The fire broke out when a shoemaker called Abū Bakr ibn 'Alwān al-Budyūkī, who dwelt in a flat at the Bāb al-Barīd, asked his wife to prepare candle fat *(duhn sham').* While she was doing so, fat dripped on some hemp [that was there] which then caught fire without any of them noticing it. When the two of them realized what had happened they were so scared that they removed their belongings without informing anyone. The fire increased and spread into the shoemakers´ market. People rushed to move their belongings instead of extinguishing the fire, (fol. 75v) while others were looting. The fire went on destroying the shoemakers´ market *(adamīyīn)* and spread further to destroy the amber market, from where it penetrated the mosque through a broken grille window *(qamarīyah)* near the door of the southwestern minaret. It got to the ceiling on the southwestern corner and progressed to all other parts. It is reported that the sultan´s *mu'allim*[32] Muḥammad ibn al-'Aṭṭār, who was present, replied to those who reported the fire to him that

[30]The passages concerning the fire and the restoration which are dispersed in the chronicle have been here pasted together . For this free translation I am using a microfilm of the manuscript from the Institute of Arabic Manuscripts in Cairo (Ma'had al-Makhṭūṭāt al-'Arabīyah MS 239), not the published texts, which have gaps. In Tadmurī´s edition, the passages referring to the fire are 1:232–63, 313, and in Ḥarfūsh´s edition, 1:147–73.

[31]Elsewhere the author uses the synonymous term *adamīyīn.*

[32]This term in late Mamluk historiography refers to the court master-builder. See my *"Muhandis, Shādd, Mu'allim*: Note on the Building Craft in the Mamluk Period," *Der Islam* 72 no. 2 (1995): 293–309.

the ceiling was too high to catch fire; he [therefore] did not remove any beams [to prevent its advance]. However, the amir al-Ṣārimī Ibrāhīm ibn Manjaq, who dwelt in the Manjaq palace adjacent to the gate of the Clocks (Bāb al-Sā'āt), ordered some beams on his side to be removed and thus succeeded in stopping the fire short of his residence. The *mashhad al-shaykh Khaṭṭāb*[33] located nearby and the rest of the *riwāq* could thus be rescued. As for the *mashhad al-nā'ib,* it was not reached by the flames because its ceiling is lower than that of the mosque, with a gap between them.

I was present most of the time, carrying away with my colleagues the carpets from the mosque to the courtyard and urging others to do the same. As the fire was progressing, I gave orders to remove the minbar and carry out the Quran of 'Uthmān and the Quran fascicles *(rab'āt)* and the *ḍarīḥ* which belonged to the *waqf* [of the mosque].[34] We had just had straw mats (fol. 76) of unparalleled fine quality newly made. They were placed near the window of *mashhad al-nā'ib* where they all burned. However, the *mashhad* itself did not; it had also escaped the fire of Timur.

Two months earlier the viceroy Qānṣūh al-Yaḥāwī had ordered the renovation of the mosque and the estate that belonged to its *waqf*. The marble paneling in the southern wall had been entirely renovated by Christian craftsmen *(naṣārá murrakhimīn),* as far as the shrine *(ḍarīḥ)* of Sīdī Hūd. The fire also destroyed the gilded *ṭirāz* (inscription band) that had been entirely renovated. The marble burned down and collapsed like melting salt. Glass bits fell alongside a grilled glass window and the lead from the roof melted down. The beauty of the mosque vanished and it was wrapped in smoke.

Every time a part of the roof collapsed, one heard a formidable thunder-like noise. People could see each other in the night because of the brightness of the fire. All grieved profoundly; even *ahl al-dhimmah* wept at the sight, as did the people who flocked in from the villages. (fol. 76v) On Friday 29 Rajab (15 October) a bench *(kursī)* for the *khaṭīb* was placed in the courtyard before the transept dome *(qubbat al-nasr)*. He performed the sermon while the audience was heavily weeping *(wa-baká al-nās bukā'an 'aẓīman)*. It was a terrible moment.

On 27 Sha'bān (12 November) Shaykh Muḥibb al-Dīn al-Ḥiṣnī came to the Umayyad Mosque and gave orders to remove the debris of the three eastern and three western aisles *(jamalīn)* and those of the *mashhad al-mu'adhdhinīn*. The debris of the western portico was removed on the first day, that of the three

---

[33]This is another name for the *mashhad* of 'Alī, located behind the eastern portico of the mosque, and is not to be confused with the *mashhad* of 'Umar ibn al-Khaṭṭāb, which is on the western side of the prayer hall.

[34]It is not clear what is meant by *ḍarīh* here; perhaps the shrine of Hūd.

western aisles [of the sanctuary] the next day, and that of the eastern aisles on the third day. An overwhelming number of people were present during these three days, including women and children, each carrying according to his capacity, so that the task was achieved at an unusual speed. (fol. 77) I saw qadis, scholars, and *ashrāf*s loading the debris on animals and dumping it outside in the ruins *(kharāb).* This task would otherwise have taken a year to accomplish, but the zeal of the knowledgeable and virtuous made this possible. The mosque was filled with ovations and recitations *(tahlīl wa-takbīr);* it was a great moment.

On Sunday, the last day of Sha'bān (14 November), the sultan ordered the viceroy to make a cost estimate of what the mosque and its *waqf* estate would need. The viceroy Qānṣūh al-Yaḥāwī, alongside the qadi of the army *(qāḍī nāẓir al-jaysh),* Muwaffaq al-Dīn, the Maliki chief qadi, Bahā' al-Dīn al-Marīnī,[35] and Yashbak, the chief chamberlain and great *dawādār,* and many others, including master-builders *(mu'allimīn)* with the sultan's master-builder Ibn al-'Aṭṭār, came to inspect the mosque. Some people believed that Ibn al-'Aṭṭār was responsible for the spread of the fire because he opposed the removal of beams from the ceiling, a measure that would have stopped the fire. For this reason, when the angry populace saw him arrive with the viceroy, while people were busy removing the debris, they shouted to prevent him from entering the mosque and some tried to kill him. While the mamluks were taking his defense, the populace began to throw stones at the viceroy with ever increasing vigor. The angry viceroy grasped an axe to attack while his mamluks were hitting people who were running away. (fol. 77v) At that point the viceroy saw a Turk *(rūmī)* carrying his *tanbūr,*[36] which increased his fury, so that he and the mamluks beat him almost to death with a burnt log from the mosque. It was a terrible sight. After the populace had run away, the viceroy and his men eventually estimated the costs of the repair at 58,700 dinars and sent their report to the sultan.

On 3 Ramaḍān (17 November), the *shaykh al-balad,* the Shafi'i shaykh Taqī al-Dīn ibn Qāḍī 'Ajlūn[37] began to collect money from the merchants and other sponsors and set out to repair the *mashhad* of 'Urwah ibn al-Zubayr, also known as *mashhad al-mu'adhdhinīn,* as well as the northern portico between the gates of Bāb al-Kallāsah and Bāb al-Barīd.

(fol. 78) In the same month an order came from the sultan announcing the allocation of 15,000 dinars from the sultan's treasury in the Citadel of Damascus, which should be sufficient to cover the restoration works. This should be [a

[35]According to Ibn Ṭūlūn, the Maliki chief qadi at that time was Shihāb al-Dīn Aḥmad al-Marīnī, who died in 897/1492.

[36]A musical instrument.

[37]Al-Ghazzī, *Al-Kawākib al-Sā'irah,* 1:114ff.

donation], not a loan to be reimbursed *(wa-lan tustadān thumma tudfa' li-ajlin ājil)*.

On Thursday 23 Shawwāl (6 January 1480) the sultan departed for pilgrimage.

In this same month [Shawwāl], the ceiling of the *mashhad al-mu'adhdhinīn* together with that of the vestibule of Bāb al-Barīd and the ceiling of the western portico were repaired. It used to be a double ceiling before the fire, but it was rebuilt, for structural reasons *(li-ajl al-khiffah),* with a single layer. This part was exclusively sponsored by generous donors from among the merchants and others.

On 5 Dhū al-Qa'dah (17 January) the viceroy ordered the carpenters and builders *(al-mu'allimīn wa-al-khashshābīn)* and the attendants of the Umayyad Mosque to tour the Damascene province in search of timber and beams suitable for the restoration of the mosque, which they did. (fol. 78v) The timber was purchased at a fair price and in a just manner *(bi-al 'adl wa-al-inṣāf)* with funds from the sultan's treasury handed out by his deputy the qadi Ṣalāḥ al-Dīn al-'Arīkī(?).

On Monday the 13th, the viceroy ordered the demolition of the mihrab of the *mashhad* of 'Urwah ibn al-Zubayr, also known as *mashhad al-mu'adhdhinīn*, which was a beautiful marble mihrab flanked on both sides by cells, to be replaced by a new one and new cells. A new one was carved in the wall.

(fol. 79 f.) On 24 Dhū al-Ḥijjah (6 March) the restoration work sponsored by the sultan began in the sanctuary. The supervisor of the work was the amir Yashbak, the viceroy's second chamberlain, alongside the notaries *(shuhūd)* Shaykh Zayn al-Dīn ibn al-Jāmūs al-Asadī and his companion, Shaykh Nūr al-Dīn al-Jabṣīnī. A few months later, however, the sultan appointed Aydakī, the governor of the Citadel, as the financial trustee *(nā'ib 'alá al-maṣrūf);* he eventually replaced the previously-mentioned *shuhūd,* although they were men of outstanding piety and honesty, by Burhān al-Buṣrawī and Manṣūr al-Ismā'īlī. Amir Yashbak continued to work with the governor of the Citadel.

In Muḥarram 885 (March), a Jew came to buy the debris of the burnt lead that used to roof the aisles of the mosque, offering the amount of one thousand dirhams for it. They took him to the deputy-supervisor of the mosque, who refused to sell for less than 3,000 dirhams, to which the Jew also agreed. The reason for this purchase was that someone caught the Jew while he was stealing the lead debris. Fearing a scandal he offered to buy it. When he was asked to pay, he changed his mind and declared that he was short of cash. At that point someone outbid him by raising the price to 250 *ashrafī*s, which the Jew eventually paid. Later on he began, along with his wife, to complain about having been forced into this deal he had no need for. Another person came up and outbid them, so that by 7 Muḥarram (18 March) the price of the debris had reached 20,000 dirhams. On the 25th the debris was eventually sold for 1,250 dinars to Nāṣir al-Dīn al-Bahnasāwī, the treasurer *(ṣayrafī)* of the Citadel in the Umayyad Mosque, in the presence of a

large crowd. The Jew then returned, saying "'indī fīhi bi-al-amānah 10,000 dinars,"[38] but Nāṣir al-Dīn replied that he would buy it himself for any amount, disregarding profit, for the benefit of the mosque.

The mosque had lead at the southern aisles, the two *nasr*s *(nasrayn),* and the *'abbārāt*(?). What escaped the fire was stored in a room in the mosque. What was burnt was sold with the debris.

The sultan's restoration of the *mashhad al-zanāyi',* also known as *mashhad* Abī Bakr, was completed by (fol. 80) the *mu'allim* Muḥammad ibn al-'Ajlūnīyah.

In the same month the restoration of the safes of *mashhad al-mu'adhdhinīn,* or *mashhad* 'Urwah ibn al-Zubayr, was completed. A total of fifty-two safe-boxes were replaced. This was done with the funds provided by the viceroy's secretary *(dawādār).* They were better than the original ones, which had different shapes and were not attached to the wall.

In Ṣafar (April) the first southwestern aisle *(jamalūn)* was completed with the sultan's funds by the *mu'allim* Aḥmad Ibn al-Zanīk and the *mu'allim* 'Abd al-Wahhāb under the supervision of Amir Yashbak al-Ḥamzāwī, the second chamberlain and overseer of the Umayyad Mosque.

The works progressed rapidly, thanks to the ingenious mechanical device of an old carpenter from Ṣāliḥīyah called Muḥammad al-Kuftī. It consisted of a pole *(sārī)* and a wheel *(dūlāb)* which could easily lift the beams, so that all the beams of an aisle could be raised in one morning. This was a great blessing that saved a great deal of money.

(fol. 80v) In Rabī' I (May) the roof of the second southwestern aisle was completed with the sultan's funds by the *mu'allim* Aḥmad 'Abbās and his team of Ibn al-'Aṭṭār's apprentices.

In the same month the first southeastern aisle was completed by the *mu'allim*s Aḥmad al-Zanīk and 'Abd al-Wahhāb. It included a great *maqṭū'* (cross-beam?)[39] above the shrine of St. John.

In Jumādá I (July) the sultan's restoration of the third southwestern aisle was completed by the *mu'allim* Aḥmad 'Abbās along with the apprentices of Ibn al-'Aṭṭār.

(fol. 81) In the same month they began the restoration of the marble dado sponsored by the sultan, beginning with the southwestern side. Aydakī, the governor of the Citadel and the sultan's financial trustee *(amīn 'alá al-maṣrūf),* ordered the repainting of the white frieze of the sanctuary with red *(zanjafar)* color. (fol. 81v)

---

[38]I am not able to interpret this sentence. Could it perhaps mean that he had already pledged some security to fulfil his obligation?

[39]Literally this is an adjective meaning "cut"; here it might refer to a perpendicular section in the beams to mark the site of the shrine of St. John.

The original white was better and more pleasant; but the one who gave the orders was popular (*maḥbūb*?), namely the Citadel's governor.

In Jumādá II (mainly August) the sultan's restoration of the third southeastern aisle was done by *mu'allim* 'Abd al-Wahhāb and his partner Aḥmad al-Zanīk, thus completing the six aisles of the sanctuary with the exception of the two parts of the transept *(nasrayn)*. They also began to replace the grille windows *(qamarīyah)* of the southern wall.

In Rajab (mainly September) the floor of *mashhad al-mu'adhdhinīn* was paved with stone *(al-balāṭ al-lāṭūn)* with funds provided by the sultan.

(fol. 82) The works began at the inner doors, paid for by the sultan.

(fol. 83v) On the 27th (1 October) they began to cast the lead for the two transepts *(nasr)* and the '*abbārāt*. The lead was carried to the *madrasah balkhīyah* to be processed there.

(fol. 84) On 15 Sha'bān (19 October) the southern *nasr* was covered with lead; it took 77.25 *qinṭār*s. This was done by a Turk *(rūmī)* called al-Ḥājj Aḥmad Isḥāq al-Rūmī, who came on his own initiative without having been summoned. He was paid 20 dirhams per *qinṭār* for casting and mounting the lead, in addition to the wage of his apprentices. This man had previously produced the lead for Jerusalem. In the same month also the northern *nasr* was covered with lead with the sultan's funds.

(fol. 84v) During the month of Ramaḍān (November/December) the mosque was painted at the sultan's expense; the chandeliers and the lamps were then suspended. The chandelier *(fanūsat al-qanādīl)* was hung at the shrine of St. John. The *khuṭbah* and the *tarāwīḥ* prayer were then performed at the *miḥrāb al-ṣaḥābah* on the eastern side of the transept, instead of the Hanafi mihrab on the western side, where the *khuṭbah* was being held since the fire. Everyone was delighted.

(fol. 85 f.) In Shawwāl (December 1480/January 1481) the great grille windows of the transept were mounted.[40] They were made by Muḥammad al-'Ajamī. At the same time the painting of the northern *nasr* was completed. This and the other *nasr* are of unparalleled beauty. They were decorated with gold and lapis and the sultan's name with the date were inscribed on the southern *ṭirāz*. The northern *nasr* had no lower ceiling before the fire. Three doors were mounted in the area of the southern *nasr,* made by master metal-beaters *(al-mu'allimīn al-daqqīyah)* from Aleppo. The southwestern doors were made by the beaters Awlād al-Zu'aymah. The southeastern doors, which had not been damaged, were polished and returned

[40]The original mosque had arched windows with marble grilles of geometric design *(qamarīyah)* in the Roman tradition. Six of them are extant in the western portico. (Creswell and Allan, *Short Account,* 69 f.). Because of the fire of 1983 it is not possible to say if the *qamarīyahs* destroyed by the fire were Umayyad or later ones.

to their place. The sultan paid for all of this.

The 15,000 dinars allocated by the sultan were now almost exhausted. The sultan had sent marble specialists from Cairo but their *mu‘allim* died and they did not do any work.

(fol. 86v) In Muḥarram 886 (March 1481) the copper door of Bāb al-Ziyādah,[41] also known as the gate of the *‘anbarīyīn,* was mounted. It was restored at the sultan′s expense and came out better than before.

On Saturday the 16th (13 March) the bench of the muezzins was mounted in its original location in the *maqṣūrah;* it was decorated with gold and lapis and cost 25,000 dirhams. The repainted minbar was returned to its place, more beautiful than ever.

On Friday the 29th (30 March) a celebration service was held in the *maqṣūrah,* the chief qadi Sirāj al-Dīn al-Ṣayrafī performing the sermon. After the end of the sermon and the prayer, the Hanafi chief qadi Muḥyī al-Dīn ibn al-Qaṣīf, the Maliki chief qadi Shihāb al-Dīn al-Marīnī, the Hanbali chief qadi Najm al-Dīn ibn Mufliḥ, the great chamberlain Yashbak, and the sultan′s *dawādār* Yalbāy came, and the Quran fascicles *(rab‘ah)* were distributed among them in the *maqṣūrah*—the muezzins were also there; they dedicated their prayers and recitations to the sultan in gratitude for his having restored the mosque. So far the costs of the restoration had amounted to 16,000 dinars.[42]

(fol. 88) On Friday 24 Rabī‘ II (22 June) another service was held in honor of the sultan, in the presence of the viceroy Qijmas. Robes of honor were bestowed on the supervisor of the construction work and the governor of the Citadel, Aydakī, as well as on the qadis and the *khaṭīb* of the mosque representing the Shafi‘i chief qadi Sirāj al-Dīn ibn al-Ṣayrafī. By that time the restoration costs amounted to 17,000 dinars.

(fol. 88v) In Jumādá I 886 (June/July) the merchants and others returned to the now-restored markets of the farmers *(zurrā‘),* the silk-makers, the amber-dealers, and the sword-makers. The funds had been provided by the sale of the lead debris, which brought 1,250 dinars, along with funds provided by the *waqf* of the mosque. The goldsmiths′ market and parts of the shoemakers′ market were not restored yet because of the western minaret.

(fol. 90v) On Wednesday 9 Sha‘bān (3 October) an accident occurred at the gate of the Bāb al-Barīd. While the builders were dismantling the gate to rebuild it, rubble fell and killed a number of prisoners in the adjacent jail.

The restoration work took two years and fifteen days to complete and amounted

---

[41]The gate of the exterior extension of the mosque, at the western end of the sanctuary.

[42]Ibn Ṭūlūn, *Mufākahah,* 1:34, who gives the date 19 Muḥarram. This must be an error, however, as this date could not be a Friday.

to 18,000 dinars, not including the reconstruction of the western minaret.[43]

In Dhū al-Qaʿdah (December) news arrived that a fire had broken out at the Prophet's mosque in Medina; the sultan summoned builders who had worked at the Umayyad Mosque, among them the above mentioned Muḥammad al-Kuftī who had raised the beams.[44]

(fol. 96) In Rabīʿ II 887 (May/June 1482) the sultan ordered the reconstruction of the western minaret and the restoration of the lead in the remaining parts of the mosque.[45]

(fol. 97) In Rajab (August/September) the restoration of the goldsmiths' market, which belonged to the endowment of the mosque, was completed with *waqf* funds.

(fol. 148) In Dhū al-Qaʿdah 893 (October/November 1488) the reconstruction of the western minaret was completed to the best standard. It cost the sultan 4,500 dinars. It was built on the foundations of the former one, reusing its stones, albeit on a smaller scale of about one quarter of its original dimensions.

---

[43]According to Ibn Ṭūlūn the restoration was completed in Rabīʿ II 886. Ibid., 1:42.

[44]Muḥammad al-Kuftī is also mentioned by Ibn Ṭūlūn, who similarly credits him for having raised the beams of the mosque. Ibid., 51.

The minaret of Qāytbāy above the Roman tower

Plan of the Umayyad mosque indicating the *mashhad*s in the late Mamluk period

Book Reviews

Aḥmad ibn ʻAlī al-Maqrīzī, *Al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār*. Edited by Muḥammad Zaynhum and Madīḥah al-Sharqāwī. Ṣafaḥāt min Tārīkh Miṣr, no. 39 (Cairo: Maktabat Madbūlī, 1998). Three volumes.

Reviewed by Frédéric Bauden, University of Liège

For those who are familiar with Claude Gilliot′s reviews of books published in Egypt, regularly appearing at the end of the *Mélanges de l′Institut Dominicain d′Études Orientales*, Muḥammad Zaynhum (sometimes Muḥammad Zaynhum Muḥammad ʻAzab) is almost a celebrity. His critical editions *(taḥqīq)* are generally based on previous ones published by the Būlāq press, or on a single manuscript preserved in the Dār al-Kutub al-Miṣrīyah. Unsurprisingly, most of them are strongly criticized by Gilliot. Now, Zaynhum has decided to tackle the problem of a critical edition of al-Maqrīzī′s *Khiṭaṭ*. It is a well-known fact that the Būlāq version, with its impractical format, numerous defects, and the poor typography, has remained since its appearance in 1853 the standard edition, although some attempts were made to provide scholars with a better one. Several editions have appeared in the course of the last century, but a complete critical edition, based on several manuscripts, was still seriously needed. This is finally the case, with Ayman Fu'ād Sayyid′s project, which will be completed by the time this review is printed.[1] Compared to the latter, the Zaynhum edition must be categorized among the commercial shenanigans to which the Maktabat Madbūlī is accustomed. The new series, in which this book appears, is full of reprints of older editions almost without any modification. This is also the case here. Probably taken from the Būlāq edition, the text is presented in a more agreeable format in three volumes with a readable font. It is hard to know whether the text has been set up again or if an Optical Character Recognition process has been used. Be that as it may, the result is a disaster: no introduction, no bibliography, no indexes; footnotes limited to the identification of Quran verses, persons, and places in a rather erratic way ending with p. 498 of vol. 1; mistakes added to the Būlāq version (like al-Musabbiḥī′s name becoming al-Mashīkhī! (2:113). A collation of the beginning revealed the following errors : 1:5, line 3: يتقبلون for يتقلبون; line 15: مضى وغبر for مضى وعبر. To conclude, this edition should not find its way onto the shelves of any library and this is even more the case because of the appearance of A. F. Sayyid′s critical edition.

REVIEWED BY DINA GHALY, University of Toronto

This book is a catalogue of the foundation inscriptions of the standing Mamluk religious buildings in Cairo. Studies on foundation inscriptions are rare, and there are only two other major systematic works that cover, within their broader scope, the material of the book under review. The first is Max Van Berchem′s *Corpus Inscriptionum Arabicarum* (*CIA*), and the second is the *Repertoire chronologique d′épigraphies arabes (RCEA),* which is a collaboration of several authors. The former is so far unsurpassed in its scope and methodology, while the latter, which is focused on cataloguing the inscriptions without any further analysis of the context, is still incomplete. Therefore, a study in this category is always welcome.

The book, as outlined by the author in his preface, consists of an introduction, four chapters and a summary of results. The introduction provides a brief review of the earliest foundation inscriptions in Islamic architecture in Egypt. It also provides a useful list of the different building materials used for the inscriptions. Unfortunately, no reference is given for the trade terminology the author uses for the different stone types (p. 11).

The first three chapters follow a typological division of the different building types: the first covers madrasahs, the second mosques and the third the rest of the religious foundations such as *khānqāh*s, *zāwiyah*s, and *ribāṭ*s. This division is practical and facilitates systematic comparison within each group. The fourth chapter is an analysis of the catalogued inscriptions, with a comparison between the content of the inscriptions and the data available from the sources and *waqf* documents.

For each building listed, the author gives the foundation inscriptions, their location within the building, and a transcription in Arabic. Some of the inscriptions offer revisions made to previously published ones. Unlike the *RCEA,* which only gives the reference to the Quranic citations found in the inscriptions, the author reproduces Quranic texts in full. This is one of the positive aspects of the book. However, some of his revisions to the *RCEA,* which is a reference conspicuously absent from his bibliography, are not properly explained. For instance, for the Madrasah al-Bunduqdārīyah, he says that Wiet added two words to the text, but the reader is left to guess whether he means that the two words were there when recorded by Wiet and are no longer there now, or whether Wiet made a mistake adding those two words.

Other problems include the wrong references he gives to the *RCEA* for many

foundation inscriptions. For example, the reference he gives for the Madrasah al-Bunduqdārīyah is to vol. 12. Vol. 12 ends with the year 680/1281–82, while the madrasah dates to 683/1283–84 and is found in vol. 13, n. 4874. He also does not include inscription n. 4872 at the base of the dome, but adds one inscription stating the date. Another example is the reference for the Madrasah al-Jāwilīyah (pp. 186–87), which he gives as vol. 13, p. 5, when in fact it is p. 245, n. 5163 (he did not provide the catalogue number in this case). Furthermore, other inscriptions in this building are not mentioned at all. The author is also inconsistent in giving the corresponding *RCEA* reference for many of his catalogue entries (e.g., pp. 51, 188–89). One important aspect provided in the *RCEA* but missing in this book is the extensive bibliography that follows each catalogue entry.

There are useful additions and revisions for some inscriptions. For instance, the author adds the date to an inscription in the *khānqāh* of Baybars al-Jāshankīr, which is missing in the *RCEA,* as well as the name of the sultan in another inscription (pp. 188–89). Another example is the date he adds for an inscription in the *khānqāh* of Mughulṭāy. However, the lack of explanation of why or how this information was added when it has been missing in earlier publications raises doubts as to the validity of this data and makes it difficult to use the text.

For the madrasah of Īnāl al-Yūsufī, the author gives only the foundation inscription on the façade and ignores the inscription on the *sabīl,* published earlier by Van Berchem (*CIA* n. 190). In addition, the inscription he provides differs from the one published earlier by Lamei and Creswell, whom he does not mention. In this case, the author fails to provide any reference to previously published inscriptions. Furthermore, although the author discusses this building again in the fourth chapter, p. 234, and provides a partial transcription of its *waqf* manuscript in the appendix on pp. 312–17, no cross-reference to these two sections can be found in the main catalogue entry of the monument (p. 56).

In Chapter 4, "Analytical Studies," (pp. 223 f.) the author attempts to analyze the relationship between the foundation inscriptions and the function of the buildings. In this chapter, the author also provides a comparison between the architectural planning of the buildings and the information available from the sources and *waqf* documents. For this purpose, he reproduces plans—all were published earlier—for all the buildings he discusses, although the figure numbers are missing for most of them.

For each building type, the author attempts to organize the different designs adopted into categories, e.g., four-*īwān* plans, two-*īwān* plans, etc. Within each plan type, a list of the monuments that follow the specified type is provided. Under madrasahs, a curious plan type is his no. 8, "the *riwāq* plan without a courtyard or a *durqā‘ah*," under which he gives the Madrasah al-Bunduqdārīyah as an example. This is not accurate, since the only surviving parts of the building

are the two mausolea. The central part of the building, on which he based his plan type, is of later construction of unknown date and does not relate to the foundation inscription provided by the author. In addition, the reader is disappointed when no analysis is given showing how a specific plan type relates to the foundation inscription, as the author promised to do. In fact, since there is no relationship between building function and specific plan type, it is hard to understand the necessity of the detailed categorization the author provides.

The author explains, through the study of *waqf* documents, the intended functions of the building, and how these functions were to be carried out. Although this shows the relationship between the architecture and the *waqf*, it does not explain the particular plan type as categorized by the author. The obvious conclusion one can reach from the author′s search for a relationship between foundation inscriptions and building designs is that there is none. Plan types, such as the *īwān*-plan, and building function, whether it is a mosque, a madrasah, or a *khānqāh,* became increasingly interchangeable in the Mamluk period and were not related to the foundation inscriptions. In other words, the exercise conducted by the author to compile his plan types seems unnecessary and irrelevant to the purpose of the chapter and the book.

An analysis of plan types in Mamluk architecture has already been successfully attempted by Meinecke in his *Mamlukische Architektur*, who also provided a reason and context for their development. Obviously, the development of plan types was subject to various urban and other criteria and was unrelated to the intended function of the building.

The author notes that the madrasahs that have a mosque function do not have minarets. However, the madrasah he mentions in the preceding paragraph, that of Īnāl al-Yūsufī, which had a mosque function as he himself explains, does have a minaret (p. 234).

The author quotes extensive excerpts from several *waqf* documents in support of the description of the buildings′ functions. He also appended several of these buildings′ *waqf* texts to the book, which he considers one of the achievements of this publication. However, he only reproduced the sections relevant to his study and not the entire manuscripts. The sections dealing with the buildings′ description and location, as well as the income producing properties allocated to the building, are not provided. The manuscripts are only transcribed and not edited.

One valid conclusion the author arrives at is that when the word ″madrasah″ is included in the foundation inscription, the plan follows the *īwān*-plan consistently.

Editorial mistakes abound in this publication. First, a table of contents is conspicuously missing, as well as an index. The photographs are of such poor printing quality that they are entirely useless. Chapter one, the one cataloguing madrasahs, lacks a title.

More importantly, there are numerous spelling mistakes that hamper the soundness of the inscriptions. For example, p. 42, n. 7: ″Allāh *il*lā ilāh illā huwa,″ which is again repeated for n. 8. Uljāy al-Yūsufī is printed ″Uljāy ila Ūsufī″ and Qānībāy is printed ″Qātbāy.″ Such mistakes are so frequent, occuring in monument names as well as personal names, that they constitute a real obstacle, especially for someone unfamiliar with the material. In addition, there are numerous grammatical and language mistakes which render the author′s intent at times incomprehensible. Footnote references do not correspond to the correct footnotes (wrong numbering). Also, mistakes in dates can be found, as on p. 251 where the date is given as 13862. Pages 254–55 are repeated on pp. 256–57, while the correct two pages are missing. In these two pages, we miss the categorization of the author′s mosque plans.

Overall, this book, which would have been a practical reference for the study of Cairo′s religious architecture, does not replace the major references in this field with respect to Mamluk religious architecture. It offers some revisions to previously published inscriptions but must be consulted with other reliable references.

REVIEWED BY ROBERT DANKOFF, University of Chicago

These are two editions of the Turkish poetry of Sultan Qānṣūh (or Qansu, or Qānıṣawh, or Qanısav) al-Ghawrī (or al-Ghūrī), d. 1516, hereafter in this review referred to by his Turkish *maḫlaṣ* as Gavri. Of these, the one by Yavuz is superior on the grounds of accuracy and comprehensiveness. The one by Yalçın does have the feature of an English rendering of the text, and so may be useful to someone who does not know Turkish but wishes to gain an idea of what the ill-fated sultan wrote poems about in that language (he also wrote poems in Persian and Arabic). The introductions of the two editions cover more or less the same ground—life, times, works, description of the manuscript—and both books include a facsimile of the unicum. Yavuz adds some poems drawn from other texts, plus a long and detailed analysis of the language of the poems; this analysis (pp. 159–282) may have some utility for Turcologists, although it struck this reviewer as largely

unnecessary since Gavri´s language is generally simple and straigtforward and departs in no way from standard Ottoman Turkish; also the analysis is skewed as based on a corpus that includes verses definitely not by Gavri (see below).

The unicum in question (Staatsbibliothek, Marburg, or. oct. 3744) has been known for some time and was described by Manfred Götz (*Türkische Handschriften* II [Wiesbaden: Steiner, 1968], 207–8) and used by Barbara Flemming in several of her articles devoted to Turkish literary activities in the late Mamluk period. The title, *Dīwān-ı Qānsūh al-Ghawrī,* refers to the first 87 folios out of a total of 236, but even this part contains *ghazal*s of other poets (see below). The rest contains poems of Aḥmed Paşa (d. 1497) and ʿAdnī (Maḥmūd Paşa, d. 1474) and several treatises on *ʿarūż* metrics.

The first part of the manuscript is incomplete, since there are clearly folios missing. What remains are roughly seventy poems attributed to Gavri. Yavuz counts 71, Yalçın 68. The discrepancy is accounted for as follows:

1. Yalçın omits a poem (XLVI in Yavuz´s edition) which in the manuscript bears an attribution to Şeyḫī, but although Şeyḫī is mentioned in the poem it is clearly by Gavri.
2. Yavuz includes an elegy (*merṣiye;* LII in his edition) for the Amir Yaşbek which is incomplete and which there is no reason to assign to Gavri.
3. Yavuz includes a long but incomplete *ḳaṣīde* as the last of Gavri´s poems in this collection (LXXI in his edition), apparently because the previous folio ends with an attribution to Gavri, but clearly at least one folio is missing in between, since the acephalous *ḳaṣīde* begins with the second hemistich of a verse; also the style is very Persianate and completely different from Gavri´s style, and furthermore the poet refers to himself as Aḥmed in the second-to-last extant verse. In fact, this is a portion of a well-known *ḳaṣīde* by Aḥmed Paşa dedicated to the Ottoman sultan Meḥemmed II Fātiḥ (see *Ahmed Paşa Divanı,* ed. Ali Nihad Tarlan [Istanbul, 1966], poem no. 13; Götz, *Türkische Handschriften,* 207, had already identified this properly).

Thus, by my reckoning, the Marburg manuscript contains 69 poems of Gavri. To these Yavuz appends nine others from four other manuscripts; five of these are by a certain Derviş Aḥmed who also signs himself Gavri but is clearly a different poet; the other four can confidently be assigned to Sultan Gavri (one—LXVIII in Yavuz's edition, Poem 66 in Yalçın´s—is from his Arabic *dīwān* and can be seen as balancing out the one Arabic poem in his Turkish ˝diwan˝).

One further discrepancy must be noted: Yavuz´s edition skips two pages of the original text, apparently corresponding to one opening that was skipped in the photograph of the manuscript which he used. The omission occurs after the first

two verses of no. IX in his edition. For the missing nine verses, see Yalçın, Poem 9. From this point also the enumeration of the folios is off by one in the two editions; thus Yavuz's 14b = Yalçın's 15b, etc.

The contents of the first eighteen poems can be roughly characterized as "religious," including praise of God, the Prophet, and the Companions; Sufi-style sentiments; and expressions of remorse for sin. The remainder of the poems sound the familiar *ghazal* themes of wine and love, and it is these that often appear in the manuscript together with counterparts *(naẓīre)* in the same meter and rhyme by other poets, including Aḥmedī (d. 1413), Nesīmī (d. ca. 1404), Aḥmed Paşa (d. 1497), and Cem Sultan (d. 1495). In the case of his contemporaries it appears that sometimes Gavri was responding to one of theirs, sometimes vice versa, although the question needs more study. Yavuz gives the text of these interspersed poems in footnotes to his edition or else in his introduction, thus permitting us to witness this *naẓīre* phenomenon at work; Yalçın omits them, thus giving us a distorted view of the original text.

At the end of two *ghazal*s Gavri names Şeyḫī (d. 1431) as the one he is emulating: "O Gavri, if Şeyhi heard your verse he would cock his ear, saying, 'Apparently shahs and sultans have favored you'" (Yavuz, XLI = Yalçın, Poem 41); "If your poetry does not match that of Şeyhi, go and give up Turkish!" (Yavuz, LX = Yalçın, Poem 58; reading: *Ermediyise ṣan'at ile Şeyḫiye şi'rüñ / Var Türkiyi terk et*).

We cannot date any of Gavri's poems, nor are there internal indications as to whether any one was composed before or after he became sultan. The only exception is the *ghazal* elegizing the Amir Yaşbek, presumably written shortly after he died in 1489 (Yavuz, LI = Yalçın, Poem 50). During his sultanate (1501–16) Gavri also sponsored the monumental Turkish translation of Firdawsī's Persian epic, the *Shāh-nāmah*, completed by the poet Şerīf (also known as Şerīfī) in 1511. This has recently been published in four volumes as *Şerîfî: Şehnâme Çevirisi,* edited by Zuhal Kültüral and Latif Beyreli (Ankara: Türk Dil Kurumu, 1999). Şerīf clearly gives his patron's name as Ġavrī Ḳānıṣav (vol. I, p. 14, verse 00335), confirming the interpretation of his name as Tk. *ḳanı sav* or *ḳanı saġ* meaning "the one of sound blood."

Four of Şerif's *ghazal*s written in honor of his patron are found toward the end of Gavri's "diwan" (text in Yavuz, pp. 31–34). Şerif states that Gavri's verses have given great pleasure to the people of Egypt *(Sözinden Ġavrī'nüñ el-ḥaḳ ḳatı ẕevḳ itdi Mıṣr ehli),* and that his own have garnered respect because of Gavri's *(Şerīf'üñ sözleri buldı şeref Ġavrī kelâmından),* indeed that it was Gavri's verse that made him, Şerif, incline to poetry at all *(Ġavrī'nüñ naẓmı-durur meyl itdüren şi're beni).* He praises Gavri's justice as giving rise to a peacable kingdom where ducks and geese nest together with falcons *('Adlüñden ördek ḳaz-ıla uçup ḳonarlar*

bāz-ıla)—the same image is found in the introduction to his *Shāh-nāmah* translation (vol. I, p. 15, verse 00382: *Ḳucaḳlar ḳaz-ıla ördekleri bāz*).

Annemarie Schimmel, in her foreword to Yalçın′s edition, points out that Turkish was the preferred language for poetical activities of most of the rulers of this period, including the Safavid Shah Ismail, Hussain Baiqara of Herat, and Babur conqueror of India; the only exception, paradoxically, is the Ottoman Sultan Selim I, who wrote poems only in Persian. Ottoman, or Anatolian, Turkish was cultivated as a literary language by the later Mamluk amirs and sultans, as Barbara Flemming especially has pointed out. The quality of Gavri′s verse is not high: it is competent but pedestrian, for the most part, and would hardly be of much interest except that the poet was also a sultan.

I pointed out above the superiority of Yavuz′s edition of Gavri′s poetry. Disregarding the unfortunate omission of nine verses and the unfortunate inclusion of a *ḳaṣīde* by Aḥmed Paşa as though it were by Gavri, Yavuz′s edition is nearly flawless. The remainder of this review contains critical notes on the book of Yalçın.

The Dîvân of Qânsûh al-Ghûrî was originally a Harvard dissertation, completed in 1993. The 2002 publication is unrevised, with the exception of substituting *é* for *i* in the text edition to represent the Turkish closed e-vowel. This is a welcome innovation; but in the one place where it really matters—distinguishing *éş* ″peer, equal″ from *iş* ″thing, work″ (Poem 11, lines 2a, 7a, etc.)—he fails to make the distinction. Some of the cross-references were not changed to accord with the printed format; thus in note 99 on p. 32 the reference to ″p. 5 n. 11″ should be to p. 14 n. 10.

Some of the most flagrant misreadings of Gavri′s text are the following (reference is to poem number followed by line number):

2.2a derkidür ⇒ deriñdür

2.8a kelîmdür ⇒ kelîmüm dér

3.14b ve'n-nâr-ı ʻâtî ⇒ve'nnâziʻâti (i.e., Quran 79:1)

6.3a ördi ⇒ urdı

6.6b size vâr-ı ⇒ sezâvâr-ı

9.7b yansın ⇒ yanasın

9.8a yalhiyetüñ ⇒ yâ liḥyetüñ

10.11b lâli ⇒ le'âli

14.5a Tevbe aʻyân ⇒ ″Tûbû″ ʻayân

23.4b özene ⇒ uzana

45.3a şefatinuñ [hem] ⇒ şefeteynüñ

54.4a ẖaddidir ⇒ ẖaddi dér

65.7a merhametüñle ⇒ raḥmetüñle

Many corrections need to be made in the English translations as well. Here are a few:

1.11b His treasury is filled with darkness and empty of actions ⇒ Devoid of good deeds, his treasure filled with wrong-doing

2.2a Whoever ponders upon comprehending His Essence, it is a contemplation to which intelligence cannot reach ⇒ Who can ponder His essence? It is too deep for intellect to reach

2.8a He is the interlocutor to Moses ⇒ He calls Moses ″my interlocutor″

4.7a the fish ⇒ the height of heaven

9.5b the shawl in front of you has no value for you ⇒ the shawl on your back is a great load

9.8a your state were white ⇒ or your beard was white

10.9a The heavens put the sandals upon his face ⇒ He put his sandal upon the face of heaven

12.10b Anything other than You is worthless ⇒ Anything else is self-regard. For Your sake, God!

20.8b feast ⇒ trumpet

26.2b a savaged heart replaces it ⇒ ″he comes with a pure heart″ (i.e., Quran 26:89)

26.3a I have no reason to let go the hem of your skirt after dying ⇒ I have no desire to let go the hem of your skirt until I die

36.5a God′s verse of *Nûr* ⇒ the verse: ″God is Light″

37.3 protect ⇒ pity

39.1a The boat has fallen ⇒ Let the boat sink

41.7a the Sheykh ⇒ Şeyhî (cf. 58.7a)

52.3b Have pity for the lover come, do not do it ⇒ Do not sacrifice the lover

53.2a put love′s fire into my heart ⇒ love′s fire is a glowing ember on my heart

58.7a give up composing poetry and Türkü ⇒ give up Turkish

REVIEWED BY JO VAN STEENBERGEN, K. U. Leuven–FWO-Flanders (Belgium)

Ever since the rise of Islam, the *jāhilīyah*-rooted concept of *furūsīyah* or "horsemanship" has remained an intrinsic part of Muslim society. Yet changing contexts and settings blurred its conceptual usages to such an extent that, e.g., the Mamluk historian and alleged *furūsīyah* expert Abū al-Maḥāsin ibn Taghrībirdī (d. 874/1469) thought it necessary to precisely define its true nature, emphasizing that "*furūsīyah* is something different from bravery and intrepidity, for the brave man overthrows his adversary by sheer courage, while the horseman is one who handles his horse well in the charge and in the retreat, and who knows all he needs to know about his horse and his weapons and about how to handle them in accordance with the rules known and established among the masters of this art." Indeed, theory and practice had grown apart, so that apart from its stricly technical meaning, only known to "military" experts like Ibn Taghrībirdī, in every day use *furūsīyah* had often become synonymous with "bravery," even "chivalry."[1] This ambiguity was also extant in the age-old literary production on the subject, with, on the one hand, works of lexicography and *adab,* setting the technicalities of horsemanship within the framework of (Islamic) virtue, heroism, and chivalry, and on the other hand, the treatises on *furūsīyah,* mostly dating from the late Middle Ages and very technical by nature and content. Unlike the former sort, the majority of these treatises on horsemanship and supplementary military aspects were drawn up by practising experts, "men of the sword" rather than "men of the pen," though by tradition they as well liked to show off their erudition by punctuating their handbooks with quotes from classical Arabic literature.[2]

---

[1]Abū al-Maḥāsin ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* ed. Ibrāhīm 'Alī Ṭarkhān (Cairo, 1963–72), 14:131; David Ayalon, "Notes on the *Furūsiyya* Exercises and Games in the Mamluk Sultanate," *Scripta Hierosolymitana* 9 (1961): 34-35; reprinted in idem, *The Mamluk Military Society* (London, 1979), 2:34-35; idem, "Furūsiyya - In the Mamlūk State," *The Encyclopaedia of Islam,* 2nd ed., 2:954; the translation is taken from Ayalon. Very illustrative in this respect is also the fact that in the *Encyclopaedia of Islam* one is referred to the lemma "*furūsīya*" for information on both "horsemanship" and "chivalry" ("horsemanship," *EI*[2], 3:536; "chivalry," *EI*[2], 2:32).

[2]G. Douillet, "Furūsiyya," *EI*[2], 2:952-53.

This conceptual dichotomy and its omnipresence throughout Islamic history happens to find a very enlightening illustration in the two works that are the subject of this review. For, on the one hand, ʿAbbūd Qarah′s *Ādāb al-Furūsīyah*, published on the brink of the twenty-first century, is a clear exponent, both in title and content, of the ancient ″chivalrous″ branch of *furūsīyah* literature, while, on the other hand, the first critical edition of *Al-Ḥiyal fī al-Ḥurūb wa-Fatḥ al-Madāʾin wa-Ḥafẓ al-Durūb,* a fourteenth-century treatise on weaponry and warfare, is a prime example of this literature′s technical branch.

As indicated by its title, Qarah′s *Ādāb al-Furūsīyah* deals in detail with the manners and customs that characterize the classical standard of Arab ″horsemanship,″ ″i.e., good manners and the doing of noble deeds by which the Arab horseman has distinguished himself since ancient times and that have become exemplary, including the keeping of a promise, patience in bad times, the protection of those who seek refuge, the protection of women and children and of the weak, modesty and courage, generosity, openmindedness and liberality, forgiveness whenever possible, and, last but not least, all noble deeds man has extolled over the course of time″ (p. 24). He traces the origins of this moral horsemanship among the Arabs long before the rise of Islam, analyzes the factors that caused it to be an exclusively Arab phenomenon, and presents its constituant parts, ranging from the breeding of horses to the proverbial Arab hospitality. All these elements are presented in a way reminiscent of classical Arabic texts, making and illustrating his points through examples, stories, and quotations that stem from the Arabs′ rich cultural background. Unfortunately, the richness of his material sometimes also happens to make the author indulge in details and arguments the relevance of which is not always clear. Thus, e.g., he consistently tries to argue that Europe only managed to rise from its ″dark″ Middle Ages thanks to the practices and principles of Arab *furūsīyah,* with which it became acquainted during the Crusades. As for the field of Mamluk studies, regrettably this book′s argumentation does not go beyond the twelfth-century example of Arab-Muslim unity set by Saladin and it is therefore of only limited relevance for anyone particularly interested in Mamluk *furūsīyah.*

For obvious reasons, the latter observation does not hold for the fourteenth-century military treatise entitled *Al-Ḥiyal fī al-Ḥurūb wa-Fatḥ al-Madāʾin wa-Ḥafẓ al-Durūb* that has now for the first time been carefully edited by Dr. Nabīl Muḥammad ʿAbd al-ʿAzīz, a *furūsīyah* expert in his own right.[3]

This work consists of two parts that are further divided into nine chapters *(abwab),* subdivided into numerous paragraphs (also *abwāb*). In the first part,

---

[3]He graduated from Cairo University (1972) with an unpublished Ph.D. dissertation on Mamluk *furūsīyah*, entitled ″Nashr wa-Taḥqīq Makhṭūṭah: Nihāyat al-Suʾl wa-al-Umnīyah fī Taʿlīm Aʿmāl al-Furūsīyah maʿa Muqaddimah Tārīkhīyah ʿan Niẓām al-Furūsīyah fī ʿAṣr Salāṭīn al-Mamālīk.″

different sorts of swords and shields, and bows, strings, and arrows are dealt with in every possible detail of fabric and use, followed by an excursus on different types and applications of glues and oils. The second part continues on bows and arrows, now concentrating on their construction; this is followed by a detailed and illustrated chapter on the construction of water wheels. The book concludes with two chapters on strategies and stratagems before, during, and after battle, including firm recommendations for commanders and the intricacies of besieging a city.

This entire treatise is presented as an amalgamate of different parts of text that were picked from a general guideline for rulers, written by Alexander the Great for his son, and that had been recovered from the ruins of ancient Alexandria by the Arabs, who had translated it into Arabic (pp. 192–93, 230). Hence the continuous use of the imperative masculine singular throughout the entire work and the unusually direct and plain way of writing. Yet the particularity of certain specific military terminologies and other at times rather anachronistic references, e.g., to Quranic verses (p. 23), suggests this alleged origin is nothing but a fabrication of style. Nevertheless, the attribution to Alexander is said to be a known phenomenon for a number of *furūsīyah* texts, suggesting that a link with certain Greek originals should not be excluded.[4]

At the same time, this particular setting has caused some confusion with regard to the identity of the treatise's author. For already in 1929, Ritter questioned its attribution to the known *furūsīyah* author and soldier in the Egyptian *ḥalqah,* Muḥammad ibn Mankalī, whose literary production is said to have flourished during the reign of the Mamluk sultan al-Malik al-Ashraf Sha'bān (764–78/1362–76).[5] Unfortunately, the editor, Dr. Nabīl Muḥammad 'Abd al-'Azīz, makes no mention of this discussion, nor does he substantiate why he attributed this work to Muḥammad ibn Mankalī, though his name remained unnoticed in any of the manuscripts of the work that were used.

As for the latter, this edition is based on three fourteenth-century manuscripts, the oldest of which dates from the year 757/1356, which may serve as a *terminus ante quem* for the treatise.[6] They are consistently and with great care referred to

On Muḥammad ibn Mankalī, see Gerhard Zoppoth, "Muḥammad ibn Mängli: Ein ägyptischer Offizier und Schriftsteller des 14. Jh.s," *Wiener Zeitschrift für die Kunde des Morgenländes* 53 (1957): 288-99.

[6]MS Ahmet III 3469, Al-Khizānah al-'Āmmah bi-al-Ribāṭ MS 43 *jīm,* and Al-Khizānah al-Malikīyah bi-al-Ribāṭ MS 285 (2712); the editor acknowledges having failed to get access to a number of other manuscripts, mentioning MSS Aya Sofia 3086, 3087, and Leiden MS 949 (pp. 7–9).

by the editor every time textual differences occur. On top of that, it is one of this edition′s major merits that the editor actively applied his scrutiny, erudition, and familiarity with the subject, its sources, and its academic production to try to solve the large number of difficulties of both technical and lexicographical nature which the specific character of this treatise poses to a modern reader. This not only enhances its accessibility to non-specialists, it would also allow specialists in related fields to make active use of this sort of source material. However, due to the unfortunate absence of a detailed index, this edition fails to measure up to the standard one expects of a properly executed edition.

However, this first and careful edition of *Al-Ḥiyal fī al-Ḥurūb* by Dr. Nabīl Muḥammad ʿAbd al-ʿAzīz is a major stepping stone for our understanding of the technical branch of *furūsīyah* literature. For, as David Ayalon already observed more than forty years ago, to date this literature remains not only in want of a careful and critical edition of its texts, but also of a lexicographic elimination of the semantic obstacles that continue to obstruct much of their profitable utilization.[7]

REVIEWED BY MICHAEL B. SCHUB, Trinity College, Hartford

In the Mamluk period a number of religious schools flourished under the general name of "Houses *(dūr* or *buyūtāt)* of Hadith in the greater Shām (approximately: Syrian) area, the most famous of which was founded in Damascus by Atabeg Nūr al-Dīn (d. 560/1173). In the eighth/fourteenth century, thousands of scholars (including some women) lived righteous lives investigating and memorizing the traditions of the Prophet which had been *grosso modo* collected by al-Bukhārī (d. 256/870), Muslim (d. 261/875), and the four other editors of the canonical collections of acceptable hadiths for Sunni Muslims ("The Six Books"), i.e., about six hundred years previously.

This work is the outcome of the author's doctoral dissertation, which was accepted in Rabat, Morocco in 1419/1998. After a pedestrian survey of the historical

[7]Ayalon, ″The *Furūsiyya* Exercises,″ 31–32; J. D. Latham and W. F. Paterson, *Saracen Archery: An English Version and Exposition of a Mameluk Work on Archery (ca. AD 1368) with Introduction, Glossary and Illustrations* (London, 1970), xxxii-xxxiii.

background of the period, the author begins what can only be called a hagiography. He lists the ancestors, teachers, children, students (sometimes supplying genealogical charts), etc., of a few hundred *muḥaddith*s, and repeats the encomia (often in verse) of these scholars reported in previous biographical works. No critical scholarly analysis sullies the pages of this worshipful catalog.

Only nine citations from the Quran and fourteen from the hadith are present, and those only *in passing*. Jacob Neusner would include this work in the genre of *Listwissenschaft*. One can only appreciate it as such.

FRANÇOIS CHARETTE, *Mathematical Instrumentation in Fourteenth-Century Egypt and Syria:The Illustrated Treatise of Najm al-Dīn al-Miṣrī.* Islamic Philosophy, Theology, and Science, Texts and Studies, 51 (Leiden: Brill, 2003). Pp. xxi + 422 + 136, illustrations.

REVIEWED BY IRINA LYUTER, Dibner Institute, MIT

This volume is representative of a growing trend in publications devoted to science and technology in the Mamluk period, including the mathematical instrumentation of that period. It contains a critical edition with English translation of the *Kitāb fī al-Ālāt al-Falakīyah* (Charette´s title), a richly illustrated Arabic treatise in 122 chapters concerning the construction of over one hundred different mathematical instruments. The value of the text lies in its detailed descriptions of instruments that are either insufficiently documented in the medieval Arabic technical literature as a whole, or indeed even absent from it. Taking into account the unprecedented number of its illustrations, it would be no exaggeration to describe the treatise as unique in its genre. The text was composed in Cairo around 730/1330 and has come down to us in two anonymous manuscripts.

Charette deserves recognition for his work. He has undertaken a profoundly professional linguistic and historical investigation to identify the author of the treatise as Najm al-Dīn al-Miṣrī, a little-known practical astronomer who spent most of his active life in Cairo; and he has presented convincing arguments for this authorship. Charette is ideally situated for this task, having previously studied three other works by Najm al-Dīn: two short treatises on spherical astronomy and approximate methods of finding the prayer times; and a huge compendium of tables.

The illustrated treatise of Najm al-Dīn was written as a reference manual for intermediate students and thus differs from works by Najm al-Dīn´s contemporaries

written on the use of instruments. It is in fact a compendium of instructions on how to construct a large variety of instruments by ruler and compass, sometimes by methods unique to the author. These instructions are concentrated exclusively on the mathematical aspects of the construction without discussions of a theoretical nature (for example, spherical trigonometry and gnomonics) or of more practical details of the construction (such as constructions of alidades and sights), the knowledge of which is implicitly assumed of the reader.

During the period of Mamluk rule, instrumentation became localized within the frame of a new subdiscipline of astronomy, the science of astronomical timekeeping *(ʻilm al-mīqāt)*. From the second half of the seventh/thirteenth century, this subdiscipline encompassed all aspects of practical astronomy (spherical astronomy, time keeping, astronomical instrumentation, qiblah computation, chronology and prediction of lunar crescent visibility), in other words, those aspects that were of direct relevance to the Islamic community. In David King′s terminology, this was ″an astronomy in the service of Islam.″ This orientation stipulated a new category of professional astronomers—the *muwaqqit*s, employed by a mosque or madrasah and responsible for establishing the times of prayer, computing the qiblah, and constructing instruments.

In his Introduction, Charette evaluates these radical changes in the practice of astronomy in order to define the place, role, and virtues of instrumentation in the context of Egyptian and Syrian societies of the Mamluk period. The increasing significance of the practical and useful aspects of astronomy (as opposed to the theoretical) specified a change in the practice and transmission of science. Among the peculiarities of Mamluk *mīqāt* literature, evident in both the concerns of its authors and the requirements of the religious institutions, Charette identifies the interaction of ″folk″ and mathematical astronomies; the predominance of approximate methods of solving problems for the needs of practical astronomy; the universality of methods for designing and developing instruments without the cost of approximation; the compilation of universal auxiliary tables; and the use of lists of so-called formulae accompanied by the mostly didactic character of the literature.

In this connection, and of particular importance for the history of mathematical sciences, Charette identifies a significant innovation that he deems ″an important step away from the hold of the rhetorical and toward a greater symbolic abstraction″ (p. 23). This innovation, appearing first in the encyclopaedia of *mīqāt* entitled *Jāmiʻ al-Mabādiʼ wa-al-Ghāyāt* by the seventh/thirteenth century astronomer Sharaf al-Dīn al-Marrākushī, consists in compiling mnemotechnic four-column tables in which each row has four quantities in which relation a:b=c:d holds. A similar table, though containing fewer entries, is credited to Najm al-Dīn al-Miṣrī and investigated by Charette in the present book (Part V, pp. 7–8, Appendix B).

The work of al-Marrākushī became the standard reference work for Mamluk Egyptian and Syrian, Rasulid Yemeni, and Ottoman Turkish specialists of the subject, including Najm al-Dīn al-Miṣrī, and is the earliest and most important source for the history of astronomical instrumentation in Islam. In this connection, a remarkable contribution from Charette is the supplemental biographical information he provides on the basis of al-Marrākushī's *Jāmi'*. Moreover, Charette presents in the Introduction a list of numerous lesser- or entirely unknown authors of the seventh–ninth/thirteenth–fifteenth centuries and sketches their main contribution to this science: al-Maqsī, Ibn al-Sam'ūn, al-Mizzī, Ibn al-Sarrāj, Ibn Shāṭir, Ibn al-Ghuzūlī, al-Bakhāniqī, Ṭaybughā al-Baklamishī, Jamāl al-Māridīnī, Ibn al-'Aṭṭār, and others.

Charrete's commentary on Najm al-Dīn's treatise is divided into five chapters and is a logical continuation of his Introduction. As a whole, these chapters form a groundbreaking historical-scientific essay on Islamic mathematical instrumentation during the Mamluk period. In the first part of the commentary, the author presents a classification, based on morphological and historical criteria, of the different categories of astrolabes and related instruments treated by Najm al-Dīn. The following chapters are devoted consequently to horary quadrants and portable dials, fixed sundials, trigonometric instruments, and, finally, miscellaneous instruments. This detailed historical and technical commentary is further characterized by Charette's analysis of a large number of both previously studied and unstudied manuscript sources on instrumentation from the period 800–1500 C.E. Charette also adds commentaries treating the mathematical aspects of the subject in order to aid the reader in grasping the main ideas and achievements of Najm al-Dīn as well as his predecessors and contemporaries. In some cases, Charette provides quite new and useful perspectives on the mathematical peculiarities of the constructions. For example, in the chapter on various-shaped horary quadrants and portable dials, Charette considers these instruments "in the light of the history of nomography" (p. 113) since they undoubtedly bear in modern terms the graphical representation of function of one or more parameters on a two-dimensional surface with a certain scale. What makes this particular chapter of special importance is the fact that earlier textual sources on such instruments are brief and scanty (not to mention that most are still unpublished), whereas Najm al-Dīn's information on them, as demonstrated by Charette, surpasses even the best-known account of al-Marrākushī.

Despite the textual problems inherent in the treatise (the instructions are obscure and indirect, explanations of the technical terminology are absent, and the language of the treatise is Middle Arabic), Charette has succeeded in producing an excellent *editio princeps* and a qualified English translation of this treatise. One small remark on Charette's translating technique may be in order. While the use of

modern terms like ″tangent″ and ″cotangent″ for the corresponding medieval trigonometric functions *ẓill mankūs* and *ẓill mabsūṭ* for the purpose of distinguishing them from proper vertical and horizontal shadows seems quite reasonable, the frequent use of the term ″function″ strikes one as overly modern for the medieval context. This is a relatively minor quibble given Charette′s achievement. The present volume is truly a wonderfully realized edition and translation and a masterful example of sound scholarship. This young author deserves high praise for his devotion to and absorption in the history of Islamic mathematical and technical sciences. I wholeheartedly recommend the present work to historians of Islamic and Western science, specialists of historical scientific instruments, as well as specialists of the Mamluk period. Charette announces future publications in the pages of this book; we await them eagerly.

KHALĪL IBN AYBAK AL-ṢAFADĪ, *Al-Kashf wa-al-Tanbīh ʻalá al-Waṣf wa-al-Tashbīh.* Edited by Hilāl Nājī and Walīd ibn Aḥmad al-Ḥusayn ibn ʻAbd Allāh al-Zubayrī (Leeds: Majallat al-Ḥikmah, 1420/1999). Pp. 530.

NABĪL MUḤAMMAD RASHĀD, *Al-Ṣafadī wa-Sharḥuhu ʻalá Lāmīyat al-ʻAjam: Dirāsah Taḥlīlīyah* (Cairo: Maktabat al-Ādāb, 1421/2001). Pp. 424.

REVIEWED BY EVERETT K. ROWSON, New York University

Khalīl ibn Aybak al-Ṣafadī (d. 764/1363) is in need of no introduction to readers of this journal. His massive biographical dictionary, *al-Wāfī bi-al-Wafayāt,* is a fundamental reference for all students of medieval Islam, and his wide-ranging literary production in other areas assures his status as a key figure for anyone concerned with the history and culture of the early Mamluk period in particular. Burgeoning interest in this period, both in the Middle East and in the West, has meant burgeoning interest in al-Ṣafadī, and the two recent publications under review here—one a critical edition of a previously unpublished text of his, and the other a focused study of what is perhaps his most interesting work—are welcome additions to our library of Ṣafadiana.

Al-Ṣafadī was, above all, an *adīb,* a littérateur, and his *oeuvre* includes a series of monographs on aspects of rhetoric. Those on the two most important tropes in the poetry of his time, paronomasia *(jinās)* and (roughly) double-entendre *(tawriyah),* have been available for some time—the former, indeed, appears to

have been the first of his works to find its way into print[1]—and the latter has been the subject of a fine analytical study by Seeger Bonebakker.[2] Now the redoubtable Hilāl Nājī, to whom we owe so much for his multitudinous critical editions of previously unavailable *adab* texts, has, with his collaborator Walīd al-Zubayrī, offered us the *editio princeps* of al-Ṣafadī's work on similes *(tashbīh),* essentially a poetic anthology but prefaced by not one but *two* theoretical introductions.

In their own introduction to the text, the editors provide a fairly conventional sketch of al-Ṣafadī's life and career, including notes on his interactions with fellow littérateurs (Ibn Nubātah in particular, although no sustained attempt is made to work out the details of the stormy relationship between the two). To this is appended what may be the most complete list to date of al-Ṣafadī's works, with full bibliographical information on eighteen published, thirty-four extant in manuscript, and fifteen apparently lost, as well as five red herrings that are not al-Ṣafadī's at all. There are a few minor slips in this list, however, and in a few places it is already out of date. The *Rashf al-Zulāl fī Waṣf al-Hilāl* is included among the published works, although the editors themselves point out that this is a mistake (it is extant in manuscript). The *Ikhtirā' al-Khurā'* has now been published; to describe it as "an explanation of two obscure verses" is not inaccurate, but obscures the fact that the verses are nonsense and the entire work is a parody of scholarly practice (as noted already by Brockelmann). Several more volumes of the *Wāfī* have appeared since the editors' tally of the progress in its publication. Whether one can conclude that al-Ṣafadī put together his own *dīwān* (now lost) from Ibn Taghrībirdī's statement that "his poetry is copious *(shi'ruhu kathīr)*" seems problematical.

Discussing the text itself, the editors cogently argue for its authenticity on the basis of both external and internal evidence. They also offer an illuminating quotation from Tāj al-Dīn al-Subkī (d. 771/1369) on al-Ṣafadī's composition techniques: having borrowed from al-Ṣafadī one volume of his multi-volume commonplace book, the *Tadhkirah,* at the time that he was in the course of composing his work on similes, al-Subkī noticed a notation to the effect that "this volume has been gone through for material for the *tashbīh* book *(najiza al-tashbīh minhu)*"—and promptly composed a three-line poem in praise of the author cleverly playing off this phrase. Nājī and al-Zubayrī then provide a literary context of sorts for the work in the form of a list of ten earlier works on *tashbīhāt* (several of them

---

[1]*Jinān al-Jinās fī 'Ilm al-Badī'* (Istanbul, 1881) (with al-Bisṭāmī, *Manāhij al-Tawassul fī Mabāhij al-Tarassul*); I have not seen the recent edition by Samīr Ḥusayn Ḥalabī (Beirut, 1987).

[2]*Faḍḍ al-Khitām 'an al-Tawriyah wa-al-Istikhdām*, ed. al-Muḥammadī 'Abd al-'Azīz al-Ḥināwī (Cairo, 1979); S. A. Bonebakker, *Some Early Definitions of the Tawriya and Ṣafadī's* Faḍḍ al-xitām 'an at-tawriya wa-'l-istixdām (The Hague, 1966).

explicitly acknowledged as sources by al-Ṣafadī), although they make no attempt to analyze this material or chart a development of the genre. The edition itself is based on a unique Paris manuscript, briefly described and illustrated with four extremely dark and muddy photographs. Most disconcerting is the editors' bald statement that the work's second volume has been lost. While this seems likely enough—the text as published stops without any real ending, and another entire volume with other "themes" is easy to envisage—we are nowhere vouchsafed the grounds for this succinct pronouncement. (Something in the manuscript itself? We are not told).

Certainly the most interesting parts of the *Kashf* itself are its introductions. Why there are two of these rather than one is not entirely clear, although the first is on the whole more general and diffuse and the second highly technical. The ten chapters of the first introduction include, among other topics, a word-study of the root *sh-b-h* (with, inevitably, a review of interpretations of the famous "obscure verses" [*mutashābihāt*] of Quran 3:7); a discussion of the imaginative *(mukhayyilah)* faculty of the brain, complete with diagram (and betraying a very superficial knowledge of the philosophical tradition); a first pass (followed up in the second introduction) at an analytical parsing of different kinds of similes, with a spirited attack on Ḍiyā' al-Dīn Ibn al-Athīr (d. 637/1239) in defense of al-Qāḍī al-Fāḍil (d. 596/1200);[3] and a list of thirty poets who were particularly good at employing similes, about half of them "post-classical," which gives us valuable insight into al-Ṣafadī's perception of the canon of Arabic poetry in his day. The second introduction, in twenty-four chapters, lists a variety of definitions of *tashbīh,* and distinguishes it carefully from the related concepts of *mathal, tamthīl,* and *majāz,* but is mostly devoted to working through a tree of subvarieties of simile, differentiated by various combinations of such aspects as concrete/abstract, unrestricted/restricted, single/multiple, and reversible/irreversible. The editors offer us no guidance for situating al-Ṣafadī's views here in their context, in terms either of sources or of responses to earlier opinions; but then one cannot demand that a text edition also be a study.

The bulk of the book itself, after the introductions—what al-Ṣafadī calls the "*natījah*"—consists of an anthology of verses deploying similes, arranged thematically. There are sixty-five chapters, beginning with celestial phenomena (sky, stars, and Milky Way; Pleiades; moon; etc.), shifting to meteorology (thunder and lightning; snow and hail; rainbow; etc.), then moving on to gardens (with some twenty chapters on individual flowers, including rich material on the famous

---

[3]Al-Qāḍī al-Fāḍil was of course a literary icon in al-Ṣafadī's day, whereas Ibn al-Athīr seems to have been a personal bugbear of his, as emerges most clearly in his *Nuṣrat al-Thā'ir*, written in support of and supplementing *Al-Falak al-Dā'ir,* Ibn Abī al-Ḥadīd's (d. 656/1258) attack on Ibn al-Athīr's *Al-Mathal al-Sā'ir.*

debate between the rose and the narcissus), fruits, vegetables (briefly, but eggplant gets inordinate attention), desserts and other foods, and beer. With bathhouses, followed by tree branches and birds, the principle of organization becomes a bit foggier; and the abrupt ending with birds certainly does suggest more topics to come. The poems presented, mostly of two to four lines, but occasionally longer, are rarely commented on, although al-Ṣafadī does like to offer "chains" of lines, tracing back through the tradition the use of a specific simile (*akhadhahu min,* "he took [this image] from"). Poets from all periods are represented, although there is relatively little pre-Abbasid verse; quite a lot of Andalusian poetry is included. Al-Ṣafadī sporadically includes as well some of his own verses, usually at the end of a chapter.

The edition is on the whole meticulous and intelligent (with full attention to the text's making sense, to the prosody of the verse, and so forth). The relatively copious and at times quite valuable notes mainly focus on parallel texts, often with variant readings, but do not attempt any real analysis of al-Ṣafadī's use of his sources. There are a few problems. Typographical errors occur in the first third of the book at a rate of about one every nine pages, hardly optimal but not an unfamiliar problem; but then from about page 148 this rate increases to about one every three pages, through to the end of the text, a fairly intolerable rate in particular for a text consisting mostly of poetry, not the least because most of these errors produce real words (and in some cases must be editors' rather than printers' errors); the misreading *aṣfar* for *aṣghar*—and vice versa—is especially frequent. Furthermore, page 148 itself is an erroneous duplication of page 149, and the proper text for that page is missing; the same thing happens at page 329 (duplicating page 339, with its own material omitted). There is also a bit of bowdlerization; although the *Kashf* is certainly not one of al-Ṣafadī's racier books, the editors have felt compelled to suppress three single words and two lines of verse in the first introduction, as well as several words from a line of verse about eggplant in the *natījah*. Less problematical, if not entirely justified, are the editors' relatively frequent interpolations of additional lines of verse from parallel sources, always, however, carefully noted.

The end matter provided is not really very satisfactory. We are given sixty pages of capsule bio-bibliographies of poets who appear in the work, alphabetically by *ism,* but not all of the latter appear and the basis for inclusion is not at all clear. This is followed by the bibliography, arranged alphabetically by title, consisting almost entirely of primary sources, and exclusively in Arabic, and a detailed table of contents. Distressingly, there are no indices, despite the obvious value both an index of proper names and one of verses would have had for readers and researchers.

Still, it is a joy to have this book in print—although it could hardly be claimed that it is al-Ṣafadī's most scintillating achievement. Twelve solid pages of verses

(mostly one- and two-liners) on the Pleiades can become a bit wearisome—and such dogged thoroughness betrays a weakness of al-Ṣafadī's that was noted even by medieval readers. Nabīl Muḥammad Rashād, in the second of the two publications to be considered here, has reproduced a telling comment by Ibn Taghrībirdī, praising al-Ṣafadī's literary accomplishments but noting that "I have observed, reading his verse in his own hand, that when he emulates *(yu'āriḍ)* one of the illustrious poets among his predecessors on a particular clever topos *(ma'ná)* he takes that topos or twist *(nuktah)* and renders it himself in two lines of verse, often quite good ones, but then adds two more lines on the same topos, and then two more, and two more, relentlessly continuing to versify the topos while saying 'and I said *(wa-qultu anā),*' until the eye gets bored, the mind gets fed up, and the ear rejects it; if he had abandoned such a procedure and been a little more discriminating in presenting us with his own verse, he would be (considered) one of the great poets. . . ."[4]

On the other hand, al-Ṣafadī could be exquisitely sensitive to readers' short attention spans, and nowhere more than in his *Al-Ghayth al-Musajjam fī Sharḥ Lāmīyat al-'Ajam*, a sort of *tour de force* of digression, in which commenting a celebrated 59-line poem becomes a vehicle for a two-volume work consisting mainly of extended disquisitions on the most varied topics imaginable. The *Ghayth* has been available in print since 1887, although never critically edited. It is a pity that the late Franz Rosenthal never devoted a sustained study to this work, despite his obvious enchantment with it, which is clear from any number of his articles (including his relatively recent entry on al-Ṣafadī for the *Encyclopaedia of Islam*). Now we do have such a sustained study, from Nabīl Muḥammad Rashād, and if it is disappointing in some important respects it is nevertheless gratifying to see attention devoted to such a rich, erudite, and entertaining monument of Arabic literature.

Rashād's study began as an M. A. thesis under Muḥammad Zaghlūl Sallām, whose surveys of the later periods of Arabic literature, supplemented by an array of text editions, are fundamental for anyone pursuing further research in the field. This is, not surprisingly, a less mature work, and while Rashād has read the *Ghayth* carefully, and on the whole intelligently, his vision is in some ways severely circumscribed. Not only is he oblivious to Western scholarship (his references throughout are exclusively Arabic), he appears to be unaware of Arabic scholarship outside Egypt as well, citing two unpublished Egyptian dissertations of relevance to the *Ghayth* but ignoring two relatively recent published studies by

---

[4]Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī*, vol. 5, ed. Nabīl Muḥammad 'Abd al-'Azīz (Cairo, 1988), 257, cited by Rashād, p. 79.

Syrian scholars.[5] And while quite a lot of valuable contextualizing information is provided for both the author and his book, the ″analysis″ promised in Rashād′s title appears only sporadically, and many of the more interesting and important questions about both author and book are either not answered or not posed.

Predictably, the first two of Rashād′s five chapters are devoted to ″Intellectual Life in the Period″ and ″al-Ṣafadī′s Cultural Accomplishments *(thaqāfat al-Ṣafadī).″* In the former he is at pains to stress (and perhaps overstress) the support offered to arts and letters by the Mamluks themselves, and makes clear his vision of this period in Arabic literary history as one of retrenchment and preservation, after the disastrous Mongol invasions of the previous century; the prominence of ″the encyclopedic impulse″ in the ″renaissance″ *(naḥdah)* of Arabic learning and literature in Mamluk Egypt (and, distinctly secondarily, Syria) is explained on this basis and lauded in explicitly nationalistic terms. An excursus on accomplishments in the secular sciences (alchemy, medicine, and others) suffers from a certain naivete, but does avoid (as does the book as a whole) the traditional and now much contested view of the period as one of decadence. Rashād notes, correctly, the extraordinary prominence of the homoerotic *ghazal* and explicit sexuality *(mujūn)* in the material he is discussing, and while bowing to contemporary mores in generally avoiding extensive citation from these genres he laudably refuses to bowdlerize such quotations as are essential to his presentation. His discussions of the popularity of rhetorical tropes in general, and especially *jinās, tawriyah,* and *taḍmīn* (quotation), of the importance of Sufism in the culture of the period, and of the role of Andalusian and Maghribi immigrants in Mamluk culture generally are interesting, and his portrayal of the popularity of literary ″debates″ offers some truly fascinating material (including al-Ṣafadī′s rather jaundiced views on Ibn Taymīyah).

Chapter 2, on al-Ṣafadī himself and his ″culture,″ stresses the breadth of the latter, rather severely overestimating al-Ṣafadī′s expertise in science and philosophy and with some attendant confusion over the distinctions to be made between the realms of philosophy, theology, and science. The section on al-Ṣafadī as *adīb* is, on the other hand, quite rich, particularly with regard to his relationships with such fellow *udabā'* as Ibn Nubātah, al-Subkī, and the Andalusian Abū Ḥayyān (d. 745/1344).

---

[5]He notes Manāhil Fakhr al-Dīn Fulayḥ, ″Nashāṭ al-Ṣafadī fī al-Naqd wa-al-Balāghah,″ a 1977 Ph.D. dissertation in the Faculty of Letters at Cairo University, and Ibrāhīm Muḥammad Manṣūr, ″Shurūḥ Lāmīyat al-'Ajam, Dirāsah Taḥlīlīyah Naqdīyah,″ a 1998 M.S. thesis in the Faculty of Letters at Tanta University. Unnoted are Muḥammad 'Alī al-Sulṭānī, *Al-Naqd al-Adabī fī al-Qarn al-Thāmin al-Hijrī bayna al-Ṣafadī wa-Mu'āṣirīhi* (Damascus, 1974, published in the wake of his edition of the *Nuṣrat al-Thā'ir* [Damascus, 1972]), and Ḥasan Dhikrī Ḥasan, *Ṣalāḥ al-Dīn al-Ṣafadī wa-Minhajuhu fī Dirāsat al-Naṣṣ al-Adabī wa-Naqdihi* (Cairo, 1988).

The remaining three chapters focus on the *Ghayth* itself. Chapter 3 looks at al-Ṣafadī´s sources, which are divided into oral and written. Al-Ṣafadī was generally very punctilious about his citations, and his habit of saying ˝I heard from X in Damascus (or Cairo, or Ṣafad) in the year Y˝ or ˝I read the following by X in his own hand˝ has much to tell us about both his personal biography and the way *adab* worked, so to speak, in his world. While presenting his material mostly in the form of lists, Rashād does manage, cumulatively, to paint a rather vivid picture of this. Had he consulted Josef van Ess´s article on al-Ṣafadī, however, he would have been able to both sharpen and expand his presentation.[6] In discussing interrelationships between al-Ṣafadī´s own works, he fails to note that a passing reference in the *Ghayth* to a previously-composed opuscule *(muqtaḍab)* entitled *Al-Tanbīh ʻalá al-Tashbīh* must be either the *Kashf* edited by Nājī and al-Zubayrī or at least some earlier version thereof. And he is quite wrong in assuming that the fourteenth volume of the *Tadhkirah,* of which there is a copy in the Egyptian National Library, is the last; van Ess has pointed out that al-Ṣafadī produced at least forty-nine volumes of this work.

Chapter 4, on al-Ṣafadī´s methodology in the *Ghayth,* tackles the topic from a number of different vantage points. Regarding the author´s motives for composing the work, Rashād specifies the excellence of the poem being commented on, the model of previous commentaries on the *Lāmīyat al-ʻArab* of the pre-Islamic poet al-Shanfará, and al-Ṣafadī´s interest in displaying both his eloquence and his erudition; the latter point, an important one, deserves a fuller and more critical treatment than Rashād has given it. Al-Ṣafadī, in the introduction to the *Ghayth,* is quite explicit about his methodological aims, and Rashād pursues a ˝test case,˝ examining the extent to which the commentary on the poem´s first line actually conforms to them; his conclusion that it does so ˝perfectly˝ is perhaps a bit disappointing, but less so than his reluctance to analyze, rather than simply present, al-Ṣafadī´s rather elaborate defense of his digressive style and his explicit interest in supporting ˝modern˝ poets against the prejudices of more conservative tastes. Rashād is actually a bit touchy about the former, offering a rough division of al-Ṣafadī´s relentless digressions *(istiṭrād)* into those that are pertinent, fortuitous (not directly pertinent to the text being elucidated, but pertinent to al-Ṣafadī´s broader pedagogical and encyclopedic aims), and unwarranted (about which Rashād´s comments are distinctly ungenerous). On al-Ṣafadī´s pedagogical aims,

---

[6]Josef van Ess, ˝Ṣafadī-Splitter,˝ *Der Islam* 53 (1976): 242–66, and 54 (1977): 77–107, is, as indicated by its title, rather a hodgepodge of observations (but valuable ones), in the wake of van Ess´s editing volume nine of al-Ṣafadī´s *Wāfī,* including an extensive list of his sources for that work. Also helpful would have been Donald P. Little, ˝Al-Ṣafadī as Biographer of His Contemporaries,˝ in *Essays on Islamic Civilization Presented to Niyazi Gerkes* (Leiden, 1976), 109–20.

on the other hand, Rashād is perceptive and cogent, offering a variety of arguments to show that the distribution of information in the *Ghayth* was unquestionably determined in large part by the author′s expectation that students, or neophytes, would constitute a large proportion of its audience. Appended to this chapter is the full text of al-Ṭughrā'ī′s *Lāmīyah* as it appears (59 lines, chopped up verse by verse) in the *Ghayth*, as well as an ″emulation″ *(mu'āraḍah)* of it (60 lines) by al-Ṣafadī, the latter absent from the *Ghayth* but happily discovered by Rashād, by chance, in a much later anthology.

In chapter 5, on ″Critical and Rhetorical Views in the Commentary,″ Rashād picks out five literary topics for further investigation. The first of these, on the ″music″ of poetry, is mostly devoted to a discussion of al-Ṣafadī′s arresting suggestion that al-Khalīl ibn Aḥmad (d. 175/791) was influenced by Greek prosody in producing his henceforth canonical analysis of prosody in Arabic. Giving full credit to the plausibility of this proposal, Rashād nevertheless ultimately rejects it on the basis of the consensus of traditional reports to the contrary from ″our forebears *(aslāfunā)*″; such credulity is unfortunately characteristic of the book as a whole. The other chosen topics—well justified by the content of the *Ghayth* itself—are al-Ṣafadī′s assessment of the verse of al-Mutanabbī (staking out a middle position in the centuries-old controversy), his defense of the poet Ibn Ṣanā' al-Mulk (d. 608/1211) against an attack by a certain Ibn Jabbārah (d. 632/1235), his treatment of plagiarism (both al-Ṭughrā'ī′s ″thefts″ from earlier poets and those by later poets from him), and his discussions of rhetorical tropes (eighteen of them altogether, with particular attention to paronomasia *[jinās]*). Of the latter perhaps the most interesting is *ikhtilāṣ,* the device of cleverly shifting a topos *(ma'ná)* from one genre *(gharaḍ)* to another (such as using love-poetry imagery in an elegy, for example); al-Ṣafadī was extremely fond of this technique, as were his contemporaries generally, but here Rashād has little to say about it beyond his quotations from al-Ṣafadī himself.

In an appendix, Rashād pulls together all of al-Ṣafadī′s own verses as cited in the *Ghayth*—187 altogether, few exceeding four lines. In itself this is useful (since we lack a real *dīwān* of al-Ṣafadī′s poetry), but Rashād presents the verses alphabetically by rhyme letter, with virtually no indication of their original context, which in some cases renders their point completely opaque; some of the instances of *taḍmīn* (embedding quotations from earlier poetry) elude him as well. A brief conclusion simply highlights the principal points made throughout the study, and is followed by a bibliography (all Arabic, divided into primary and secondary sources) and a detailed table of contents. Again, there are no indices.

Despite its limitations, Rashād′s study is must reading for those of us with a particular interest in al-Ṣafadī, and is certainly worth the attention of anyone concerned with Arabic literature of the Mamluk period generally. Together, this

text edition and study advance our knowledge appreciably, and as indicators of a trend encourage us to look forward to more Ṣafadī, and more Ṣafadī studies, in the near future.

The Historiography of Islamic Egypt (c. 950–1800). Edited by Hugh Kennedy. The Medieval Mediterranean: Peoples, Economies and Cultures, 400–1453, no 31. (Leiden: E. J. Brill, 2001). Pp. 269.

REVIEWED BY ANNE F. BROADBRIDGE, University of Massachusetts at Amherst

This work represents the proceedings of a conference on the Historiography of Islamic Egypt, held at the University of Saint Andrews, Scotland, from 28–31 August, 1997. Based on the generally high quality of these papers, it appears to have been a fascinating and unusually cohesive conference. All but one article are written in English; the exception is in French. This is a satisfying collection, which provides well-deserved attention to historians of Egypt, and paves the way for future work in this rich field.

The volume is arranged chronologically in sections of uneven length. Section topics include the Fatimid and Ayyubid Periods (358–658/969–1260), the Bahri Mamluk Period (648–792/1250–1390), al-Maqrīzī (d. 845/1442) and His World, Historians of the Circassian Mamluk Period (784–922/1382–1517), and the Historiography of Ottoman Egypt. The collection concludes with a solitary article on the modern period.

Only two scholars presented on the Fatimid and Ayyubid periods, which reflects the relative paucity of that historical material. First Michael Brett uses John Wansborough′s theory on diplomatic terminology as a meta-language for communication in the Mediterranean to illustrate that Fatimid chancery documents, even when inaccurate, shaped the tone and style of the chronicles that relied on them as sources. Brett also discusses the institutional continuity that allowed authors from later periods to use these documents, and theorizes briefly about reasons for the eventual disappearance of such materials. Next David Morray provides a description of the biographical dictionary of Aleppo by Ibn al-Adīm (d. 660/1262), the *Bughyat al-Ṭalab fī Tārīkh Ḥalab*. Morray focuses on the different kinds of travel in which medieval personalities engaged, and lays the groundwork for future in-depth studies.

Given the preponderance of historical sources for the Mamluk period (648–923/1250–1517), it is no surprise that Mamluk topics dominated the

conference. In the section on the Bahri period, D. S. Richards discusses the historian Baybars al-Manṣūrī (d. 725/1325) as a person and an author, although this work has now been superseded by the introduction to his edition of Baybars al-Manṣūrī's *Zubdat al-Fikrah fī Tārīkh al-Ḥijrah* (Beirut, 1419/1998). Reuven Amitai uses six brief case studies to analyze the sources, style, strengths, and weaknesses of the little-known history of the Mongols written by the Mamluk historian Shihāb al-Dīn Aḥmad ibn ʻAbd al-Wahhāb al-Nuwayrī (d. 733/1333), which appears in his *Nihāyat al-Arab fī Funūn al-Adab.* Amitai demonstrates that al-Nuwayrī's information is often independent of the Persian histories and the anonymous *Secret History of the Mongols,* and argues convincingly that this work must be consulted by anyone seeking a fresh view of Mongol history. Robert Irwin makes a similar call for scholars to move outside the standard historical corpus. Interested in both the literary world of the Mamluk sultanate and its history, Irwin has struggled to promote Arabic literature in its own right, and as an aid to historical study.[1] This time he presents a literary analysis of an erotic text by the eighth/fourteenth-century ʻAlī al-Baghdādī, which he combines with an outline of the way this fictional collection could illuminate the social history of Cairo in the 730s/1330s.

Several presenters contributed to our increasingly sophisticated understanding of scholarly biases in the sources with which we grapple. For the Bahri period, Nasser Rabbat argues that when writing, the civilian literati not only emphasized their own social class to the detriment of commoners and the military elite, but actually constructed specific and often reductionist images of these two other groups, which have affected modern views of Mamluk society. Rabbat also explores the political and social reasons for the literati's biases, and the way the literati used variations in language to further their stereotypes. For the Circassian period, Carl Petry analyzes uneven coverage of Bedouin raids in the countryside and urban crime in Cairo to reveal that historians' discussion of crime reflected their own privileged and stratified view of society, and also gave them an opportunity to issue oblique criticism of the ruling elite.

An entire section of the conference was devoted to that perennially interesting personality and topic, the famous eighth/fifteenth-century Mamluk-era historian Taqī al-Dīn Aḥmad ibn ʻAlī al-Maqrīzī (d. 845/1442).[2] In the solitary article written in French, Ayman Fu'ād Sayyid provides an overview of topographical

[2]Scholars interested in al-Maqrīzī will also benefit from the proceedings of a later conference devoted entirely to that historian, for which see *Mamlūk Studies Review* 7/2 (2003).

writing in Egypt *(khiṭāṭ)* both before and after the composition of al-Maqrīzī's paramount *Al-Mawā'iẓ wa-al-I'tibār fī Dhikr al-Khiṭāṭ wa-al-Āthār*. Sayyid draws our attention to those authors whose works have been lost, and those who were members of religious minorities, among them Copts and Shi'ites. Also focusing on al-Maqrīzī, Amalia Levanoni and Irmeli Perho both employ case studies to illuminate different aspects of his writing. Levanoni uses the struggles for power by the Mamluk sultan Barqūq (r. 784–91/1382–89; 791–801/1389–99) to reveal that al-Maqrīzī's moralizing sometimes led him to present biased or inaccurate information; she also makes an important call for a reevaluation of the role of ethnicity in the transfer from Turkish to Circassian rule. Perho's case study of the treatment of common people in Cairo *(al-'āmmah)* in the writings of both al-Maqrīzī and his student Yūsuf ibn Taghrībirdī (d. 874/1470) demonstrates that their writing styles were shaped by their different interests and backgrounds.

Some took this conference as an opportunity to introduce new or little-known works. Among them was Li Guo, writing on Burhān al-Dīn Ibrāhīm ibn 'Umar al-Biqā'ī (d. 885/1480), a brilliant maverick scholar with an ugly personal life whose chronicle contributes an original view of society in the mid-ninth/fifteenth century. A welcome addition to the existing sources, al-Biqā'ī's writing should expand our knowledge of the history and culture of this as yet understudied period. Guo also discusses al-Biqā'ī's use of apocalyptic visions and Quranic prophecy to produce a distinctive salvation history, and places al-Biqā'ī's work in the greater context of Islamic salvation history over the ages. Similarly, the late Ulrich Haarmann, to whom the conference proceedings are dedicated, also contributed an investigation of a misfit scholar, although this one was more bumbling than brilliant. Haarmann discussed one Abū Ḥāmid al-Qudsī (d. 888/1483), who was emotionally scarred in a nasty incident of scholarly hazing. By subsequently rejecting the norms of the social class that had rejected him, Abū Ḥāmid managed to break all literary conventions, distance himself from the tired stereotypes used for the Mamluk military elite (and aptly described by Nasser Rabbat earlier in this volume), and produce a unique and valuable set of works about life in Cairo in the later ninth/fifteenth century.

Despite the dominance of the Mamluk period, this collection also features a welcome set of articles on the historiographical wealth of Ottoman Egypt. Michael Winter provides an overview of changing attitudes towards the Ottomans displayed by Egyptian historians from the tenth/sixteenth to the fourteenth/twentieth centuries. This contribution is particularly useful for its discussion of works composed in Arabic, Turkish, and Hebrew.

Other articles on the Ottoman period propose the rethinking of current scholarly assumptions and practices. Jane Hathaway uses the example of two rival political factions in Egypt and their real or fictional ties to Yemen to call for the rehabilitation

of Yemen as crucial in understanding Egypt. She also demonstrates the localism and limitations of Ottoman-era historians by contrasting the simultaneous yet dissimilar historiographical traditions of the two regions. Daniel Crecilius also suggests a revision of scholarly assumptions. He unmasks the revered historian ʻAbd al-Raḥmān ibn Ḥasan al-Jabarṭī (d. 1237/1822) as an overly proud man who refused to acknowledge his sources, then details the way some modern scholars have been misled by al-Jabarṭī's coy insistence that he worked alone. That accomplished, Crecilius rehabilitates many of the oft-ignored eleventh/seventeenth- and twelfth/eighteenth-century historians whose works al-Jabarṭī consulted, and suggests that we do the same.

In a similarly revisionist vein, Nelly Hanna argues that a surfeit of comparisons between Ottoman Egyptian historians and their Mamluk predecessors has divorced the Ottoman authors from the social and cultural context in which their works were produced. She rectifies this shortcoming with an analysis of that context and of the role played in it by history as art, entertainment, and education. Like Nasser Rabbat, Hanna focuses in part on language variation in the texts, which illuminate different aspects of society and culture. Hanna also provides a list of histories in manuscript from this period, which should be read with the material provided by Crecilius and by Winter for a sense of the extent and variety of Ottoman Egyptian historical sources.

The final contributor, Paul Starkey, analyzes the uses of Egyptian medieval and pharaonic history by modern authors of fiction, and spotlights the works of Jurjī Zaydān and Gamāl al-Ghīṭānī. Like Robert Irwin's piece, this work gives us a welcome view of the shifting boundaries between history and fiction, and a reminder that history—though fascinating—is but one aspect of the extraordinary legacy of Egypt.

The editing of this collection is uneven, and the book contains some typographical errors in English and French, as well as mistakes in the transliteration of Arabic. But these are minor faults. They do not change the fact that reading such a fine collection of essays should be considered *de rigeur* for serious historians. By doing so, they will gain a new and subtle vision of the works on which we all depend.

REVIEWED BY FRÉDÉRIC BAUDEN, University of Liège

When one considers Mamluk historiography, it is now recognized that there exists a Ḥijāzī school of historians in addition to the Egyptian and Syrian ones. It remains to be determined if significant differences characterize the historians of this area as compared to their colleagues in Cairo or Damascus. It would be interesting to know whether their technique of redaction or the use they made of their sources shows similarity to the historians of the other schools. However the Ḥijāzī historians have not yet attracted sufficient interest from scholars conducting studies of this sort, which is a great pity. Only recently, a first attempt to survey all Meccan historians, from the very beginning until the nineteenth century, has appeared and should stimulate further research in this field despite its shortcomings.[2]

The emergence of this school during the period under consideration coincides with the activity of a Meccan scholar, although of Moroccan origin, who lived mainly during the second period of Mamluk rule, namely Taqī al-Dīn al-Fāsī (832/1429). Between him and the first historians of Mecca, al-Azraqī (244/858) and al-Fākihī (*adhuc viv.* 272/885), there is a gap of more than five centuries, and thus it is important to stress the fact that he can be credited with the revival of a school that had not really caught on. This does not mean that there were no other scholars who were interested in the history of Mecca, but their works were merely isolated cases in their production, while al-Fāsī devoted most of his time to the writing of historical books dealing with the Holy City. Also, the heuristic aspect

[2]See Muḥammad al-Ḥabīb al-Hīlah, *Al-Tārīkh wa-al-Mu'arrikhūn bi-Makkah min al-Qarn al-Thālith al-Hijrī ilá al-Qarn al-Thālithah 'Asharah : Jam', 'Arḍ wa-Ta'rīf* (London: Al-Furqān Islamic Heritage Foundation , Makkah al-Mukarramah Encyclopaedia Branch, 1994). See my review in *MSR* 3 (1999): 223–30.

of his works is worthy of mention. Unlike many historians, he did not rely only on other written sources, although they included *fiqh* and hadith works for instance, but utilized less conventional materials such as diplomas *(ijāzah)* and dictionaries of authorities (*mashyakhah, muʿjam al-shuyūkh, thabat*). Even more intriguing is his undertaking ″field work″ in search of evidence, as when he personally measured the Kaʿbah, comparing his results to those of his predecessors. The same inquisitiveness drove him when, as an epigraphist, he scrutinized inscriptions which he found on buildings, sometimes giving the full text. Al-Fāsī certainly deserves a study in his own right and it is to be hoped that this call will not go unheeded.[3]

If he won fame and inspired students, it was thanks to two of his books: a biographical dictionary of residents of Mecca from the beginning of Islam to his own time, entitled *Al-ʿIqd al-Thamīn fī Tārīkh al-Balad al-Amīn,*[4] and a history of the Holy City, the title of which is *Shifāʾ al-Gharām bi-Akhbār al-Balad al-Ḥarām.* Both were begun at the same time and conceived as complementary. The idea of composing such a history occurred to him after he noticed that since al-Azraqī nothing serious had been written on the subject (*Shifāʾ* 1:39), a lacuna even stranger in his eyes when he considered that other cities had already been the subject of this kind of work, giving as examples the *Tārīkh Baghdād* by al-Khaṭīb al-Baghdādī, the *Tārīkh Dimashq* by Ibn ʿAsākir, and the *Tārīkh Miṣr* by al-Quṭb al-Ḥalabī (1:42). He then decided to collect all he had read about this subject, including inscriptions found on marble, stones, and wood, oral information, etc. (1:40). All the material gathered on independent leaves was then reorganized, following a plan of forty chapters.[5] It is thus clear that the *Shifāʾ* is not a conventional

[3]What is available is completely inadequate. See Ṣubḥī ʿAbd al-Munʿim Muḥammad, *Taqī al-Dīn al-Fāsī: Rāʾid al-Muʾarrikhīn al-Ḥijāzīyīn (775–832 H./1373–1429 M.)* (Cairo: al-ʿArabī lil-Nashr wa-al-Tawzīʿ, 1997). Reviewed by Li Guo in *MSR* 5 (2001): 169–75.

[4]Ed. by Muḥammad Ḥāmid Al-Fiqī (vol. 1), Fuʾād Sayyid (vols. 2–7), and Maḥmūd Muḥammad Al-Ṭanāḥī (vol. 8) (Cairo: Maṭbaʿat al-Sunnah al-Muḥammadīyah, 1962–69; repr., Beirut: Muʾassasat al-Risālah, 1406/1986).

[5]In a very important note added at the end of his book (2:1065), al-Fāsī recounts the history of its composition, explaining that the original work was much bigger and that he summarized it a first time in 811. Initially, it was organized in 24 chapters, but the author made important additions in 812, 813, 814, 815, and 816 which resulted in the presentation in 40 chapters as it is now. New additions were brought in 817 and 818–19. Most of these were taken from *Tārīkh Makkah* by al-Fākihī, a work which he did not get access to before, and from his own book *Al-ʿIqd al-Thamīn*. Thus the actual version of the *Shifāʾ* appears to be in fact a summary made by the author and expanded several times. The original text is constantly referred to by the author as the *aṣl* (1:47: ″asʾalu min kull wāqif ʿalá hādhā al-mukhtaṣar wa-aṣlihi″; 1:356: ″kamā dhakartuhu fī aṣl hādhā al-kitāb wa-iqtaṣartuhu hunā min dhālika ʿalá mā dhakartuhu″; 1:380: ″wa-nadhkuruhu kamā dhukira fī aṣl hādhā al-kitāb″). This version must have contained,

historical work where the data are presented according to the year or the reign. Each chapter focuses on a theme dealing with the Ḥaram (for instance, the names of Mecca, the Ḥaram, the Ka'bah, etc.) where all periods are considered, beginning with the Jāhilīyah. For Mamlukologists, the most important parts are probably chapters 23 (on the madrasahs, *ribāṭ*s, etc.) and 37 to 39 (lists of governors, and political, meteorological, and finally economic events).[6] But substantial data can also be found scattered in other chapters. Those interested in the Fatimid period will be surprised to learn that al-Fāsī occasionally quotes the *Tārīkh* of al-Musabbiḥī as he had access to a resumé *(mukhtaṣar)* made by Rashīd al-Dīn al-Mundhirī (1:203), a fact that has been overlooked by historians of this period.[7]

Before the edition under discussion here, the *Shifā'* was available in the following ones:

1) It was published for the first time in 1859, but only partly, by F. Wüstenfeld, in a collection of works dealing exclusively with the Holy City.[8]

2) It was only in 1956 that the full text was made available to scholars[9] in an edition based on an undated manuscript belonging to the Dār al-Kutub al-Miṣrīyah (shelf-mark: Tārīkh 504). This edition also utilized another manuscript which was in fact a recent copy of the Cairo manuscript, and the editors also made use of other sources. The result of the collation was indicated in the footnotes, which rarely satisfy the requirements of a scientific edition.

3) Another edition was prepared by 'Umar 'Abd al-Salām Tadmurī.[10] It has been criticized by al-Hīlah[11] as being just a copy of 2). This same author recognized the lack of a good critical edition of this important text and hoped that one would be published in the future.

This could have been the case with the present edition. Published by a committee of three persons under the supervision of Sa'īd 'Abd al-Fattāḥ, it appears as no. 2 in a promising series called "Mawsū'at Makkah wa-al-Madīnah," where no. 1 was in fact the *Tārīkh Makkah* by al-Azraqī. It seems thus that the publisher intends to place at the disposal of scholars the most important texts dealing with the two Holy Cities. In his preface (p. 11), the supervisor stresses the fact that only a few

---

among other details, full chains of transmitters. It is now presumably lost.

[6]Some of these aspects have already been studied. See particularly the articles published by R. Mortel and C. Morisot.

[7]These quotations are not found in A. F. Sayyid, "Nuṣūṣ Ḍā'i'ah min Akhbār Miṣr lil-Musabbiḥī," *Annales Islamologiques* 17 (1981): 1–54.

[8]*Die Chroniken der Stadt Mekka* (Leipzig: F. A. Brockhaus, 1857–61), 2:55–324.

[9]Ed. by a board of experts, with supplements including *Al-Durrah al-Thamīnah fī Tārīkh al-Madīnah* by Ibn al-Najjār (Mecca: Maktabat al-Nahḍah al-Ḥadīthah).

[11]*Al-Tārīkh wa-al-Mu'arrikhūn bi-Makkah,* 122.

books on Mecca have been published, although many manuscripts are still waiting to be unearthed. What is curious in such a statement is why the committee decided to publish first two histories which were already available, unless it intended to prepare new critical editions. Unfortunately, as we will see with the *Shifā',* this is far from being the case.

The introduction (pp. 13–33) contains a short biography of al-Fāsī where only his most important works are mentioned. It lacks references and contributes nothing to our knowledge of the author. In the next section (pp. 19–21 and 27–33), the manuscripts ″selected″ are described. The editors have relied on two manuscripts, one of them corresponding to the Dār al-Kutub al-Miṣrīyah manuscript already mentioned for edition no. 2.[12] This was not chosen as the basic text; rather another manuscript preserved in the same institution under the shelf-mark Tārīkh Ṭal‘at 2067 was selected.[13] Because it is dated 864, only 32 years after al-Fāsī′s death, it was preferred.[14] Recognizing that in some places both manuscripts have blanks clearly indicated as such *(kadhā fī al-aṣl),* the editors have hastily concluded that they are copies of the author′s original, but this is not necessarily so. Both are described summarily and no other copy is referred to, although they would have learned of others had they consulted al-Hīlah′s book, which has been available since 1994 (pp. 121–22).

The edition is provided with notes indicating the results of the collation of both manuscripts, as well as others where persons and places are identified, though not systematically. For instance (1:168), in an *isnād* with eleven transmitters, only four are clearly identified. Elsewhere (1:458), Muḥammad ibn Ḥabīb al-Māwardī is identified as his famous namesake who died in 450/1058,[15] even though he appears in an *isnād* just after Sufyān ibn ‘Uyaynah (d. 196/811), and is followed by three other transmitters, the last one being al-Dāraquṭnī (d. 385/995). This was an anachronism apparently unnoticed by the editors. When the name of a person previously identified occurs subsequently, the editors have taken trouble to note

---

[12]Here its shelf number is given as Tārīkh M 54. However, it is clear that we are dealing with the same manuscript, as the scribe′s name that can be read on the facsimile page of the colophon (p. 33) is identical with the one mentioned in the edition no. 2.

[13]The editors also refer to a third manuscript in the Dār al-Kutub al-Miṣrīyah (Tārīkh Taymūr 1463), dated to 1336 A.H. As often in the case of such recent manuscripts, they are just copies of another MS from the same institution.

[14]According to al-Hīlah, *Al-Tārīkh wa-al-Mu'arrikhūn bi-Makkah,* 121, there is a manuscript in the Royal Library in Rabat (al-Khizānah al-Malikīyah, no. 1911) which is the oldest copy (848 A.H.) and the most reliable one *(aṣaḥḥ).*

[15]Al-Māwardī in this passage must be read al-Jārūdī, a correct reading appearing in the edition no. 2 although their manuscript gave al-Māwardī. In this case, the editors could modify the reading by comparison with the source quoted by al-Fāsī.

the previous identification, but this proves useless since no cross reference is provided and because the indexes are incomplete. Moreover, no particular effort has been made to try to locate passages quoted by al-Fāsī from other sources, not even the traditions selected from canonical collections, such as al-Bukhārī, Muslim, etc., although this would surely have helped to correct some incorrect readings common to both manuscripts. I have taken some soundings which confirm my negative impression: this edition is surely not a definitive one and in many respects it has proved to be less reliable than edition no. 2, adding new mistakes. Among these, I will mention just a few, such as 1:365, where تنحسرfأشطايا must be read تنخشرfأشظايا; 1:397, where منقوشرfعرضة must be read متقوسرfعرصة as al-Fāsī is speaking of the *ḥijr* (an enclosure with a wall in the shape of a bow); 1:459, where (two occurrences) الحافظ العرافي is in fact الحافظ العراقي as is confirmed by a quotation two lines below where the name is correctly given; 2:999 (عفيف الدين الطبري, leg. عفيف الدين المطري); 2:1026 (ابن مشدي, leg. ابن مسدي); 2:1029 (ماشخنا, leg. مشايخنا). The presence of indexes should allow me to temper these criticisms, but they are deficient. All the indexes have been placed at the end of vol. 2, even though they consist in fact of separate indexes for each volume. Most of them are incomplete and are not adequate for making use of the book. In conclusion, *Al-Shifā'* still awaits a serious critical edition with full annotation and proper indexes.

Al-Fāsī prepared a resumé of the *Shifā'* that he entitled *Al-Zuhūr al-Muqtaṭafah min Tārīkh Makkah al-Musharrafah,* where most details (*isnād*s, debates) have been eliminated. It would be a mistake, however, to neglect the work on this basis, since it appears that in some cases the author has added data which are not to be found in the *Shifā'*. Besides the *Zuhūr,* he produced, as he declares in his introduction, three other books on the same subject which must also be considered resumés of the *Shifā'*: *Tuḥfat al-Kirām bi-Akhbār al-Balad al-Ḥarām*, *Taḥṣīl al-Marām min Tārīkh al-Balad al-Ḥarām*, and *Hādī Dhawī al-Afhām ilá Tārīkh al-Balad al-Ḥaram.*[16] Except for the last work, they are preserved only in manuscript and remain unpublished. It is only recently that the *Zuhūr* has become available in several editions, among which two are under review here.[17] Both are based on an important manuscript and provide us an opportunity to compare how the editors have rendered it in their work. This manuscript, dated to 825 A.H. (thus during

[16] Al-Hīlah, *Al-Tārīkh wa-al-Mu'arrikhūn bi-Makkah,* 122–23, also mentions *Tarwīḥ al-Ṣudūr bi-Ikhtiṣār al-Zuhūr* and *Mukhtaṣar Tarwīḥ al-Ṣudūr* as resumés of the *Zuhūr.*

[17] ʿAlī ʿUmar speaks in disparaging terms (″ṭabʿah kathīrat al-taḥrīf wa-al-asqāṭ″) of an edition published in Mecca-Riyadh (Maktabat Nizār Muṣṭafá al-Bāz) in 1997 and prepared by Muṣṭafá Muḥammad Ḥusayn al-Dhahabī, who based it on two manuscripts. Divergences noticed by ʿUmar with this Meccan edition have been indicated in the footnotes.

the lifetime of the author, who died in 832), is in the handwriting of Aḥmad ibn ʻAlī al-Shuwāʼiṭī al-Yamanī[18] and was in the library of the Kuwaiti scholar ʻAbd Allāh ibn al-Khalaf al-Daḥiyyān, who bequeathed it to the Maktabat al-Awqāf al-Kuwaytīyah upon his death. Additionally, the title-page proves that the text was transmitted by well-known scholars. None of the editors has studied these notes that are transcribed here thanks to the facsimile of the title-page added in ʻUmar′s edition:

أروي هذا الكتاب من طريق شيخنا الحافظ برهان الدين الناجي[19] عن المؤلف تقي الدين الفاسي

وعن شيخنا السخاوي إجازة عن شيخه ابن حجر رواية عن المؤلف

وعن شيخنا الشيخ شهاب الدين ابن الملاح المقرئ الرملاوي[20] بدمشق رواية عن المؤلف

أروي هذا الكتاب من طريق شيخنا القاضي سراج الدين ابن الصيرفي[21] رواية عن المؤلف

Given its importance, a facsimile edition of the whole text was published by Muhannā Ḥamad al-Muhannā[22] together with an introduction, notes, and indexes. ʻUmar, however, made occasional use of an additional manuscript preserved in Baghdad (al-Mathaf al-ʻIrāqī, no. 1385), which was previously the property of Father Anastase Marie de Saint-Élie, who bought it in 1918. It is unfortunately undated, but seems to be from the seventeenth century.[23] While al-Ghazzāwī′s edition is provided with an introduction written by the supervisor al-Arnaʼūṭ (pp. 5–20), in which he discusses the author and his work and provides a cursory description of the manuscript, ʻUmar is more laconic (pp. 5–8) and speaks especially of the previous Meccan edition and of the manuscripts. Both editions are provided with footnotes, but not of the same value. Al-Ghazzāwī has tried to return to the original sources from which al-Fāsī quoted, though failing to locate the references made by the author to his other works. He also added, but rather meagerly, identifications of persons and places and explanations of lexical terms. On the other hand, ʻUmar has considered it important to faithfully indicate where he

---

[18]On him, see ʻUmar ibn Fahd, *Muʻjam al-Shuyūkh,* ed. M. al-Zāhī (Mecca, n.d. [1982?]), 67, where it is stated that he settled in Mecca in 803 A.H. His *nisbah* designates a locality situated near Taʻizz.

[23]In one particular case, this manuscript appeared more reliable since a complete passage (pp. 133–34) was missing in the Kuwaiti manuscript.

found the references made by al-Fāsī to his other works. Yet he disregarded the identification of persons or places, which is a pity.

In summation, I believe that ʻUmar′s edition is, generally speaking, more reliable. If I should recommend one of them, I would be inclined to say that ʻUmar can be trusted in most cases, although one must be aware that his edition is not free from mistakes. His edition permits us to emend some readings in all the available editions of the *Shifā*ʼ. The presence of numerous, reasonably reliable indexes, is another positive aspect.[24] In the following lines, I have given the result of my collation of some passages, where the bold version is considered the correct one, so that the reader will be able to draw his own conclusions.

MAMLŪK STUDIES
REVIEW

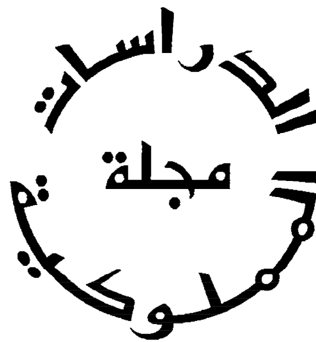
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. The print copy should have full and proper diacritics, but the disk copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of primary and secondary sources, created and maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review.*

ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the illustrations.

MAMLŪK STUDIES
REVIEW

Announcing

The Bruce D. Craig Prize for Mamluk Studies

Mamlūk Studies Review will award a cash prize of $1,000 annually for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the calendar year, beginning in 2004. To be considered, dissertations must be received before December 31. Submissions should be sent to:

Prof. Warren Schultz
Chair, Prize Committee
Mamlūk Studies Review
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

In the event no dissertations are submitted, or none are deemed to merit the prize, no prize will be awarded.

Note

Bruce Craig first asked me to undertake the preparation of a *Mamlūk Studies Review* volume devoted to the economic history of the sultanate in early 2000. In retrospect, however, his suggestion only began to assume form and shape over the period from May 2000 to September 2001, endpoints defined by two international conferences devoted to Mamluk studies: the ″International Conference on the Mamluks in Egyptian and Syrian Politics and Society″ organized by Haifa and Tel Aviv Universities (May 14–17, 2000); and the ″Symposium on Medieval Arabic Historiography: The Legacy of al-Maqrīzī (1364–1442)″ organized by the University of Notre Dame (September 28–29, 2001). These gatherings facilitated contacts with several of the scholars whose work appears in the following pages. The project then grew in scope as a result of two subsequent *Mamlūk Studies Review*-sponsored activities. The first was a double panel at the 2002 MESA conference entitled ″From Alexandria to Aden: Commerce and Society in the Medieval Middle East,″ and the second was ″The University of Chicago International Conference on Mamluk Studies″ held in May, 2003. The majority of the contributors to this volume were participants in one of these two events. Many people thus contributed their talents and efforts to this volume, as well as to the studies which, due to space constraints, could not be included here. I would like to especially thank Bruce Craig, Marlis Saleh, and our anonymous readers for all they have done to bring this volume to press.

Invisible Peasants, Marauding Nomads: Taxation, Tribalism, and Rebellion in Mamluk Egypt*

Right from the outset of Mamluk rule, the Arab tribes of Egypt stand out as the most persistent internal threat to the regime. The Egyptian tribesmen were the only group in the Mamluk domains that was openly and repeatedly contesting the legitimacy of Mamluk authority, and the only group that was ready to resort to armed resistance. In 650/1252–53, in what appears to be a direct response to the Mamluk seizure of power, an Arab uprising engulfed large parts of the Egyptian countryside. Led by the *sharīf* of the tribe of the Ja‘āfirah, Ḥiṣn al-Dīn ibn Taghlab, the Arabs mobilized a force of 12,000 cavalrymen and prevented the collection of the agricultural taxes. Ḥiṣn al-Dīn scorned the rule of al-Mu‘izz Aybak and the government of the Turkish slaves; rather, he claimed, the Arab tribes *(‘urbān)* were the true owners of the land.[1] Over the following century, the Arab tribes mounted two more general revolts. In 698/1298–99 the Arab tribes of Upper and Middle Egypt staged a rebellion that lasted for three years until its brutal repression by a Mamluk expeditionary force.[2] In 749/1349, following the first outbreak of

the Black Death, most of the Arab tribes of Upper Egypt were again engaged in a loosely organized rebellion centered on the regions of Assiut and Qūṣ. This uprising was only quelled in 754/1354.[3]

Interpretations of the Arab resistance to Mamluk rule differ, mainly with regard to the matter of the relationship between the tribesmen and the peasants. A. N. Poliak emphasized the agricultural nature of the Arab rebellions and the close alliance between the Arabs and the peasants. For Poliak, the bedouins of the Nile were halfway on the road to sedentarization, living in hamlets around the villages but retaining their privilege of armed service to the state.[4] More recently, Abdel Hamid Saleh has gone even further in allying the bedouins with the peasants. The bedouin tribesmen who migrated to the Nile valley were allowed to cultivate the land, and thus became ″peasants (*fallāḥ*s) of bedouin origin,″ distinguished by their tribal ethics and the solidarity of the tribe. When fighting against the Mamluk authorities they formed a close alliance with the general Egyptian population, with whom they had common cause.[5]

Jean-Claude Garcin, on the other hand, emphasized the fundamental conflict between the bedouin and the peasant. According to his interpretation, which is grounded in his detailed and much-praised study of the city of Qūṣ, the causes of Arab resistance to the Mamluks should be sought in the eternal struggle between Qaysī and Yamanī tribes. The Qaysī tribes of Upper Egypt, such as the Banū Hilāl and Banū Kanz, lived alongside the settled population of the southern regions, while Yamanī tribes, such as the Juhaynah, ʻArak, and Balī lived further to the north. Garcin suggests that the revolts were predominantly based in the regions occupied by Yamanī tribes, while the Mamluk authorities, like their Ayyubid predecessors, allied with the Qaysī tribes. But from the second half of the fourteenth century, when the bedouin Yamanī tribes were incorporated into the Mamluk state machinery, their true colors became apparent. When the bedouin leaders became major *iqṭāʻ* holders, their repression and exploitation of the peasantry was no better, and perhaps worse, than that of the Mamluk amirs.[6]

[5]Saleh, ″Quelques remarques,″ *Studia Islamica* 48 (1978): 45–70. Similarly, Sato believes that the life-style of the *ʻurbān* varied from cattle-breeding to agriculture (*State and Rural Society,* 95).

[6]Jean-Claude Garcin, ″Note sur les rapports entre Bédouins et fellahs á l′époque Mamluke,″ *Annales islamologiques* 14 (1978): 147–63; Garcin, *Qūṣ,* 362–84.

All three interpretations, I would argue, suffer from a common and misleading association of tribal identity with pastoral nomadism, whether past or present. The assumption that the Arab tribes are, or were in the recent past, pastoral nomads partly stems from semantic imprecision. Poliak, Saleh, and Garcin all refer to the rebelling tribesmen as bedouins, but the term most commonly used in the Mamluk sources is *ʿurbān,* a non-classical plural form of *ʿarab.*[7] The word *ʿarab* (Arab) in itself did not mean pastoral nomadism. As defined by the lexicographer al-Azharī (d. 370/980), who is invariably cited in Mamluk dictionaries, the *ʿarab* are all those descended from the Arabs, whatever their way of life may be. Arabs who live in settled communities, in cities or in villages, are still Arabs, even if they do not speak eloquent Arabic. Likewise, the Companions of the Prophet were Arabs, even though they lived in sedentary communities. The *aʿrāb,* on the other hand, is a Quranic term for a sub-category of Arabs who live in the open country and migrate for the purpose of grazing their herds. Al-Azharī is keen to emphasize that not all Arabs but only the *aʿrāb,* the pastoral nomads, can be equated with the *badw* (bedouin).[8]

Even the term *badw* could refer, in certain contexts, to rural communities that were not necessarily transhumant, as is demonstrated by Ibn Khaldūn's dichotomy of the *badw* and the *ḥaḍar.* At the beginning of the chapter on *badawī* civilization, Ibn Khaldūn defines *badw* as "those who either live from cultivation of the land *(al-falḥ)* or those who make their living by raising livestock." Both groups are by necessity *badw,* because both need space for their feddans of fields or pasturage for their herds.[9] It is true that Ibn Khaldūn later shifts his attention to the nomadic tribesmen, and his account of the devastation caused by the invasion of the Banū Hilāl to North Africa is often seen as an epitome of the antagonism between the desert and the sown in Islamic history.[10] But, as established by many a Khaldūnian interpreter, Ibn Khaldūn singles out the pastoral nomads because he considers them to be the simplest, the most elementary, and the purest form of *badawī* civilization.[11] On account of their simplicity and remoteness, the camel-herding

[11]Peter Von Sivers, "Back to Nature: the Agrarian Foundations of Society according to Ibn

nomads are able to preserve the purest Arabic speech and purest lineages, which also means that their group solidarity *(ʿaṣabīyah)* is the strongest. They are nonetheless only a sub-category within the larger group of *badw,* a group that includes peasants and nomads, cultivators and herdsmen. Rendering Ibn Khaldūn's *badw* as "bedouin" is therefore somewhat misleading. As Muhsin Mahdi notes, the reduction of the Khaldūnian *badw* to "nomadic" can lead to serious misunderstanding of Ibn Khaldūn's thought.[12]

The dissociation of tribalism and bedouin identity from pastoral nomadism finds its corollary in attempts by anthropologists to come to terms with the often confusing ethnographic accounts of Middle Eastern tribes. In Afghanistan, Pakistan, Oman, the Yemen, and Morocco, and in many other places in the Middle East, tribesmen are for the most part settled cultivators. While most tribes have both nomadic and settled components, major tribal groups in these countries are—and were in any part of their known history—settled cultivators with little or no inclination towards pastoral nomadism. While tribes share some common features, like a segmentary lineage system and ideals of political autonomy, a tribal identity specifies little, if anything, about systems of production.[13] Even a bedouin identity cannot be simply equated with camel-herding or pastoralism. Bedouins are, almost always, Muslim Arabic speakers, and, for the most part, are organized along tribal lines. But the bedouins can live by more than one strategy.[14] In modern Jordan, for example, very few of the large bedouin groups are, or were in the recent past,

Khazanov, *Changing Nomads in a Changing World* (Brighton, 1998), 38–49.

pastoralists or nomads. The decisive elements of their bedouin identity—that which makes them *badw*—are rather their memory of a lineage associated with a distant nomadic past, and their adherence to ideologies of equality and autonomy.[15]

I would contend here that a clear distinction between pastoral nomadism as an economic option, tribalism as a form of social organization, and bedouin-ness as a cultural identity allows for a richer interpretation of the resistance of the *'urbān* to Mamluk rule. Such a conceptual distinction also makes it possible to distill much more precisely the meaning of tribal identity in the medieval Egyptian countryside, and to place the tribes right at the center—rather than at the margins—of Egyptian history. Moreover, it also sheds a much-needed light on the process of conversion and Islamization outside of the urban centers. In order to do that, we need to re-visit al-Nābulusī's *Tārīkh al-Fayyūm,* the most detailed account of a rural province that has reached us from medieval Islamic Egypt. Al-Nābulusī visited the Fayyum only a decade before the outbreak of the first Arab rebellion against the Mamluks, and I would argue that what al-Nābulusī saw in the 1240s can be generalized for other parts of Middle and Upper Egypt. The tribes of the Fayyum, seen through the eyes of al-Nābulusī, are crucial for a proper interpretation of the Arab revolts in the century that followed.

The account of the province of the Fayyum written by the Ayyubid official Abū 'Uthmān al-Nābulusī, entitled *Tārīkh al-Fayyūm wa-Bilādihi,* is the most detailed cadastral survey to have survived from medieval Egypt.[16] In the words of Stephen Humphreys, it is "as close as we will ever get to an official tax register for

[16]Abū 'Uthmān al-Nābulusī, *Tārīkh al-Fayyūm wa-Bilādihi (Description du Faiyoum),* ed. B. Moritz (Cairo, 1898; repr., Beirut, 1974). George Salmon, "Répertoire géographique de la province du Fayyoûm d'aprés le Kitâb Târîkh al-Fayyoûm d'an-Naboûlsi," *Bulletin de l'Institut français d'archéologie orientale* 1 (1901): 29–77, provides a brief summary for each village. For a discussion of tax obligations, see Claude Cahen, "Le régime des impôts dans le Fayyūm Ayyūbide," *Arabica* 3 (1958): 8–30 (reprinted in idem, *Makhzūmiyyāt* [Leiden, 1977]). On production and irrigation, see Sato, *State and Rural Society,* 215–24; I. König, "Die Oase al-Fayyum nach 'Uthmān ibn Ibrahim an-Nabulusi: ein Beitrage zur Wirtchaftsgeschichte Aegyptens um die Mitte des 13. Jahrhunderts n. chr.," *Zeitschrift für Geschichte der Arabisch-Islamischer Wissenschaft* 10 (1996): 190–253. For a useful recent summary, see G. Keenan, "Fayyum Agriculture at the End of the Ayyubid Era: Nabulsi's *Survey*," in *Agriculture in Egypt: From Pharaonic to Modern Times,* ed. Alan K. Bowman and Eugene Rogan, Proceedings of the British Academy 96 (Oxford, 1999), 287–99.

Mamluk Egypt."[17] Al-Nābulusī, dispatched to the Fayyum in 641/1243 by al-Ṣāliḥ Ayyūb with instructions to report on the fiscal conditions of the province, was a prominent official in the Ayyubid bureaucracy. He wrote at least two other works concerned with the proper administration of the finances of Egypt. One is a staunchly anti-*dhimmī* text, appropriately called *Tajrīd Sayf al-Himmah li-Istikhrāj Mā fī Dhimmat al-Dhimmah,* in which he argues against the employment of Copts in the state's bureaucracy.[18] In another treatise, *Luma' al-Qawānīn al-Muḍī'ah fī Dawāwīn al-Diyār al-Miṣrīyah,* al-Nābulusī exposes abuse and incompetence in the administration. In this work al-Nābulusī comes across as an extremely pedantic and experienced civil servant, who is wholly and totally committed to the increase of the government's revenue.[19] It is against this perceived incompetence that al-Nābulusī set out to write *Tārīkh al-Fayyūm* as an exemplary model of a cadastral survey, paying very careful attention to the minute details of agricultural production.

Tārīkh al-Fayyūm is divided into nine introductory chapters dealing with the geography, history, and demography of the Fayyum, followed by the main body of the treatise, the cadastral survey itself. The survey begins with a description of the provincial capital, Madīnat al-Fayyūm, which is then followed by entries for more than one hundred villages. For each village, al-Nābulusī starts by indicating the size of the village and the state of its habitation, its geographical location, its inhabitants, its sources of water, the names of the *iqṭā'* holders, and the local mosques, churches, and monasteries. The fiscal part of the entry is a list of the actual taxes levied on the village, divided into taxes in cash and taxes in kind. The taxes in kind are expressed in *irdabb*s, mostly of wheat and barley, but sometimes also of legumes. The taxes in cash were levied on all other taxable agricultural products, such as livestock and cash crops, including flax, cotton, sesame, indigo, vegetables, and fruits. This category of taxes in cash also included the poll-tax levied on non-Muslims, specifically the Coptic population, a fiscal feature that enables us to estimate the number of Copts residing in each village.

In an introductory chapter, entitled "on the inhabitants of the Fayyum and their division into *badw* and *ḥaḍar,*" al-Nābulusī divides the population of the Fayyum

[19]Claude Cahen, "Quelques aspects de l'administration égyptienne médiévale vus par un de ses fonctionnaires," *Bulletin de la faculté des letters de Strasbourg* 26 (1947–48): 98–118; English translation by C. A. Owens, "Scandal in the Egyptian Treasury: A Portion of the *Luma' al-qawānīn* of Ibrāhīm al-Nābulusī," with an introduction by C. C. Torrey, *Journal of Near Eastern Studies* 14 (1955): 70–80.

into the familiar Khaldūnian categories. In the beginning of the chapter al-Nābulusī writes:

> When I was given orders to survey the region of the Fayyum, I went from village to village and acquainted myself with its inhabitants. I would have even made a census, but for my fear that they would notice [me doing so]. I have found the majority of the people to be Arab *(aktharu ahlihā al-ʻarab),* divided into sections and tribes *(al-afḥādh wa-al-shuʻūb).* As for the *ḥaḍar,* there are very few of them, residing in no more than two or three villages. These few *ḥaḍar* communities are under the protection of the Arabs. In return, the Arabs take a fee from the revenue of their allotted portions *(rizaqihim)*[20] or hold rights to part of their lands, and the Arabs treat [the *ḥaḍar*] in a humiliating manner. The Arabs belong to three tribal confederacies *(uṣūl),* which are the Banū Kilāb, Banū ʻAjlān, and the al-Lawāthīyīn. I will now list their dwelling places, excluding [the tribes] who seek pasture at the time of a drought and those who come there to transport the harvest.[21]

In this key chapter, al-Nābulusī informs us that almost the entire population of the Fayyum consisted of Arab tribesmen, which he also describes as *badw,* or bedouin. The only exceptions were a few *ḥaḍar* communities, who were under the domination of the Arab tribes. Al-Nābulusī goes on to list around one hundred villages—that is practically all the villages in the province—organized by their tribal affiliation. All these villages were populated by *badw,* with the exception of only three villages in which the population was *ḥaḍar* and the *badw* were only the guardsmen *(khufarā')*.[22] The list corroborates al-Nābulusī's general statement about the predominance of the *badw,* and shows that the population of the Fayyum was indeed dominated by three tribal groups. First in importance were the Banū Kilāb, then the Banū ʻAjlān, and then—much smaller—the Lawāthah, a Berber tribe. The Banū Kilāb dominated in the central, south, and west; the Banū ʻAjlān in the east and the north; while the Lawāthah dwelt in villages along the Lāhūn gap.[23]

---

[20]On the meaning of *rizqah* in the Mamluk period, see N. Michel, "Les *rizaq iḥbāsīyah,* terres agricoles en mainmorte dans l'Égypte mamelouke et ottomane: Étude sur les *Dafātir al-Aḥbās* ottomans," *Annales islamologiques* 30 (1996): 105–98.

[21]Al-Nābulusī, *Tārīkh al-Fayyūm,* 12–13.

[22]These were the village of Munsha'at Awlād ʻArafah and the village of Bājah, both guarded by the Banū ʻĀmīr of the Banū Kilāb, and the village of Minyat al-Usquf (al-Nābulusī, *Tārīkh al-Fayyūm,* 13, ll. 18–19).

[23]See summary in Keenan, "Fayyum Agriculture," 292.

The predominance of the Banū Kilāb in the Fayyum is also attested in a treatise on Arab tribal genealogy written by Badr al-Dīn al-Ḥamdānī (d. after 680/1281), a work that has reached us through al-ʻUmarī and al-Qalqashandī.[24]

In order to understand the meaning of Arab tribal identity in the Fayyum, let us take a closer look at the village of Saylah, one village out of the hundred-odd *badw* villages described by al-Nābulusī.[25] According to him, Saylah was a medium-size village at the eastern edge of the province, three hours ride from Madīnat al-Fayyūm. He notes that, like most other villages in the province, the inhabitants of Saylah mainly cultivated cereals—wheat, barley, and broad beans *(fūl)*. The reliance of the village on grain production is borne out by its list of taxes. At the top of the list were the taxes on grain, levied in kind. They amounted to 2,500 *irdabb*s, a third of which was to be paid in wheat and the remaining two-thirds in barley. Assuming an average tax rate of 2.5 *irdabb*s per feddan, as reported by Ibn al-Mammātī,[26] we can estimate that the villagers of Saylah cultivated at least 1,000 feddans of cereals.[27] The monetary value of these taxes was also substantial: given normal prices, 2,500 *irdabb*s of grain were worth tens of thousands of dirhams.[28] All the other taxes paid by the villagers of Saylah pale in comparison. They owed only around 730 dirhams for their herds of livestock, which included 600 head of sheep, goats, a few cows, and one solitary ox. In addition, ten non-Muslim men who lived in the village owed twenty dinars as their poll-tax.

Saylah was a cereal-growing community, a typical village in al-Nābulusī's Fayyum. All the taxes on livestock, chicken, and fodder, even including the miscellaneous fees paid to local officials, were nothing but small change compared to the tax on grain. This was a settled community, and its fields were probably

[26]*Kitāb Qawānīn al-Dawāwīn,* ed. A. S. Atiyya (Cairo, 1943), 259.

[27]According to later cadastral surveys, the villagers of Saylah cultivated more than 1,000 feddans. Ibn Duqmāq puts it at 4,573 feddans (Ibrāhīm ibn Muḥammad Ibn Duqmāq [d. 1407], *Al-Intiṣār li-Wāsiṭat ʻIqd al-Amṣar,* ed. Karl Vollers [Cairo, 1893], 5:9), and Ibn al-Jīʻān at 3,609 feddans (*Kitāb al-Tuḥfah al-Sanīyah bi-Asmā' al-Bilād al-Miṣrīyah* [Cairo, 1974], 155). See also Heinz Halm, *Ägypten nach den mamlukischen Lehensregistern* (Wiesbaden, 1979–82), 1:269.

[28]According to al-ʻUmarī, in the first half of the fourteenth century, and under normal circumstances, an *irdabb* of grain fetched 10–15 dirhams (cited in Sabra, *Poverty and Charity in Medieval Islam* [Cambridge, 2000], 120).

marked with fences *(judrān),* as were the fields of other villages in the province.[29] While it is possible that some migrated seasonally with the herds, the community as a whole was not transhumant. It was quite different from the *muntaji'ūn,* the nomadic herdsmen, mentioned by al-Nābulusī as being taxed only for their livestock.[30] And yet, like almost all the villages in al-Nābulusī ′s Fayyum, Saylah was inhabited by a tribal group. Al-Nābulusī says that the villagers of Saylah belonged to the Banū Zur'ah, a section of the Banū 'Ajlān.[31]

Like Saylah, almost all the cereal-growing villages of the Fayyum were inhabited by *badw,* or Arab, tribal groups. Each village is identified with a section of a tribe in a plain and straightforward manner, and this identification is repeated twice, once in the fifth chapter on the inhabitants of the province and then again in the individual entries for each village. There is nothing to suggest that the Arab tribes lived around the villages, maintaining a half-sedentary way of life, as suggested by Poliak.[32] The Arab tribes provided armed protection to the few *ḥaḍar* villages, but, given the demographic predominance of the Arabs, this was the exception rather than the rule, contrary to the purely military role ascribed to them by Cahen.[33] Moreover, there is nothing to suggest that these were tribes in the process of becoming settled. Al-Nābulusī is quite keen to note the disappearance of villages and the founding of new ones, but says nothing about recent settlement of nomadic tribesmen. It is not that the *badw* came to resemble the peasants; rather, in al-Nābulusī′s Fayyum, the *badw* was a category that included both peasants and nomads—the vast majority of the inhabitants of the province.

The demographic predominance of the Arab tribesmen meant that even the handful of *ḥaḍar* rural settlements were under the influence of the Arabs. The hamlet of Munsha'at Awlād 'Arafah was populated by Christian *ḥaḍar,* but guarded by the Banū 'Āmir, a section of the Banū Kilāb.[34] Similarly, the majority of the inhabitants of the village of Abū Kisā were *ḥaḍar,* but a minority belonged to the

[29]The village of Fānū was so close to the village of Naqalīfah that the fence *(jidār)* of the former was in the lands of the latter (al-Nābulusī, *Tārīkh al-Fayyūm,* 31). Similarly, the fence of al-Malālīyah was in the lands of another village (ibid., 133). When the lands of a village were without a fence, al-Nābulusī saw it as a sign of an abandoned village (ibid., 87).

[30]See examples in al-Nābulusī, *Tārīkh al-Fayyūm,* 55, 88.

[31]The published text has Banū Kilāb, but this is a mistake, perhaps on the part of the editor. Compare al-Nābulusī, *Tārīkh al-Fayyūm,* 14, l. 3.

[32]Poliak, ″Les revoltes populaires,″ 257.

[33]Claude Cahen states that protection fees *(rasm al-khafārah)* were paid to the bedouin for not pillaging the villages (″Le régime des impôts,″ 19). He does not clarify that this could have been the case only in the few non-Arab villages.

[34]Al-Nābulusī, *Tārīkh al-Fayyūm,*13, l. 18.

Banū Jawwāb of the Banū Kilāb, who likewise assumed the role of guardsmen.[35] The small town of Bamūyah, boasting of a regional market and a variety of tradesmen, was mainly inhabited by *ḥaḍar*. But three sections of the Banū ʿAjlān shared the responsibility of protecting it.[36]

The difference between the *badw* and the *ḥaḍar* becomes clearer when we consider the village of Minyat al-Usquf as an example of a *ḥaḍarī* village. Minyat al-Usquf was a small village not far from the province's capital.[37] Perennial irrigation allowed the village houses to be surrounded by orchards and gardens. The village produced a great variety of fruits, such as, among others, apricots, grapes, lemons, and pomegranates. The population consisted of Christian *ḥaḍar*, including 56 adult men subject to the poll-tax. Their protection was in the hands of the Banū Zurʿah.[38] The entire tax assessment of the village was in cash rather than in grains, as the village held no arable land. The total tax assessment was around 230 dinars. The major part of this sum, 216 dinars, was levied on the village's orchards, and the remaining taxes were paid on the village's palm-trees and dye-house. In addition, the village had to pay 112 dinars in poll-tax, at the standard rate of 2 dinars per every adult non-Muslim male.

One major difference between the *badw* and the *ḥaḍar* villages lay in their agricultural produce and irrigation method. The village of Minyat al-Usquf mainly cultivated cash-crops and was therefore dependent on perennial irrigation, while the *badw* village of Saylah grew cereals and was dependent on seasonal inundation. The villagers of Minyat al-Usquf, like the other predominantly *ḥaḍar* villages in the Fayyum, did not cultivate wheat or barley at all, but only cash-crops, especially vegetables, fruits, and sugar-cane. The correlation between the *badw* villages and cereal growing may suggest that tribal social organization was linked to the organization of cereal cultivation, and, especially, to the local irrigation system.[39] In cereal-growing villages, the amount of arable land was subject to drastic annual fluctuations, and the peasants may have looked for ways of sharing the risk of a low Nile level. As late as the eighteenth century, cereal-growing villagers in

---

[35]Ibid., 46, ll. 17–18. The village is listed as one of the settlements of the Banū Jawwāb (ibid., 13, l. 7).

[36]Ibid., 69, ll. 11–12.

[37]Ibid., 145–46.

[38]Ibid., 145, l. 22. But in another place al-Nābulusī states that it is the Banū Rabīʿah who are the guardsmen of the village (ibid., 13, l. 18). This may be a copying or editing mistake.

[39]On the possible correlation between tribal segmentation and collective land management, see Scott Atran, "Hamula organization and *mashāʿ* tenure in Palestine," *Man* 26 (1986). Alternatively, it has been argued that tribal segmentation emerges when the irrigation system is local and not based on one large waterway (Thomas F. Glick, *From Muslim Fortress to Christian Castle: Social and Cultural Change in Medieval Spain* [Manchester, 1995]).

Upper Egypt redistributed the village lands annually, according to the tillage rights of individual households or clans, with the aim of equalizing the effects of a bad harvest.[40] Indeed, according to an anecdote told by al-Nābulusī, the lands of the village of Saylah were redistributed periodically among the cultivators.[41] In the *ḥaḍar* villages that relied on perennial irrigation such collective management of production would not have been necessary.

The second major difference was that the inhabitants of Minyat al-Usquf were predominantly Christians while the *badw* villagers of Saylah were predominantly Muslim. All in all, 1,142 adult non-Muslim men were registered as living in the province of the Fayyum.[42] Of these, about half lived in eight predominantly Christian *ḥaḍar* villages, which accounted for less than 10% of the total number of villages in the province.[43] The Christian *ḥaḍar* inhabitants of these villages were the only people in rural Fayyum without tribal affiliation or claim to Arab genealogy, the only ones excluded from the otherwise all-encompassing *badw* identity. In addition, about five hundred Christian men liable for the poll-tax were unevenly spread among the far more numerous *badw* villages, at an average of about five per village. In Saylah, for example, ten adult non-Muslim men and their families lived in the midst of the Muslim *badw* majority.

Unlike the *ḥaḍarī*s, the *badw* had the right to bear arms, a privilege obviously reserved to Muslims. Some of the Arab tribesmen must have been armed during peacetime, since we are told that Arab tribesmen guarded, and possibly harassed, the few Christian *ḥaḍar* villages.[44] Al-Nābulusī also tells us that the Arab tribes of

[40]Kenneth Cuno, *The Pasha's Peasants: Land, Society, and Economy in Lower Egypt, 1740–1858* (Cambridge, 1992), 66; idem, "Origins of Private Ownership of Land in Egypt," *International Journal of Middle East Studies* 12 (1980): 246. Poliak has already suggested that village lands were periodically redistributed in the Mamluk period, but on rather slim evidence ("Some Notes on the Feudal System of the Mamluks," *Journal of the Royal Asiatic Society* [1937]: 104–5).

[41]Al-Nābulusī relates, in the context of an anecdote about a locality in Saylah allegedly blessed by the Prophet Jacob, that "whenever this plot of land falls in someone's field through distribution *(bi-al-qismah),* the yield of the field increases by 100 *irdabb*s" (*Tārīkh al-Fayyūm,* 114). I take this sentence to mean that the same plot of land rotated between different cultivators according to some form of a periodic draw.

[42]But about a quarter of these 1,142 non-Muslim men were regarded as absentees *(nā'ūn),* that is, men who left their original village and now dwelled in another village, either in the Fayyum or in another province. On this fiscal category of absentees, see also al-Nuwayrī, *Nihāyat al-Arab,* 8:244.

[43]Apart from the five villages already mentioned (Abū Kisā, Bājah, Bamūyah, Minyat al-Usquf, and Munsha'at Awlād 'Arafah), other predominantly Christian and *ḥaḍar* villages were Dimashqyan al-Baṣal, Sinnūris and Dhāt al-Ṣafā'.

[44]Qalāwūn's memorandum to Kitbughā, dated 679/1281, specifically prohibits the *'urbān* from carrying weapons of any kind when traveling from village to village (Sato, *State and Rural*

the Fayyum were required to provide 400 cavalry for royal campaigns, forces that were naturally aligned according to tribal lines.[45] Again, it should be emphasized that the Arab tribesmen of the Fayyum lived, for the most part, in settled communities. Al-Nābulusī´s fundamental dichotomy of *badw* and *ḥaḍar* is not between nomads and settled cultivators, not between the desert and the sown, but rather between Muslim tribesmen and non-Muslims. It therefore follows that the right to carry arms and to participate in royal campaigns was not confined to nomads, but was associated with the Islamic and *badw* identity of the rural population of the Fayyum.[46]

Al-Nābulusī´s dichotomy of Christian *ḥaḍar* and Muslim *badw* meant that not only were all the *badw* Muslims, but, more surprisingly, all the Muslims were *badw*—a demographic situation which could not have been purely the result of settlement by nomadic tribes coming from the Arabian Peninsula. According to medieval Islamic historiography, the Arab tribes that participated in the Muslim conquests spread all over the Islamic world, from the lands of the Turks to Andalusia and West Africa.[47] The tribesmen of the Banū Kilāb, the dominant tribe in the Fayyum, were supposedly the descendants of a small clan that lived in the outskirts of Medina. Some of them had migrated to Egypt in the early second/eighth century, and others to Syria.[48] We are also told that the remoteness of the Fayyum laid it open to raids by Arab and Berber tribes, and that the associated phenomenon of the sedentarization of nomads has been recurrent in the province up to modern times.[49] But if we are to believe that the entire Muslim population of al-Nābulusī´s Fayyum was indeed descended from the Arab tribes that migrated from the Arabian Peninsula, we must wonder about the fate of the indigenous population. We are not dealing here with one single village in which the nomads have chased away

---

Society, 113, citing Ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed. C. Zurayq [Beirut, 1936–42], 7:196–200). But such a prohibition suggests that it was not uncommon for Arab tribesmen to travel armed.

[45]Al-Nābulusī, *Tārīkh al-Fayyūm,* 177–78. Sato assumes that the Arabs were required to provide these troops in return for an *iqṭā‘* (*State and Rural Society,* 53), but there is no specific mention of such an *iqṭā‘* in al-Nābulusī´s text.

[46]As Talal Asad reminds us, there is no reason to think that nomads would always be militarily more powerful than sedentary populations. The history of Islam abounds with examples of sedentary populations dominating over nomadic groups, starting with the early Islamic community itself (Talal Asad, ″The Bedouin as a Military Force: Notes on Some Aspects of Power Relations between Nomads and Sedentaries in Historical Perspective,″ in *The Desert and the Sown: Nomads in the Wider Society,* ed. Cynthia Nelson [Berkeley, 1973], 61–71).

[47]See, for example, al-Qalqashandī, *Qalā'id,* 19.

[48]Ibid., 117. In his other treatise on tribal genealogies al-Qalqashandī is not certain whether the Aleppine Banū Kilāb have the same ancestry as Egyptian tribes of the same name (*Nihāyat al-Arab,* 365).

[49]P. M. Holt, ″Al-Fayyūm,″ *The Encyclopaedia of Islam,* 2nd ed., 2:872–73.

the original cultivators, or with nomads settling on the margins of the cultivated areas, but rather with an entire province. A massive settlement of nomads should have been a cataclysmic event, on the scale of the Hilalian invasion of North Africa. Strangely enough, the process in which a small tribal group came to represent the vast majority in the Fayyum has not left any historical record of violent dispossession or mass exodus.[50]

The only plausible explanation for the concurrent Islamization and bedouinization of the province of Fayyum is that conversion to Islam was accompanied by the assumption of a bedouin tribal identity. Al-Nābulusī actually tells us that the *badw* Muslim villages stood at the same sites as the formerly Christian villages. Even if some villages on the edges of the Fayyum were deserted in late antiquity, the province as a whole was never abandoned by its cultivators.[51] The *badw* Muslim village of Saylah was located in precisely the same place in which the Christian village of Saylah, a center of Coptic Christianity, used to stand.[52] According to al-Nābulusī, as many as forty churches used to serve the village of Saylah alone, although only one church and one monastery remained when he surveyed the village. In fact, remains of the Christian past were everywhere evident in the *badw* Muslim villages of the Fayyum.[53] Therefore, it seems likely that the Christian cultivators gradually took over, not only the Muslim religion and Arabic language of the conquerors, but also their tribal social organization and *badw* identity.[54] We must therefore conclude that most of the villagers of the

---

[50]See also the remarks of Saleh, who has made an earnest attempt to chronicle the migrations of the Arab tribes to Egypt, but concludes that in most cases the history of their settlement remains obscure (″Les migrations″).

[51]On the desertion of villages in the Fayyum in late Antiquity, see Keenan, ″Fayyum Agriculture,″ 288, and the sources cited there. For models linking sedentarization of Arab tribes with Islamization, see Nehemia Levtzion, ″Towards a Comparative Study of Islamization,″ in *Conversion to Islam,* ed. idem (London, 1979), 1–23; and more recently, in the context of Crusader Palestine, Roni Ellenblum, *Frankish Rural Settlement in the Latin Kingdom of Jerusalem* (Cambridge, 1998), 263–68. For criticisms of this approach, see remarks by Tarif Khalidi, ″Tribal Settlement in Early Medieval Palestine,″ in *Land Tenure and Social Transformation in the Middle East,* ed. idem (Beirut, 1984), 181–89; Jeremy Johns, ″The *Longue Durée*: State and Settlement Strategies in Southern Transjordan Across the Islamic Centuries,″ in *Village, Steppe and State: The Social Origins of Modern Jordan,* ed. Eugene L. Rogan and Tariq Tell (London, 1994), 1–31.

[52]On Saylah as one of the centers of the Coptic Church in the Fayyum, see Abū Ṣāliḥ al-Armanī, *Churches and Monasteries,* 209.

[53]Also noted by Sato, *State and Rural Society,* 182.

[54]The process of conversion in early Islamic Fayyum is the subject of a current Ph.D. thesis entitled ″Arabization and Islamization in the Countryside of Early Medieval Egypt: The Fayyum District, 640–1036,″ by Lennart Sundelin at Princeton University. I am grateful to Lennart for sharing with me his preliminary results.

Fayyum were holding on to an identity derived from a fictitious account of their ancestry. It is crucial for our understanding of tribal identity in the Mamluk period, and for our perception of Arab resistance to Mamluk authority, that the nomadic past claimed by the Arab tribesmen was imagined, not real.

In the year 701/1301, as the contemporary Mamluk chronicler and bureaucrat al-Nuwayrī tells us, the harm caused by the *ʻurbān* of Upper Egypt had reached unacceptable levels:

> They resorted to highway robbery, and imposed on the merchants and the artisans in Assiut and Manafalūṭ a tax similar to the *jāliyah* [the common term for the poll-tax imposed on non-Muslims]. They defied the authority of the local governors, and prevented the payment of the agricultural *kharāj* taxes. Their leaders called themselves by the names of [the Mamluk] amirs, one calling himself Baybars and another calling himself Sallār. They armed themselves and released all prisoners incarcerated in jails. Seeing that, the amirs called upon the qadis and the jurists, and asked their opinion on the permissibility of waging battle against [the *ʻurbān*], and the [jurists] gave a *fatwá* to that effect.[55]

The Arab revolt, according to al-Nuwayrī's account, was about reversing the relations of power between city and countryside. On the one hand, the rebels prevented the payment of agricultural taxes, while on the other hand they siphoned back part of the income made by the local representatives of urban wealth, the merchants and the artisans. The revolt attempted to establish a local autonomous government ruled by tribal leaders who bore the titles of the Mamluk amirs, a mirror image of the central government in Cairo. But it was a topsy-turvy government, one in which the merchants and the artisans pay their taxes to the local population. Not incidentally, perhaps, the taxes imposed by this rebel government had a markedly religious connotation, as if non-Arabs were not true Muslims.[56]

The subsequent brutal suppression by the Mamluk forces leaves us in no doubt regarding the mass participation of peasants in this revolt. After thousands

---

[55]Al-Nuwayrī, *Nihāyat al-Arab,* 30:333, cited in al-Maqrīzī, *Sulūk,* 1:920.

[56]Similarly, in al-ʻAynī's account of the revolt of Ibn Taghlab, the rebels are supposed to have collected a tax resembling the *jizyah* (the legal term for the poll-tax) from several provinces in Upper Egypt (al-ʻAynī, *ʻIqd al-Jumān,* 1:107).

of Arabs were put to the sword, al-Nuwayrī reports that the Mamluk forces took 1,600 Arab captives, who were all cultivators of the land *(la-hum filāḥāt wa-zurū‘)*.[57] The booty was immense, including a substantial amount of agricultural products, such as oil taken from the local presses, and thousands of cows and oxen. Reportedly, the Mamluk armies could not find buyers for the enormous amounts of grain *(ghilāl)* they obtained during the suppression of the revolt. But when the troops returned north, they found the land empty:

> The troops made their way back on 16 Rajab (18 March 1302). [They found that] the land had become desolate, and one could walk and encounter no one on his way, or dwell in a village and see only women and small children. Then they decided to release the prisoners and let them go back, in order to sustain the land *(li-ḥifẓ al-bilād)*.[58] That year, an unusually large portion of Upper Egypt was sown, followed by a harvest so bountiful it could not be counted.[59]

Like the Arab tribesmen of the Fayyum, the majority of Arab rebels were peasants. Following the repression of the Arab revolt, the same Arab tribesmen who participated in the revolt, and who were killed or captured by the Mamluks, were now needed to cultivate the land. This passage has been noted by both Poliak and Saleh, who took it either as a sign of the close alliance between the peasants and the bedouins, or as an indication of the increasing settlement of the nomads. Even Garcin, who is generally keen to distinguish between the peasants and the bedouin, is bewildered by a revolt that evokes images of a French peasant *jacquerie*.[60] But in light of what we know of the Arab tribesmen of the Fayyum, the peasant participation in the revolt should not surprise us. If, as in the Fayyum, the vast majority of the Muslim peasantry had an Arab tribal identity, then their participation in an Arab revolt makes sense: the Arab revolts had an agricultural nature, as well as a peasant mass participation, simply because the Muslim peasants of Upper Egypt *were* Arabs.

All the large Arab revolts of the first Mamluk century had a predominantly agricultural nature. The first Arab revolt of 650/1252–53, erupting only seven

[60]Garcin, ″Note sur les rapports,″ 150.

years after al-Nābulusī's survey, engulfed the entire Egyptian countryside, including the Arab tribes of the Fayyum. In this first revolt, as well as in the subsequent ones, the entrepots of grain levied as taxes and destined for Cairo were always targeted. Poliak also points out that the revolts were based in the Nile valley. The nomadic tribes of the desert, on the other hand, are never mentioned as taking part in the revolts.[61] Occasionally, Mamluk sources even appear to use the terms *fallāḥūn* and *'urbān* interchangeably. Thus, after the suppression of the revolt of Ibn al-Aḥdab in 754/1354, the amir Shaykhū is reported to have severed the head of any peasant who pronounced the letter *qāf* in the manner of the Arabs, and went on to kill many *'urbān* and *fallāḥūn*. Later that year, Ibn Iyās tells us, the sultan decreed that no *fallāḥ* should ride a horse or carry a weapon.[62] Similarly, during the suppression of the 701/1301 revolt, a punitive mission led by Sunqur al-A'sar confiscated all the horses of the *fallāḥ*s and the *badw*. According to al-Nuwayrī, the result of this punitive mission was that the *fallāḥ*s were subjugated, and handed over the *kharāj* taxes.[63]

But it would be wrong to equate the Arab tribesmen with a sedentary life-style in the same way as it is wrong to equate them with a nomadic life-style. Both nomads and peasants participated in the revolts, and both were considered to have had an Arab *badw* identity. It is likely that those Arab tribesmen who protected the roads and provided horses for the royal post *(barīd)* were predominantly nomadic.[64] The lists of booty captured by the Mamluk armies during the consecutive suppressions of the Arab revolts suggest that some of the rebels subsisted on animal husbandry, and in particular on camel-herding. Even after the revolt of 701/1301, for which the Mamluk sources most explicitly indicate mass peasant participation, we are told that the Mamluk army confiscated 80,000 head of cattle, 4,000 horses, and 33,000 camels.[65] The involvement of the nomads in the revolts does not exclude the involvement of peasants; these were Arab rebellions, undertaken by Muslim peasants and nomads who subscribed to an Arab tribal identity.

This Arab identity is best captured by the word *'urbān,* a term that distinguished the Arab tribes of Mamluk Egypt and Syria from the pure Arabs of the Arabian Peninsula. Ibn Faḍl Allāh al-'Umarī (d. 749/1349), who devoted a long chapter to

the Arab tribes in his geographical work *Masālik al-Abṣār,* makes a consistent distinction between the original *ʻarab,* or Arabs, and the contemporary Arab tribes, "the *ʻurbān* found in our time."[66] In al-ʻUmarī's view, the *ʻurbān* are those who claim Arab descent and who subscribe to the values of the nomadic life-style, even if they no longer practice it.[67] While al-ʻUmarī eulogizes the nomadic way of life,[68] he nonetheless acknowledges that many Syrian tribes have settled down. These tribes, he says, were originally Arab but are no longer so, as they became *ḥaḍarī*s, settled people who cultivate agriculture.[69] The list that follows is organized by localities, each locality with its tribal inhabitants. Among the places mentioned are the cities of Gaza, Hebron, Jerusalem, Nablus, ʻAjlān, Adhruʻāt, Ḥimṣ, Ḥamāh and Shayzar. By the end of the long list, which al-ʻUmarī admits to be incomplete, it is clear that much of the Syrian peasantry claimed Arab origins.[70]

In Egypt, according to al-ʻUmarī, almost all the *ʻurbān* were settled cultivators. The Banū al-Zubayr, who dwelled in the province of al-Bahnasā, are described as submissive artisans and peasants.[71] The five sections of the Banū Saʻd of the Judhām mostly practiced agriculture and husbandry. The Banū ʻAbd al-Ẓāhir were a lineage of scribes.[72] In his administrative work *Al-Taʻrīf,* al-ʻUmarī claims that only the Arabs of the western province of al-Buḥayrah have the true traits and mores of Arabs, because these tribes were truly nomadic and traveled as far as al-Qayrawān and Gabes. He also singles out the Arabs of the province of al-Sharqīyah as having special status in the eyes of the sultan.[73] In these two provinces of Lower Egypt, in which the land is more suitable for grazing than for intensive agriculture, the Arab tribes undertook the defense of their own districts, unlike the other provinces, where the *ʻurbān* were only responsible for maintaining the roads.[74] But the rest of the Arab tribes are not held in great respect, because:

> They [the Arab tribes of Egypt] are sedentary people who sow their lands, who do not travel between the highlands and the plains or between Syria and Iraq, as they do in the Arabian peninsula, and who do not venture beyond the limits of their fences.[75]

While al-ʿUmarī noticed the discrepancy between the reality of the sedentary subsistence on the one hand and the Arab genealogy on the other, he nonetheless considered the Arab peasantry as part of the *ʿurbān*. Like the word *muslimān,* distinguishing between recent converts and "true" Muslims, the term *ʿurbān* served to distinguish between the pure Arabs of the legendary past and the mundane contemporary existence of Arab tribesmen, who did not necessarily live up to the notions of true Arab-ness.[76] The sedentary life of the Arab tribesmen of the Fayyum was therefore not an exception, but rather the rule in most Egyptian provinces along the Nile valley. Al-ʿUmarī's account suggests that it was particularly so in Upper and Middle Egypt, the centers of the great Arab revolts. Al-Nābulusī's tax records for the *badw* cereal-growers of the Fayyum are thus in complete accordance with the mass participation of peasants in the revolts, and are further corroborated by the explicit authority of al-ʿUmarī, our main contemporary source concerning the Mamluk *ʿurbān.*

If the Fayyum was indeed representative of Middle and Upper Egypt in general, this would imply not only that most *ʿurbān* were peasants, but also that the vast majority of the peasants were *ʿurbān.* As we recall, in al-Nābulusī's Fayyum all the Muslim peasants were also members of an Arab tribe. Modern scholars have always assumed that the Arab tribes lived as a minority amongst a sea of Egyptian peasants, or *fallāḥūn*. But, as Sato noted in his study of Mamluk rural society, the term *fallāḥ* is seldom used in Mamluk sources of this period.[77] In administrative works, including *Tārīkh al-Fayyūm,* the peasants are usually called *muzāriʿūn,* a fiscal and legal category derived from the *muzāraʿah,* the standard share-cropping

Society, 98; Saleh, "Les migrations," 14.

[75]". . . li-mā kānū ahl ḥāḍirah wa-zarʿ laysa minhum man yunjidu wa-lā yuthimu wa-lā yuʿriqu wa-lā yushʾamu wa-lā yakhrijūna ʿan ḥudūd al-judrān" (Ibn Faḍl Allāh al-ʿUmarī, *Al-Taʿrīf,* 70; cited in al-Qalqashandī, *Ṣubḥ,* 7:160).

[76]The term *ʿurbān* would appear to have some derogatory connotation, as suggested by Garcin (*Qūṣ,* 362). On the use of the term *muslimān* in the Mamluk period, see Bernadette Martel-Thoumian, "Le converti à travers quelques écrits historiques du IXe/XVe siècle," in *Proceedings of the Eighteenth Congress of the Union Européenne des Arabisants et Islamisants*: *Law, Christianity and Modernism in Islamic Society,* ed. U. Vermeulen and J. M. F. Van Reeth (Leuven, 1998), 171–84. I owe this reference to Tamer el-Leithy.

[77]Sato, *State and Rural Society,* 185.

contract in Islamic law. In the chronicles, the term *fallāḥ* is almost never used, except with regard to irrigation works,[78] and, as mentioned above, in association with the term *'urbān.* The Arab identity of the Egyptian peasant can provide a simple explanation for the mysterious silence of the Mamluk sources regarding the *fallāḥ:* the term *muzāri'* defined the peasant's fiscal obligations, the term *fallāḥ* defined his professional activity of cultivating the land, and the term *'urbān* defined his social tribal allegiance and his political agency. The three terms referred to different aspects of the life of the Arab peasantry of Egypt.

However, as with al-Nābulusī's Fayyum, if most of the Egyptian peasants were *'urbān,* it is historically impossible that all were the offspring of the Arab conquerors. In works devoted to tribal genealogy, medieval writers such as al-'Umarī explained the *badw* character of the Egyptian peasant by the settling down of nomadic tribes coming from the Arabian Peninsula. But works of tribal genealogy were compiled with a purpose. Al-'Umarī was interested in highlighting the lineage of his own tribe, and devoted a treatise, now lost, to extolling its virtues. He is very sympathetic to the tribes, glorifying their role in the defense of the Mamluk domains from foreign enemies. His account is as close as we get to the Arab tribesmen's view of themselves, an exercise in propaganda in which genealogical claims play a major role.[79] It would therefore be a mistake to read his text for what it is not. Al-'Umarī's tribal genealogies, in which a seemingly endless reservoir of Arab tribes are constantly migrating and settling down in the Egyptian countryside, hold little historical value. Such tribal histories, which invariably include the migration of distant ancestors to the site of the current settlement, are still found in peasant communities of the Middle East. The tribal histories of Tunisian village communities, for example, would have us believe that the country was first inhabited in the fifteenth century. Therefore, as Lucette Valensi points out, "genealogy reveals itself not as an account of the past, but as an allegory of the present, a translation of political, religious and matrimonial practices."[80]

The claim to Arab descent by the Muslim villagers of Upper and Middle Egypt must be understood as an attempt to negotiate the present rather than as a

factual narrative of the past, a move that has many parallels in medieval Islam. Michael Brett suggests that the Banū Hilāl invasion of North Africa was not a real event, but a myth perpetuated by sedentary Banū Hilāl tribesmen to establish themselves as a class of warriors, part of the elite and not of the commoners. He concludes that the Banū Hilāl epos emerged as an attempt to ″modify the realities of the past in order to meet the exigencies of the present.″[81] Even more pertinent are the attempts of fourteenth-century North African Berber converts to produce Muslim genealogies that extended to earlier dates than those of their conversion.[82] Last but not least, claims of sharifian descent going back to the Prophet Muḥammad were likewise a means of securing material and social privileges. Medieval Muslim societies made some attempts to regulate the genealogical claims to Prophetic descent, most notably through the institution of *niqābat al-ashrāf,* but they were not always successful. At least one fourteenth-century *naqīb al-ashrāf* was found guilty of selling the entitlement to sharifian status in return for bribes, and there are quite a few other examples from Islamic history.[83]

A claim to bedouin identity and lineage provided the villagers of Mamluk Egypt with a language of rights—both to the land and to its dominant religion. Rather then being viewed as the descendants of Coptic converts, the *badw* identity meant a pride of place within the Muslim community. And rather than being regarded as lowly tax-paying peasants, the claim to an Arab descent was also a claim to the values of an imaginary nomadic past, in particular to the independence and the equality of the nomadic tribe. By adopting an ideology of lineage or of bedouin-ness, the rural communities found a sense of superiority in Islam and nostalgia for the autonomy of a nomadic past. The tribal genealogies preserved in the work of al-ʻUmarī, and later reproduced by al-Maqrīzī and al-Qalqashandī, were the product of a purposeful attempt to re-align local identity within the dominant culture.

Moreover, bedouin-ness was also an empowering ideology that could nourish armed resistance. The claim to Arab descent and nomadic past may also be a means of justifying revolt against the state and its tax-collectors. In our *badw* village of Saylah, where a significant proportion of the crops would have been taken away by royal officials like al-Nābulusī, a revolt led by the *sharīf* Ḥiṣn

al-Dīn ibn Taghlab would have made an impact. Resistance to taxation and to the local bureaucracy would have found an outlet through the *sharīf*'s alleged descent from the Prophet, the local community's pride in its Arab lineage, and its adherence to the bedouin ideal of autonomy. Set against a Mamluk elite composed of newcomers both to Egypt and to Islam, the *sharīf* evoked the value of lineage as well as the rights of the indigenous communities. As we remember, scorning the rule of the Turkish slaves, Ḥiṣn al-Dīn claimed that the Arab tribes were "the true owners of the land."

In *Tārīkh al-Fayyūm wa-Bilādihi*, al-Nābulusī provides us with a singular eye-witness account of social and economic life in a medieval Egyptian province; we should listen to him very carefully. In particular, al-Nābulusī divides the population of the Fayyum into the Khaldūnian categories of *badw* and *ḥaḍar,* and tells us that almost the entire population of the Fayyum was *badw*. From the fiscal part of his survey we learn that the *badw* tribesmen lived, for the most part, in sedentary cereal-growing villages, which were dependent on seasonal inundation. The few *ḥaḍar* villages, on the other hand, cultivated cash-crops and were dependent on perennial irrigation. Moreover, the inhabitants of the *ḥaḍarī* villages were predominantly Christians while the *badw* villages were predominantly Muslim. Al-Nābulusī's dichotomy of Christian *ḥaḍar* and Muslim *badw* meant that not only were all the *badw* Muslims, but, more surprisingly, all the Muslims were *badw*. I have argued that the only plausible explanation for this demographic situation is that conversion to Islam by the indigenous Christian population was accompanied by the assumption of a *badw* tribal identity.

Like the Arab tribesmen of the Fayyum, the majority of the tribesmen who took part in the large Arab revolts of the Mamluk period were peasants. Moreover, it seems that, as in the Fayyum, most of the Muslim peasantry in the Egyptian countryside had an Arab tribal identity. This Arab identity is best captured by the term *ʿurbān,* which was meant to distinguish the Mamluk tribesmen from the truly Arab tribes of the Arabian Peninsula. Unlike the original Arabs, most of the *ʿurbān* lived a sedentary existence, but still claimed Arab descent and subscribed to the values of the nomadic life-style. These claims, transmitted to us in several genealogical works composed in the Mamluk period, hold very little historical value. It is quite impossible that a large portion of the Egyptian peasantry were the descendants of a few tribal clans who arrived following the Muslim conquest. Rather, the claim to Arab descent by the Muslim inhabitants of rural Egypt must be understood as an attempt to negotiate the present. Bedouin-ness, that is the memories of an (invented) nomadic past of independence and the pride in an (alleged) lineage in Islam, was an ideological antidote to the lowly status of the

bulk of the cereal-growing Egyptian peasantry. And when the opportunity was ripe, it was also a rallying cry for revolt.

The findings of this article are limited to the first century of Mamluk rule in Egypt. Arguably, by limiting my discussion to this early period, I have ignored the wealth of historical evidence regarding the increasing political influence of the tribes in the fifteenth century. In particular, I have not discussed the fifteenth-century reports of bedouin violence towards the peasantry, especially in Lower Egypt.[84] I would argue, however, that the outbreak of the plague in the middle of the fourteenth century is an appropriate cut-off point for a study of the rural communities of Egypt. The Black Death brought about radical demographic, economic, and social changes to Egyptian rural society, changes whose nature we are just beginning to understand. The tribesmen of al-Nābulusī's Fayyum inhabited a world very different from that of their descendants two centuries later. Since Arab and bedouin identities were not fixed or natural, but rather assumed and cultural, the definition of bedouinness must have shifted through the ages. Undoubtedly, there is still detailed research to be done on the place of the Arab tribesmen in Mamluk society. But this research must acknowledge that the Arab tribes represented a significant portion of the Egyptian population, if not an outright majority; and that they should be at the center, rather than at the margins, of Mamluk historiography.

Sharp Practice in Levantine Trade in the Late Middle Ages: The Brizi-Corner Affair of 1376–77*

Given the common reputation of Mamluk officials as being, even by the standards of their own time and place, extraordinarily corrupt and grasping, it is hardly surprising that contemporary governments, confronted by reports of Mamluk officials impounding the goods of foreign merchants, and demanding of them outrageous compensation, were inclined to attribute these acts to greed. That this was not always the case, however, that in some circumstances Mamluk officials operated not solely from greed but as well in reaction to some real offense and from a desire for justice for their own subjects, is evident from the documents from the Venetian archives which refer to what, for want of any official title, might be designated the Brizi-Corner Swindle of 1376–77.[1]

The Venetians were, by the fourteenth century, old hands at Levantine trade, perhaps the oldest in Christendom. The national legend of the smuggling of the body of St. Mark from Abbasid Egypt in the ninth century attests not only to the antiquity of Venetian contacts in the East, but also to their self-perception as a people who could take care of themselves in the treacherous world of Eastern Mediterranean trade and politics. They had confronted and dealt with all manner of hazards at one time or another—pirates, cut-throat competition from the Genoese and others, uncooperative or merely corrupt officials, and the uncertain security of the goods, and, indeed, the very persons, of traders living on sufferance in foreign parts. They knew their way around.

Successful trade presupposes mastery of diplomacy, and Venice had learned to play that game particularly well: from Flanders to Tana, even among the crafty Byzantines or the testy Mongols, Venetian diplomats had met with success in securing the trading interests of the Republic. And yet, in the mid- and late fourteenth century, the Venetians apparently found their resourcefulness severely tested by trading conditions in Egypt and Syria. Even for a trading nation of such consummate ability, dealing with the Mamluks was something particularly challenging.

---

*The author wishes to thank the Gladys Krieble Delmas Foundation and the CIES for their support of the research on which this article is based.

[1]Brief mention of the swindle discussed in this article can be found in Eliyahu Ashtor, *Levant Trade in the Later Middle Ages* (Princeton, 1983), 123.

The rapacity of Mamluk officials has, justly, become legendary; there can be little doubt that they often preyed heavily on whomever they could, to the extent that they may have grievously harmed the economies of Syria and Egypt. The system not only allowed such abuses, but in part made them necessary: the tenure of official posts was uncertain, and the temptation to milk them for all they were worth was great. Abuses of office, impositions of extraordinary levies on the helpless—Muslim and non-Muslim alike—manipulation of the market, or even forced purchases to take advantage of one′s own speculations in commodities, were all standard practice for Mamluk officials, both in Egypt and in Syria.[2]

Particularly vulnerable to the greed of such functionaries were the communities of foreign, especially Latin Christian, traders conducting their affairs in port towns and inland emporia. Without the protection offered by law to Muslims, or even to Christian subjects of the sultan, their position on Mamluk soil was, at best, equivocal. Security of person or property, let alone expectations of honest trade practices, was not derived from any legal right, but rather depended on the goodwill of the sultan and his deputies, on their willingness to grant safe conduct and special trading privileges. Self-interest, of course, dictated that the Mamluks allow and even encourage trade, but this consideration hardly deterred officials from seeking bribes in exchange for trading concessions. It is no wonder, then, that throughout the late Middle Ages ambassadors from merchant states around the Mediterranean, their purses bulging with cash to buttress their persuasiveness, arrived at Cairo, commissioned to seek the valuable permission of the sultan to carry on trade, to set up factories, to be represented by consuls, and the like. Such treaties were negotiated with various European trading powers, granting them security and establishing guidelines for trade.[3] But these treaties could in no way be viewed as a guarantee of smooth operations and freedom from harassment. The ability of foreign traders to do business unhampered was directly proportional to the sultan′s willingness (and ability) to see that his edicts were enforced, and that the concessions he had granted were observed, by his governors and lesser officials in the provinces. In the fourteenth century compliance by local officials with concessions handed out at Cairo could not be taken for granted. They, at the very least, could be expected to demand their own share of the graft before carrying out their duties.

That Venice, along with other trading nations, suffered from these abuses is

---

[2]See, for example, Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, Mass., 1967), 55–56, 124–25.

[3]Some of the most valuable articles on these concessions have been published by John Wansbrough. See, in particular, his articles ″The Safe-Conduct in Muslim Chancery Practice,″ *Bulletin of the School of Oriental and African Studies* 34 (1971): 20–35; ″A Mamluk Letter of 877/1473,″ *BSOAS* 24 (1961): 200–13; ″Venice and Florence in the Mamluk Commercial Privileges,″ *BSOAS* 28 (1965): 483–523.

abundantly clear: some sense of how difficult a time Venetian merchants were having in the Levant, and of how extensive and regular these abuses were, can be extracted from the pages of the registers of the Deliberazioni Miste of the Senate, preserved at the Archivio di Stato of Venice.[4] Scarcely a register exists—and fourteenth-century registers that cover more than a three to four-year period are rare—that does not contain numerous references to the trials suffered by Venetian merchants at Alexandria, Damascus, or elsewhere. Iniquitous levies (contrary to the privileges granted by the sultan), unwarranted confiscation of the goods of merchants,[5] demands for graft and bribes (Venetian *manzarie;* modern Italian *mangerie*), imprisonment and beatings of Venetian merchants or even of the Venetian consul, all figure in the pages of the registers, and particularly in the drafts of commissions for the embassies that Venice, with monotonous regularity, was forced to send east throughout the last half of the century to secure the interests of her merchants.

The Venetians, like all good negotiators, knew the value of taking the offensive from the first. An ambassador sent on such an important mission was already likely to be well-versed in this cardinal rule of successful negotiation. The commissions, nonetheless, regularly made it clear how the Republic expected her envoys to approach the discussions: however diplomatically he might phrase his arguments, an ambassador was to put all of Venice′s grievances to the fore immediately, and to demand satisfaction. Never argue from weakness, never admit even partial culpability for problems arising between the two states—this seemed to be the principle upon which Venetian negotiations with the Mamluks (and with other states as well) were built.

In any event, the commissions, when read as a series, begin to look like form letters: after giving the usual expressions of goodwill, the ambassador is then to mention all the abuses suffered by Venetian merchants at some given place,

---

[4]The registers for the fourteenth century are to be found under the heading *Deliberazioni Miste* (hereafter given as ASV, Senato Miste); after 1400, most material pertaining to foreign relations can be found in the registers of *Deliberazioni Secrete*.

[5]Particularly vulnerable were the goods of the merchants who died while trading abroad—such goods were supposed to be secured by the consul for disposal as the deceased′s will, or law of inheritance, required. But often whatever was found in his possession went into the purse of an official. Such was the case, for instance, of one Nicoleto Trevisan, an agent carrying on trade in the Levant in the early 1380s. Falling ill at Acre, and fearing for his life, he sent his *tarjumān,* with the proceeds from his trading activity, to the captain of a Cretan galley in the harbor, a commission that the *tarjumān* faithfully fulfilled. The luckless Trevisan did die, and the *amiratus* of Acre had his corpse searched immediately. His *tarjumān* was imprisoned and questioned—under circumstances we can only imagine—and the official, having learned the whereabouts of the money, had it extracted from the captain, ″per vim.″ See Venice, Archivio di Stato di Venezia (ASV), Senato Miste, 29 July 1382 (reg. 37, fols. 99v–101r).

concerning which the ambassador is to say he is sure that the sultan was unaware, and the news of which is certain to be displeasing to that particular font of justice. Only after unburdening himself of this speech and receiving the sultan's guarantees that such abuses would not be tolerated, and after satisfying himself that these instructions would be carried out, could the ambassador take up other business.

It is in the context, then, of this series of very like commissions that the commission of 8 September 1377 stands out as unusual: the grotesquely un-Venetian tone of apology Nicolò Loredan and Baldo Querini were instructed to take before the sultan was a conspicuous departure from the normal pattern. Why would Venice, usually quick to object indignantly to mistreatment of her citizens and restriction of her trade, instruct her ambassadors to adopt nothing short of a posture of crawling contrition when they went before the sultan?

In light of the usual pattern of commissions, it at first seems worthy of little note that in the winter of 1376–77, the Senate voted to select an ambassador who "shall place before the sultan the [illegal] novelty perpetrated against our consul and merchants in the regions of Damascus, and obtain the release of the goods and merchandise of our merchants, held in said regions."[6] The commission for Nicolò Zeno, selected for the job, was worded in the usual way,[7] and he was sent forth with two thousand ducats for gifts and bribes, and told to stay at Cairo until he had received a promise that the abuses would be rectified, had written to the consul at Damascus to this effect, and had received word back that the promise had indeed been carried out.[8]

No verbatim account of the embassy of Nicolò Zeno can be found, but, from what we know from later documents, it must have turned out to be a singularly awkward and uncomfortable assignment. The ambassador, sent to chide the sultan for letting his officials abuse their positions and molest Venetian subjects who

[6]". . . exponat [soldano] novitatem factam consuli et mercatoribus nostris, in partibus Damaschi, et procuret liberationem haveris et mercationum nostrorum detentarum in dictis partibus . . ." Venice, ASV, Senato Miste, 30 December 1376 (reg. 35, fols. 133v–134r [new numbering 145v–146r]).

[7]Venice, ASV, Senato Miste, 17 January 1376 [=1377] (reg. 35, fol. 138v [new numbering 150v]). It does appear that the Senate was a bit more agitated than usual: a vote was taken (14 January 1376 [=1377]) to cut off completely all commerce with Beirut and Damascus, but this was defeated.

[8]Venice, ASV, Senato Miste, 19 January 1376 [=1377]. After all this important business has been taken care of, the ambassador is instructed to do "whatever good he can" to effect the release of the king of Armenia and his wife and sons. They had been held by the Mamluks since the dismemberment of the Kingdom of Lesser Armenia two years earlier.

were trading in all good faith, must have been greeted with stony silence, followed by the revelation, supported by what Zeno apparently found sufficient evidence, that it was not owing to malfeasance by Mamluk officials that Venetians were being imprisoned and their goods confiscated at Damascus, but rather it was owing to the fact that certain Venetians had been systematically swindling Muslim traders.

Up to this point, Marco Brizi, the alleged swindler, and his associates appear, as they doubtless appeared both to their compatriots in the Senate and to the Muslim traders who injudiciously trusted them, as honest Venetian businessmen, of long experience in the Levant. It must have been of a shock, then, when a chastened Nicolò Zeno returned from his embassy to Cairo. The main points of his reports to the Senate can be surmised from the very first words of the decree in which the scandal became public:

> In that Ser Marco Brizi and Ser Zanachi Cornario have, as has been learned, fled the environs of Damascus with the goods and possessions of Saracens, and have sent some of these goods to Venice; and, as is clear enough, they have delivered some of these goods over to the hands of Ser Jacobello Cornario, accomplice of the aforementioned . . .[9]

The decree goes on to detail steps to be taken: the provisors of the state are ordered to make a thorough investigation; all such merchandise found at Venice is to be immediately impounded; the culprits are to be arrested if they come to Venice or fall into the hands of Venetian officials elsewhere.[10]

Marco Brizi was a merchant of apparently long experience in the Orient. His subsequent misdeeds must have proved all the more embarrassing for the Republic in light of the position of trust to which he had been earlier assigned: he had served a long tenure as Venetian consul at Damascus, at least through the first half of the 1370s.[11] Nor could that embarrassment have been diminished by the fact that the Senate, just a year before the scandal broke, had ordered their consul at Alexandria to pressure the Mamluk sultan himself for payment of a debt of

---

[9]Venice, ASV, Senato Miste, 27 August 1377 (reg. 36, fol. 34r [new numbering 35r]).

[10]Actually, only the Corner brothers are named specifically; Brizi, as later documents reveal, was apparently already dead.

[11]After a short breech of diplomatic and commercial relations in 1369–70, we find reference to permission being given for Marco Brizi to return to his position as consul at Damascus (Venice, ASV, Senato Miste, 13 May 1370 [reg. 33, fol. 54r]). He was apparently still consul in early 1375, when he was replaced in that position by Johannes Barbadico (Venice, ASV, Senato Miste, 6 February 1374 [=1375], 30 March 1375 [reg. 34, fol. 156, reg. 35, fol. 9v]).

some 8,000 Byzantine gold pieces, which he owed to two Venetian traders, ″Jacobus Cornario″ and ″Marcus de Briciis,″[12] the first time we see together the names that were to be linked only a short time later in an indictment.

In any event, the investigative and punitive measures ordered by the Senate in August 1377 could only be the first steps in repairing the damage done to Venice′s Levantine trade—and her reputation for honesty—by the actions of Brizi and the Corners. All possible means were to be employed to placate the sultan and his officials: on the very day the public condemnation of Brizi and the Corners was issued, the Senate also voted to send yet another embassy to Cairo, this time to express the Republic′s sorrow and mortification over the incident. Nicolò Loredan and Baldo Querini were selected for the task.[13]

The draft of their commission, dated 8 September 1377, outlined in typically scrupulous detail—often specifying the very words that were to be used—just how the Senate wished the new ambassadors to approach their task. In form, it is much the same as the commissions of other ambassadorial expeditions; in content, however, it is unique: after the usual fulsome exchange of words of greeting and undying friendship, the ambassadors were to tell the sultan that the Senate had received and understood the reports of Nicolò Zeno and the letters of the sultan, and was most upset if any of her citizens had perpetrated such an act. They were to tell the sultan further that Venice had launched an investigation of the affair, but that the results would be disappointing to those seeking restitution or revenge: none of the culprits were to be found at Venice, nor could Venice locate any of their belongings that might be impounded. In any event, a warrant had been issued for their arrest and return to Venice, and it was certain that, once they were caught, it would be a long time before any of them emerged from prison.

> Had we but known [the ambassadors are further instructed to say] of these things before their flight, we should have taken steps against them of such immediate and personal significance, as they would not have forgotten as long as they lived, both as a punishment for them, and as an example to others in the future.[14]

Venice, the ambassadors were to conclude, would never condone such an act, and such occurrences were expressly contrary to the desires of the doge. Since, therefore, Venice had acted in good faith, it was only right that the goods of honest Venetian merchants be released; they had, indeed, been seized illegally, contrary to the

[14]Ibid., 8 September 1377.

sultan′s own edicts, which did not recognize guilt by association: ″the son should not be made to bear the damages or punishment for his father[′s misdeeds], nor the father for [those of] the son.″[15] If by some chance the ambassadors should find the sultan cooperative, they were to press him to order his officials to release the impounded merchandise immediately; one of them was then to go to Damascus to check to see if the order had indeed been carried out, while the other was to remain at Cairo.

And yet so greatly did the Senate recognize the weakness of Venice′s position that they were willing not only that their ambassadors should so uncharacteristically abase themselves, but also that they should descend into melodramatic pathos:

> And, so that you might attain our end more quickly and easily, you should say to the sultan and his aides that every day orphans, widow ladies, and others appear before us, asking of us the release of the aforementioned goods, saying, most insistently, that they have nothing else in this world.[16]

The Senate′s instructions provide as well what we must consider more practical inducements to obtain cooperation on the matter. The commission provides them with 2,000 ducats for ″gifts″ for the sultan and his men, as well as for paying graft; in an addendum to the commission, however, the ambassadors are authorized to make bribes up to 15,000 ducats, ″out of the goods and belongings of our merchants that are held there.″[17] In any event, the ambassadors are instructed to use whatever skills they can: the concern is indeed that of securing the release of the merchandise, but further, and ultimately more important, securing good relations for the future.

No mention of the swindle, of the punishment of the Venetian trading community,

---

[15]Ibid. Compare the text of the safe-conduct granted by Qānṣawh al-Ghawrī to the Florentines, edited and translated by Wansbrough, ″Safe-Conduct,″ 22: ″wa-an lā yuṭālib al-ab ʻan ibnihi wa-lā al-akh ʻan akhīhi.″ Venetian traders at Aleppo had apparently enjoyed similar security at a much earlier time: See G. L. F. Tafel and G. M. Thomas, eds., *Urkuden zur älteren Handels- und Staatsgeschichte der Republik Venedig* (Vienna, 1856), 2:276, mentioned in M. E. Martin, ″The Venetian-Seljuk Treaty of 1220,″ *English Historical Review* 95 (1980): 330; see as well the provisions of the treaty between Genoa and Qalāwūn mentioned in P. M. Holt, ″Qalawun′s Treaty with Genoa in 1290,″ *Der Islam* 57 (1980): 102.

[16]Venice, ASV, Senato Miste, 8 September 1377 (reg. 36, fol. 37v [new numbering 38r]).

[17]″. . . quod possitis expendere in manzariis . . . usque ad summam ducatorum .xv. de bonis et rebus nostrorum retentis deinde.″ Venice, ASV, Senato Miste, 14 September 1377 (reg. 36, fol. 38r [new numbering 39r]).

or even of the two ambassadorial missions appears in the usual Mamluk sources. At first this might appear striking, because while arrivals of ambassadors are not always noted by the chroniclers, they are frequently mentioned.[18] But the Islamic years 778–80 [May 1376–April 1379] were ones of particular turmoil in Mamluk Cairo. In March 1377, the sultan al-Ashraf Shaʻbān, who had been on the throne for fourteen years and was the last of the line of the descendants of Qalāwūn to rule in more than just name, was overthrown and strangled, and his son ʻAlī, who was just a boy of seven, was placed on the throne by the coalition of conspirators.[19] There followed a period of instability and even more than the usual court intrigue, as various Mamluk amirs sought to seize for themselves positions of power around the child sultan: the Islamic year 779 [May 1377–April 1378] saw no fewer than four men occupy the post of *atābak al-ʻasākir,* normally the second in command in the state but, when the sultan was a mere figurehead, the position of greatest power.[20] The last of these was Barqūq, who would become sultan in 1382, inaugurating the second, or ″Circassian,″ phase of Mamluk rule.

In short, the Venetian embassies arrived in a Cairo gripped by political intrigue. If Zeno arrived anytime after March 1377,[21] his audience was not with a single sultan and his advisers, but with a boy surrounded by a throng of amirs who were at that very moment jockeying for power. This could very well explain the eight-month period between the commission and his report to the Senate. Nor was the embassy of Querini and Loredan faced with significantly more stable conditions. It is amazing that they got anything done at all.

M. Holt, *The Age of the Crusades* (London, 1986), 146.

[21]It is impossible to establish from the commissions exactly when the ambassador did depart; in any event, the problems of navigation in the Mediterranean in mid-winter may have made for considerable delays.

It was with good reason that Venice viewed with concern her prospects for trade in Mamluk lands, because the Brizi-Corner swindle, far from being an isolated incident, was one of many such incidents that had apparently plagued Venetian-Mamluk relations for decades.[22] An addendum to the commission given to Loredan and Querini suggests that they could strengthen their case before the sultan by mentioning that ″at many times many *bancherii*[23] had run off from that region, and never had any sort of innovation or molestation been practiced on that account against merchants or commerce.″[24] Venetian traders, it would seem, as a matter of course had in their possession goods obtained from Muslim merchants for which they had not yet fully paid, goods that had been taken either on credit or on consignment. There is evidence as well that some of these goods were carried off—we must presume legally—from Muslim ports, with expectation of later compensation. In 1369, a time of heightened tension between Venice and Egypt, Venetian citizens who had in their possession the goods of ″Saracens of Egypt or Syria, subjects of the sultan of Babylon″ are called upon to report the fact, although in this case it is just as likely that what Venice was planning was a confiscation of goods legitimately held in trust, a ″freezing of Muslim assets,″ as it were, as relations with the Mamluks deteriorated completely.[25] A far more clear-cut case is that of one Christoforo Permarino, who is reported to have fled Syria with the belongings and goods of Muslim merchants, and whom the Senate orders to be held, and ″dealt with according to what is just.″[26]

The profits to be made in the Levantine trade were, obviously, enormous, more than compensating for the discomforts and indeed hazards of life in so inhospitable a place. Even without resorting to dishonest means, the person involved in such trade, especially one of such long-term experience as Brizi, could expect to amass a handsome fortune. And indeed, the Venetians had made honesty something of their stock-in-trade. It was a tremendous advantage to Venetian traders in the competitive Levantine marketplace to be regarded as always to be

---

[22]We must, of course, consider that the charges against the three were manufactured. As noted above, they had lent money in the past to the sultan and, we may assume, lesser officials, and it would not be the first instance where powerful rulers sought to discharge their debts by making accusations of turpitude against their creditors. But the ambassadors and the Senate did find the evidence compelling and the actions of the accused, if not damning, were certainly suspicious.

[23]*Banchiere* generally meant an ″international banker,″ although it could also mean a local banker or even money changer. See Florence Elder, *Glossary of Medieval Terms of Business, Italian Series 1200–1600* (Cambridge, Mass., 1934), 39–40.

[24]Venice, ASV, Senato Miste, 14 September 1377 (reg. 36, fols. 37r–38v [new numbering 38r–39v]). We do have to wonder how wise a negotiating ploy it was to bring up such past offenses.

[25]Ibid., 31 August 1369 (reg. 33, fol. 30v).

[26]Ibid., 20 May 1385.

trusted; shrewd, no doubt, and all the more respected for it, but not dishonest.

How, then, could men like Brizi be drawn into dishonest dealings? How, indeed, could they be put in possession of goods not theirs in the first place? The answer is to be found in the very reputation for trustworthiness that had helped Venetian trade flourish: Muslim merchants were, apparently, willing either to sell to Venetian merchants on credit, or to entrust goods to them on consignment, allowing them to take possession of their goods in advance of full payment, in return for greater profit later on. Such a system must have worked well as long as the merchants themselves remained on the scene. But when, after a career in the east, one decided to clear out for good, there must have been some temptation to buy once more on credit, and abscond before paying.

Venice had already encountered problems owing to this practice. In 1359 the Senate instructed the consul at Alexandria to go to Cairo to urge the sultan to forbid Muslim merchants from selling goods to Venetians on credit, or entrusting them with goods on consignment, recognizing that these sales were potentially dangerous.[27] Little apparently resulted from the mission.

A year before the Brizi-Corner scandal broke, there was again alarm in Venice about the potential harm that could be done Venetian interests by the willingness of Arab traders to sell to Venetians on credit. In 1376 the Senate wrote to the Venetian consul at Alexandria, ordering him to ask the sultan to issue an order forbidding the sale of goods by Muslim merchants to Venetians on credit, ". . . because, owing to the sales on credit made by Saracens to our merchants and citizens at said regions of Damascus and other regions of Syria, many damages and harmful effects might follow, in all sorts of ways."[28] For their own part, the Senate issued an edict a month later, forbidding Venetians from buying on credit from Muslims, as well as entering into mutual relationships that would involve them in having possession of the goods of Muslim merchants.[29] But either the damage had already been done, or Brizi and his associates were able to ignore the order. Sadly, in the commission for Loredan and Querini, the Senate once again takes up the issue:

> We also commission you, that when you have cleared away the main object of your mission, you should, how and when it seems best to you, take pains and petition before the sultan, as forcefully as you can, that his subjects may in no way sell to our merchants

[27]Ibid., 18 June 1359. Making the situation perhaps even more hazardous was that Mamluk officials themselves often invested in consignments of cargo. See Lapidus, *Muslim Cities,* 120.

[28]Venice, ASV, Senato Miste, 20 May 1376 (reg. 35, fol. 100v [new numbering 112v]).

[29]Ibid., 19 June 1376 (reg. 35, fol. 107v [new numbering 119v]).

> on credit, so as to prevent such things from happening again in the future, owing to the desertion of either his subjects or ours. Such an injunction should be backed by all the greatest penalties, restraints and strictures that you can obtain, by showing the sultan and his men how useful—indeed necessary—such a thing is for the sake of merchants and commerce; use such arguments and words as seem useful to you.[30]

Clearly there was great risk in Venetians taking possession of goods that belonged to Muslim merchants, even if by honest means and temporarily. So tenuous and uncertain, so subject to abuse of all sorts, was the position of the Latin trader in the East that even the accidental loss or destruction—let alone intentional theft—of goods not fully theirs would be disastrous. So nervous was Venice about the harm that could be done to her commerce by such a loss, that she even prohibited Venetian ships from turning a profit by carrying goods belonging to Muslims from place to place, ″. . . because it might be the cause of great scandal and misunderstanding.″[31] Quite simply, Venice did not want her citizens in the Levant to have in their possession or care goods to which they had not full and clear title.

Given the essentially negative character of the news that they brought to Cairo and the potential for some unpleasantness during—and after—their audience with the sultan, and given the chaos and political turmoil that must have hindered the regular conduct of business at court, few would look with relish on the task to which Loredan and Querini were assigned. Fewer still would anticipate that they would meet with the success that, in spite of everything, the Republic very clearly expected of them. And yet, apparently, they did succeed. Exactly what they said and did, exactly what concessions they had to make, what compensation they had to arrange, whose purses they had to fill, we do not know. But we do have the indirect evidence of commissions to later ambassadors, who were charged with seeing that the sultan enforced the promises he made to ambassador Loredan.[32] Of course, one would not expect the Mamluks to have remained obstinate for long. Trade with the Venetians was dear to Muslim merchants, to the official coffers of the state, and no doubt to the private purses of its minions. We still must, however,

[30]Ibid., 8 September 1377.

[31]″. . . quod posset esse causa magni scandali et erroris.″ Venice, ASV, Senato Miste, 12 May 1384 (reg. 38, fol. 120r [new numbering 121r]).

[32]See, for instance, the commission to Petro Grimani and the same Baldo Querini, Venice, ASV, Senato Miste, 29 July 1382 (reg 37, fols. 99v–101r).

pause to appreciate the choice of the Senate in so obviously picking the right people for the job.

What, finally, of the other protagonists of the story, the people who made all this fuss necessary? Their various fates must have, at least, given some comfort and consolation to the merchants whom they had diddled. Marco Brizi apparently did not live to enjoy his profits. Already in the edict of 27 August 1377, we are struck by the fact that orders for arrest are given only for the brothers Corner; Brizi is not mentioned. Our suspicions that he came to a bad end are confirmed by the commission of 8 September 1377. Brizi, it seems, was killed at sea while making his getaway on Genoese galleys. No further detail is supplied. A curious point arises about the role of Venice´s arch-rival, Genoa, in abetting Brizi´s getaway. Relations between Venice and Genoa, particularly as regarded Levantine trade, had not been unqualifiedly bad in the 1370s. Indeed, the decade opened upon a union of cooperation between the two rivals, engineered and encouraged by the pope, and born of a perceived need to present a united front against abuses in Mamluk ports. But by mid-decade the tension that was ultimately to lead to the unsuccessful Genoese blockade at Chioggia in 1378–80 was already present, nourished by hostility over the dispositions of the islands of Cyprus and Tenedos. Brizi´s contacts with Genoa went back at least to 1370, when Genoese ships were possibly involved in transporting the then- consul at Damascus back to that city from Cyprus.[33] It would seem improbable that Genoa played an active role in Brizi´s swindle. Nonetheless, in helping him make off with the goods of Muslim merchants, Genoa could but hope that the act would do long-term damage to Venice´s interests in the Levant.[34]

Zanachi Corner, it seems, did very little better: he had been found, living as a pauper and beggar on Cyprus. Whether he had already squandered what he had, or whether, when the story first became public, he had to flee without the swag, we cannot say. Both men disappear for good from the records. Not so Zanachi Corner´s brother Jacobellus, who, to be just, seems not to have played so damning a role in the scheme. He had also remained in exile, but some four years later we find him petitioning to be allowed to return to Venice to explain himself without being thrown into prison as soon as his foot hit the wharf: in no way, he explained, had he been an accomplice, or even an associate, of Brizi. The Senate seemed willing to accommodate him.[35] And yet, only a few months later, they withdrew their permission allowing him to return with immunity, fearing that, even after

[34]I have found no mention of the incident in Genoese archival materials.

[35]Venice, ASV, Senato Miste, 30 August 1381.

years had elapsed, Venetians might still suffer.[36] We can only guess how great the original fury of the Mamluk inner circle had been over the crime from the fact that, at least as the Venetians perceived it, it might still be smoldering after four years.

The Last Decades of Venice´s Trade with the Mamluks: Importations into Egypt and Syria

For hundreds of years, Venetians and Mamluks were engaged in an economic partnership based on a fundamental interdependence of two economic systems that were both linked to many other commercial networks. During the fifteenth century, Venetian merchants and entrepreneurs became the main middlemen between the territories subject to Mamluk sultans and western Europe.

The basic characteristics of the commercial relations between Mamluk lands and Venice stem from their dependence on the continuous presence of Venetians in Egypt, Syria, and Palestine. This presence had two main components: on the one hand merchants, commercial agents, and official representatives (consuls and vice-consuls) staying in the main centers of commercial activity, importing and exporting goods and keeping constant contacts with their partners in Venice and in other centers of international trade; and on the other hand, periodic visits of Venetian ships, including both the state-owned and regulated commercial galleys, particularly those operating on the Alexandria, Beirut, and *trafego* galley lines,[1] and the privately-owned round ships.[2] The latter were also of two kinds: those visiting the Levantine ports in preestablished periods *(mude)* in spring and autumn, and those that were not dependent on a state-regulated sailing schedule. Thus, Venetians functioned not only as exporters of goods from Venice to the East and from the East to Venice, but also as importers of Western goods and products into Egypt and Syria. No Egyptian or Syrian merchant is known to have been involved in this trade with the West beyond the boundaries of Mamluk territories.

The activities of Venetian merchants in Mamluk lands were often disturbed or disrupted, owing to disagreements with Mamluk sultans as to the conditions regulating their activities and to harassments by Mamluk officials, who considered European merchants easy prey to extortion. In particular the policy inaugurated by Sultan Barsbāy in the 1420s and pursued by his successors, forcing the Venetians

[1]The *trafego* line linked Venice, the Maghreb, and the Mamluk ports. On the system of the merchant galleys, see Frederic C. Lane, *Venice, A Maritime Republic* (Baltimore and London, 1973), 124–31, 337–52.

[2]Round ships is a term used in Mediterranean shipping to distinguish a certain type of ship (roundish in form, propelled by sails) from another type, namely galleys, which were long in form and could be operated either with sails or with oars.

to buy part of the large quantities of pepper they were always exporting from Mamluk territories from the sultan´s warehouses at a high price, was the source of many difficulties. But notwithstanding several moments of crisis, trade always continued, and Venetians never disappeared from the scene for long periods.

During the last twenty years of the Mamluk Sultanate, there were further internal and external factors that threatened to destroy this commercial relationship altogether. On the Egyptian and Syrian side, the death of Sultan Qāytbāy in 1497 was followed by approximately four years of violent power struggles over the sultan´s throne. The accession of Qānṣūh al-Ghūrī in 1501 seemed to stabilize the political situation inside the sultanate, but other destabilizing forces continued to disrupt trading activities in the region, particularly the rise of the Safavid power in the east and the ensuing military struggle between Safavid Persia and the Ottoman Empire.

At the very same time, in a coincidence that could not have been any worse from both the Mamluk and the Venetian standpoints, the Portuguese caravels began bringing spices to Lisbon through the new sea route around Africa. Mamluk efforts to oust the Portuguese from the Indian Ocean ended in failure, and in 1513 and again in 1516, the Portuguese penetrated the Red Sea, causing damage to Muslim shipping centered around Jidda. In 1513, the Portuguese also reconquered Hormuz.[3]

During those years, Venice had to face one of the most difficult phases in its history. The Italian wars that had begun in 1494 with the French invasion of Italy, the war against the Ottoman Empire that lasted from 1499 to 1503, and even more so, the war of the league of Cambrai, which began in 1509 with the loss of all Venetian territories in the Italian mainland, necessitated enormous investment in armies and military equipment. Loss of income, heavy taxation, and forced public loans led to a serious financial crisis.[4] International trade, the basis of the republic´s power and wealth, could not be pursued without great difficulty during those years, since many of the products exported from Venice to the east originated from or passed through lands that had become enemy territory, either in the Balkans and the eastern Mediterranean, where the Ottomans constituted a threat, or in the *Terra Firma* and the Alps controlled by the European enemies of Venice.

Confronted with these great difficulties and even by the same threats, such as the rise of Ottoman power and the Portuguese presence in the Indian Ocean, one

---

[3]Subhi Y. Labib, *Handelsgeschichte Ägyptens im Spätmittelalter (1171–1517)* (Wiesbaden 1965), 453–61.

[4]Frederic C. Lane, ″Venetian Bankers,″ *Journal of Political Economy* 45 (1937), reprinted in *Venice and History: The Collected Papers of Frederic C. Lane* (Baltimore, 1966), 70–72, 79–80; Gino Luzzatto, *Storia economica di Venezia dall´ XI al XVI secolo* (Venice, 1995), 221–38.

would have expected more collaboration between Venetians and Mamluks. Yet that was not the case. Qānṣūh al-Ghūrī intervened on two occasions to stop trading relations with Venice. In 1503 he claimed that goods included in the tribute paid by Venice to the sultan in recognition of Mamluk suzerainty over Cyprus were of bad quality, and two years later he tried to raise substantially the quantity of pepper that Venetians were required to buy directly from him.[5] In 1510 another crisis developed on account of Venetian contacts with the Safavids.[6] Consequently, no galleys were sent to Alexandria and Beirut in 1505, to Alexandria in 1506, and to Beirut in 1510. These and further pauses in the functioning of the Alexandria and Beirut lines for other reasons were signs of crisis in the trade between Venice and the Mamluks.[7]

Under such unfavorable conditions Venetian merchants tried to continue their activities in Mamluk territories. Impressed by the dramatic character of military events and political upheavals, we tend to underestimate the peaceful and often uneventful activities of merchants. But international trade is actually the visible aspect of very strong forces of supply and demand, of patterns of consumption and basic needs that are remarkably resilient. Wars eventually end, regimes change, political leaders rise and fall, but, as we shall see, such patterns of material life cannot easily be swept away.

For the last twenty years of the Mamluk Sultanate, we are lucky enough to have a considerable amount of source material that allows us to study in detail the Venetian trading system in general and the commercial exchange with Mamluk territories in particular. Venetian sources are rich and diversified in this respect, including

[5]Marino Sanuto [Sanudo], *I diarii,* 58 vols. (Venice, 1879–1902), 5:114–15; Maria Pia Pedani Fabris, ″Gli ultimi accordi tra i sultani mamelucchi d′Egitto e la repubblica di Venezia,″ *Quaderni di studi arabi* 12 (1994): 57–60; Francesco Gabrieli, ″Venezia e i Mamelucchi,″ in *Venezia e l′Oriente tra tardo medioevo e Rinascimento,* ed. Agostino Pertusi (Florence, 1966), 427; John Wansbrough, ″A Mamluk Ambassador to Venice in 913/1507,″ *Bulletin of the School of Oriental and African Studies* 26 (1963): 503–30.

[6]Francesca Lucchetta, ″L′ ˙ affare Zen¨ in Levante nel primo Cinquecento,″ *Studi Veneziani* 10 (1968): 109–219.

[7]In addition to the years mentioned above, no galleys were sent to Alexandria in 1508, 1509, 1513, 1514, and 1515. See Claire Judde de Larivière, ″Entre bien public et intérêts privés: Les pratiques économiques des patriciens vénitiens à la fin du Moyen Age,″ Ph.D. diss., Université Toulouse II-Le Mirail, 2002, 1:80. However, trade on board round ships, more difficult to follow, did not stop, and as of 1514 the galleys lost their monopoly on transporting spices, which could henceforeward be shipped, alongside other goods, on private Venetian ships: Frederic C. Lane, ″Venetian Shipping during the Commercial Revolution,″ in *Venice and History,* 14 (originally published in *American Historical Review* 38 [1933]: 219–39).

official documents related to trade, commercial correspondence, notarial acts, judicial records, and diaries. These have already been the subject of substantial research, sometimes in combination with Mamluk narrative sources, and it is not my purpose here to return to the well-known themes that have occupied historians of these issues for many decades. In fact, most studies dedicated to this commercial system have focused essentially on trade in products that were exported from the East into Europe. A great amount of research has been carried out, for example, on the spice trade and its vicissitudes following the Portuguese discovery of the route around Africa to the Far East. In a recent book on Venetian trade in late fifteenth-century Syria, it is stated that ˝the main scope of Venetian presence in Syria was not to sell [imported] products; on the contrary, the foremost aim of the Venetians was to buy several high-quality products and to sell them in Venice with great profit.˝[8] I am not entirely convinced that this distinction rightly reflects the attitude of Venetians engaged in trade with Mamluk territories. As we shall see, much attention was paid to, and an impressive amount of capital invested in, products imported into Mamluk lands. These, however, have attracted relatively little attention by historians, and the few studies that do treat such arguments are not focused on a limited time span of about twenty years, which is precisely the aim of the present paper.

Among the many Venetian sources that shed light on importations into Egypt and Syria during the last twenty years or so of the Mamluk Sultanate I have chosen to focus especially on two types that are of particular interest in this regard. The first includes cargo lists and references to the cargo of ships sailing to Egypt and Syria, included in the diaries of Domenico Malipiero, Girolamo Priuli, and Marino Sanudo. All three were Venetian patricians who recorded, often on a daily basis, the developments of their times, including trade and shipping. Malipiero´s work, which is actually halfway between a chronicle and a diary, covers the period between 1457 and 1500,[9] Priuli´s diary, part of which has been lost, covers the period between 1494 and 1512,[10] and Sanudo´s diary, the most impressive of the three, covers the years between 1496 and 1533.[11] From these diaries I have been able to extract seven detailed cargo lists as well as ten more

[10]Girolamo Priuli, *I diarii (1494–1512),* ed. Arturo Segre (vol. 1) and Roberto Cessi (vols. 2 and 4), *Rerum italicarum Scriptores,* vol. 24, pt. 3 (Città di Castello and Bologna, 1912–36). The third volume, covering the period between September 1506 and May 1509, has been lost. Vols. 5–8, treating the period between October 1509 and July 1512, remain unpublished.

[11]See above, n. 5.

succinct descriptions of cargoes of merchant galleys that sailed from Venice to Alexandria and to Beirut between 1495 and 1515. The cargoes of galleys sailing on the *trafego* line, which ran between Venice, the Maghreb, Egypt, and Syria, are never referred to, most probably because their role in carrying Western goods to the lands of the Mamluk Sultanate was negligible. Altogether, the cargoes of twenty out of thirty-two galley convoys that sailed to Syria and Egypt during those two decades are described, at least to some extent, by the diarists (some of the descriptions refer to both lines). These descriptions have been put together in Appendix A. Another cargo list used here belongs to a private ship that sailed to Syria in 1499.[12] The second type of sources includes two merchant manuals *(Tariffe)* of the late fifteenth and early sixteenth centuries: the unpublished ″Tarifa″ [sic] of 1494, bearing the name of Lorenzo Rimondo [Arimondo] and mainly concerned with Alexandria, and Bartolomeo de′ Paxi′s *Tariffa,* first published in Venice in 1503. Both of them offer very precious and generally up-to-date information on Venetian trading activities at the turn of the sixteenth century.[13] Their lists of products imported into Egypt and Syria are included in Appendix B. Other sources, Venetian and Arabic, and, of course, several modern studies, have been used to try and clear up questions concerning the role of Cyprus in this commercial relationship, as well as the provenance and the patterns of consumption of goods imported into Mamluk lands.[14] This last aspect, however, still remains greatly unexplored.

Before turning to analyze the material drawn from these two types of sources, it is necessary to refer to their reliability. The cargo lists found in the Venetian diaries are not directly drawn from the ships′ manifests, but rather indirect reconstructions, mostly based on reports that the captains of galley convoys sent from the ports of Istria, before sailing to the East.[15] As far as the items mentioned in the lists are concerned, there is no reason to doubt the veracity of data provided by the diarists. More caution should be applied when using the quantitative data included in these lists, in view of the rather uncertain course they had passed

[14]My thanks go to Housni al-Khateeb Shehada for helping me locate and use the Mamluk sources.

[15]On these and other types of cargo lists, see Benjamin Arbel, ″Les listes de chargement des bateaux vénitiens: un essai de typologie,″ in *Mélanges en l′honneur de Michel Balard*, *Byzantina Sorbonensia* (forthcoming).

before ending up in these diaries. This uncertainty is reflected in the inconsistencies between different reports referring to the same convoy, when available.[16] Except for a short analysis of overall figures referring to the comprehensive value of cargos and precious metals shipped eastward, we shall therefore forego quantitative speculations, contenting ourselves with identifying those products that appear time and again on these lists, and using the numerical data mainly to get a general idea of the order of magnitude of the shipments concerned. For the sake of brevity, this reservation will not be repeated henceforward whenever numbers taken from these lists are cited.

The two commercial manuals present a different problematic. As for Rimondo´s *Tariffa,* thanks to Ugo Tucci we may consider it one of the new types of manuals that appeared in the Venetian commercial milieu at the end of the fifteenth century, being composed by Venetian factors overseas (in this case by Lorenzo Arimondo who was active in Alexandria) and intended for practical use by these agents. We may therefore consider it to authentically reflect the Egyptian market for Venetian imports during those years.[17] Paxi´s book, on the other hand, has been attributed by Tucci to another category of manuals, which mainly served for training of young merchants. But Tucci also emphasized that the training of merchants necessitated up-to-date instruments,[18] and there is no reason to exclude the possibility that an impressive work like that of Paxi genuinely reflected the movements and content of Venetian trade in the Levant at the time of its first appearance in print (1503). In the prologue to his work, Paxi declares that it was the fruit of long and serious effort and laborious study *(grave e longa mia faticha e laborioso studio)*.[19] In fact, there are several indications that Paxi´s book was indeed the consequence of a genuine effort to provide up-to-date material on the world of international trade in the period of its original publication. Tucci has noted, for example, the updating of the measure for oil in Constantinople,[20] and Paxi´s careful reference to the spice *kanter* [=*qinṭār*] of Damascus,[21] to which I may add the absence of Coron and Modon, the important Venetian ports in the southern Peloponnese,

which had been lost in 1500, and which were not re-integrated into the post-war system of Venetian commerce.[22] Admittedly, the opening of the Atlantic spice-route to India is not yet reflected in this book,[23] but this is quite understandable, considering its date of publication.[24] In any event, our scope in using this sort of source is limited to defining the main categories and nature of goods imported by Venetians to the Mamluk lands, and possibly to tracking down their provenance. For this purpose, and although no systematic research has yet been carried out to corroborate this hypothesis, I tend to consider the first edition of Paxi′s manual as a trustworthy presentation of the contents of Levantine trade in general, and of importations into Mamluk lands in particular, in the late fifteenth and the first years of the sixteenth century. A comparison between the lists of goods shipped to the Levant that are included in these manuals with the cargo lists of galleys sailing to those parts, as well as with other commercial papers, seems to corroborate this hypothesis.

The cargo lists of Venetian merchant galleys sailing eastward, and the cargo list of a round ship wrecked off Cyprus on its way to Syria, present a quite coherent picture of which products were expected to find buyers in eastern markets. A first group of such items includes different kinds of metals and their products.

Precious metals constituted a most important item among Venetian importations into Egypt and Syria. Gold reached Venice mainly from the Maghreb and from Hungary, and silver from the Tyrol, and probably also from Serbia and Bosnia.[25] They were exported to Mamluk lands in the form of silver and gold coins (including Mamluk *ashrafī*s),[26] silver ingots, silver and gold artifacts, and even as gold dust

(tiber) that reached Alexandria from Tripoli on board Venetian galleys.[27] These distinctions are not reflected in the cargo lists of our diarists, who preferred to express the overall value of precious metals sent on board these ships in terms of Venetian ducats. This does not mean, however, that the entire sum referred to consisted of gold ducats. In fact, silver ingots and coins are never mentioned separately in the cargo lists, although we know for certain that they were shipped to Mamluk territories in great quantities.[28] The Venetian mint even issued special silver coins for exportation to the Levant, worth less than the standard silver coins circulating in Venice.[29] In a commercial letter sent from Famagusta to Venice in 1511 it was reported that the galleys sailing that year to the Levant were carrying silver coins to the value of 100,000 ducats.[30] And at the beginning of the sixteenth century, a French observer noted that in the Venetian mint, silver ingots weighing about 25 marks each (some 6 kg.), were especially produced for exportation to the Levant, to a total annual amount equivalent of about 800,000 ducats.[31] A great part of those must have reached Mamluk territories.

Though not bothering to distinguish between gold and silver, our diarists do, however, use other distinctions that cannot be easily understood. For example, with reference to the Beirut galleys of November 1502 and to the Alexandria galleys of March 1503 and of March 1511, Priuli distinguishes between what he calls *aver di cassa a nollo* or *al nolo,* and *aver di cassa di marcadanti;* Sanudo, on the other hand, uses different distinctions in 1501 and 1511, referring to *aver di cassa d´aviso* and *aver di cassa in scrigni*.[32] These distinctions may partly be understood if we consider that cash money or silver ingots transported on the

galleys were subject to freight charges. When writing about the quantity of gold and silver (referred to as ″ducats″) on the Alexandria galleys of 1498, Priuli comments that the sum might be much higher than 240,000 ducats, because ″they always declare a lower sum, since they have to pay freight charges″ *(sempre se dice de menno* [sic] *per el pagar del nolo)*.[33] The sums mentioned by the diarists should therefore be taken as estimates, including a sum on which freight charges were paid, according to the report *(aviso)* of the convoy′s captain, and an additional sum, which could not be accurately evaluated, since it pertained to gold and silver kept in private strong-boxes *(scrigni)* on board. Another expression found in Priuli′s diary with reference to the Alexandria convoy of 1510, namely *traze le galie di nolo, d′aviso,* does not appear to refer to specie shipped on board, but rather to the sums owed to the galleys on account of freight charges.

In any case, huge amounts of silver and gold yearly reached Egypt and Syria not only on board state galleys, for which we have more information, but also on the privately-owned ships, though on the whole it can be surmised that the latter carried smaller amounts of precious metals, since spices, normally shipped on galleys, were much more expensive than goods exported from Mamluk lands on round ships, and galleys were also better protected against pirates. As a rule, sums sent to Alexandria were higher in comparison with those sent to Syria.

The fact that large quantities of gold and silver were imported annually by Venetians into Mamluk lands is often referred to as a reflection of Venice′s unfavorable trade balance with the Mamluks. Without discarding this claim altogether, it seems that behind this steady flow of precious metals into Mamluk territories there is another economic factor. Precious metals, even in the form of coins, were considered a commodity, similar to copper, tin, or woolens. Merchants had to pay freight charges for gold or silver coins shipped on the galleys, and when reaching Egypt, they were also subject to customs dues.[34] Even more significant is the fact that during the period under consideration, it was more profitable to export silver to the East than gold. This can be inferred, for example, from a remark made by Marino Sanudo in August 1498, writing that considerable quantities of old coins and gold were sent on the galleys sailing to Alexandria; however, he writes, one could not expect to make a profit out of these gold pieces *(di li qual*

---

[33]Priuli, *I diarii,* 1:94.

[34]On freight charges on coins, see, for example, the account made in 1413 at Ḥamāh by Lorenzo Priuli, where a sum is accounted for the payment of freight for a sachet containing 200 ducats: Archivio di Stato di Venezia (hereafter: ASV), Miscellanea di carte non appartenenti ad alcun archivio, busta 18. In Alexandria, gold ducats were subject to a customs due of 1 per cent, whereas silver coins and ingots had to pay 1 ducat for every 6 *rotoli zeroi* [=*raṭl jarwī*] and 1 ounce (1 ducat for 12 *lire grosse*). See Paxi, *Tariffa,* 49r.

ori non si farà bene).[35] In fact, it is very likely that the large sums expressed in ducats were actually often brought eastward in the form of silver coins and silver ingots.[36] On silver ingots exported to Alexandria, which had 60 karats of copper per mark of silver (the same alloy as the *Marcelli* coins in Venice), Venetians could make a profit amounting to 4-5 per cent when selling them in Alexandria. This is explicitly stated in Paxi´s commercial manual, though with reference to the past, before a slight change in the standard weights of silver was introduced.[37] But it can be surmised that profit could still be substantial, considering the great sums involved. These profits seem rather low in comparison with those that could be enjoyed from other branches of trade, but silver (like gold) was a merchandise that Venetians could dispose of immediately, whereas in the case of other goods it was not always certain when and at what price they could be sold.

Besides for coinage, silver and gold were widely used by the Mamluks for many purposes, such as robes of honor, riding outfits, writing instruments, and various ornaments.[38] Briefly, silver was in demand and was more valuable in the East than in Europe. Moreover, this demand for silver in Mamluk territories seems to have been connected to an even higher demand in India and the Far East, ensuring the constant flow of this metal from Venice into Egypt and Syria, and most probably also farther eastward.[39]

Among other metals shipped eastward, copper in particular was highly sought after in Mamluk lands, since all lists discovered so far include at least one sort of copper cargo, and mostly more. During the fourteenth and early fifteenth century, Italian merchants imported copper into Egypt from the northern shores of Anatolia.[40]

---

[35]Sanudo, *I diarii,* 1:1032.

[36]In 1497, no ingots could be found for shipment to the East. See Appendix A-III.

[37]Paxi, *Tariffa,* 49r.

[38]Taqī al-Dīn Aḥmad ibn ʻAlī al-Maqrīzī, *Al-Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1996), 2:3:158–59, 170–71; Leo A. Mayer, *Mamluk Costume: a Survey* (Geneva, 1952), 25 (silver and golden belts), 35 (spurs overlaid with silver or gold); Carl Petry, ″Robing Ceremonials in Late Mamluk Egypt: Hallowed Traditions, Shifting Protocols,″ in *Robes and Honor: The Medieval World of Investiture,* ed. Stewart Gordon (New York, 2001), 363 (golden sword, gold saddle, gold insignia).

[39]Ashtor, *Les métaux précieux*, 52; idem, ″Maʻdin,″ *The Encyclopaedia of Islam,* 2nd ed., 5:963b; J. Michael Rogers, ″To and Fro: Aspects of Mediterranean Trade and Consumption in the 15th and 16th Centuries,″ *Revue du Monde Musulman et de la Méditéranée* 55–56 (1990): 61, 63. Rogers´ statement that Venetian merchants settled their purchases in gold (ibid., 63) seems to be based on the wrong assumption that all the sums of cash and other forms of precious metals shipped eastward, which are expressed in ducats, represent real gold coins.

[40]Philippe Braunstein, ″Le marché du cuivre à Venise à la fin du Moyen Age,″ in *Schwerpunkte der Kupferproduktion und des Kupferhandels in Europa 1500–1650,* ed. Hermann Kellenbenz (Vienna, 1977), 85; Ashtor, ″Maʻdin,″ 963b.

Yet the conquest of Constantinople in 1453, and the gradual closing of the Black Sea to Italian ships, may have enhanced the importance of copper imported by the Venetians to Egypt and Syria from Europe, where copper production considerably expanded precisely during those decades.[41]

Quantities mentioned in our sources are impressive. In 1496, according to Malipiero, the galleys left in Alexandria no less than 10,000 *qinṭār*s of copper, equivalent to some 954 tons;[42] in 1501, 381 tons were sent to Beirut; in 1503, Priuli noted in his diary that the copper exported to Egypt, all sent by one Venetian merchant, Michiel Foscari, amounted to 1,000 *miera* (about 477 tons), in addition to 400 *miera* loaded on private ships and 300 more awaiting further passage, altogether about 811 tons.[43] In 1510, the value of copper exported to Alexandria on board the galleys was estimated by Sanudo at 50,000 ducats.[44] Comparing these impressive quantities to the much lower ones included in two late fourteenth-century cargo lists of the Alexandria galleys—about 212 *miera* (94.6 tons) and 70 *miera* (33.3 tons) in 1395 and 1400 respectively—one may wonder whether what seems to be a spectacular increase really represents a marked rise in the demand for copper in Egypt and Syria towards the end of the Mamluk period.[45]

Most of the copper shipped eastward had originated from the Tyrol and from Slovakia and was brought to Venice by German merchants. It could have reached Venice in various forms, but part of it may have undergone some industrial

---

[41]It has been estimated that between 1460 and 1530, the production of European copper had quintupled: J. U. Nef, ″Mining and Metallurgy in European Civilization,″ *Cambridge Economic History of Europe,* vol. 2 (Cambridge, 1952), 469–70.

[42]Copper was weighed in Venice in thousandweights *(miera)* of *lire di grossi;* each *miera* was equivalent to around 477 kg. In Alexandria it was weighed in *qinṭār*s *jarwī* (in Venetian terminology: *canter ceroi* or *geroi*), each one of which was equivalent to around 95.4 kg. Paxi, *Tariffa,* 7v, 44r; *Lettres d′un marchand vénitien: Andrea Berengo (1553–1556),* ed. Ugo Tucci (Paris, 1957), 357; Eliyahu Ashtor, ″Levantine Weights and Standard Parcels: A Contribution to the Metrology of the Later Middle Ages,″ *Bulletin of the School of Oriental and African Studies* 45 (1982): 473.

[43]Priuli, *I diarii,* 2:255. Between 1495 and 1503, Michiel Foscari exported to Alexandria 1555 tons of copper. See Braunstein, ″Le marché du cuivre,″ 92.

[44]Sanudo, *I diarii,* 9:516. See also Ashtor, *Les métaux précieux,* 58–64. Though mainly brought on board Venetian ships, copper could occasionally reach Egypt on board other vessels (ibid., 64). See also idem, ″Profits from Trade with the Levant in the Fifteenth Century,″ *Bulletin of the School of Oriental and African Studies* 38 (1975): 253–54. Since Ashtor does not specify what the original terms translated by him as ″copper plates″ and ″polished plates″ were, his data should be treated cautiously.

[45]Jacques Heers, ″Il commercio nel Mediterraneo alla fine del sec. XIV e nei primi anni del XV,″ *Archivio Storico Italiano* 113 (1955): 167. If the amount of copper shipped in 1395 and 1400 can really be considered ″important quantities″ (ibid.), how should we describe the shipments of 1497 and 1503, which were about eight or nine times as big?

process in Germany, in Venice itself or in its neighboring territories, before being sent eastward in the form of semi-finished or finished products.[46] It is indeed listed under different headings in the cargo lists: the greatest quantities appear to have been shipped as copper ˝loaves˝ *(rami in pan),* most likely raw copper packed in baskets or cases; another common form of shipment included copper bars *(rami in verga);* copper wire *(fil di rame)* was also often shipped on galleys sailing to the east; another category included ˝worked copper˝ *(rami lavoradi)*. The significance of the latter can be deduced from a passage in Paxi´s manual mentioning ˝worked copper products, that is coppers˝ *(rami lavorati, zoè caldiere)*. Ugo Tucci explains that this term signifies semi-finished copper vessels, ready for further elaboration by Egyptian or Syrian coppersmiths.[47] Some of these vessels could have been made of brass, an alloy widely diffused in Mamluk lands for various purposes.[48] Another copper product shipped to Mamluk ports was verdigris *(verdirame),* a green crystallized substance formed on copper by acetic acid. It could have been produced from copper in Venice or Murano, before being shipped eastward.

The uses of all these kinds of copper (*nuḥās*), brass *(shabah, bīrinj),* and

---

[46]Braunstein, ˝Le marché du cuivre,˝ 86–88. Copper also reached Venice by sea, on board the Flanders galleys; see ibid., 86, and Ugo Tucci, ˝Il rame nell´economia veneziana del secolo XVI,˝ in *Schwerpunkte der Kupferproduktion,* 102.

[47]Tucci, ˝Il rame,˝ 96.

[48]Michael Rogers suggests that the absence of zinc from bills of lading means that much of the *rami* must actually have been brass, yet zinc was only identified as a distinct metal at a much later stage; cf. Rogers, ˝To and Fro,˝ 65. The Beirut galleys of 1498 are said to have carried 164 baskets *(coffe)* of copper loaves, whereas those sailing to Alexandria that year had, according to Sanudo, 1,168 (according to Malipiero—1,100) copper baskets on board. The cargo list of 1499 includes 19 packs of ˝worked copper˝ *(rami lavoradi)* sent by Antonio Negro to his son Alvise in Beirut (Arbel, ˝Attraverso il Mediterraneo,˝ 113). In 1500, the galleys of Beirut had 354 cases of copper loaves *(rami in pan),* and 51 cases of copper bars for Alexandria; the Alexandria galleys of the same year carried 1,234 baskets *(coffe)* of copper loaves, 40 loads of copper bars, 30 of ˝worked copper,˝ and 28 of copper wire. The Alexandria galleys of 1501 had 800 *miera* (some 381 tons) of copper loaves on board (all of them shipped by the firm Agostini dal Banco), and those sailing to Beirut an unspecified quantity of the same. The Beirut galleys that departed in November 1502 had on board 233 cases of copper loaves, 5 of worked copper, and 12 bundles of copper wire. The galleys of Alexandria that sailed in March 1503 (originally the 1502 galleys) had 2,463 cases of copper loaves, 188 bundles of copper bars, 76 bales of worked copper, and 24 bundles of copper wire. The galleys of Alexandria that sailed in October 1503, though rather poor and empty, nevertheless carried 268 copper baskets. In 1504 the Alexandria galleys carried 500 copper baskets. In 1510, the galleys of Alexandria had on board 316 baskets of copper loaves, 327 barrels of copper bars, 16 bales of worked copper *(rami lavoradi),* and 14 bundles *(fardi)* of copper wire. The galleys of Alexandria sailing in 1511 had 505 lots of copper rods, 527 cases of copper loaves, 106 of worked copper, and 9 cases of verdigris. The Beirut galleys of 1513 carried 77 copper loaves and 2 bundles of copper wire. For references to the galleys´ cargo lists, see Appendix A.

derived products in Egypt and Syria were, of course, manifold, such as the minting of coins (both small coins—*fulūs*—and silver coins with copper alloy), military uses, house utensils and ornamental objects, the roofing of mosques and palaces, as well as for medical use and for dyeing (in the case of verdigris). Copper was regularly accepted as barter payment in exchange for pepper and other spices in Syria and Egypt.[49] Copper objects also seem to have served as status symbols. In his fifteenth-century description of Cairo, al-Maqrīzī´s mentions ornamented copper objects carried in a procession, as well as copper watering vessels in the stables of a prominent amir.[50]

Tin was also a common cargo on Venetian ships sailing to Egypt and Syria. Paxi mentions Flanders as the origin of tin bars imported into Syria, but that must have been associated with the fact that Venice imported tin on board the Flanders galleys, which also called on English ports. In fact, most of the tin traded by Venetians must have originated from Cornwall.[51] According to Paxi, tin reached Alexandria in the form of rods *(in verga)*.[52] This important material could, of course, be used for preparing bronze *(ṣafr),* but it has been pointed out that in fifteenth-century Egypt bronze appears to have been replaced by leaded brass.[53] However, tin was also used for tinning of copper vessels, kitchen utensils, and implements. Eric Vallet suggests that since it always followed woolens in price lists of merchants´ letters, it was, among non-precious metals, the greatest in demand on the Syrian market of the early 1480s.[54]

Steel *(azzali),* probably produced in the area of Brescia, appears only once in our lists.[55] It was, of course, an important material for Mamluk armorers, and Egypt and Syria might have been supplied with it from other sources. On the other hand, tinned iron plates always figure in these cargo lists, where they appear under three headings: *banda larga, banda raspa', * and *piastre di laton.*[56] Iron

---

[49]Tucci, ˝Il rame,˝ 97.

[50]Al-Maqrīzī, *Khiṭaṭ,* 2:3:110.

[51]The galleys sailing to Beirut in 1498 carried 22 bundles *(fardi)* of tin. The ship wrecked in 1499 had 8 bundles of tin [bars?] sent by Marcantonio Morosini to Syria: Arbel, ˝Attraverso il Mediterraneo,˝ 113. The 1500 galleys of Beirut had 112 such bundles; the galleys sailing to Beirut had 130 tin bundles *(fassi)* on board. The 1503 galleys of Alexandria carried 182 bundles; the 1510 galleys of Alexandria carried 45 cases *(casse)*. The 1511 cargo list of the galleys of Alexandria has 106 packages; the Beirut galleys of 1513 carried 11 bundles of ˝fine tin.˝

[54]Vallet, *Marchands vénitiens,* 84.

[55]20 *azalli* packages figure in the cargo list of the Alexandria galleys of 1511.

[56]The galleys sailing to Alexandria in 1498 had 71 bundles of *banda larga* and those sailing to

mainly reached Venice from Styria and Carinthia, and its tinning was probably carried out in Venice itself, or in the Venetian mainland.[57] The importation of iron plates into Egypt and Syria must have been intended for specific purposes, whose exact nature can only be guessed at this stage. Military uses have certainly to be taken into consideration, but civil uses, for construction and for all sorts of instruments and utensils should not be excluded either.

Lead, most probably brought from the Balkans, can also occasionally be found in those cargo lists.[58] Lead was used for the production of leaded brass, for water conducts in aqueducts, for public and private baths, for roofing of important buildings, and generally for protecting iron from corrosion.[59] A kind of lead, called *raṣāṣ qalʿī,* served for manufacturing breast chain-mail.[60]

Information on further uses of lead in these regions can be found in the thirteenth-century pharmaceutical treatise of Ibn al-Bīṭār (died in 1248), who was also active in Damascus. The fact that it was still relevant in the later Mamluk period and even afterwards is attested by the medical treatise of a sixteenth-century doctor from Antioch, Dāʾūd al-Anṭākī (died in 1599). The latter distinguished between two different qualities of lead *(raṣāṣ): asrab* and *qalʿī* (a synonym for *qaṣdīr*). The former was of inferior quality, not fully distilled, and could be easily processed by smiths. The pharmaceutical uses of lead were manifold. It was ground into different ointments (especially for cosmetic purposes), rendering them more effective, and also used for disinfecting wounds and stopping bleeding. It served against various skin diseases, against tumors, especially in the sexual organs, against hemorrhoids, against stings of scorpions, and against masturbation of

Beirut, 63 barrels of *banda*. The 1499 cargo list has 6 barrels of *banda raspa´* sent to Beirut by Hieronimo and Jacomo Striga: Arbel, ″Attraverso il Mediterraneo,″ 113. The 1500 galleys of Beirut had 18 barrels of *banda raspa´;* those sailing to Alexandria that year had 50 bundles of *banda larga.* The galleys of Alexandria departing in March 1503 had 282 bundles of *banda larga* on board. The Alexandria galleys of 1510 had 4 barrels of *banda raspa´*. The Alexandria galleys of 1511 had 19 barrels of *banda raspa´* and 57 packages of *banda larga* as well as *piastre di latton.* The Beirut galleys of 1513 carried 15 bundles of *banda larga,* and 2 of *banda raspa´*. Paxi explicitly explains the term *banda larga* as tinned iron *(Banda larga zoè ferro restagnado):* Paxi, *Tariffa,* 51r.

[57]Philippe Braunstein, ″Le commerce du fer à Venise au XVe siècle,″ *Studi Veneziani* 8 (1966): 268, 277. Michiel Foscari, whom we have already encountered as a copper exporter to Egypt, was also involved in iron production and exportation: he invested in mines, controlled the processing of iron at Belluno, and exported iron products to Crete and the Levant (ibid.).

[58]Paxi gives equivalents for weight units of Ragusa and Alexandria with reference to lead. See Paxi, *Tariffa,* 44r. The galleys sailing to Alexandria in 1498 carried 55 lots *(pr.)* of lead; the Beirut galleys of 1500 had 32 m. *[miera?]* of lead; the Alexandria galleys of 1510 had 130 ″pieces.″

[59]Ashtor, ″Maʿdin,″ 963b.

[60]*Al-Munjid fī al-Lughah wa-al-Aʿlām,* 28th ed. (Beirut, 1986), 654.

adolescents. Putting five *dirham*s under someone's pillow could cause hallucinations, and a few drops sprinkled into one's ear were considered an effective protection against murder. Rings made of lead were considered effective against becoming overweight. It was also used in agriculture, to prevent fruits from falling immaturely, and in small quantities it was used as a pesticide.[61]

Mercury also seems to have been in demand both in Syria and Egypt, since it figures on four of our cargo lists.[62] Mercury veins were discovered in 1490 at Idria, in the province of Gorizia, and later it was from there that Venetians acquired this material.[63] Among other purposes, especially gilding,[64] mercury *(zi'baq)* was commonly used in Mamluk lands for medical purposes, such as against lice (in combination with other substances), for treating dermatological problems, as well as against muscle and joint pains. It was used externally against bad smells and swollen throats.[65] Mercury also served for preparing cinnabar *(zenabrii),* or mercuric sulfide (vermilion), a decorative dyestuff figuring on several of these cargo lists,[66] which was produced on the island of Murano.

Textiles of various types constituted an important component of Venetian shipments to Syria and Egypt. Most of them were woolens of different qualities and provenance. Eliyahu Ashtor dedicated a long and detailed study to the exportation of Western textiles to the Muslim Orient in the later Middle Ages, a study that opens much wider vistas than our cargo lists, which hardly specify the origins of these products.[67] Only cloths made in Venice and a few specific types of cloth are occasionally listed separately. Such is the case of kerseys, which were

[61]Dā'ūd ibn 'Umar al-Anṭākī, *Tadhkarat Ūlī al-Albāb wa-al-Jāmi' lil-'Ajab al-'Ujāb* (Beirut, n.d.), 1:168; cf. Ḍiā' al-Dīn Abī Muḥammad 'Abd Allāh Ibn Aḥmad al-Andalusī al-Māliqī Ibn al-Bīṭār, *Al-Jāmi' li-Mufradāt al-Adwiyah wa-al-Aghdhiyah* (Beirut 1992): 1:434–37.

[62]The galleys sailing to Beirut in 1498 had 35 lots of mercury according to Sanudo and 63 *boioli* (vases) of the same product according to Malipiero; in 1500 the Beirut galleys had 248 barrels marked "for Alexandria"; in 1503 the Alexandria galleys—60 barrels; in 1510, 50 barrels were sent to Alexandria, and in 1511, 251 [barrels?].

[63]Philippe Braunstein, "Zur Frügeschichte des Bergbaus und Quecksilberhandels von Idria," *Neues aus Alt-Villach,* vol. 2, *Jahrbuch des Stadtmuseums* (Villach, 1965), 41–45.

[64]Rogers, "To and Fro," 64.

[65]*Zi'baq* was widely used for dermatological purposes, both for humans and non-human animals: Ibn al-Bīṭār, *Al-Jāmi',* 1:487–88; al-Anṭākī, *Tadhkarat Ūlī al-Albāb,* 1:184.

[66]On the Venetian production, see Luzzatto, *Storia economica,* 180. In 1498, 27 lots of cinnabar were sent to Beirut; in 1500 the Beirut galleys carried 256 cases and those sailing to Alexandria, 307 cases. In 1503 the Alexandria galleys had 78 barrels of cinnabar on board; in 1510 the Alexandria galleys had 44 cases, and in 1511, 21 cases, 5 of which belonged to Michiel da Lezze. See Braudel and Tenenti, "Michiel da Lezze," 71. See also Rogers, "To and Fro," 64.

[67]Eliyahu Ashtor, "L'exportation de textiles occidentaux dans le Proche Orient musulman au bas Moyen Age (1370–1517)," in *Studi in memoria di Federigo Melis* (Naples, 1978), 2:303–77.

relatively cheap woolens originally produced in England but subsequently imitated in many other places.[68] The latter may probably be identified with the woolen cloth called *al-jūkh,* the use of which became so widespread in al-Maqrīzī´s time.[69] Some lists also mention separately linen cloths *(tele),* serge cloths *(sarze),* and *grixi,* or *grisi,* which were cheap woolens, as well as a few specific types of garments, imported in small quantities, such as *bernusi* (women´s gowns known in the east as *burnus*), *carpette* (most likely also women´s garments), and *gonele de griso* (probably a type of men´s coats).[70]

Since our cargo lists provide only a little information on the origin and type of cloth sent to Egypt and Syria, it is worthwhile to cite the relevant paragraphs of Paxi´s *Tariffa*, more helpful in this regard. Among those sent to Alexandria, he mentions:

> Fine Venetian cloths, scarlet and dark blue *(paunazi)* cloths, Paduan scarlet cloths, Brescian cloths, ˝bastard˝ cloths, Southampton cloths *(panni santani), rocha* cloths,[71] cloths from Geneva and from Feltre, that is dyed *bianchete* [a type of cheap cloth], and other kinds of cloths.[72]

---

[68]The galleys sailing to Alexandria in 1498 had 71 bales of cloths on board, while those sailing to Beirut had 418 bales; the ship wrecked in 1499 had 6 bales and one bundle of woolens sent to Syria: Arbel, ˝Attraverso il Mediterraneo,˝ 113. The 1500 Beirut galleys had 400 bales of *panni* and those sailing that year to Alexandria, 133 bales; the galleys sailing to Beirut in October 1501 carried 330 bales of woolens; the Beirut galleys of 1502 had 560 bales of *panni* on board; those that sailed to Alexandria in 1503 had 127 bales. The Beirut galleys of 1504 had 450 bales; the Alexandria galleys of 1510 had 180 bales of Venetian woolen ˝of various sorts,˝ 110 bales of woolens originating from Western Europe *(panni di Ponente)* of various sorts, and 100 bales of kerseys. The Alexandria line of 1511 had 134 bales of woolens on board; and the Beirut galleys of 1513 carried 241 bales.

[69]Al-Maqrīzī, *Khiṭaṭ,* 2:3:159; Mayer, *Mamluk Costume,* 25; Ashtor, ˝L´exportation,˝ 305.

[70]See the list of the Beirut galleys of 1502 (12 bales of *sarze,* 11 of *tele,* and 11 rolls of *grixi*), and the Alexandria galleys of 1510 (8 bales of *bernusi*) and 1511 (2 packings of *gonele de griso*). For *bernussi,* see Salvatore Battaglia, *Grande dizionario della lingua italiana* (Turin, 1961–2002), 2:186; for *sarze,* ibid, 17:580; for *carpetta,* see Nicolò Tommaseo and Bernardo Bellin, *Nuovo dizionario della lingua italiana* (Turin, 1865), 1:1253; on *griso* (pl. *grisi*), see Achille Vitali, *La moda a Venezia attraverso i secoli: Lessico Ragionato* (Venice, 1992), 210.

[71]*Rocha* may derive from *roça,* i.e., madder, meaning cloths dyed with this material. According to another interpretation, not entirely contradictory, this term denotes low-quality cloths. I am grateful to Dr. Edoardo Demo and Dr. Andrea Mozzato for their assistance in trying to sort out the expressions related to woolens in Paxi´s *Tariffa.*

[72]Paxi, *Tariffa,* 48r.

Woolens exported to Damascus are listed by him as follows:

> Fine Venetian cloths, some scarlet, some dark blue, Paduan "bastard" cloths, fine Florentine cloths, Brescian cloths, narrow cloths from Bergamo, washed and sheared *(bagnadi e cimadi),* expurgated cloths from Bergamo *(panni bergamaschi tiradi),* Guildfort cloths *(panni Zilforto),* Southampton cloths, *sesse* [Essex] cloths,[73] Saint Ursula cloths, narrow Geneva cloths, full-size cloths from Majorca *(panni maiorini integri),* large Geneva cloths, half-size cloths from Majorca *(panni mezzi maiorini),* cheap cloths of the *Fontego (panni de fontego),* large Flemish serge cloths, narrow Flemish serge cloths, *panni zinese le vestrine,*[74] hemp cloths.[75]

Shorter lists are given by Paxi for Aleppo and Tripoli, though with slight variations, as for instance concerning the colors preferred on the Aleppo market: beside the dark violet *(paonazo)* and scarlet, typical for Venetian cloth also shipped to Egypt, we have azure, white, and green, as far as Florentine cloth was concerned.[76] Judging by a few merchant letters written in Syria in 1484, Western woolens sold on the Syrian market at that time were those from Bergamo, Brescia, and Vicenza in the Venetian mainland, as well as cloths from Geneva, Southampton, Essex, the cloths known as *panni bastardi,* cloths of the *fontego,* and serges.[77]

Silk cloth of various types was imported in smaller quantities than woolen cloth to the Mamluk East. Our cargo lists mention gold cloth *(panni d'oro)* or simply "silk cloth" *(panni di seta),* very likely products of Venice's important luxury industries, exported for the refined Mamluk clientele.[78] Al-Maqrīzī explicitly

---

[73]The term *sesse* sometimes denotes oriental textile, but in the present case it is obviously a Western product sent eastward. Cf. *Ambasciata straordinaria al sultano d'Egitto (1489–1490)*, ed. Franco Rossi (Venice, 1988), 225; John Wansbrough, "A Mamluk Letter of 877 (1473)," *Bulletin of the School of Oriental and African Studies* 24 (1961): 209, citing Quatremère.

[74]The significance of these terms remains to be elucidated.

[75]Paxi, *Tariffa,* 54r.

[76]Ibid., 56r–56v.

[77]Vallet, *Marchands vénitiens,* 281, 288, 297, 300–1. On *panni bastardi,* see Ashtor, "L'exportation," 346–48. According to Ashtor, *panni de fontego* were of the cheapest sort (ibid., 313).

[78]The 1500 Beirut galleys had 6 cases with *pani d'oro et de seda* and those sailing to Alexandria, 7 cases of silk cloth *(pani de seda).* The Beirut galleys of 1502 had 10 cases of silk cloth; the galleys sailing to Alexandria in 1503 had 3 cases of silk cloth and one of gold cloth. The Alexandria galleys of 1510 had 2 cases of silk cloth whereas those of 1512 had 15 cases with silk and gold cloth. At the beginning of the sixteenth century there were as many as one thousand silk looms in Venice: Luzzatto, *Storia economica,* 176. See also Luca Molà, *The Silk Industry of*

mentions silk cloths worn by Mamluk amirs as being of Rūmī, that is European, origin.[79] We can partly overcome the succinct character of our lists with the help of the report on gifts presented in 1489–90 by the Venetian ambassador to Mamluk officials, which included luxurious silk cloths,[80] and also with the help of Paxi´s *Tariffa,* mentioning, for the Alexandria market, damask *(damaschi),* velvet *(veludi),* and cloth of gold *(panni d´oro)* and of silver *(panni d´arzento).*[81] For Damascus Paxi provides a slightly different and more detailed list, probably reflecting the tastes of local clients: to Damascus, the Venetians sent, besides damask and velvet, also gold brocade, *campo d´oro,* and silver brocade.[82]

Another category of luxury items included furs. We know, for example, from al-Maqrīzī´s writings that during his times, Egyptians of both sexes, especially but not exclusively Mamluks, used to ornament their clothing with furs of different sorts. The bestowal by the sultan of robes lined with expensive furs was customary as a reward for service, confirmation of an elite status, reconciliation, and restoration.[83] Another indication of the special interest of Mamluks in furs is the fact that they were exempt from customs dues when imported to Alexandria.[84] This weakness for Western furs seems to have been well known in Venice, for when Venetian ambassadors came to Egypt to negotiate with the Mamluks they brought along with them great amounts of furs to be presented to the sultan and his officials.[85] Our cargo lists mention sables *(zebellini)* and vairs *(vari),* which according to Paxi´s book were imported either raw or dressed.[86] To these we may

[80]*Ambasciata straordinaria,* 78–83.

[81]Paxi, *Tariffa,* 48r–48v.

[82]Ibid., 54r. For Aleppo and Tripoli, see ibid., 56v.

[83]Ibid., 168–69, 369; Mayer, *Mamluk Costume,* 14, 19, 23, 25; Petry, ″Robing Ceremonials,″ 363–64, 367–70.

[84]Paxi, *Tariffa,* 50.

[85]In 1489, Ambassador Pietro Diedo brought along 3,000 pieces of vairs and 80 of sables: *Ambasciata straordinaria*, 79. In 1512, Ambassador Domenico Trevisan brought as presents 120 sables, 4,500 vairs, and 400 ermines: Jehan Thenaud, *Le voyage d´outremer . . . 1512 suivi de la relation de l´ambassade de Domenico Trevisan au Soudan d´Egypte,* ed. Charles Schefer (Paris, 1884), 187.

[86]The 1500 Beirut galleys had 2 cases of marten´s furs and 3 of vairs; those sailing to Alexandria in the same year had 4 cases containing *″zebelini armilini″* and 2 containing vairs; the 1502 Beirut galleys had 9 barrels of vairs; the 1503 Alexandria galleys carried 8 barrels of vairs; the 1511 Alexandria galleys had 2 cases of marten furs and 19 of vairs; and the Beirut galleys of 1513 had 4 barrels of vairs, one case of ermines, and one of sables.

add common marten furs *(martore),* stone marten [=beech marten] furs *(fuine),* and ermines *(ermellini),* mentioned in Paxi′s manual among goods imported to Alexandria. It would be useful to identify the kinds of furs imported by the Venetians with those mentioned by al-Maqrīzī.[87] Vair *(varo)* must correspond to *sinjab,* whereas ermine *(ermellino)* probably corrsponds to *qamāqin* (=mod. Arabic: *qāqūm*?). Sable *(zibellino)* is normally translated as *sammūr,* but the same Arabic term is also given as a translation for common marten *(martone).*[88] *Fuina* denotes stone marten fur, though Dozy suggested that it was beaver fur, corresponding to al-Maqrīzī′s *qirḍ aswad,* or *qundus*.[89] *Washaq,* another sort of fur mentioned by al-Maqrīzī, seems to be lynx fur. If it denotes European lynx and not the Middle Eastern caracal, it is not clear to which sort of furs mentioned in Venetian sources it corresponds.

Hats are also encountered on board ships sailing to Alexandria. Our lists include both *capelli* and *barete,* which seem to represent two different kinds of headgear.[90] Venetian hat manufacturing seems to have undergone an impressive expansion around the turn of the sixteenth century. According to a petition presented by the hatters to the Venetian government in 1506, the number of workshops producing headgear in Venice had risen within a few years from 5 to over 80.[91] Was this impressive expansion somehow related to a demand for Venetian hats in Mamluk territories? Were the green, blue, and red hats mentioned by al-Maqrīzī as being fashionable in his times imported by the Venetians?[92]

A kind of textile not intended for clothing, but often exported to Egypt and Syria, is hemp cloth (*canevaza,* pl. *canevaze*). This coarse material was produced in Venice from hemp grown around Montagnana, in the Venetian mainland.[93] It served particularly the Venetians themselves, for preparing sacks and packages for goods exported by them westwards. This was especially important for the exportation of raw cotton and cotton thread, shipped in great quantities from Syria

and Palestine on board Venetian vessels.[94]

Various glass products, originating from Venice′s famous glass manufacturies at Murano,[95] were also common on board Venetian ships sailing to the Mamluk Sultanate.[96] Michael Rogers wrote that by the fifteenth century the Mamluk market had already been enslaved to Venetian glass exports, and our cargo lists seem to corroborate this statement.[97] Among the goods imported to Damascus and Tripoli, Paxi′s manuals mentions ″common glass″ *(veri comuni),* rosaries *(paternostri)* made of yellow glass, and glass crystal *(veri cristalini).*[98] Among those imported to Alexandria, Rimondo′s ″Tarifa″ makes reference to ″glass for mirrors″ *(veri da spechio)* and to ″worked glass″ *(veri lavoradi).*[99] Vases made of glass crystal also seem to have been in demand in the Mamluk lands.[100]

The term *veri cristalini,* or *cristal[l]i,* as it appears on our cargo lists, is worthy of some further comment. The word *cristalli* had manifold meanings in Italian writings of the early modern period. It could denote products made of rock crystal or of glass crystal, as well as of mirrors, phials, lenses, drinking glasses, glass panes, and even saltpeter.[101] However, in the late fifteenth century Venetian context, *cristallino* or *cristallo* were terms used to denote a special kind of high-quality colorless and transparent imitation of rock-crystal, invented in Venice during the second half of the fourteenth, and further improved during the first half of the fifteenth, century.[102] The term *Veri cristal[l]ini* seems to have denoted

---

[94]The ship wrecked in 1499 had 2 *ruotoli* of canvas on board: Arbel ″Attraverso il Mediterraneo,″ 113. The Beirut galleys sailing in November 1502 had 85 *baloni* of canvas on board; the Alexandria galleys of 1503 had 3 *balle;* and the Beirut galleys of 1513—10 *ruotoli.* Cf. Ashtor, ″L′exportation,″ 367–69.

[100]On arrival at Jaffa in July 1480, the captain of the Venetian pilgrims′ galley sent vases made of glass crystal *(vasi christalini)* to the *dawādār* of Damascus, to ensure favorable treatment of the pilgrims. See Santo Brasca, *Viaggio in Terrasanta,* ed. L. Momigliano Lepschy (Milan, 1966), 63.

[101]Battaglia, *Grande dizionario,* 3:980–82.

[102]Luigi Zecchin, ″Il ′Vetro cristallino′ nelle carte del Quattrocento,″ in his *Vetro e vetrai di*

various objects made of crystal glass, as can be inferred from a commercial letter sent to the Levant in March and April 1511, announcing the shipment of two cases of *veri cristalini,* one containing 1,000 *stagnaele* and 30 *angistere* and the other one containing 1,000 *stagnaele* and 40 *angistere* with a stem and a gilded rim *(da pé con la bocca indorata)*—all terms designating different sorts of glassware.[103] The same passage also helps us to get an idea about the quantities of products contained in those ″cases″ mentioned in our cargo lists.

Al-Maqrīzī′s description of Cairo, as well as a series of letters sent in 1512 by Martino Merlini, a Venetian merchant in Venice, to his brother and business partner Giambattista, then residing in Syria, help us clarify the nature of those *cristalli,* and also shed some light on Mamluk consumption of Venetian luxury products. From al-Maqrīzī′s work we learn that during his times crystal *(ballūr)* was used as a status symbol by the upper classes of Mamluk society. For example, brides of prominent families were traditionally presented with a sort of bed or divan called *dikkah,* which was paraded in the streets of Cairo. Al-Maqrīzī mentions a granddaughter of one of the sultans who received as a wedding present such a *dikkah* made of crystal, on which there were other precious objects, such as a crystal vessel painted with figures of birds and animals.[104]

Martino Merlini′s commercial correspondence is of great interest in many respects. It reveals the *modus operandi* of the Venetian entrepreneur who encouraged his brother to carry out a thorough market research concerning the demand for what he called ″*lavori di cristalo smaltadi,*″ that is, enameled crystal objects. Giambattista was required to send to his brother (most probably his elder brother) a detailed report concerning the types of such merchandise which were mostly sought after in Syria, to find out who and what kind of people possessed them, as well as to specify the kinds and quantities of such products in their possession. He was also encouraged to address one of the amirs and ask him what kind of new product he would like to have, and to send to Martino a model made of wood, or a drawing of the same, so that the expert manufacturer of these crystal objects,

[104]Al-Maqrīzī, *Khiṭaṭ,* 2:3:171.

Vetor di Anzoli, could produce it back in Murano.

In another letter of the same year, Martino asked his brother to acquire a suit of Mamluk armor, and if he were unable to do so, to bring with him to Venice a model made of leather or cloth and a drawing of the same. Merlini intended to produce, with the help of Vetor de Anzoli, whom he described as ″the one who makes the most beautiful crystal artifacts sent to that land″ (i.e., the Mamluk Sultanate), a suit of armor made of crystal, with a helmet made of enameled silver, and possibly also inlaid with precious stones. Such a product, Martino wrote ironically, would not be fit for defense, but would be a magnificent and unique piece that could be worn by a sultan′s slave in a parade,[105] ″as is the habit among the Mamluks to parade their beautiful crystal artifacts, such as saddles, breastplates or corsets, and scimitars, which have no other use than adornment.″[106] Martino was hoping to draw a profit amounting to one thousand ducats from such an affair, and he also encouraged his brother to find a way of convincing the Safavid ruler of Persia to acquire a similar artifact, which would raise the profit to about three or four thousand ducats.[107] Martino′s reference to crystal saddles is confirmed by Ibn Iyās′s description of the procession organized by Sultan Qānṣūh al-Ghūrī on 15 Rabīʻ al-Ākhar 922/17 May 1516, when leaving Cairo for his battle against the Ottomans.[108] Briefly, Mamluk sultans and amirs seem to have been the clients of these expensive and extravagant glass-crystal artifacts, representing wedding gifts or different instruments of Mamluk horsemanship, produced especially for this market in Venice′s glass manufactories at Murano, and shipped, alongside other glass products, to Egypt and Syria on board the state galleys. As a matter of fact, objects made of glass crystal were often decorated with elaborate trailing, with enamelling and gilding and with filigree decoration.[109]

Coral of the red, black, and white sorts, originating in the western Mediterranean, could also often be found on board these ships.[110] The most important sources of

[110]The galleys of 1496 left 36 cases of coral in Alexandria. The Beirut galleys of 1498 carried 11

Mediterranean coral were off the shores of the kingdom of Tunisia, Sardinia, Corsica, Sicily, Provence, and Liguria. The best and probably richest source was the Tunisian one off Marsá al-Kharaz (today in Algeria), and its main clients were in the Mamluk Levant. From the 1430s until the 1460s the Tunisian coral fisheries were dominated by the Genoese, but from the 1470s the Venetians succeeded in breaking the Genoese monopoly on the lease of coral extraction in Tunisian waters. The shipment of coral and coral products on Venetian vessels to Mamluk lands during the last decades of the fifteenth century was therefore linked to a direct involvement of Venetians in the extraction of this natural product in the area considered to produce its best quality. Yet, although there were also coral artisans in Venice, part of the coral products shipped on board Venetian galleys to Egypt and Syria seems to have originated from other sources of supply.[111]

Paxi's commercial manual mentions four different sorts of coral brought by Venetians to Alexandria—*coralli in brancha* (coral twigs), *toro* (probably polished coral), *bastardo* (broken pieces of coral), and *zoppe,* a term whose significance remains unclear.[112] A substantial part of these materials seems to have been imported as rosary beads, called *bottoni de coralli,* which, as he specifies, were beads *(pater nostri)* that were supposed to be round and thick *(tondi e grossi)* and above all, have a good color.[113] Paxi's remark that such beads were being acquired in great quantities in Genoa and Sicily indicates that the Venetian grasp of Tunisian coral did not exclude the possibility of acquiring coral products for the Mamluk markets from other sources. Besides, although the Venetians enjoyed a hegemony in Mamluk western trade, other entrepreneurs could also take part in this field, as exemplified in a contract for the sale of coral artifacts in Cairo, stipulated in 1482 between two Neapolitans (one of whom was a jeweler).[114] Such alternative sources of supply must have grown in importance after the retreat of the Venetians from

---

cases of coral; the Beirut galleys of 1500 carried 17 cases of coral, and those sailing that year to Alexandria carried 9 cases of coral. The galleys sailing to Alexandria in 1503 carried one case of coral; the 1511 Alexandria galleys had 4 cases of coral beads; the Beirut galleys of 1513 carried 13 cases of coral, 19 of coral beads, and 5 of a similar product.

[111]On the geography and history of coral fisheries in the fifteenth-century Mediterranean, see Giovanni Tescione, *Italiani alla pesca del corallo ed egemonie marittime nel Mediterraneo* (Naples, 1940), xlviii–lvii, 35–60; Bernard Doumerc, "Le corail d'Ifriqiya à la fin du Moyen-Âge," *Bulletin archéologique du Comité des travaux historiques et scientifiques* 19/B (1983): 9–12; Damien Coulon, "Un élément clef de la puissance commerciale catalane: le trafic du corail avec l'Egypte et la Syrie (fin du XIVe–début du XVe siècle)," *Al-Masāq* 9 (1996–97): 99–149. On Venetian production of coral artifacts, see Luzzatto, *Storia economica,* 183.

[114]Tescione, *Italiani,* 45.

direct exploitation of the Tunisian coral reefs around the turn of the sixteenth century.[115]

Besides rosaries, jewelry, and talismans, coral was widely used in the Islamic world for medical purposes, as a collyrium against eye diseases, against hemorrhage and blockage of the urinary tract, and against epilepsy and mental illnesses. The broken coral imported by the Venetians could have served for such therapeutic purposes. Coral was also widely used as an amulet against various troubles, such as snake bites and malaria, and was believed to be an aphrodisiac.[116]

Amber, which also seems to have enjoyed a regular demand in Mamluk markets, came from the Baltic regions, and reached Venice either through German merchants active in the *Fondaco dei Tedeschi,* or on board the Flanders galleys.[117] Fifteenth-century Venice was famous for its artistic works of amber,[118] and at least part of the cargoes exported to Syria and Egypt must have included such artistic artifacts.[119] Cairo had a special amber market, and according to al-Maqrīzī, even commoners used to wear amber necklaces and ornament their homes with amber objects.[120] Yet it is possible that amber, like coral, was also shipped eastward as a raw material, since it also served medical purposes. Amber was believed to be effective as a hemostatic and astringent, and in solving problems of the urinary tract. It was also used to prevent vomiting and against hemorrhoids, as well as for curing broken bones.[121]

Two more typical industrial products made in Venice and its mainland territories

Rika Gyselen (Bures-sur-Yvette, 1998), 191–92.

respectively were soap and paper, also encountered on board galleys and ships sailing to the lands of the Mamluks. The solid white Venetian soap was made of olive oil from Venetian colonies in Greece and alkali ashes imported from Syria. Paxi calls these soaps "*savoni bianchi da navegar*," indicating that they were mainly produced for exportation.[122] To have an idea on quantities of this product exported eastward, we may use the example of a few shipments for which the weight is provided by our sources. The galleys of 1496 brought 200 *miera* (60 tons) of soap to Alexandria and in 1511, our sources mention two shipments to Alexandria, both carried out by the same merchant: the first of 11,701 kg, and the second (on another galley of the same *muda*) of 5,279 kg.[123] In other words, a single Venetian merchant shipped about 17 tons of soap to Alexandria in a single *muda*.[124]

Paper shipments from Venice to Mamluk territories also seem to have been quite regular.[125] This also was undoubtedly a product of Venetian industries in the mainland territories of the republic.[126] The examination of water-marks has shown that during the Ottoman period, paper used in Egypt was to a great extent of Venetian origin,[127] and it is most likely that the preponderance of Venetian importations of this material had already begun under the Mamluks.

---

[122]Paxi, *Tariffa,* 46v.

[123]Braudel and Tenenti, "Michiel da Lezze," 71. The quantities are given in Venetian *lire sottili.* The first shipment had 38,875 net *lire* and the second—17,540. The Venetian *lira sottile* was equivalent to 0.301 kg: Paxi, *Tariffa,* 49v, and Tucci, *Lettres d'un marchand vénitien*, 354. These soaps were packed in sacks, whereas the cargo list of the same galleys included in Sanudo's diary mentions only soap in cases *(casse).* Cf. Appendix A.

[124]More information on soap shipments: the galleys sailing to Alexandria in 1498 had 573 sacks of soap and those sailing there in 1500 had 62 cases of soap on board. In 1503 the galleys brought 378 cases of soap to Alexandria; the 1511 Alexandria galleys had 602 cases of soap on board.

[125]The ships wrecked in 1499 carried altogether 10 bales of paper belonging to two different merchants: Arbel, "Attraverso il Mediterraneo," 113. The galleys sailing to Beirut in 1500 carried 42 bales of paper; the Alexandria galleys of 1503 carried 23 bales of paper; the 1510 Alexandria galleys had 8 paper bales on board. See also Luzzatto, *Storia economica,* 180, and for evidence on earlier years of the fifteenth century: Eliyahu Ashtor, "The Venetian Supremacy in Levantine Trade: Monopoly or Pre-Colonialism?," *Journal of European Economic History* 3 (1974): 26, n. 85.

The importation of soap and paper, as well as of sugar (imported from Cyprus), was mentioned by Ashtor as a reflection of the decline of Levantine industries that had produced these items in the past.[128] Although it can be shown that soap was still produced in the late fifteenth century in Syria,[129] no such evidence exists, to the best of my knowledge, for paper, and the imported quantities cited above, especially in the case of soap, may support Ashtor´s claim.

Spices, dyes, pigments, perfumes, and drugs normally traveled westward, but a few such products of western provenance were nearly always to be found on board Venetian ships sailing eastward. Such is the case of saffron, originating, according to de´ Paxi, from the region around L´Aquila in the Abruzzo.[130] It served for cooking, for medical purposes, for cosmetics, for dyeing, and even for perfume, and must have had special importance considering Mamluk preference for the yellow color.[131] An Egyptian chronicler records how in 855/1451, while celebrating the rise of the Nile, Egyptians happily threw saffron at one another.[132] This habit could have continued in later years, encouraging further importation by the Venetians. Other dyes often shipped to these lands were realgar (*risegallo*, or *sandarac*), the red pigment or varnish that could be produced artificially but which, apparently, was also extracted from the raisin of the Moroccan *callitris quadrivalvis;*[133] *sbiacca,* a carbonate of lead used as a white color, both as a varnish and whitewash for walls, and for paints and cosmetics;[134] and finally, what our sources call *grepola,* or *tartaro,* which seems to be a crust accumulating on the sides of wine casks, a substance that apparently was in demand in the Mamluk

[133]One and a half bales of saffron were shipped in 1510 to Alexandria; 12 bottles of *risegallo* were transported on the ship wrecked in 1499: Arbel, ″Attraverso il Mediterraneo,″ 113; 3 barrels of *risegalli* were sent to Alexandria in 1503; 12 cases of the same product were on board the Alexandria galleys in 1510, and 35 *risegal* packages of unspecified nature on those of 1511. J. Michael Rogers identifies realgar as the natural orange-red sulfide of arsenic (As_2S_2): Rogers, ″To and Fro,″ 70, n. 42.

[134]Battaglia, *Grande dizionario,* 2:202 *(Biacca).* In 1502 the galleys sailing to Beirut had 135 barrels containing this product.

Levant, and must have served medical purposes.[135]

The Alexandria galleys of 1510 carried 90 cases of sulfur, and Paxi's manual also mentions this material among those commonly exported from Venice to Alexandria and Damascus.[136] Sulfur was used for bleaching, for the preparation of gun-powder and fireworks, as fumigation to expel vermin from houses, and in medicine against skin diseases and stings of poisonous animals, in electuaries against fever, cough, asthma, tetanus, and dropsy, as well as in magic.[137]

Among foodstuffs shipped by the Venetians to the lands ruled by the Mamluks, a special place was reserved for chestnuts. This merchandise does not figure in our cargo lists for the simple reason that special ships were required to transport it. Such ships were even called "the chestnut ships," and they seem to have sailed from Italy to Mamluk territories on quite a regular basis. For the two last decades of the Mamluk Sultanate I have found evidence for shiploads of chestnuts sent to Syria in 1509, 1510, and 1516, but these were very likely not the only vessels used for the same purpose during those years.[138]

According to Bartolomeo de' Paxi, the best chestnuts exported to Egypt and Syria originated from the area of Bologna, the valley of Lamone, and the territory of Imola. The same author mentions, besides fresh chestnuts, also dried chestnuts, and chestnuts boiled in wine, of which only small quantities were exported eastward for obvious reasons.[139] Chestnuts seem to have mainly served as a substitute for grains in periods of scarcity. One may wonder whether the expansion of cotton fields in later medieval Syria was carried out at the expense of grain fields, thus creating periods of scarcity and necessitating resorting to substitutes of this kind.

It is remarkable to observe to what extent the information included in Paxi's commercial manual corresponds to the cargo lists of our three diarists and to other testimonies that reflect the actual operation of importations into Egypt and Syria. The cargo lists, however, are incomplete (the diarists sometimes admit it), partly, but not only, because galleys were intended for the shipment of special kinds of goods. Judging by the information included in our two commercial manuals, the range of products imported by Venetians to Mamluk lands on board different kinds of vessels was actually much wider. Appendix B includes Paxi's lists of goods imported into Damascus, Aleppo, and Tripoli, and a list of goods mentioned

[155]Paxi, *Tariffa,* 44r.

refresher, in preparing a dark blue dye, and probably also as a mordant;[156] *zafari,* a dark blue cobalt-based dyestuff used for painting on glass; blue glaze *(smalta azuro),* undoubtedly for producing enameled glass;[157] *loldano (ladanum),* a Cypriot raisin used for medical purposes and for incense;[158] tinned iron wire *(filo de loton);*[159] alum, acquired in Constantinople;[160] timber from Anatolia and Rhodes;[161] tinned iron basins; and a product called *gozime,* or *gozeme,* which I have not been able to identify.[162]

Rimondo's "Tarifa" of 1494 also mentions among the goods imported to Alexandria wether wool; lead oxide *(mor da sangue); roza*, which might signify rose water; sesame; *tigname,* an aromatic bark used for incense; Barbary hides; coarse woolen cloth or blankets *(s[ch]iavine);* cotton; linen; nut-galls; and *largado,* another product which I have been unable to identify.

The fact that many of these products do not figure in our cargo lists is no proof that they were not imported to Egypt and Syria in the period under consideration. We have very little evidence on private ships active in this period, and even the cargo lists of the galleys that have been analyzed above are not comprehensive, and often include generic terms, such as *merce,* or *aver sottil,* which may comprise many of the items mentioned in the two merchant manuals.

Any discussion of Venetian importations into Mamluk lands should not omit Cyprus, which became a Venetian territory *de facto* in 1473 and *de jure* in 1489. The island, situated merely sixty miles off the Syrian coast and not very far from Egypt, was not only an important emporium and way station on the routes of Venetian ships sailing between Venice and Mamluk territories, but also a source of supply for the latter. This historical aspect of the easternmost colony of Venice is hardly known and difficult to follow. We have, however a few indications pointing to the close mercantile contacts, especially with Syria, carried out on board small local vessels, operated by Syrian Christians, who were inhabitants of Famagusta. The captain of Famagusta reported, for instance, in October 1500 that between four and six boats arrived from Syria every week with foodstuffs.[163] In

September 1502, the captain reported that boats owned by Syrians reach Cyprus on a daily basis.[164] In 1510, the governors wrote to Venice that many poor people in Cyprus depended for their living on trade with Syria.[165] This activity was carried out on small vessels, and only exceptionally left any traces in written documents, but a few archival sources allow us to get an idea about the nature of this trade, and particularly on importations from the island into Syria and Egypt. In 1504, a few Cypriots of Syrian origin complained that the Venetian consul in Damascus compelled them to pay dues on salt, sugar, honey, and molasses, which they imported into Syria, and even on cash money exported from that country.[166] Salt was indeed one of the island´s main export products, and its exportation to Syria (as also to Anatolia) was regulated by a periodical lease to private individuals.[167] In 1514, Cypriot molasses was also exported into Egypt, a piece of information corroborating the testimony of our two *Tariffe* in this regard.[168]

Contraband trade between Syria and Cyprus, as, for instance, the exportation of wheat, normally forbidden to be exported to non-Venetian territories, should also be taken into consideration, considering the relatively short distances separating the island from the shores of the Mamluk Sultanate. In 1509, for example, the governors of Cyprus reported bringing to trial exporters of 60,000 *mozza* of grains.[169] On some occasions grains were officially sold to the Mamluks, as for instance in 1513, when barley crops were abundant on Cyprus and great shipments were carried out to Syria, both by the governors and by private individuals.[170] The Venetian Council of Ten later authorized the governors of the island colony to export to Syria or Turkey up to 40–50,000 *mozza,* instructing them to prevent private individuals from competing with the public exportations.[171] Later that year the Council of Ten authorized two Venetian patricians who held in lease public estates on Cyprus to export up to 20,000 Cypriot *mozza* of barley ˝to Syria or

[168]Three vessels waited at Paphos for over three months before being able to cross over to Damietta, with a cargo of molasses ˝and other drugs,˝ finally sailing towards the end of March 1514: Archivio di Stato, Venezia (hereafter: ASV), Lettere ai Capi del Consiglio dei Dieci (hereafter: Lett. Capi X), busta 288, nos. 101–2.

[169]Ibid., fol. 69.

[170]In May 1513, 1,000 *ashrafī*s, the return of a barley shipment to Syria, were sent from Cyprus to Venice: ibid., nos. 86–88.

[171]ASV, Consiglio dei X (hereafter: X) Misti, reg. 36, fol. 63v (30 Aug. 1513).

Turkey."[172] But grains were also imported from Mamluk lands, as reported in the following year by the governors—who bought 10,000 *mozza* in Damietta and were hoping to obtain more from Syria.[173] During that summer, following a locust plague that ruined Cypriot harvests, ships loaded with Syrian wheat reached Cyprus on a daily basis, until the crisis related to Venetian contacts with Persia temporarily disrupted collaboration with the Mamluks.[174]

Since 1426, Cyprus had been paying tribute to the Mamluk sultan, and its rulers were bound to send yearly to Cairo luxury cloths, mostly produced and dyed on the island, to the value of 8,000 ducats. After taking control of the island, Venice continued to pay this tribute. The main occupation of the camlet and samite industries in Nicosia seem to have been connected to this yearly dispatch of luxury cloths to the Mamluks.[175]

Commercial contacts between Venice, Venetian Cyprus, and the Mamluk territories also had an interesting monetary consequence. Mamluk coins, such as *ashrafī*s and *maydīn*s, circulated in Cyprus, necessitating official intervention to regulate their circulation and make arrangements for evaluating those coins, which must have had different alloys and weights.[176] *Ashrafī*s are also occasionally encountered on ships sailing from Venice eastward, indicating that the circulation of Mamluk gold coins was not limited to lands ruled by the sultan and its close neighbors.[177]

Finally, one cannot disregard the role of Venetian shipping in trade between different Muslim lands, and even between different Mamluk territories. The galleys of the *trafego* line, to which we have devoted too little attention in this paper, connected the Maghreb with Egypt and Syria, and were a convenient means of transportation for Muslim traders, besides their role in the Venetian trading system. Private Venetian ships also sailed between different ports of the Muslim Mediterranean.[178] It is therefore not surprising to find in Paxi's manual, in addition

[174]Sanudo, *I diarii,* 11:656.

[175]Arbel, "Venetian Cyprus and the Muslim Levant," 161–62. Following is a list of such cloths sent from Cyprus by the Venetians to the sultan as tribute (plus presents) for the two previous years (the sultan expressed his dissatisfaction about their quality): zambeloti di Cypro per presente-peze 40; zambeloti per le page-peze 582; campo d'oro-pichi 200 quarte 3; damaschini-pichi 42; Raso venitian-pichi 103; panni de lana acoloradi-pichi 318 3/4: Sanudo, *I diarii,* 5:114–15.

[176]ASV, Lett. Capi X, busta 288, no. 91 (14 Dec. 1513).

[177]Braudel and Tenenti, "Michiel da Lezze," 43 (1497), 71 (1511).

[178]E.g., Sanudo's report in mid-April 1497 about the shipwreck off Tripoli of a private vessel owned by Priamo Contarini, sailing from Alexandria to the Maghreb with merchandise belonging to Moors: Sanudo, *I diarii,* 1:605.

to olive oil imported from Barbary (Tripoli and Tunis), gold dust *(tiber)* imported likewise from Tripoli, or currants imported from Smirne, also linen, a product acquired in Alexandria, and imported by Venetians into Tripoli in Syria, and a product called *muchara,* mentioned among those imported from Damietta into the same Syrian port town.[179] The cotton mentioned in Rimondo´s manual as imported into Egypt also could have originated in Syria.

What general conclusions can be drawn from this material? The difficult political and military background certainly had negative repercussions on Venetian importations into Egypt and Syria. The Alexandria line in particular was often interrupted, and Venice´s dire straits opened new opportunities to its commercial rivals. Priuli and Sanudo noted in their diaries the activity of French and Genoese ships in the course of Venice´s war with the Ottomans in 1500 and 1501, carrying copper, woolens, corals, and specie to Syria and Egypt and exporting cotton and spices.[180] However, it does not seem that the French or the Genoese were able to replace the Venetians as the chief trading partners of Egypt and Syria on a regular and continuous basis. For example, in 1505, to cover a debt owed to him by the Venetians for forced sales of his pepper, the sultan confiscated goods belonging to Venetian merchants in Alexandria and Cairo in order to sell them in public auctions. According to merchants´ letters from Cairo, the woolens and hazelnuts thus sold enjoyed excellent prices, since shortages of certain goods had developed in the Egyptian markets following the temporary absence of Venetian ships.[181] The rich shiploads of the galleys sailing to Alexandria in 1510, which, according to Sanudo, carried goods to the value of 300,000 ducats, may also indicate that shortages of certain products had developed in Egypt during the previous two years, when no galleys had been sent eastward. Despite the difficulties, Venetians and Mamluks thus continued to depend on one another down to the end of the Mamluk Sultanate. This impression would be even stronger if we took into consideration importations on board private ships that were functioning alongside the galleys, and especially during years when galleys were not sent eastward.[182]

In view of this interdependency, a crisis in Venetian-Mamluk trade may also

---

[179]See Appendices A and B-I. Could this term signify marine shells (*maḥārah*, pl. *maḥārāt*)?

[180]Priuli, *I diarii,* 1:259; ibid, 2:42–43, 65; Sanudo, *I diarii,* 3:687, 1121.

[181]Priuli, *I diarii,* 2:401.

[182]E.g., the report of the Venetian consul in Alexandria, dated 26 March 1503, on the arrival there of ″Moras´s ship,″ loaded with 240 barrels of oil, a ship loaded with copper belonging to Michiel Foscari, a *barzoto* loaded with hazelnuts, and another [Venetian?] ship with hazelnuts *(noxele)* from Sicily: Sanudo, *I diarii,* 5:34–35.

indicate a crisis in the Mamluk economy in general. Ashtor′s suggestion that Mamluk external trade in the late fifteenth century was flourishing may be erroneous, being based on rather scanty evidence. In view of the great geopolitical, commercial, and military upheavals characterizing those years, it is difficult to accept the claim that the last decades of the Mamluk Sultanate were characterized by commercial and industrial prosperity that had no precedent in the earlier Bahri Mamluk period.[183]

That does not mean the international trade became insignificant, particularly as far as local demand for certain products was concerned. Assuming that not only the cargo lists, but also the two *Tariffe,* represent a real (though quantitatively incomplete) picture of the importations into Egypt and Syria in the late fifteenth and early sixteenth centuries, the number, variety, and also the value of products shipped to the Mamluk Levant is impressive indeed.

In three cases, our cargo lists contain estimates for both precious metals and other merchandise sent to Alexandria.[184] In 1486 Malipiero remarked that little money was sent to Egypt whereas the goods shipped there were evaluated by him at 230,000 ducats; in 1496, 220,000 ducats worth of gold and silver were sent to Alexandria, but 50,000 came back, which leaves us with 170,000 ducats as against 150,000 invested in goods sent to the same destination; and in 1510, according to Sanudo, only 52,000 ducats of gold and silver were sent to Egypt whereas the goods shipped there were evaluated by the diarist at no less than 300,000 ducats (including copper worth 50,000 ducats).[185] Regardless of the question of the balance of payment between Venice and the Mamluk Sultanate,[186] our diarists′ evaluations do indicate that the economic importance of goods other than gold and silver imported by Venetian merchants into Egypt (and most probably also to Syria) during those years was far from negligible. It would be, of course, hazardous to judge by these few cases, but the tendency of sending smaller amounts of specie and precious metals on the state galleys sailing eastward indicates an increase in the relative importance of other products shipped on the same vessels during the last decades of Mamluk rule,[187] and probably a growing importance of barter transactions in the East. The decline in gold and silver shipments was both a sign of economic difficulties on the Venetian side, and a grave problem for the Mamluks.

---

[183]Cf. Ashtor, *Levant Trade*, 510–11; Robert Irwin, ″Egypt, Syria and Their Trading Partners,″ in *Carpets of the Mediterranean Countries 1400–1550,* ed. R. Pinner and W. B. Denny (London, 1986), 78.

[184]See Appendix C.

[185]It should, however, be taken into consideration that no galleys sailed to Beirut in 1510.

[186]See R. S. Lopez, ″Il problema dei bilanci dei pagamenti nel commercio di Levante,″ in *Venezia e il Levante fino al secolo XV,* ed. Agostino Pertusi (Florence, 1973), 431–51. See also my remarks above, 43–46.

[187]See Appendix C.

It must have been relatively easier for Venetian merchants to acquire on credit in Venice goods that were meant to be sent eastward, but were they able to do the same with gold and silver? Thus, with less gold and silver arriving from the West, Mamluk capacity to finance trade with India and southeast Asia, and most likely also their ability to confront the Portuguese and the Ottomans, were restricted.[188]

Of course, some goods, particularly those that are not mentioned in the cargo lists, were probably only occasionally sent eastward, or else were shipped on board round ships, for which we have only one cargo list at our disposal. However, the fact that not a few products could be found time and again in substantial quantities on galleys and ships sailing both to Syria and Egypt point to well-established patterns of consumption of goods originating from Venice and the West, and to the dependence of the Mamluk market on Venetian importations of certain products. Among those, raw materials, especially metals, occupy a prominent place. Copper in different forms, tinned iron, tin, lead, and mercury seem to have been in constant demand both in Egypt and Syria, and this demand must have only grown when Venetian galleys were unable to reach the ports of the Mamluk Levant. It is also noteworthy that the old restrictions on provision of strategic materials to the Mamluks were ineffective, especially during years in which Venice and the papacy were at war. Indeed, such products were openly exported to the Mamluks.[189]

It has also been noted that in spite of the general crisis, luxury items for the Mamluk elite, such as silk cloth and furs, or extravagant artifacts made of glass crystal, continued to reach the ports of Egypt and Syria, but we have no way of checking whether consumption of these goods declined towards the end of the Mamluk period. Michael Rogers has claimed that ″consumers of luxuries are tenacious and imaginative in their efforts to keep up their standards of living,″[190] and it may well be the Mamluk upper classes also behaved that way despite the financial difficulties characterizing the last decades of the Mamluk Sultanate.

Luxury goods undoubtedly offered the Venetian merchants prospects for great profits, but that did not cause them to neglect other opportunities. For instance, among the woolens imported into Egypt and Syria we encounter kerseys and *grisi (grixi),* which were considered to be common cloths; rosary beads made of glass

---

[188]Rogers, ″To and Fro,″ 66.

[189]In view of the huge amounts of copper shipped regularly to Egypt and Syria, the accusation brought against Michiel Foscari, reported by Sanudo in October 1503, of having shipped prohibited goods (i.e., copper) into Egypt, looks more like lip service or even a personal vendetta, rather than an indication of Venetian policy to implement the old restrictions. See Sanudo, *I diarii,* 5:162. Cf. Braunstein, ″Le commerce du fer,″ 288–89.

[190]Rogers, ″To and Fro,″ 66.

and even amber can also be considered as rather inexpensive merchandise. And an unknown portion, which could be substantial, of the above-mentioned raw materials probably found its way to small manufacturers for production of common utensils. Among the foodstuffs, chestnuts and other sorts of nuts, and occasionally grains, can also be considered as products that had a wider consumption. It would therefore not be erroneous to state that Venetian importations into Mamluk lands reached, either directly or indirectly, a considerably wide spectrum of Mamluk society.

One has also to take into consideration that at least part of the products imported by the Venetians into Egypt and Syria were re-exported to other lands. This may be the case of some of the silver, copper, tin, brass, mercury, cinnabar, woolens, dyestuffs, mastic, mirrors, beads, verdigris, and other goods for which we have evidence of exportation to India via Aden during the fifteenth and the first years of the sixteenth century.[191] According to a German merchant manual of the early sixteenth century, a merchant buying spices in Cochin was required to pay for half of it, or at least one third, in copper.[192] Part of this copper must have reached India through the lands of the Mamluks.

It is also important to note that the appearance of a certain product in a list of imported goods cannot by itself constitute sufficient proof of its scarcity in Mamluk territories. Similar products, or different sorts and qualities of the same products, could be imported and exported at the same time. This is especially true of luxury goods, which could have attracted the refined tastes of an elite clientele. For example, a small ship *(schirazo)* from Constantinople that anchored in July 1484 at Saline, in Cyprus, was said to have sailed from Damietta loaded with wheat (sold on Cyprus) and salt. But it was actually on its way to Tripoli in Syria, where soap was intended to be loaded, to be shipped to Constantinople.[193] We may surmise that both the salt and the soap concerned were local products. Soap from Tripoli was probably not expensive enough or refined enough for the tastes of certain clients in Egypt, who preferred the product imported from Venice.

Finally, it is tempting to try and compare imports into Syria with those into Egypt. As far as precious metals were concerned, it is possible that the smaller quantities of silver imported into Syria, compared with those shipped to Alexandria, have something to do with the lower value of silver in the northern territories of the Mamluk empire, where silver also arrived from Persia and central Asia.[194] However, we should not forget that a large part of the money paid for spices in

---

[193]Melis, *Documenti,* 200.

[194]Ibid., 52–53.

Alexandria was used to cover purchases of these precious goods from their importers into Egypt, whereas much of the gold and silver imported into Syria remained in the land itself, since it was invested in acquiring cotton and cotton products as well as alkali ashes for the Venetian glass and soap industries.

All shipments of Venetian soap discovered so far were made to Egypt, and none to Syria. Likewise, both Rimondo´s and Paxi´s commercial manuals mention soap among the products imported into Egypt but omit it from the list of importations into Syria. Is it because of protective measures for the soap industry at Tripoli, or was the latter competitive enough in Syria to prevent Venetian importers from trying to market their own soap there? As for woolens, it should be noted that the list of woolen cloths imported, according to de´ Paxi, into Damascus, Aleppo, and Tripoli, is longer and more diversified than the similar list referring to Alexandria. Certain kinds of silk cloth in demand in Damascus, as well as colors preferred in the Aleppo market, are also worthy of attention. However, the limited quantity of relevant data on these issues requires great caution in drawing any definitive conclusions. It is also possible, for example, that higher customs dues in Alexandria, compared to those in Syria,[195] may have played a role in merchants´ considerations as to the destinations of their shipments. In fact, rather than helping us formulate clear answers, the material presented here raises a series of questions. The data included in these few cargo lists are also insufficient for drawing any serious quantitative conclusions, especially since we do not have comparable data from the decades preceding the period treated here. They do provide, however, many elements for further research on patterns of material life and consumption during the last decades of Mamluk rule.

APPENDIX A: CARGOES OF VENETIAN GALLEYS SAILING TO BEIRUT AND ALEXANDRIA, 1495–1513, ACCORDING TO THE DIARISTS MALIPIERO, PRIULI, AND SANUDO

I–II. AUGUST 1495: INFORMATION ON THE GALLEYS TRAVELING TO ALEXANDRIA AND BEIRUT

Le gallie de Alexandria, che sono quatro, et da Barutto altrettante, partirono nel mese di agosto secondo il consueto et piui riche assai di quello che cadauno pensava, che per le guerre et angarie accadute pensavanno non dovesseno andar si riche; quelle de Alexandria de contantti ducati 190,000, rami in pani mura [*sic,* should be *miera*] 1,100, ogli botte 500, le galee da Baruto richissime al´uxato et alttri danari et robe assai, che non si pol chusì dirle, perché non se intende la veritade.

Priuli, *I diarii,* 1:30

III–IV. 1496: INFORMATION ON CARGOES SENT TO ALEXANDRIA AND BEIRUT

Nonostante che in 18 mesi sia sta´ messo quatordese decime a Monte Nuovo e sie perse ai Governadori, è sta´ manda´ in Alessandria su queste galie 220,000 ducati e a Barutho 120,000, senza quei che è sta´ mandai in Soria per le nave . . .
. . . galie d´Alessandria . . . torna in drio 50,000 ducati de contadi; e dise che resta in Alessandria 1,000 bote de ogio, 10,000 cantera de rami e 200 miera de saoni, 36 casse de corali e altre merce, in tutto per cento e cinquantamile ducati . . .

Malipiero, ˝Annali,˝ 629, 634–35

V–VI. 1497: PRECIOUS METALS SENT TO THE EAST

A 22 d´Avosto [1497] è sta´ manda´ con le quattro galie d´Alessandria tresentomile ducati de contadi senza le merce; e a Baruthi sessantamile. Non se ha possudo haver arzenti in pezza, che è sta´ pagadi cinque ducati e vinti un grosso la marca; et è sta´ fatto gran quantità de moneda; e per questo, è abondantia de monede forestiere: testoni de Milan, da trenta soldi l´un; Bolognesi, Ferraresi, Mantoani; carlini papali da 12 e da 20; e de bezzi di Alemagna.

Malipiero, ˝Annali,˝ 640

VII–VIII. SUMMER 1498: CARGOES OF THE GALLEYS SAILING TO ALEXANDRIA AND BEIRUT

A. MALIPIERO´S REPORT

El cargho delle galie che va in Alessandria, è de contadi dusentomile ducati, settanta una bala de pani, mile e cento coffe de rame, cinquecento e settanta tre sachi de saoni; e quelle che va a Baruthi, sessanta mile ducati de contadi, quattrocento e disdotto bale de pani, cento e sessantaquattro coffe de rami, dodese barili de ambra, sessantatre barili de banda, vintisette casse de cenapri, sessanta tre bojoli de argento vivo.

Malipiero, ″Annali,″ 646

B. PRIULI´S REPORT

AUGUST 1498: CARGO LIST OF THE BEIRUT GALLEYS, CAPTAIN GABRIEL BARBARIGO, AND OF THE ALEXANDRIA GALLEYS, CAPTAIN PIETRO LANDO

Ali XII detto de agosto se partì tutte le gallie deli viagii, zoè le ultime, et per lettere da Puola se intende le gallie da Baruto aver tra argenti et ongari a nolo de gallia duc. 55,000 et in cassa de marchadanti et tanse ducati 15,000, in tuto ducati 70,000 de contanti, pani per Soria balle 418, rami in pani coffe 164, stagni fardi 22, corali casse 11, ambra lavorata bale 7, ambra greza balle 12, zenabrii C.i 27, argenti vivi C.i 35, et altre simile cosse et marchadantie al uxato che ogni anno se manda.

Le gallie de Alexandria hano tra argenti e monede et venetiani ducati 190,000 a nollo di gallia et in cassa de marchadanti et tanse duc. 50,000, in tutto duc 240,000 de contanti, benché se judicha sia stato molto piui, perché sempre se dice de menno *[sic]* per el pagar del nolo. Rami in pani coffe 1,168, piombi pr. 55, banda larga fassi 71, et altre merchadantie, che solenno andar ogni anno pani balle 71.

Priuli, *I diarii,* 1:94

XIX. 23 March 1511: Cargo List of the Alexandria Galleys, Captain Piero Michiel

A. Sanudo´s Report

Rami in verga	505	Gonele de griso	2
Rami in pam	casse 527	Paternostri de vero	casse 85
Arzenti vivi	251	Sede da cavalo	barili 1
Zenabri	casse 21	Ambra	2
Rami lavoradi	106	Panni de seda e d´oro	casse 15
Barette	casse 12	Banda raspa´	19
Pani de lana	134	Gripola	28
Vari	19	Banda larga	57
Ver de rami	casse 9	Zebelini	casse 2
Azalli	20	Piastre de laton	casse 27
Botoni di corallo	casse 4	Merze casse	
Stagni	106	Aver di nollo per cassa	
Savoni	casse 602	di merchadanti d´aviso, duc.	90,000
Risegal	35		

Sanudo, *I diarii,* 12:77–78

B. PRIULI´S REPORT

Da Puola veramente segondo il solito si hebbe il carigo delle gallie quale andavano al viagio de Alexandria, capitano ser Piero Michiel, chome apar qui a carta 119. Et haveranno al nolo tra arzenti lavorati et danari contadi ducati 90,000, et in chassa di marchadanti ducati 16,000, tuta volta se iudichava certissimamente fusseno in tuto ducati 120,000 de contadi et arzenti lavorati, quali se potevanno reputare danari . . . Et cum le sopradicte galie etiam andoronno merze assai, id est pani de piui sorte bale 234, stagni fassi 236; rami in pam choffe 250; et rami in verghe fassi 250; arzenti vivi et zenabri bogiolli 350 in zircha; et rami lavoradi et altre robe assai segondo il solito che furono stimate riche galie a questi tempi

XX. SEPTEMBER 1513: SPECIE AND GOODS ON THE BEIRUT GALLEYS, CAPTAIN MARCANTONIO DA CANAL

Da sier Marco Antonio da Canal, capitanio di le galie di Baruto, date . . . a Puola. Avisa il cargo dile do galie sue, ch´è di contadi ducati 10 milia e merzi ut in poliza, e col nome di Dio fanno vela a buon viazo . . .

1513, adì 18 Septembrio, ai scogi di Puola

cargo di galie do di Baruto, capitanio sier Marco Antonio da Canal

Panni	bale 241	Botoni di coralo	casse 5
Ambra	casse 22	Botoni di coralo *[sic]*	casse 19
Vari	bote 4	Armelini	casse 1 1/2
Veri	casse 4	Zebelini	casse 1 1/2
Merze	casse 3		
Rami	C.o 77	Canevaze	ruodoli 10
Banda larga	fassi 15	Pater nostri	casse 20
Banda raspa	fassi 3	Aver sotil, zercha	ducati
Fil di rame	fassi 2		6000
Stagno fin	fassi 11	Aver di cassa	ducati
Corali	casse 13		10,000

Sanudo, *I diarii,* 17:79, 82, with slight corrections on the basis of Sanudo´s autographic manuscript in Biblioteca Nazionale Marciana (Venice) MS It. VII 245 (9232), fol. 50v [concerning the numbers of cases of *Armelini* and *Zebelini*]

APPENDIX B: IMPORTATIONS INTO MAMLUK LANDS ACCORDING TO THE *TARIFFE*

I. GOODS IMPORTED INTO SYRIA ACCORDING TO BARTOLOMEO DE´ PAXI (1503)

A. PRODUCTS IMPORTED INTO DAMASCUS[196]

Arzento di bolla che sono dela liga de marzelli
Stagni in verga de Fiandra
Stagni de fontego
Arzenti vivi
Rami in pan
Piumbi
Rami tiradi in fil rosso
Fil de loton zallo tirado
Fil de ramo rosso tirado
Rami de bolla
Banda larga, zoè ferro stagnado
Grepola zoè tartaro
Cophali mordasangue
Cenabrio in pan
Verderamo in udre
Solphari
Arsenico
Sulimado
Oropiumento
Lume de rocha
Oio de tigname Cera de Natolia et d´altri loghi
Mastici
Coralli, zoè brancha
Toro
Bastardo
Zopa Zafran *[sic]*
Botoni de coralli
Coralli pescadi
Ambra zalla de Fiandra
Ambra greza fina
Ambra lavorada
Ambra mezana de Fiandra
Smalto azuro
Bacille de loton
Tigname
Cristallo
Paternostri zalli
Carta da scrivere
Tele de molte sorte
Canevaze
Zuchari fini de Cypri
Miele *[sic]* de Dalmatia; ma nota che voleno esser bianci e duri
Veri cristalini
Vari fini de pelo
E vari fini de coro
E zibelini
Armelini

De molte sorte de panni de lana fano per Damascho, ma se trazeno da Venesia e da altri loghi qui di soto darò noticia de tute sorte fano per lì, e prima:

Panni fini da Venesia
Alcuni scarlati
Alcuni Pauonaci panni paduani bastardi

[196]The first grouping of products, up to ″armelini,″ probably refers to wares imported into Damascus, since it is located between detailed information on trade with Damascus and additional lists of products imported into that city.

Panni da Fiorenza fini
Panni bressani
Panni bergamaschi streti, bagnadi e cimadi
Panni bergamaschi tiradi
Panni Zilforto
Panni Santoni
Panni sesse
Panni Santorsola
Panni genevrini stretti
Panni maiorini integri
Panni genervini larghi *[sic]*
Panni mezi maiorini
Panni de fontego
Sarze de Fiandra large
Sarze de Fiandra strete
Panni zinese le vestrine
Canevaze

Panni de seda li quali fano per Damascho e se trazeno da Venesia e de altri loghi, e prima:

Veludi de più colori
E damaschini de piu colori
Brocha d´oro
Campo d´oro
E brocha d´arzento

Alcuni fructi fano per Damascho, e prima:

Maroni, ma voleno essere del conta´ de Bologna overo della valle de Lamone et del conta de Imola, et questi sono li migliori, et durano più che altri fructi de altri loghi
Castagne seche mondade
Castagne cote in vino ma poche se ne conduse
Mandole comune de Puia quando Damascho non fa
Noselle da Napoli quando manchano a Damascho ne vene portado
Miele biancho duro del conta´ de Bologna overo de Dalmatia o de Catalogna, questi sono le meior de tutti li altri mieli

Molte merce de fontego se fano per Damascho
Lavor de lotoni assai
Pater nostri zalli de vero
Banda raspada de fontego

Merce milanese de più sorte, come sono:

deziali de loton
Campanelle
Alchuni aghi
Anchora alchune altre merce milanese

Paxi, *Tariffa*, 53v–54v

B. Products Imported into Aleppo

Merce e panni che fano per Alepo

Prima panni fini da venesia scarlati
pavonazi, panni da Fiorenza,
la mazor parte azuri biavi et verdi,
panni bastardi bagnadi, zimadi,
panni bastardi de Fiandra tiradi,
che non siano bagnadi ne zimadi,
panni zenevrini largi, panni maiorini,
panni santoni, panni bergamaschi
tirade ogni color
Arzenti de bolla de liga del marcello
Ducati d´oro de zeche venetiani
Stagni de Fiandra stagni de fontego
Banda raspada
Bacille de loton

Cotoni [sic, but: Botoni] per coralli
ma volleno essere tondi e grossi
et de bon color
Grepola
Carta da scriver
Zibilin
Loldano
tigname
Ambra lavorada de ponente
Vari
Panni de seda, zoè veludi e damaschini
panni d´oro
Merce de fontego de più sorte
Merce milanese de ogni sorte
Canevaze

Paxi, *Tariffa*, 56r–56v

C. Products Imported into Tripoli

Robe, zoè merze e panni che fano per Tripoli de Soria, e prima:

Arzenti de bolla
Panni bergamaschi bagnadi zimadi
Panni zervevini
Panni visentini streti
Panni fini scarlati
Panni santoni
Panni visentini alti
Panni bastardi
Panni bressani et quarantani
Panni de seda
Panni de oro
Canevaze
Ambra lavorada
Loldano
Panni de fontego
Vari

Stagni
Panni paduani
Zibelini
Rami lavoradi
Rami in caphe
Tigname
Vari cristalini de ogni sorte
Zuchari
Muchara de Damiata
Lini de ogni sorte de Alixandria
Veri comuni
Orzo
Sal de Corfu
Risi
Paternostri de vero
Carta da scrivere

Arzento vivo
Noselle da Napoli overo de Cicilia
Et tute le sopradite robe fano per Alepo

Paxi, *Tariffa*, 56v

II. Goods Imported into Alexandria According to Rimondo´s and Paxi´s Merchants Manuals

A. Products Imported into Alexandria Mentioned in Rimondo´s 1494 "Tarifa" (Arranged Here in Alphabetical Order According to the Original Spelling)

Anbra
Armelini
Arzenti vivi
Bastardi
bazilli
Biacha
Bossi
Canbelotti
Cartte
Cera
Chamocha
Chanevaze
Chastegne
Chorali in brancha
Choralli
Cibibo
Cofolli
Coralli in fil, zoè pater nostri
Dragantti
Eoro
Fige
fil di rame
Formazi
Formazi in ff.
Fostagni
Galle
Gottare in zare
Gottare zoè melazi in charatelli
Gottoni
Gozema
Lana di Chastron
Largado in zare
Lini
Loldano
Mandolle senza schorzo
Mastizi
Mieli in udri
Mieli in zare
Mieli in zarotti
Mor da sangui
Nosse (Noxe)
Noxelle
Oglio in botta
Oglio in udri
Oglio in zare di Sibilia
Oglio magrabi in zare
Oropimentto
Pani
Pani di seda
Pelle di Barbaria
Pignulli
Piombi
Rami
Rixegall
Roza
S[ch]iavine
Savoni in sachi da Venetia
Seda di porcho e di chavallo
Solfari
Stagni

Sussimani
Sussine (susine)
Tigname (tegname)
Tta . . . tir
Ttarttaro
Ttavole di rame
Vari crudi e chonzi
Verdirami
Veri da spechi
Vini
Zafaran
Zafari
Zope

Rimondo, ˝Tarifa,˝ fols. 10r–28v, 40v–41v

B. Goods Mentioned by Paxi as Imported to Alexandria (Arranged Here in Alphabetical Order According to the Original Spelling)

Armelini
Arzenti in piatini de bolla
Arzenti lavoradi
Arzento vivo (arzenti vivi)
Bacili de loton
Banda raspada
Bossi
Botoni de coralli, zoè pater nostri
Canevaze
Castagne zoè maroni
Cenabrio
Cere
Cibibo de Natolia dal´Ismir
Cophali
Coralli
Draganti
Ducati d´oro in groppo
Fige
Filo de loto
Formazo
Fuini
Gotare
Gozime
Grepola, zoè tartaro
Landano
Lignami [from] Natolia over Rodi
Lume de rocha [from] Constantinopoli
Mandole comune de Puia rotte
Martoni
Mastici da Sio
Miele de Dalmatia
Miele in caratelli [from] Romagna e [il] Bolognese
Miele in udre de Cipri overo d´altro logho
Miele in Zara
Monede [such as] Marceli e Mozenighi
Nose dela Marcha
Noselle integre del Reame de Napoli
Noselle rotte da Napoli
Noxe de la Marcha da Recanati overo da Fermo
Oio de Maiolicha
Oio de Puia dela mesura de Bari
Oio de Sibilia
Oio de terra de Barbari
Oio in udri
Oio magarbin da Tripoli de Barbaria e da Tunis
Oro lavorado
Oropimento
Panni de lana de molte sorte
Panni de seda
Piombi (piumbi)
Rame (ramo) philado

Risagallo
Rame in pan (in panno)
Savoni bianchi da Venesia (da navegar)
Sbiaca
Sede de Cavallo
Sede de porco
Solphari
Stagni in verga
Susine seche da Napoli overo da Cicilia
Tiber de Tripoli di Barbaria
Vari crudi e conzi
Verderamo
Vini malvasie
Zafari
Zafran
Zibelini

1504	70,000		30,000	
1510	52,000	300,000		
1511	90,000 [Sanudo]			
1511	90+30,000= 120,000 [Priuli]			
1513			10,000	

Sato Tsugitaka
Waseda University

Sugar in the Economic Life of Mamluk Egypt

Sugar cane cultivation seems to have originated in northern India,[1] from where it spread both eastward and westward. As for the eastward route, it was only during the sixteenth–seventeenth centuries that sugar cane cultivation was introduced to Okinawa in Japan through southeast China, but it spread swiftly to the countries on the westward route. It is believed that sugar cane cultivation had already begun both in Iran and Iraq in the mid-seventh century at the end of the Sasanian period.[2]

According to *Tabaṣṣur bi-al-Tijārah* (Thoughts on commercial activities) by al-Jāḥiẓ (d. 255/868–69), the district of Ahwāz irrigated by the Dujayl River in western Iran was particularly well known as a major producer of sugar *(sukkar)* and silk brocade *(dībāj)*.[3] According to Andrew M. Watson,[4] sugar cane cultivation was introduced to southern Iraq from western Iran and diffused further to the Jordan valley and the Syrian coastal regions up to Bāniyās around the tenth century. As to the situation in tenth century Iraq, Ibn Ḥawqal relates that there was no village without sugar cane *(qaṣab sukkar)* in this vast area.[5]

Before sugar cane spread to the Islamic world, a traditional treacle of grapes, carobs, and other fruits, called *dibs,* was very popular in addition to honey *(ʿasal),* the universal sweetening agent among both the wealthy and common people.[6] However, even after the wide diffusion of sugar cane, the common people under the Abbasids still continued to use the less expensive treacle for sweetening.[7]

The first clear reference to the cultivation of sugar cane in Egypt comes from a papyrus of the mid-eighth century.[8] According to D. Müller-Wodarg, sugar cane cultivation spread in ninth-century Egypt.[9] However, the main sugar cane-producing

districts noted in the Arabic sources up to the end of the eleventh century were mostly restricted to the outskirts of al-Fusṭāṭ and the villages of Lower Egypt. On the other hand, al-Bakrī (d. 487/1094) is probably the first to refer to sugar cane cultivated in such districts as Assiut and Qūṣ in Upper Egypt.[10] Accordingly, it was after the eleventh–twelfth centuries that sugar cane plantations spread to Upper Egypt on a large scale, resulting in an increase of sugar consumption in Egypt and sugar export from Egypt to other Muslim countries and Europe.[11]

The present article attempts to demonstrate the importance of sugar in the economic life of Ayyubid and Mamluk Egypt, focusing on sugar as merchandise, medicine, and festival goods after an explanation of the diffusion of sugar cane cultivation and its manufacturing technology.

THE DIFFUSION OF SUGAR CANE CULTIVATION IN EGYPT

Both Muḥammad al-Musabbiḥī (d. 420/1029) and Ibn al-Ma'mūn al-Baṭā'iḥī (d. 588/1192) refer repeatedly to the sugar consumption in the Fatimid court,[12] but do not identify the districts where it was grown in Egypt. However, the following account of the village of Naqqādah in Qūṣ shows that Ayyubid soldiers were eager to cultivate sugar cane.

> Ṣalāḥ al-Dīn granted the village of Naqqādah, together with one-third of the village of Sandabīs, as *waqf* to twenty-four soldiers who were guarding the prophet's tomb. They set up a water wheel *(dūlāb),* constructed a sugar cane pressing factory *(ma'ṣarah lil-qaṣab)* there, and guarded the water wheel by turns.[13]

Thereafter during the reign of Saladin, Abū 'Amr 'Uthmān al-Nābulusī (d. 660/1261), an Ayyubid government official, under orders from Sultan al-Ṣāliḥ (r.

(1954): 47–48.

[11]Sato Tsugitaka, *State and Rural Society in Medieval Islam: Sultans, Muqta's and Fallahun* (Leiden, 1997), 211. Helmut Blume, based on the description by von Lippmann (*Geschichte des Zuckers* [Leipzig, 1890]), relates that sugar cane spread to the Levant and Egypt before the end of the seventh century, to Cyprus (about 700), Morocco (about 709), Andalusia (about 714), Crete (about 818), and Sicily (about 827) (*Geography of Sugar Cane* [Berlin, 1985], 24). However, the dates are too early to confirm the full spread of sugar cane cultivation into these districts. See Watson, *Agricultural Innovation,* 28–29.

[12]Al-Musabbiḥī, *Akhbār Miṣr* (Cairo, 1978–84), 1:65, 79–80; Ibn al-Ma'mūn, *Akhbār Miṣr* (Cairo, 1983), 26, 31, 35–36, 42, 63.

[13]Ibn Duqmāq, *Kitāb al-Intiṣār* (Cairo, 1893), 2:33, 49.

638–47/1240–49), observed the situation in the province of Fayyum for two years (641–42/1243–44) after which he wrote a history entitled *Tārīkh al-Fayyūm* dedicated to his master.[14] This book contains a vivid description of the introduction of sugar cane into the province of Fayyum. Here are a few examples.

1. The village Dahmā *(iqṭā'):*
   In this village cotton had been cultivated until irrigation water was diverted to sugar cane. As sugar cane spread, all the water was devoted to its irrigation, which caused [the village] to abolish cotton cultivation.[15]
2. The village Dhāt al-Ṣafā' *(iqṭā'):*
   In this village sesame had been cultivated, then rice was introduced as the land worsened in fertility. But rice was abandoned eventually because the water was diverted to sugar cane newly introduced into the village.[16]
3. The village Shānah *(iqṭā'):*
   As the population increased, the villagers went to the village of Lawāsī to cultivate there. But because Lawāsī was distant from their village, they emigrated to a nearby place. It is also said, however, that the cause of their emigration *(intiqāl)* was the lack of irrigation water *(qillat al-mā')* due to the increase of sugar cane cultivation in the province of Fayyum.[17]
4. The village Shadamūh *(iqṭā'):*
   The village has fruit orchards of dates, grapes, and sycamores. Winter crops [wheat, barley, broad beans, flax, etc.] are mainly cultivated, and summer crops [sesame, cotton, taro, eggplant, etc.] had also been cultivated until sugar cane increased.[18]

The instances described by al-Nābulusī show that sugar cane cultivation spread to the extent of supplanting such summer crops as rice *(aruzz),* cotton *(quṭn),* and sesame *(simsim),* because its cultivation required irrigation even after the Nile had receded. According to his survey during the middle of the thirteenth century, the cultivated area of sugar cane in the province of Fayyum amounted to 1,468 feddans (about 881 hectares), while the area of wheat, for example, was 29,000 feddans (about 17,400 hectares) in total.[19]

[19]Sato, *State and Rural Society,* 212–13.

The following accounts confirm that sugar cane cultivation was already widespread in the districts of Upper Egypt other than the province of Fayyum in the first half of the Mamluk period. We find an account in the annal for 697/1289 in *Kitāb al-Sulūk* by al-Maqrīzī (d. 845/1442):

> [After the Ḥusāmī *rawk* (the cadastral survey of Egypt conducted by Sultan al-Ḥusām Lājīn in 1289)][20] the viceroy *(nā'ib al-salṭanah)* Mankūtamur was granted vast *iqṭā'*s in Upper Egypt; that is to say, Marj Banī Humaym and its surroundings, Samhūd and its surroundings, Ḥarajat Qūṣ, Madīnat Udfū, and waterwheels *(dūlāb)* in these districts. The revenues were made up of over 110,000 *irdabb*s (about 9,900,000 liters) of crops *(ghallah)*, raw sugar *(qand)*, molasses *('asal)*, dates, sheep, and firewood. He owned 27 sugar cane-pressing factories *(ma'ṣarah li-qaṣab al-sukkar)* there.[21]

Al-Maqrīzī gives another account on Mallawī in Upper Egypt:

> During the reign of Sultan al-Nāṣir, the cultivated area for sugar cane increased to 2,500 feddans (about 1,592 hectares) in this district. ['Abd al-Wahhāb] al-Nashw, supervisor of the sultan's domain *(nāẓir al-khāṣṣ)*, seized all the sugar produced there in 738/1337–38 to send 14,000 *qinṭār*s (1,260,000 kilograms) of raw sugar *(qand)* other than molasses to Dār al-Qand at al-Fusṭāṭ. Later he forced the people in the district to deliver 8,000 *qinṭār*s (720,000 kilograms) of *qand* to it.[22]

---

[20] About *al-rawk al-Ḥusāmī* carried out in Egypt in 697/1298, see Sato, *State and Rural Society*, 124–34.

[21] Al-Maqrīzī, *Kitāb al-Sulūk li-Ma'rifat Duwal al-Mulūk* (Cairo, 1939–73), 1:843–44. E. Ashtor relates that the sugar factories were usually in the same area where sugar was grown ("Levantine Sugar Industry in the Late Middle Ages: A Case of Technological Decline," in *The Islamic Middle East, 700–1900: Studies in Economic and Social History*, ed. Abraham L. Udovitch [Princeton, 1981], 93). However, while sugar pressing factories *(ma'ṣarat al-sukkar)* were in the same area, sugar refineries *(maṭbakh al-sukkar)* were often located in towns like Qifṭ, Qūṣ, and al-Fusṭāṭ (see below).

[22] Al-Maqrīzī, *Kitāb al-Mawā'iẓ wa-al-I'tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1270 H., repr. Baghdad, 1970), 1:204. Concerning the sugar industry in Mallawī, see Ashtor, "Levantine Sugar Industry," 99. 'Abd al-Wahhāb Sharaf al-Dīn al-Nashw (d. 740/1339), a converted Coptic Muslim, was employed as a clerk *(kātib)* by Sultan al-Nāṣir and was later appointed *nāẓir al-khāṣṣ*. He was arrested because he had confiscated the estates of amirs and merchants and levied heavy taxes on the people (Ibn Ḥajar, *Al-Durar al-Kāminah* [Cairo, 1966–67], 3:42–43; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī* [Cairo, 1994], 7:390–93; al-Maqrīzī, *Kitāb al-Sulūk*, 2:473 f.).

Ibn Baṭṭūṭah (703–770 or 779/1304–1368–69 or 1377), who visited Mallawī at the beginning of the fourteenth century, states:

> The town has eleven sugar cane-pressing factories *(ma'ṣarah li-sukkar)* where even beggars or the poor *(faqīr)* can enter freely. They come to the factories with hot bread, put them into the pots which are boiling pressed juice, and go out with the bread steeped plentifully in sugar juice.[23]

According to Abū al-Fidā' (d. 732/1331), Qamūlah, a village located south of Qūṣ in Upper Egypt, had many orchards where sugar cane was cultivated.[24] Al-Udfuwī (d. 748/1347) further relates that he found forty sugar refineries *(maṭbakh lil-sukkar)* and six sugar cane-pressing factories *(ma'ṣarah li-qaṣab al-sukkar)* in Qifṭ, and in Samhūd there were many such factories with seventeen stone mills *(ḥajar)* in total.[25] Al-Udfuwī's description shows that during the thirteenth–fourteenth centuries Qifṭ was a particularly important center for sugar production in Egypt. *Al-sukkar al-Qifṭī* was famous for its purity.[26]

These accounts reveal that sugar cane had come to be cultivated on a large scale in the districts of Upper Egypt by around the thirteenth or fourteenth century. The large plough known as *muqalqilah* must have been invented during this time.[27] The work required from planting to harvest is summarized by al-Nuwayrī

---

[23]Ibn Baṭṭūṭah, *Tuḥfat al-Nuẓẓār fī Gharā'ib al-Amṣār* (Paris, 1854), 1:100–1. Ibn Baṭṭūṭah calls the town "Manlawī." It was also called "Mallawī" or "Maltawī" (Muḥammad Ramzī, *Al-Qāmūs al-Jughrāfī lil-Bilād al-Miṣrīyah* [Cairo, 1953–68], 2:4:68–69).

[24]Abū al-Fidā', *Taqwīm al-Buldān* (Paris, 1840), 103–4. Yāqūt says that Qamūlah had many date trees and vegetables (*Mu'jam al-Buldān* [Beirut, 1955–57], 4:398–399).

[25]Al-Udfuwī, *Al-Ṭāli' al-Sa'īd al-Jāmi' li-Asmā' al-Fuḍalā' wa-al-Ruwāt* (Cairo, 1914), 7–8, 9, 18; Ibn al-Ḥājj, *Al-Madkhal* (Cairo, 1981), 4:154; Yāqūt relates also that sugar cane cultivation was popular at Bahjūrah in Upper Egypt (Yāqūt, *Mu'jam al-Buldān,* 1:514). In 742/1341–42 Amir Qūṣūn was able to make numerous grants to his mamluks, partly because he held 500 feddans of privately owned land in Upper Egypt for sugar cane cultivation (al-Maqrīzī, *Kitāb al-Sulūk,* 2:561; al-Yūsufī, *Nuzhat al-Nāẓir fī Sīrat al-Malik al-Nāṣir* [Beirut,1986], 370–71). See also S. D. Goitein, *A Mediterranean Society* (Berkeley and Los Angeles, 1967–93), 1:125–26.

[26]Ibn al-Ḥājj, *Al-Madkhal,* 4:154; Subhi Y. Labib, *Handelsgeschichte Ägyptens im spätmittelalter (1171–1517)* (Wiesbaden, 1965), 320; E. Ashtor, *A Social and Economic History of the Near East in the Middle Ages* (Berkeley and Los Angeles, 1976), 243.

[27]"A Memorandum to Amir Kitbughā" issued in 1281 may be the first reference to this *muqalqilah,* which was used for the construction of canals and irrigation dikes (Sato, *State and Rural Society,* 111, 207). See also Hassanein Rabie, "Some Technical Aspects of Agriculture in Medieval Egypt," in *The Islamic Middle East,* ed. Udovitch, 64.

(d. 733/1333) with respect to his native land, Qūṣ:

> In the Coptic month of Barmahāt (25 February–26 March), after weeded fields are cultivated six times by the *muqalqilah*—a large-sized plough *(miḥrāth kabīr)*—and smoothed by harrows after six more ploughings, sugar cane with two joints is planted by throwing it into ridged fields. The second-year sugar cane *(khilfah)* is irrigated after burning the old stubble. When seed leaves grow, the soil is hoed *(ʻazq)* to weed the fields, which continues until the end of Bashnas (26 April–25 May). During this period the plants are to be irrigated at fixed intervals, twenty-eight times in total, for two to three hours. The second-year cane harvest in Kīhak (27 November–26 December) and the first-year cane *(ra's)* harvest in Ṭūba (27 December–25 January) are reaped and carried on camels or donkeys to pressing factories *(maʻṣarah)*.[28]

Al-Nuwayrī adds, ″This explanation is about sugar cultivation in the province of Qūṣ, but it is not much different from that of other provinces.″[29] In any case, sugar cane, in addition to its long term of cultivation (about 10 months), required complicated tasks, such as deep ploughing, weeding, hoeing, irrigation at intervals, pressing, and processing. That is to say, sugar production in medieval Egypt was conducted with high technology, large capital outlays, and much labor. Sugar production, therefore, was mostly carried out under the control of the government from the Fatimid period on.

SUGAR PRODUCTION TECHNOLOGY

As to who cultivated sugar cane in Ayyubid and Mamluk Egypt, al-Nābulusī says that in the province of Fayyum cultivation was chiefly done on crown farms (*wasīyah,* pl. *awāsī*). *Awāsī,* in the early Islamic period, designated a private domain *(ḍayʻah)* mostly consisting of estates belonging to Coptic monasteries *(dayr)* and great bishops *(rāhib)*.[30] On the other hand, *awāsī* during the Ayyubid and Mamluk periods have been regarded as state domains cultivated by corvée or as village common lands.[31] However, when we examine the terms provided by

---

[29]Ibid., 8:271.

[30]Morimoto Kosei, *The Fiscal Administration of Egypt in the Early Islamic Period* (in Japanese) (Tokyo, 1975), 342.

[31]Cahen, ″Le régime des impôts,″ 28; idem, ″Contribution à l'étude des impôts dans l'Égypte médiévale,″ *Journal of the Economic and Social History of the Orient* 5(1962): 265–66.

al-Nābulusī in detail, we find both explanations somewhat inadequate. Al-Nābulusī gives us various accounts: government income through cultivation of *al-awāsī al-dīwānīyah* (ministry *awāsī*); *al-awāsī al-sulṭānīyah* (the sultan's *awāsī*) in the town of Fayyum; and provisions from *al-wasīyah al-'ādilīyah* (charitable *wasīyah*).[32] Furthermore, it is interesting to find *awāsī* not only as a part of *iqṭā',* but also in the villages belonging to the sultan's domain.[33] We may therefore conclude that *awāsī* under the *iqṭā'* system were crown farms controlled directly by the government or sultan.

Al-Nābulusī gives us brief references to their cultivators:

1. sugar cane in the village of al-'Udwah (80 feddans)
   80 feddans cultivated by *murābi'ūn*[34]
2. sugar cane in the village of Sinnūris (318 feddans)
   222 feddans cultivated by *muzāri'ūn*
   96 feddans cultivated by *murābi'ūn*[35]
3. sugar cane in the village of Fānū (268 feddans)
   95 feddans cultivated by *murābi'ūn*[36]

There is another example from the village Maṭar Ṭāris, where both *muzāri'ūn* and *murābi'ūn* cultivated sugar cane and vegetables on 76 feddans of *awāsī*.[37] Furthermore, the town of Fayyum allotted 110 feddans for sugar cane cultivation in the surrounding area, among them 28.5 feddans cultivated by *muzāri'ūn,* and 81.5 feddans by *murābi'ūn.*[38]

Muzāri'ūn, who were usually called *fallāḥūn,* were peasants who customarily cultivated the land allotted under *qabālah* contracts concluded with the government or *iqṭā'* holders *(muqṭa')* after the annual flood of the Nile in autumn.[39] On the other hand, *murābi'ūn,* according to Cahen, meant peasants who had the right to take one-fourth *(rub')* of what they produced. They paid the ordinary tax in cash

[32]Al-Nābulusī, *Tārīkh al-Fayyūm,* 25–26.

[33]Ibid., 32–34, 100, 108, 134, 157, 158. See also al-Makhzūmī, "Minhāj fī 'Ilm Kharāj Miṣr," British Library MS Add. 23483, fols. 99r–100v.

[34]Al-Nābulusī, *Tārīkh al-Fayyūm,* 32–34.

[35]Ibid., 107–10.

[36]Ibid., 156–59.

[37]Ibid., 156–59.

[38]Ibid., 27, 174–75.

[39]Sato, *State and Rural Society,* 192–97. After the annual flood of the Nile, irrigated land was classified according to each cultivation contract *(qabālah)* concluded between peasants *(muzāri'ūn)* and *iqṭā'* officials or government officials *(mubāshirūn).*

on their cultivation of sugar cane.[40] I have my doubts about *murābi'ūn* paying the ordinary tax in cash, but the following two points should be taken into consideration. First, most of the *murābi'ūn* cultivated sugar cane in *awāsī,* while *muzāri'ūn* cultivated wheat and barley in addition to sugar cane. Secondly, *murābi'ūn* were provided with both crops and cash by the government every year, while the *muzāri'ūn* were given only seed for cultivation.[41] That is to say, *murābi'ūn*, who might have formed a class of agricultural laborers, were apparently inferior in status to *muzāri'ūn.*[42] However, it should be noted that *murābi'ūn* were not slaves in any sense of the word.[43]

Now, let us turn to the description of al-Nuwayrī once again explaining the way sugar was produced in Qūṣ.

> The harvested sugar cane is carried on camels or donkeys to pressing factories *(ma'ṣarah)* and put in a place called "the sugar cane plant" *(dār al-qaṣab),* where laborers cut it into small pieces with large knives and clean the mud off. The cleaned pieces are carried to mill stones *(ḥajar)* which are rotated by excellent oxen *(baqar jayyid).* The pressed juice is boiled in large pots (with a capacity of 3,000 *raṭl*s, about 1,350 kilograms of juice) called *khābīyah* in the refinery *(maṭbakh)* after filtrating the crushed cane through a sieve *(munkhal).* The boiled juice is filtered three times through wool and put in another room after further boiling to produce raw sugar *(qand)* and molasses *('asal).* Then the raw sugar is boiled once again with water and fresh milk *(al-laban al-ḥalīb)* to get white sugar *(al-sukkar al-bayāḍ)* and fine molasses *(quṭārah).* The refining percentage of white sugar is one-fourth or one-sixth of raw sugar.[44]

According to his explanation, the process of sugar production can be summarized as follows: (1) sugar cane cutting and cleaning at the *dār al-qaṣab,* (2) pressing with mill stones rotated by oxen, (3) filtration of the crushings and boiling juice in the refinery *(maṭbakh),* (4) reboiling to produce raw sugar *(qand)* and molasses

[40]Cahen, "Le régime des impôts," 23.

[41]Al-Nābulusī, *Tārīkh al-Fayyūm,* 32-34, 107–10, 133–38.

[42]Sato, *State and Rural Society,* 217–19.

[43]Al-Maqrīzī explains that "*'abd qinn*" is a slave for life who cannot expect to be sold or emancipated (*Khiṭaṭ,* 1:85). Egyptian peasants (*muzāri'ūn* or *fallāḥūn*) under the *iqṭā'* system were also not slaves by law, but were actually likened to *'abd qinn*. See Sato, *State and Rural Society,* 177.

[44]Al-Nuwayrī, *Nihāyat al-Arab*, 8:267–71, 272.

(ʿasal), and (5) further boiling of raw sugar with water and fresh milk to make white sugar.

Al-Nuwayrī explains that sugar cane was pressed with mill stones *(ḥajar)* rotated by oxen; however, we do not know whether these mills were of the vertical or horizontal type. In *Description de l'Égypte* published after Napoleon's expedition to Egypt in 1798, we find a drawing of horizontal and roller-type mills for sugar cane pressing.[45] In the Caribbean islands, where sugar manufacturing technology was introduced from the Islamic world, roller-type mills were popular among planters.[46] Based on these later facts, it may well be supposed that horizontal and roller-type stone mills were used for sugar cane pressing in Egypt during the Ayyubid and Mamluk periods.

Al-Nuwayrī relates that when raw sugar is boiled a second time with water and fresh milk, white sugar and fine molasses can be produced. Does his assertion have any scientific grounds? According to a scientist at the Department of Agriculture, the University of Tokyo, fresh milk is effective in creating white sugar because heated milk protein curdles absorb the impurities in raw sugar. In the same vein, raw sugar was boiled with fresh eggs to get white sugar in Okinawa during the Tokugawa period. Consequently, al-Nuwayrī's explanation is based on sound scientific grounds.

Al-Nuwayrī does not refer to the method of adding ashes into the pressed juice before boiling; however, there is the well-known story told by Marco Polo (1254–1324) about sugar production in China. His travel account reads:

> Before this city (Unken) came under the Great Khan (Qubilai 1260–94) these people knew not how to make fine sugar; they only used to boil and skim the juice, which when cold left a black paste. But after they came under the Great Khan some men of Babylonia who happened to be at the Court proceeded to this city and taught the people to refine the sugar with the ashes of certain trees.[47]

It is annotated that Babylonia in this passage indicates "little Babylonia of Egypt" within the old city of al-Fusṭāṭ and Unken is a city located near Zaytun. If this account is reliable, sugar-refining technology was introduced into the coastal areas of southeast China from Mamluk Egypt. According to Christian Daniels, most scholars regard this as a factual report due to the lack of evidence of the use

of plant extracts for sugar refining in China.[48]

Al-Qazwīnī (d. 682/1283) relates that Assiut in Upper Egypt was a sugar-producing center transporting every kind of sugar all over the world.[49] Raw sugar *(qand)* (that is, poor quality sugar) was called "red sugar" *(al-sukkar al-aḥmar)* in the Arab world.[50] *Sulaymānī* was a kind of sugar produced from *qand* after another boiling.[51] Then *sulaymānī* was refined to *fānīdh* or white sugar by another boiling.[52] What was produced after further refining was rock sugar *(ṭabarzad or thalij),* regarded as the highest-quality sugar.[53]

As to "Egyptian sugar" during the Mamluk period, al-Qalqashandī (d. 821/1418) lists in *Ṣubḥ al-Aʻshá* the following varieties: *mukarrar* (repeated), *tabaʻ* (subordinate), *wasaṭ* (middle), and *nabāt* (literally "plants," that is, sugar candy).[54] According to Ashtor, *mukarrar* was thrice-boiled sugar, *tabaʻ* and *wasaṭ* twice-boiled, and *nabāt* once-boiled.[55] I assume that these three types correspond roughly to *fānīdh*, *sulaymānī,* and *qand,* respectively.

As sugar production spread from Lower to Upper Egypt on a large scale by the thirteenth or fourteenth century, sugar was considered the most important export to European countries as well as a luxury good consumed by Egyptian sultans and amirs at their residences or at public festivals. Taking a great amir as an example, the account book *(daftar)* of amir Ṭaybars al-Ḥājj al-Wazīrī (d. 687/1288), which was written down by one of his mamluks, discloses that Ṭaybars and his household had consumed totally in his career 3,000 sheep *(ghanam),* 600 cows *(baqar),* 500 horses *(ikdīsh),* 28,000 *qinṭār*s of sugar for drinks *(sukkar lil-mashrūb)* and 160 *qinṭār*s of sugar for making sweets *(ʻamal al-ḥalāwāt).*[56] As one *qinṭār* was about 45 kilograms, 28,000 *qinṭār*s and 160 *qinṭār*s were equivalent to 1,260 tons and 7.2 tons of sugar respectively. Ṭaybars, who was related to

[55]Ashtor, "Levantine Sugar Industry," 96–97. He concludes that *mukarrar, tabaʻ, wasaṭ,* and *nabāt* correspond respectively to *muccaro, caffettino, musciatto,* and *candy* found in the description of Pegolotti who travelled to China via the Middle East and wrote a book entitled *La practica della mercatura scritta* (1335–43).

[56]Al-ʻAynī, *ʻIqd al-Jumān* (Cairo, 1987–92), 3:172.

Sultan Baybars by his daughter's marriage, was promoted to amir of one hundred and appointed as *nā'ib al-salṭanah* in Damascus in 659/1261.[57] This shows evidently that the households of great amirs during the early Mamluk period were already consuming a large quantity of sugar.

SUGAR IN EGYPTIAN SOCIETY UNDER THE MAMLUKS

SUGAR AS A COMMODITY

We find various descriptions of domestic and international transactions involving sugar in Arabic historical sources dating back to around the ninth century. For example, al-Ṭabarī relates that in 238/852 the Rūm (Byzantine) army attacked Damietta in Lower Egypt, plundering goods *(amti'ah),* raw sugar *(qand),* and flax *(kattān)* to be carried to Iraq.[58] Besides, according to Ibn Ḥawqal, white sugar *(fānīdh)* produced in Kirmān was transported to Sijistān and Khurāsān in Iran during the tenth century due to an increase of sugar cane cultivation there.[59] Al-Muqaddasī (tenth century) also states that sugar produced in Khūzistān was transported to Iraq, Yemen, and other countries.[60]

As to the sugar carried from Egypt to Syria, Bar Hebraeus (d. 685/1286) has the following to say:

> [A Jew said to Ṣalāḥ al-Dīn, who was encamped before Acre], "I am a Jew and a merchant of Damascus. I was coming by sea from Alexandria, and I had with me twenty loads of sugar. And when I came to the port of 'Akkā thy servants plundered me." . . . and when they admitted that they had deposited it in the Treasury, he [Ṣalāḥ al-Dīn] commanded the officials and they gave to the Jew the price of the sugar.[61]

Goitein says, "Sugar production must have been one of the major, if not the greatest, industry in Fusṭāṭ during the Fatimid and Ayyubid periods, and the share of the Jews in this field was very extensive."[62] He further relates that *sukkarī,* or maker (and seller) of sugar, was one of the most common occupations and family

---

[57]Al-Ṣafadī, *Kitāb al-Wāfī bi-al-Wafayāt* (Wiesbaden, 1982), 16:508–9; al-Maqrīzī, *Kitāb al-Sulūk,* 1:448.

[62]Goitein, *A Mediterranean Society,* 1:125–26.

names occurring in the Geniza documents.[63]

We find another account about the sugar carried from Egypt to Baghdad in *Kitāb al-Sulūk* by al-Maqrīzī:

> In this year [650/1252] the news arrived that the Mongol army encountered a caravan *(qāfilah)* headed for Baghdad from Ḥarrān and plundered it of great assets, including 600 loads *(ḥiml)* of Egyptian sugar, valued at 600,000 dinars.[64]

As one *ḥiml* was about 225 kilograms during the twelfth–thirteenth centuries,[65] 600 *ḥiml*s were equivalent to 135 tons of sugar. Consequently, these accounts show that Egypt had already become one of the most important sugar-producing countries in the Islamic world, exporting to such countries as Syria and Iraq.

As to sugar exportation from Egypt to European countries during the Mamluk period, al-Maqrīzī relates:

> When the water of the Nile flows into the Alexandria Canal during Misrā (25 July–23 August), ships *(markab)* loaded with various kinds of goods, like crops *(ghallah),* spice *(bahār),* and sugar *(sukkar),* set sail.[66]

The Alexandria Canal was a long canal connecting a place near Ṭanṭā and the coastal town of Alexandria, where Italian merchants chiefly from Venice, Genoa, and Pisa purchased various spices from Muslim merchants under the protection of their own consulates.[67] However, as al-Maqrīzī discloses, the goods purchased by the Italians also included agricultural crops, sugar, alum, and paper from Egypt, besides spices from the East.[68]

It is well known that the Kārimī merchants carried on a flourishing spice trade

---

[63]Ibid., 126. We find the account of the Jewish merchants of sugar *(al-Yahūd al-sukkarīyūn)* in Ibn Duqmāq, *Kitāb al-Intiṣār,* 1:41.

[66]Al-Maqrīzī, *Khiṭaṭ,* 1:273.

[67]Ashtor, *A Social and Economic History,* states on page 299, ″Even after the fall of Acre [in 1291] the trading nations sent embassies to the sultan of Cairo and concluded new commercial treaties, reducing imposts and acquiring new rights.″

[68]Concerning the sugar transportation from Egypt to European countries, see the following works: Labib, *Handelsgeschichte Ägyptens,* 320; Ashtor, A *Social and Economic History,* 306; Sato, *State and Rural Society,* 215.

in Yemen, Egypt, and Syria during the Ayyubid and Mamluk periods. According to al-Ashqar, 201 Kārimī merchants can be identified from the Arabic sources of the Mamluk period.[69] Based on the vast profits from the spice trade, they made loans to the sultan of Cairo and other princes. However, it should be noted that they traded also in wood, sugar, textiles, precious metals, wheat, and ceramics for the Italian merchants.[70]

As to sugar production and trade by the Kārimī merchants during the Mamluk period, here is an example from *Kitāb al-Intiṣār* by Ibn Duqmāq (d. 809/1406). Among the 65 refineries *(maṭbakh al-sukkar)* located at al-Fusṭāṭ,[71] 7 were owned by the sultan, 21 by amirs, 13 by merchants *(tājir),* and 27 not identified. Among the 13 *maṭbakh*s owned by merchants, 4 were managed by *sukkarī*s[72] (Muslim or Jewish sugar merchants), and another 4 by the Kārimī merchants.[73] This indicates that in the Mamluk period, Kārimī merchants were involved in managing sugar refineries in addition to trading sugar with Muslim and European countries.

Among the above-mentioned four *maṭbakh*s owned by Kārimīs, two were managed by the Kharrūbī family from Cairo. Badr al-Dīn Muḥammad al-Kharrūbī (d. 762/1361) was particularly well known as a "sugar refinery merchant" *(tājir fī maṭābikh al-sukkar)* at al-Fusṭāṭ and as founder of a school *(madrasah)* across from the Nilometer, where he stipulated that every post at the school should be occupied by Arabs.[74] On the other hand, his brother, Ṣalāḥ al-Dīn Aḥmad al-Kharrūbī (d. 769/1368), started out as a poor merchant, but earned immense profits later through trade and constructed a large tomb *(turbah)* in the district of al-Qarāfah, south of Cairo.[75]

---

[69]Muḥammad ʻAbd al-Ghanī al-Ashqar, *Tujjār al-Tawābil fī Miṣr fī al-ʻAṣr al-Mamlūkī* (Cairo, 1999), 467–539. According to Ashtor, people of all denominations belonged to the Kārimīs, Muslims, Christians, and Jews (*A Social and Economic History,* 300).

[70]Labib, *Handelsgeschichte Ägyptens,* 93; Ashtor, *A Social and Economic History,* 241, 300; al-Ashqar, *Tujjār al-Tawābil,* 76.

[71]Ibn Duqmāq, *Kitāb al-Intiṣār,* 1:41–46.

[72]Among the merchants who sought protection from amirs like Qūṣūn and Bashtāk in 737/1336–37, there was a sugar merchant *(rajul sukkarī)* who had made adulterated sugar and molasses *(zaghal fī al-sukkar wa-al-ʻaṣal)* (al-Yūsufī, *Nuzhat al-Nāẓir,* 370).

[73]The names of the refineries owned by the Kārimī merchants were as follows: Maṭbakh ʻUqbah al-Milḥ, Maṭbakh al-Kamāl ibn Marzūq, Maṭbakh Sirāj al-Dīn ibn al-Kharrūbī, and Maṭbakh Nūr al-Dīn ibn al-Kharrūbī.

[74]Al-Maqrīzī, *Khiṭaṭ,* 2:369–70. Al-Maqrīzī relates also that Badr al-Dīn Muḥammad constructed a quarter *(rabʻ)* near the school. On the Kharrūbī family, see Labib, *Handelsgeschichte Ägyptens,*114–15, 228; E. Ashtor, "The Kārimī Merchants," *Journal of the Royal Asiatic Society* (1956): 48–50; Ira M. Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, Mass., 1967), 121, 212.

[75]Al-Maqrīzī, *Khiṭaṭ,* 2:369.

Ṣalāḥ al-Dīn's grandson, Nūr al-Dīn ʻAlī (d. 802/1400), called "the last merchant of the Kharrūbī family," made the Meccan pilgrimage several times and was reputed to be an honest and pious person. However, at the age of thirty he was whipped by the amir Barqūq (later sultan 784–91/1382–89, 792–801/1390–99) for trying to secure the position of vizier at the Mamluk court by bribery.[76] His grandson, Sirāj al-Dīn Sulaymān (d. 864/1460), could not maintain his status as one of the notables *(aʻyān)* at al-Fusṭāṭ, for in 826/1423 Sultan Barsbāy (825–41/1422–38) proclaimed a government monopoly over sugar refining and trade and in 832/1429 ordered that spices be traded at prices fixed by the government, dealing the Kārimī merchants a fatal blow.[77] Sulaymān, who could not pay his debts under such severe conditions, was arrested and sent to prison in Cairo.[78]

The fall of the Kharrūbī family symbolized the fate of the Kārimī merchants during the later Mamluk period. Under monopolistic policies imposed on sugar and spices by Sultan Barsbāy, they suddenly lost their livelihoods in Egypt. Ibn Taghrībirdī (d. 874/1470) relates in his chronicle that the Kārimī merchants had disappeared from the Egyptian markets by the middle of the fifteenth century.[79]

SUGAR AS MEDICINE

Sugar was widely used also for medical purposes in the medieval Muslim world and elsewhere. Ibn Bayṭār (d. 646/1248), who was born in Malaga in Andalusia and lived in both Ayyubid Cairo and Damascus as a pharmacologist, compiled a voluminous work entitled *Al-Jāmiʻ li-Mufradāt al-Adwiyah wa-al-Aghdhiyah* (Compiled terminology on medicines and nourishments),[80] based on the results of his reading and field work. The item on "*sukkar*" in this book reads:

> Dioscorides [first century] relates that it is a kind of honey *(ʻasal),* but solid. In fertile lands like al-Hind and al-Maghrib, it is found

He says, "This year [859/1455] not a single Kārimī merchant was to be found [in the market] from the end of Ramaḍān to date, which caused much damage to the situation of the common people." Concerning the monopolistic policies of Sultan Barsbāy, see the following works: Darrāj, *L'Égypte sous le règne de Barsbay*; Labib, *Handelsgeschichte Ägyptens,* 422–23; Ashtor, *A Social and Economic History,* 309; al-Ashqar, *Tujjār al-Tawābil,* 439–51.

[80]Ibn Bayṭār, *Al-Jāmiʻ li-Mufradāt al-Adwiyah wa-al-Aghdhiyah* (Bulaq, 1291).

> as [sugar] cane.[81] It looks like salt, but if one drinks it with water, his stomach will be relieved. It is also effective against bladder *(mathānah)* and kidney *(kulyah)* pain.
>
> Galen [ca. 129–ca. 200] relates that the *sukkar* carried from al-Hind and al-Maghrib was apparently extracted from cane and congealed. It is not harmful to the stomach, unlike our honey *(ʻasal)*.
>
> Ibn Māsawayh [160–243/775–857] relates that it is effective for the stomach, in particular for persons whose gall *(al-mirrah al-ṣafrā')* is not sufficient. *Ṭabarzad* (rock sugar) is not softened like *sulaymānī* and *fānīdh*.
>
> ʻĪsá al-Baṣrī[82] relates that if one drinks it with almond powder, it is effective both against colic (*qawlanj)* and impotence *(ʻatīq)*. It is also capable of removing phlegm *(balgham)* from the stomach.
>
> Al-Sharīf[83] relates that if one drinks it with butter, it becomes a fine diuretic. If one drinks one *ūqīyah* [25 grams] of sugar with two *ūqīyah*s of butter, it is effective against stomachache, and it also purifies afterbirth. If one drinks sugar with hot water, it heals sore throat and is effective against cough *(suʻāl)* and asthma *(taḍāyq)*. Persons with experience relate that it relieves cough.
>
> Al-Rāzī [543–606/1149–1209] relates that it relieves chest *(ṣadr)* and lung *(ri'ah)* pain. If raw sugar *(nabāt)* is boiled with rosewater *(mā' al-ward),* it becomes the coldest and lightest of drinks. And if it is boiled with violet leaves *(waraq al-banafsaj),* it becomes the gentlest drink for the body.[84]

For all these reasons, sugar was one of the generic medicines sold by druggists, *(ʻaṭṭār),* as well as a luxury good traded by sugar merchants *(sukkarī)*. The *ʻaṭṭār*s during the Mamluk period also sold spices like pepper, nutmeg, and cloves, and perfumes like frankincense, musk, and saffron in addition to generic medicines like pomegranate and lemon bark or root, medicinal herbs, dry fruit, rosewater, and sugar.[85] Furthermore, Ibn al-Ḥājj (d. 737/1336), who wrote a guide to everyday life, relates that sick Muslims require foods and drinks mixed with sugar.[86]

---

[81] It is doubtful that the material related by Dioscorides refers to the sugar made from sugar cane.

We find another example of the medicinal importance of sugar in *Ighāthat al-Ummah* by al-Maqrīzī:

> The year 695/1295–96 began with the people distressed because of high prices and diminishing income. However, they placed their hopes on the crops *(al-ghilāl al-jadīdah),* which were almost due. When the crops were ripe, a wind coming from the direction of Barqa blew like a storm and darkened the horizon, carrying a yellow dust that covered the crops in the area. . . . The crops withered; the summer crops, such as rice, sesame, colocasia, and sugar cane, as well as other irrigated plantings, all failed. Consequently, prices soared. This wind was followed by diseases and high fevers that afflicted the entire population, thus causing the prices of sugar, honey, and other products needed by the sick to soar.[87]

Faced with this severe situation, Sultan Kitbughā (694–96/1294–96) ordered that the poor and needy *(faqīr, dhū al-ḥājāt)* be assembled and distributed among the amirs. He allocated one hundred of them to every amir of one hundred, fifty to every amir of fifty, and so on down to every amir of ten receiving ten.[88] However, the situation was worsened by the epidemics following rampant inflation. Al-Maqrīzī continues:

> Epidemics intensified throughout the countryside and in the villages, and disease spread in Cairo and Old Cairo (al-Fusṭāṭ). The number of deaths multiplied, and medicines were so much in demand for the sick that a druggist *(ʻaṭṭār)* located at the beginning of the Daylam quarter in Cairo sold 32,000 dirhams [of medicines] in one month.[89]

It is probable that what this Cairene *ʻaṭṭār* sold, in the midst of the epidemic, was mostly sugar. At the end of the thirteenth century, the annual *iqṭāʻ* revenue of a

[87]Al-Maqrīzī, *Ighāthat al-Ummah bi-Kashf al-Ghummah* (Cairo, 1940), 33–34; English tr. by Adel Allouche as *Mamluk Economics* (Salt Lake City, 1994), 44. The translation has been modified slightly by the present writer.

[88]Al-Maqrīzī, *Ighāthah,* 35; *Mamluk Economics,* 45. In 694/1294, when Kitbughā acceded to the sultanate, the disaster began in Egypt and he was regarded as an "ill-omened sultan" (Sato, *State and Rural Society,* 106).

[89]Al-Maqrīzī, *Ighāthah,* 35; *Mamluk Economics,* 45.

ḥalqah cavalryman was 20,000 dirhams or less, lower than the sum earned in a month by the above Cairene *'aṭṭār*.[90] We find another example in the annal for 709/1309 by al-Maqrīzī:

> During this year fierce disease spread among the people and epidemic *(wabā')* also prevailed. Medicines and doctors were in demand, but what was needed by the sick became so scarce that sugar was purchased at five dirhams per *raṭl* [450 grams], chicken at the same price, and melon at one dirham. Under such circumstances, an *'aṭṭār* could earn from two to three hundred dirhams per day.[91]

Furthermore, during the autumn of 748/1347 plague *(ṭā'ūn)* spread to Egypt from Syria, then throughout Lower Egypt and further to Upper Egypt the next year.[92] In 749/1348 the daily death toll in Cairo increased rapidly from 300 to 2,000, devastating Barjawān quarter, where al-Maqrīzī was born and raised, leaving 42 vacant houses.[93] The plague spread outside Egypt; for example, in Ghazzah a peasant was found dead, grasping a plough *(miḥrāth)* in his hands.[94] At this time, the price of sugar needed by the sick soared to 23–27 dinars per *qinṭār* (45 kilograms),[95] which was equivalent to 4.6–5.4 dirhams per *raṭl,* enabling the *'aṭṭār*s of Cairo to enjoy once again windfall incomes, far beyond that of the *ḥalqah* cavalrymen.

SUGAR AS A FESTIVAL GOOD

Nāṣir-i Khusraw (d. 453/1061), a Persian poet and traveller who visited Fatimid Egypt in 439/1047,[96] states in his travel account, *Safar Nāmah:*

> They say that during Ramaḍān sugar granted by the sultan [Fatimid caliph] to his servants amounted to 50,000 *mann* (about 41,650 kilograms). I actually saw an [ornamental] tree shaped like a citron *(turanj),* with all its branches, leaves, and fruits made of sugar.[97]

This was an elaborate decoration of sugar to display the authority of the Fatimid caliph, al-Mustanṣir (487–95/1094–1101) to the Muslim and non-Muslim peoples in Cairo. Based on the above description, we may see further that the practice of distributing sugar by the caliphs or sultans in the sacred month of Ramaḍān had already begun in the Fatimid period. It is related also that in 624/1227 the Ayyubid sultan al-Kāmil (615–35/1218–38) spent his money on schools *(madrasah)* and Sufi convents *(khānqāh),* giving bread, meat, candy *(ḥalawī),* and sugar to every scholar *(faqīh)*.[98] Furthermore, in 636/1238 Sultan al-Malik al-ʻĀdil (635–37/1238–40), who had acquired lordship over Egypt and Syria, held a banquet *(simāṭ)* below the citadel in Cairo and provided candy and 5,000 *ublūj*s of sugar (about 50,000 kilograms) to the common people.[99]

In 660/1262 over 200 Mongol soldiers who had been defeated by Berke Khan arrived in Cairo with their families. They were cordially received as *″wāfidīyah″* (immigrants) by Sultan Baybars (658–76/1260–77), who ordered that they be provided with fodder, sheep, robes, and sugar.[100] According to *Ṣubḥ al-Aʻshá* by al-Qalqashandī (d. 821/1418), the cadastral surveys conducted by Sultan al-Nāṣir *(al-rawk al-Nāṣirī)* during the years 713–25/1313–25 helped establish the basis of an empire which continued up to the end of Sultan Ashraf Shaʻbān′s reign (764–78/1363–77).[101] It is related that this Sultan al-Nāṣir, who had a deep appreciation for horses *(khayl),* granted textiles, sugar, and other goods to persons who brought excellent horses to him.[102]

During the third reign of Sultan al-Nāṣir (709–41/1310–41), the sugar grant to

---

98Ibn al-Dawādārī, *Al-Durr al-Maṭlūb fī Akhbār Mulūk Banī Ayyūb* (Cairo, 1972), 283.

99Ibn Duqmāq, ″Nuzhat al-Anām fī Tārīkh al-Islām,″ Dār al-Kutub al-Miṣrīyah MS 1740 Tārīkh, fol. 35a–35b. The *ublūj* originated from the Persian *āblūj* which meant a loaf of sugar. According to al-Maqrīzī, one *ublūjah (ublūj)* was equal to about a ninth *(tusʻ)* of a *qinṭār [jarwī]* (about 10 kilograms) (*Khiṭaṭ,* 1:103). Ashtor reads the words *″tisʻ* (nine) *qinṭār*s*″* (810 kilograms) (″Levantine Sugar Industry, 123, 127), but the output of sugar per feddan based on that weight far exceeds the figure seen in modern Egypt. Cf. H. A. B. Rivlin, *The Agricultural Policy of Muḥammad ʻAlī in Egypt* (Cambridge, Mass., 1961), 146. See also Sato, *State and Rural Society,* 219–20.

100Al-Maqrīzī, *Kitāb al-Sulūk,* 1:473–74. Notables of the *wāfidīyah,* also called *″mustaʻminūn″* (persons who requested safety), were granted the rank of amir, and the others were incorporated into the Bahri Mamluks. See also Ibn ʻAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir* (Dacca, 1956), 58–59; David Ayalon, ″The Wafidiya in the Mamluk Kingdom,″ *Islamic Culture* 25 (1951): 89–104.

101Al-Qalqashandī, *Ṣubḥ,* 4:14. See also Sato, *State and Rural Society,* 161. Ibn Khalīl al-Asadī (ninth/fifteenth c.) estimates that the Nāṣirī *rawk* brought about the prosperity of villages through fair administration promoting public welfare, which continued until the reign of Sultan Barqūq (al-Asadī, *Al-Taysīr wa-al-Iʻtibār* [Cairo, 1968], 74, 76–77).

102Al-Maqrīzī, *Kitāb al-Sulūk,* 2:526.

the Mamluk amirs in Ramaḍān had already become an established custom. Al-Maqrīzī states:

> During the days of al-Nāṣir Muḥammad ibn Qalāwūn, the annual grant of sugar *(rātib al-sukkar)* [to amirs and sultan's mamluks] during Ramaḍān amounted to 1,000 *qinṭār*s (about 45,000 kilograms), then increased to 3,000 *qinṭār*s (135,000 kilograms) in 745/1344–45 [under the reign of al-Ṣāliḥ Ismā'īl ibn Muḥammad], estimated at 600,000 dirhams which are equal to 30,000 Egyptian dinars.[103]

The purchase of a great number of mamluks and horses by Sultan al-Nāṣir, as well as the generous grant of sugar to his servants, gradually affected the finances of the Mamluk government. However, heavy sugar consumption continued during the reigns of his successors. Here is an example from 778/1377:

> We could not estimate the loads of kitchenwares, drinks, and various kinds of eatables [prepared for the Meccan pilgrimage by Sultan Ashraf Sha'bān]. Among them there were 30,000 small bags of sugar candy *(ḥalawī),* each bag weighing 5 *raṭl*s [about 2.25 kilograms], 180,000 *raṭl*s [about 81,000 kilograms] in total. Since all the candy was made of pure sugar, it was worth more than 100 *mithqāl*s [about 468 grams] of musk, except sandalwood and aloes.[104]

Since the amirs who accompanied Sultan Ashraf to Mecca also provided sugar candy, 360,000 *raṭl*s (162,000 kilograms) of sugar was consumed in only one month. Although the small bags of sugar candy were prepared for the Meccan pilgrims, the Cairene people criticized such luxury, saying "it is not suitable for the Meccan pilgrimage."[105]

Besides the lavish consumption of sugar by sultans and amirs, the close relationship between sugar consumption and festivals had already appeared among the common people in Fatimid Cairo. Al-Baṭā'iḥī writes that on Mawlid al-Nabī (12 Rabī' I 517/10 May 1123) sugar, almonds, honey, and sesame oil (*sīraj*) were provided to every religious shrine *(mashhad)* in Cairo.[106] Al-Maqrīzī further relates a case in Mamluk Cairo in his *Khiṭaṭ:*

---

[103]Al-Maqrīzī, *Khiṭaṭ,* 2:231.

[104]Al-Maqrīzī, *Kitāb al-Sulūk,* 3:273.

[105]Ibid.

[106]Al-Baṭā'iḥī, *Akhbār Miṣr* (Cairo, 1983), 62.

> The Sugar Candy Market *(Sūq al-Ḥalawīyīn)* [in Cairo]. This is a market for selling sugar candy *(ḥalawī),* called today ″various sweets.″ It was the best market where one could find shops selling plates, heavy brass-wares, and various colored sugar candy. I witnessed that in this sugar market each *qinṭār* (45 kilograms) of sugar was sold at 170 dirhams. . . . During the month of Rajab one finds a beautiful scene in this market. Many kinds of sugar candy are made in the shapes of horses *(khayl),* lions *(sab'),* cats *(qiṭṭah),* etc. Since the candy is hung by threads in the shops, they are called ″hung candy.″ Each piece weighs between 1/4 *raṭl* [about 110 grams] and 10 *raṭl*s [4.5 kilograms] and are all purchased for children. The markets in al-Fusṭāṭ, Cairo, and their environs are also filled with goods like these.[107]

The tradition of abstaining from raids and warfare during the holy month of Rajab has been observed since the Jāhilīyah. Furthermore, it is related that on the 26th night of this month the Prophet Muḥammad travelled to Jerusalem on a legendary horse *(al-Burāq)* and ascended to heaven (the *isrā'* and *mi'rāj* legends based on Quran 17: 1). We are not certain whether the custom of ″hung candy″ in Rajab originated from this popular legend or not. In contemporary Cairo, we find similar customs on the occasions of the Prophet′s birthday *(mawlid al-nabī),* and the Feast of the Sacrifice *('īd al-aḍḥá)*.[108] At the sugar candy stores, large candies in the shape of brides, camels, and horses are displayed, as well as boxes filled with small candy in the shape of radishes, eggplants, turnips, strawberries, etc.

According to al-Maqrīzī, successive misfortunes after the latter half of the fourteenth century caused a swift decline in sugar production in Egypt. He states,

> Misfortunes *(miḥnah)* happened [intermittently]. The price of sugar increased due to the ruin of both waterwheels *(dūlāb)* in Upper Egypt and sugar refineries *(maṭbakh al-sukkar)* in the town of al-Fusṭāṭ. Since many sugar candy artisans *(ṣāni')* died out, production also declined.[109]

Miḥnah in the works of al-Maqrīzī indicates *fasād* (corruption) on the part of

---

[107]Al-Maqrīzī, *Khiṭaṭ,* 2:99–100.

[108]On the Muslim festivals, see Gustav E. von Grunebaum, *Muḥammadan Festivals* (London, 1951).

[109]Al-Maqrīzī, *Khiṭaṭ,* 2:99.

sultans and amirs rather than natural disasters—mostly *ṭaʿūn* (plague)—that struck Egypt intermittently beginning with the great epidemic of 748/1347–48, which was called ″the Black Death″ in Europe.[110] On the other hand, Ashtor states that the Egyptian and Syrian sugar industries during the later Mamluk period adhered to their old methods, using oxen as power to drive the pressing mills,[111] while in the sugar mills of Sicily and Cyprus, oxen had been replaced by horses and waterpower.[112] This argument is not correct, however, because the above account by al-Maqrīzī discloses that waterwheels *(dūlāb)*[113] were already in use in Egypt under the Mamluk sultans. Consequently, it may well be that it was not technological stagnation, but rather both political corruption and natural disasters that caused the decline of the Egyptian sugar industry in the later Mamluk period.

---

[110]Al-Maqrīzī gives the following explanation as to the causes of famine and high prices in late Mamluk Egypt. The first is political corruption among the Mamluk amirs. Political posts such as vizier, qadi, and *wālī* could not be obtained without paying bribes *(rishwah)*. The second is the rise in the taxes levied on *iqṭā*ʿs; and the third is the circulation of copper coins. During the reign of Barqūq, dinars and dirhams disappeared from the market places (*Ighāthah,* 71). In contrast to the explanation of al-Maqrīzī, Abraham Udovitch proposed that repeated plague epidemics from the middle of the fourteenth century must have significantly decreased the population in Egypt, which led to the stagnation of economic activity in rural and urban society (″England to Egypt, 1350–1500: Long Term Trends and Long-distance Trade,″ in *Studies in the Economic History of the Middle East*, ed. M. A. Cook [London, 1970], 115–28). However, since Egyptian agriculture was closely tied to administrative affairs, we cannot easily reject al-Maqrīzī′s suggestion on the grounds that he mistook cause for effect. See also Sato, *State and Rural Society,* 237–39.

[111]Ashtor relates that from the second half of the thirteenth century until the end of the fourteenth, the technological level of the Middle Eastern sugar industry was relatively high and was by no means lower than that of the sugar industries in the southern European countries (″Levantine Sugar Industry,″ 105).

[112]Ibid., 105–6.

A Note on Archaeological Evidence for Sugar Production in the Middle Islamic Periods in Bilād al-Shām

The role of sugar in medieval Mediterranean trade is well documented in Italian and Arabic sources. The cultivation of sugar cane and the refinement of sugar are also well documented in the archaeological record.[1] Numerous sugar mills and refineries have been discovered in surveys of Israel and Jordan, and four refineries have been the subject of excavation (and publication), providing physical evidence for sugar production, as well as insight into the modes and methods of production,

[1]The textual evidence for production and trade in the Islamic Mediterranean has been discussed most prolifically by Eliahu Ashtor (see especially his ″Levantine Sugar Industry in the Later Middle Ages: A Case of Technological Decline,″ in *The Islamic Middle East: 700–1900,* ed. Abraham Udovitch [Princeton, 1977], 91–132; idem, ″Levantine Sugar Industry in the Later Middle Ages: An Example of Technological Decline,″ *Israel Oriental Studies* 7 (1977): 226–80). It is also discussed by Andrew M. Watson among other agricultural products: Andrew M. Watson, *Agricultural Innovation in the Early Islamic World* (Cambridge, 1983). W. D. Philips discusses the diffusion of sugar throughout the Mediterranean, and its trade through the sixteenth century: W. D. Philips, ″Sugar Production and Trade in the Mediterranean at the Time of the Crusades,″ in Vladimir Goss, ed., *The Meeting of Two Worlds: Cultural Exchange between East and West during the Period of the Crusades,* Studies in Medieval Culture, vol. 21 (Kalamazoo, 1986), 393–406. A. Peled concentrates on Crusader production in Palestine: A. Peled, ″The Local Sugar Industry under the Latin Kingdom,″ in *Knights of the Holy Land: The Crusader Kingdom of Jerusalem*, ed. Silvia Rozenberg (Jerusalem, 1999), 251–57. Anthony Luttrell, Franz Georg Maier and Vassos Karageorghis, and Marie-Louise von Wartburg have all written on the Cypriot sugar industry, with Maier and von Wartburg drawing on excavations of several well-preserved mills on Cyprus: Anthony Luttrell, ″The Sugar Industry and Its Importance for the Economy of Cyprus during the Frankish Period,″ in *The Development of the Cypriot Economy from the Prehistoric Period to the Present Day*, ed. V. Karageorghis and D. Michaelides (Nicosia, 1996), 163–73; Franz Georg Maier and Vassos Karageorghis, *Paphos: History and Archaeology* (Nicosia, 1984); Marie-Louise von Wartburg, ″The Medieval Cane Sugar Industry in Cyprus: Results of Recent Excavations,″ *The Antiquaries Journal* 63 (1983): 298–314; idem, ″Cane Sugar Production Sites in Cyprus, Real and Imagined,″ *Report of the Department of Antiquities, Cyprus* (2000): 381–400. H. Eduard LaGro′s dissertation on Ayyubid-Mamluk ceramics from Tell Abu Sarbut contains a nice summary and description of the sugar industry in the southern Levant, noting al-Nuwayrī′s description of differences between Egyptian and Syrian production methods. See his dissertation (due to be published in 2004): H. Eduard LaGro, ″An Insight into Ayyubid-Mamluk Pottery: Description and Analysis of a Corpus of Mediaeval Pottery from the Cane Sugar Production and Village Occupation at Tell Abu Sarbut in Jordan,″ Ph.D. diss., University of Leiden, 2002.

throughout the region of Bilād al-Shām. In addition, excellent comparanda come from very well preserved sugar refineries dating to the late thirteenth to sixteenth centuries A.D. excavated in Cyprus, which, having been modeled on the earlier and contemporary Levantine refineries, illustrate how the Levantine installations may have functioned.[2] Other comparanda come from Iran and North Africa: a refinery dating to the twelfth and thirteenth centuries A.D. was excavated at Susa,[3] and several sites, probably sixteenth century and later, have been surveyed in Morocco.[4] Although sources such as al-Qalqashandī and al-Nuwayrī, as well as Geniza letters and other trading documents, indicate Islamic Egypt was awash in sugar cane, there have unfortunately been no published excavations in Egypt to accompany the textual evidence.[5]

In Bilād al-Shām, four sugar factories have been excavated and published, all in the south, in modern Israel and Jordan. Tell Abu Qa'dan/Deir Alla in southern Jordan was excavated by Henk J. Franken and Moawiyah M. Ibrahim in 1977 and 1978, and the nearby Tell Abu Sarbut was excavated by Hubert de Haas, H.

Eduard LaGro, and Margreet L. Steiner in 1989, 1990, and 1992.[6] In Islamic Beisan (Roman-Byzantine Scythopolis), excavations have revealed a Mamluk sugar factory making use of part of the Crusader citadel there. Brief descriptions are included in Ruth Gertwagen's report on the Abbasid-Fatimid fortress and surrounding Islamic settlement,[7] and by Jon Seligman in his report on his excavations of the Crusader citadel.[8] Edna J. Stern has excavated a fairly well-preserved sugar refinery and associated mill in northern Israel that dates to the Ayyubid and Mamluk periods.[9]

There are numerous mills extant in Palestine and the Jordan valley, and numerous places are known from the textual sources to have grown sugar cane and manufactured sugar. All of the surveys of the Jordan valley at least mention sites having numerous sugar pots scattered on the surface, and some have described milling sites in detail.[10] Stern's M.A. thesis provides valuable survey data of the forty-three sites in Israel that have positive evidence of having been sugar factories.[11] She also lists those that may have produced sugar (twenty sites), and those that have been rumored to produce sugar but for which there is no evidence (three

[11]Ms. Stern has generously e-mailed me the tables from her M.A. thesis in English.

sites).[12] Fifty-one possible sugar-producing sites in Palestine have also been collected from survey and textual sources and summarized by Brigitte Porëe-Braitowsky in a long article that also relies on some of her own reconnaissance.[13] This number is mostly a count of milling sites, for which there is no direct archaeological evidence of sugar production, however. Here we are concerned with those sites that have been excavated or surveyed, and found to contain the best proof there is for sugar production, which is the presence of great quantities of sherds of both conical sugar molds and syrup jars.[14] Boiled, reduced cane juice (collected from chopped and crushed sugar cane) was poured into the molds, which were conical, having a wide mouth and narrow base, and had one to three small holes punched in the base. The molds were either set directly on or raised over syrup jars, which collected the liquid slowly draining from the mold. This slow draining, as well as evaporation of liquid, resulted in a cone-shaped cake of sugar. The collected syrup might be re-boiled and poured again into molds, or sold in its own right.[15] The sugar molds were often broken during the removal of the sugar cake, resulting in great quantities of broken pottery remaining at sugar-production sites, and likely on-site production of pottery.[16]

---

[12]Edna J. Stern, ″The Sugar Industry in Palestine during the Crusader, Ayyubid, and Mamluk Periods in Light of the Archaeological Finds,″ M.A. thesis, Hebrew University, 1999. There are numerous such sites in this region. For example, the excavators at Caesarea believe they have discovered an Abbasid-period mill used for sugar, which would have been animal-driven. They cite no evidence beyond the mill itself, but Caesarea was known as one of the more important sites of sugar production in the early Islamic period. See Avner Raban, ″Combined Caesarea Excavations (B),″ *Excavations and Surveys in Israel* 17 (1998): 58–76. (I am grateful to Asa Eger for this reference.)

Nicholas Coureas and Jonathan Riley-Smith (Nicosia, 1995), 377–510.

[14]Milling sites that are not accompanied by this ceramic evidence could not have been used for sugar, although it has been argued that some of them may have been built for grinding sugar cane and were later used for grain.

[15]The reconstruction of sugar production comes from al-Nuwayrī, and from the above-mentioned excavations at Kouklia, Cyprus. See LaGro′s useful summary of al-Nuwayrī′s description in his dissertation (LaGro, ″An Insight into Ayyubid-Mamluk Pottery,″ 30–31, or al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab,* vol. 7 (Cairo, 1931).

[16]Berthier, *Les anciennes sucreries du Maroc;* Franken and Kalsbeek, *Potters of a Medieval Village*; von Wartburg, ″The Medieval Cane Sugar Industry in Cyprus.″

Summaries of the excavations known to date illustrate what is known and possible to know from the archaeological evidence:

Tell Deir Alla is a large mound in the east side of the Jordan valley, close to the Zerqa' river. Excavations from 1960 to 1967 by Henk J. Franken of the University of Leiden revealed intensive Late Bronze Age and Iron Age occupation, but in the Islamic periods the site was used as a cemetery, presumably contemporaneous with the adjacent site of Tell Abu Qa'dan.[17] Some of the grave goods include sugar molds and syrup jars.[18] At Tell Abu Qa'dan, northeast of Deir Alla, mills were still visible in the early twentieth century several hundred meters to the east of the tell.[19] Because of its presumed relationship with Tell Deir Alla, it was excavated briefly in 1967 by M. Jamerah of the Department of Antiquities. These excavations and a detailed ceramic study were published by Franken and J. Kalsbeek, providing the most detailed study extant of sugar vessels from this region.[20] Only two 5 m x 5 m trenches were dug, with most of the work concentrating on one trench. The excavators reached a depth of 6.5 m, of material that they dated from the eighth to the fifteenth centuries A.D.[21] In trench DA/AR100 a series of courtyard levels was excavated, each containing pottery, ash, and thick clay deposits from collapsed walls, as well as some pits and thick ash deposits. Bread ovens were also found. The excavators emphasize that the most surprising aspect of the excavation was the very large quantity of ceramic recovered from the courtyards, including several pots smashed *in situ* by a collapsed wall, and thus able to be reconstructed. Partly because of the nature of the deposition, and partly because of the speed of excavation, the excavators were unable to get good stratigraphic differentiation. All the dating is done on the basis of ceramic analysis, not stratigraphy. Thus Franken and Kalsbeek differentiate three phases of occupation, or at least of ceramic production, but they are unable to anchor them to an absolute chronology.

The greatest quantity of sherds from the site is of two types, present only in

[17]Franken and Ibrahim, ″Two Seasons of Excavations at Tell Deir ′Alla, 1976–1978.″ (Abu Qa'dan is spelled Abu Gourdan in the publications.)

[18]The cemetery was again excavated in 1976–78 by a joint expedition of the University of Leiden and the Jordanian Department of Antiquities, directed by H. J. Franken and M. M. Ibrahim.

[19]Franken and Kalsbeek, *Potters of a Medieval Village*, 219.

[20]Ibid.

[21]James A. Sauer questions the basis for these dates, as Franken and Kalsbeek make only a few general comparisons of their pottery with other sites, and make no attempt to sort through the nineteen layers of stratigraphy. James A. Sauer, ″Pottery Techniques at Tell Deir ′Alla,″ *Bulletin of the American Schools of Oriental Research* 222 (1976): 91–94. LaGro′s dissertation is meant to follow up on and perhaps improve upon Franken and Kalsbeek′s ceramic study: LaGro, ″An Insight into Ayyubid-Mamluk Pottery.″

the latter two phases of the site. Thousands of body sherds were found belonging to the above-described sugar-pots: conical molds (these having a single small hole in the base) and syrup jars, which are generally described as ″bag-shaped,″ and are handle-less and almost rimless. Both types of sugar pot are usually of somewhat coarse red- or white-firing wares, thickly potted. Only the interiors of the molds are smoothed. According to Franken and Kalsbeek′s study of those at Deir Alla and Abu Qa'dan, they are made with a combination of coil-built and wheel-thrown techniques. The molds come in various heights, keeping a generally standard rim diameter. They seem to be roughly standardized to three different capacities. The same rim variations occur in each phase, making rim changes useless for chronology. Syrup jars are likewise consistent in shape and capacity throughout the periods. The vast majority of both molds and jars are plain, but there are rare examples of decorated sugar molds, having combed decoration or even a dark green glaze.[22] The sheer quantity of ceramics related to the sugar industry, along with the presence of some vitrified sherds, indicates that they may have been produced on site to meet the high demands of sugar production.[23] The courtyards themselves may represent the remains of a refinery, used over a long period of time.

Tell Abu Sarbut, only about 1.5 km west-northwest of Tell Deir Alla and Tell Abu Qa'dan, was excavated by Hubert de Haas, H. Eduard LaGro and Margreet L. Steiner in 1989, 1990, and 1992. Although no remains of either a mill or a press were found, the excavators did find part of a large building that may have been used as a refinery, with two main phases of use some time apart. In its second phase there were benches with sugar molds embedded in them, ready to hold other sugar molds into which the boiled sugar cane juice would be poured. Many fragments of sugar molds and jars were also found here. Another part of the tell revealed a domestic area containing four phases of Ayyubid-Mamluk occupation built directly over unexcavated Byzantine remains. Material culture included numerous ceramics, but also fragments of glass bracelets and pieces of iron and bronze. The dating of this area and the factory was based on calibrated ^{14}C dates.[24] They date the last phase of the domestic area, which is evidence of the village, to A.D. 1434–1510 or 1598–1620, and the phase succeeding the last phase of the factory to 1292–1448. Thus the factories could have been late Ayyubid or early

[22]Franken and Kalsbeek, *Potters of a Medieval Village*, 143–46.

[23]For comparison, the fourteenth–fifteenth-century sugar mill at Kouklia on Cyprus included a simple round kiln for manufacturing the molds and jars on site (von Wartburg, ″The Medieval Cane Sugar Industry in Cyprus″). Generally the quantity of specialized vessels for sugar production is so high at each site that it only seems reasonable to assume that they were manufactured on-site.

[24]The reports do not disclose what material was used for the ^{14}C samples or how many samples were taken.

Mamluk. We may infer that the village was not completely dependent upon the success of the factories, for it remained occupied for at least a century after the last use of the factory.[25]

Beisan or Bet She'an, Byzantine Scythopolis, also possesses evidence of sugar production in its later periods. It has been excavated by numerous institutions, but we are concerned with two projects: the Bet She'an Excavation Project in cooperation with the Department of Archaeology of Haifa University excavated the area of interest to us in August–October 1989 and May–November 1990 under the direction of Ruth Gertwagen and Adrian Boaz; and the Israel Antiquities Authority excavated in the summers of 1992, 1993, and 1994 under the direction of Jon Seligman. In the lower town, in an area about 400 m west of the center of the Roman-Byzantine town, there is an area of occupation dating from the Byzantine through the Ottoman periods, centered around the Crusader citadel. The citadel appears to have been built over an earlier fortress from the Abbasid-Fatimid periods. In the early Mamluk period a complex of installations for the manufacture of sugar was built inside the citadel's inner rooms, keep, and part of the moat, as well as over the basalt buildings to the north of the citadel, which may be interpreted as houses built around a courtyard. The principal evidence for sugar manufacture is the presence of thousands of sherds of sugar pots lying on a lime floor. Seligman also noted "compartments built along the walls to support vessels used in the sugar industry," presumably sugar molds.[26] Unfortunately neither Gertwagen nor Seligman describe the finds in detail, although Seligman notes they found no installations for processing the cane itself (i.e., a press). In any case the industry appears to have been short-lived in this location, and by the late Ottoman period the citadel's upper story was rebuilt and used as a school.

Excavations at Yesud HaMa'ala in the Galilee have revealed the interesting building sequence of a possible synagogue cum sugar factory.[27] Yesud HaMa'ala is in eastern Galilee, on the east bank of the Jordan, about 15 km north of Safed. Excavations were carried out there in 1883, 1970, and 1974–83 by Y. Shoram,

[26]Seligman, "Bet She'an, the Citadel."

[27]Although there are four short publications by the excavators in Hebrew, I have relied most heavily on the summary in French by Porëe-Braitowsky. A. Biran, "Yesud HaMa'ala," in *The New Encyclopedia of Archaeological Excavations in the Holy Land* (Jerusalem, 1993), 4:1510; Biran and Shoram, "Remains of a Synagogue and of a Sugar Installation at Yesud HaMa'alah" (in Hebrew), *Eretz-Israel, Archaeological, Historical and Geographical Studies* 19 (1987); A. Biran and Dan Urman, "Yesud HaMa'ala, Synagogue—1982–1983" (in Hebrew), *Excavations and Surveys in Israel* 2 (1983): 110–11; Porëe-Braitowsky, "Les moulins et fabriques à sucre de Palestine et de Chypre."

Avraham Biran, and Dan Urman. The building housing the sugar factory seems to be undated. The entire twenty-one meter length of the south wall was uncovered to a height of 1.5 m. The interior space of the building was divided with two rows of columns. In its latest phase the three spaces provided by the rows of columns each held a plastered basin in and around which numerous fragments of sugar molds and jars were discovered. The basins each incorporated a column base. Further evidence of sugar refining was the presence of a five-meter-long stone canal, providing the water necessary for the process of sugar refining.

The ceramics, including those of the sugar pots, were dated on the basis of one Crusader coin minted in Cyprus to the thirteenth century, to which the excavators date the last phase of use of the building. The excavators claim that there were no ceramics later than the medieval period, and also that there were no Roman or Byzantine sherds. The colonnaded building is nevertheless identified as a synagogue based on an Aramean inscription found on the site, along with architectural similarities with those at Gush Halav and Capernaum, which date to the fourth through sixth centuries A.D.

Excavations at Lower Horbat Manot provide the final example of an excavated sugar refinery in Bilād al-Shām. This was a salvage excavation conducted by the Israel Antiquities Authority in 1995. At this site, on the Acre plain about 12 km northeast of Acre, a refinery and aqueduct were built by Godfrey le Tor in the thirteenth century A.D. (who sold it to the Hospitallers, who in turn leased it to the Teutonic Knights of Montfort) and remained in operation under Mamluk and then Ottoman governance.[28] A screw-press nearby was likely the site of sugar cane crushing, before it was taken to the refinery to be boiled. The excavation of the site was incomplete, but the excavators did establish the location of the building that would have housed the fire pits over which cauldrons of cane juice would have been boiled, and they fully excavated the courtyard where the cakes of sugar were dried. The large quantities of sugar pots dating from the thirteenth, fourteenth, and fifteenth centuries indicated that the production of sugar did not slacken during or after the transition to Mamluk rule.[29] The nature of the Ottoman sugar production is far more fragmentary, however. One transformation is apparent, and that is in the manufacture of the sugar vessels themselves. In the Crusader period they are made of a cleaned clay, with added temper, and fired at a high temperature to a hard finish. The Mamluk and Ottoman vessels were, however, made of clay that had not been cleaned or had any added temper, and were fired at a lower temperature to a softer finished product. Stern suggests this difference in production may reflect the change in ownership between the Crusader and Mamluk periods,

---

[28]Stern, "The Excavations at Lower Horbat Manot."

[29]Ibid.

even though the workers at the plant are likely to have remained the same, coming from the nearby village of Manueth.[30] In addition, the capacity of the molds became greater over time, with the Crusader sugar molds having an average volume of 3.8 liters, the Mamluk sugar molds having volumes of 4, 4.5, or 6 liters, and the Ottoman sugar molds being too fragmentary to determine their volume.[31]

As mentioned above, comparanda for the functioning of sugar mills and refineries can be found at several sites on Cyprus, which are said to be modeled on the Crusader refineries found on the Levantine coast.[32] The sugar factory at Kouklia-Paphos is the most complete factory extant, containing a press, mill, boiling and refining installations, and a workshop and storage area, built within the remains of Roman temples. It was thoroughly excavated by a Swiss-German expedition in the late 1980s, and dates from the thirteenth century with possible use into the seventeenth century.[33] The layout of the factory is logical and efficient for the production of sugar, and represents a refinement of mill planning from those known in the Levant, the layouts of which do not seem planned. Water, so important in both the growing of cane and the production of sugar, was brought to the site from a spring 3 mi. away by means of an aqueduct. Two mills operated at the site, the smaller perhaps an addition to increase the milling capacity of the factory. The larger stone-built mill, grinding hall, and refinery are adjoined, sitting at the bottom of a slope on the main aqueduct line. In the mill proper, the cane was crushed on a large mill-base, still *in situ,* on which a large animal-driven runner stone rotated. The mash thus produced was then taken to a water-driven mill north of the hall and pressed, as described by al-Nuwayrī. The adjoining vaulted refinery hall contained basins for collecting the freshly-squeezed cane juice, and hearths for boiling it in large copper cauldrons, as well as a water conduit in the center of the room, compartments for molds of sugar juice to rest on beams for evaporation, and rooms with water basins for the soaking and cleaning of sugar jars and molds.[34] The stone and mud-brick hearths are constructed so that their stoking chambers are on the outside of the building, to prevent ash and soot from entering

the refining area.[35] A storage and workshop area was found adjoining this complex at the north, which may have served as a place to store and repair the cauldrons and other implements used in refining. An additional mill or crushing installation was found here as well.[36]

This review of the excavations of sugar-production sites reveals that the archaeological evidence corroborates the textual evidence of both the processes by which sugar was produced in the Mamluk period and the implements with which it was done.[37] The numerous sugar mills that have been surveyed (twenty positively-identified sites in modern Israel alone) also seem to corroborate the story of large quantities of sugar being produced for the international and probably local markets in this period. On the other hand, these excavations and surveys cannot yet flesh out the picture of production in rural Bilād al-Shām, placing sugar in its agricultural and economic contexts. This is not due to the inherent limitations of archaeological investigation, but rather to the failure on the part of excavators to determine the relationship of the sugar refineries with their supporting settlements. This element is missing from all excavations discussed above but that of Tell Abu Sarbut, where the excavators determined that the existence of the village was not contingent upon the success of the sugar refinery, as it was occupied long after the refinery was defunct.[38] Careful excavation of additional sugar factories and their attendant settlements will help address such debated issues as rural population fluctuation in Mamluk Bilād al-Shām, and the degree to which populations of various regions depended on cash crops and associated industries.

[37]For example, al-Nuwayrī describes the sugar pots and molds, noting that the molds were of different volumes.

[38]This may soon be remedied by the ongoing research at Tall Hisban in southern Jordan, where excavators have unearthed a storeroom containing sugar storage jars. The surrounding area is likely to have held numerous sugar mills, and several mill sites have tentatively been identified in archaeological field surveys as being Mamluk. See Bethany J. Walker, ″Mamluk Investment in Southern Bilad al-Sham in the Eighth/Fourteenth Century: The Case of Hisban,″ *Journal of Near Eastern Studies* 62 no. 4 (2003): 241–61. As she notes in this article on p. 259, n. 81, research on the possible sugar industry at Hisban will integrate the field research and textual study of *waqf* and other documents and is published in her article entitled ″Mamluk Investment in Transjordan: A ′Boom and Bust′ Economy″ in this volume.

Bethany J. Walker
Oklahoma State University

Mamluk Investment in Transjordan: a ″Boom and Bust″ Economy*

The fourteenth century witnessed a flurry of economic activity not only in Egypt but also in the most remote and previously neglected of the Mamluk provinces, such as *Mamlakat Karak* and the southern districts of *Mamlakat Dimashq*. This region, which constitutes today′s Hashemite Kingdom of Jordan, benefited from intense capital investment from Cairene sources, as well as an expansion of the local military and administrative apparatuses. From the reinstatement of al-Nāṣir Muḥammad to the sultanate in 1310 until the end of the century the agriculture of geographical Transjordan prospered. Yet, in spite of this prosperity and the obvious financial benefit gained by the Egyptian state from this region, large parts of the Transjordan were abandoned by the fifteenth century.

The handful of historians who have written on Mamluk Jordan and the much larger number of archaeologists working in the region′s ″Middle Islamic″ period have largely agreed on the factors behind this phenomenon.[1] They regularly cite natural disasters (earthquakes, droughts, locust infestations, and floods), plague and other epidemics, currency devaluation and changing trade and transport routes, political factionalism in Cairo, and the region′s unruly bedouin, who are said to have been eager to devour villages once the garrisons protecting them pulled out, as creating the conditions for the economic collapse of the fifteenth century.[2] They describe this collapse as total, affecting the entire region, and permanent, a financial,

*The following is based on a paper presented at the MESA Annual Conference in Washington, D.C., on November 25, 2002, as part of the pre-organized panel ″From Alexandria to Aden: Commerce and Society in the Medieval Middle East.″ I want to thank Dr. Warren Schultz for organizing this panel and for his encouragement in submitting my contribution for publication here.

[1]The most prolific of the historians are Jordanian nationals: Drs. Yūsuf Ghawānimah and Muḥammad ʻAdnān al-Bakhīt. The most relevant archaeological literature will be cited throughout this paper.

[2]Yūsuf Ghawānimah, ″The Affects of Plague and Drought on the Environment of the Southern Levant During the Late Mamluk Periods″ (in Arabic), *Studies in the History and Archaeology of Jordan* 2 (1985): 315–22, and idem, ″Earthquake Effects on Bilad al-Sham Settlements,″ *Studies in the History and Archaeology of Jordan* 4 (1992): 53–59; R. M. Brown, ″Late Islamic Settlement Patterns on the Kerak Plateau, Trans-Jordan,″ M.A. thesis, SUNY-Binghamton, 1984; Jum′a Mahmoud H. Kareem, *The Settlement Patterns in the Jordan Valley in the Mid- to Late Islamic Period* (Oxford, 2000), 12 and 16–17.

political, and demographic ruin from which the region recovered only briefly in the sixteenth century. Their conclusions are based largely on contemporary Egyptian sources and interpretations of archaeological surveys in the region now twenty or more years old. They are regularly cited in both the historical and archaeological literature and have colored the way both groups of scholars "read" their respective sources.

The economic decline of Transjordan should be understood as part of the larger pattern of political, financial, social, and environmental decline of Greater Syria and the Mamluk empire as a whole. Its local conditions, however, must also be considered in any debate about the agricultural and demographic shifts of the late Mamluk period. Transjordan was unique in many respects. Outside of Kerak in the south (the nursery of sultans and a provincial capital) and the smaller administrative center of ʻAjlūn to the north, it had no large or permanent official centers. Although the structure of Mamluk administration throughout Syria was irregular, the Transjordan seemed to have been particularly susceptible to shifts in district capitals, fluid administrative borders, and frequent changes in the ranks of its local governors, phenomena perhaps reflecting the state's precarious relationship with the region's large bedouin population.[3] Moreover, investment by the state and state officials had an ambiguous effect on the fortunes of this region. While the location of the hajj and caravan routes through its interior certainly benefited Jordan, the plantation-style development of the Ghôr (Jordan Valley) for growing and processing cane sugar and the conversion of some of the best farmland in the well-watered northern highlands and central plains to vast, grain-producing *iqṭāʻāt* may have contributed to uneven development of the region, favoring particular districts over others. In addition, much of this land was made *waqf* for institutions outside of Jordan. Many of these endowments, and the farms that supported them, survived well into the Ottoman period.[4] This was not necessarily the case with the agricultural properties in the Ghôr, a large portion of which belonged to the sultan as part of his personal estate *(khāṣṣ).* In the absence of a strong, centralized government, irrigation canals fell into disrepair, there was no longer any direct supervision of sugar manufacturing and transport, and many industries were abandoned, to be replaced by new agricultural projects.[5]

A general over-reliance on written sources from Egypt has obscured many of

[3]Bethany J. Walker, "Mamluk Investment in Southern *Bilād al-Shām* in the Fourteenth Century: The Case of Ḥisbān," *Journal of Near Eastern Studies* 62, no. 4 (2003): 243 ff.

[4]See the discussion of the Ottoman tax registers for northern Jordan below.

[5]In his archaeological survey of the northern Jordan Valley, Kareem began to document the rise and fall of the local sugar industry through mill sites, storage facilities, canals, and road systems (Kareem, *Settlement Patterns in the Jordan Valley,* 9 ff).

these developments. What was true for Egypt was not necessarily true for the Transjordan, as a reading of Syrian sources seems to indicate. Among the chronicles of the period, those of Ibn Qāḍī Shuhbah (who died in 1448) and Baybars al-Dawādār *(Zubdat al-Fikrah fī Tārīkh al-Hijrah)* are illustrative of the kind of data available on local agriculture. Ibn Qāḍī Shuhbah′s *Tārīkh* includes regular excerpts of letters exchanged between this judge and his colleagues posted in other cities throughout Syria. These letters often discuss how crops are doing that year in villages under the judges′ jurisdictions, occasionally mention the prices of agricultural goods, and lament the cold spells and floods that have ruined local harvests. Significant in this regard are passages describing farms in northern (the village of Ḥibrāṣ) and central (the village of Ḥisbān) Jordan.[6] The Mamluk amir Baybars al-Dawādār served as the governor *(nā'ib)* of Kerak from 1286 to 1291.[7] While this source is primarily concerned with political events and military campaigns, the author makes the occasional reference to towns and villages in southern and central Transjordan and the road networks that connect them. The Syrian geographies of the period are also a rich source of information about the location of towns and villages, the topography of the region, water resources, and agricultural specialization. Most significant in this regard are *Al-A'lāq al-Khaṭīrah* of Ibn Shaddād (d. 1285) and *Nukhbat al-Dahr fī 'Ajā'ib al-Barr wa-al-Baḥr* of al-Dimashqī (d. 1327).[8] In addition, the secretary′s manual of Amir Khalīl al-Ẓāhirī, who served at Kerak in 1437, not only describes the administrative structure of Greater Syria in his day but also describes, however irregularly, the topography, climate, and crops that characterize each region.

These sources are very general and treat the smaller villages of the region in only a cursory fashion. Mamluk *waqfīyāt* and early Ottoman tax registers (*defter*s) are much richer sources of information on demographics, the size of farms, ownership of rural estates, crops grown in the smallest of villages, and the revenues they yield. With one exception, the *waqfīyāt* remain in manuscript form; several from the Dār al-Wathā'iq and Wizārat al-Awqāf in Cairo are presented publicly for the first time in this study.[9] Many of the Ottoman registers in Istanbul relevant to Jordan have been published and translated into Arabic by Muḥammad 'Adnān

---

[6]Abū Bakr Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah,* ed. 'Adnān Darwīsh (Damascus, 1977–), 3:164 (entry for year 761) and 4:181 (year 803).

[7]Baybars al-Manṣūr al-Dawādār, *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* ed. D. S. Richards (Beirut, 1998), XVI.

[8]These sources, however, should be used with caution. They often combine data from much older sources with contemporary descriptions, not always specifying the time period to which they are referring. In order to locate rural sites from archival sources (such as *waqfīyāt*), one should combine the medieval geographies with a reading of more modern travel accounts.

[9]They are listed at the end of this paper.

Bakhīt and charted into map form by the historical geographers Hütteroth and Abdulfattah.[10] These are a gold mine of detailed data on Mamluk agriculture and rural endowment practices, because the Ottomans inherited the Mamluks′ local tax apparatus and applied it with little alteration in the sixteenth century and the registers make regular reference to *awqāf* in the region dating back to the Mamluk period.[11] In the absence of any comparable Mamluk tax records, these sources are priceless for this kind of research. The picture of Jordanian agriculture that emerges from these documents is one of continuity. While it is clear that many villages were abandoned during the fifteenth century and that there was some level of decline in agriculture throughout Jordan, some areas, particularly the north, continued to be relatively productive throughout this period and grew rapidly in population in the first half of the sixteenth century.

In addition to the underutilization of these textual sources, there are archaeological reasons for reconsidering the phenomenon of decline in Mamluk Jordan. A refinement of ceramic chronologies during the last fifteen years has resulted in the identification of many Middle (or Ayyubid and Mamluk) and Late Islamic (Ottoman) occupational levels and sites that were mistakenly assigned to other time periods.[12] This, combined with an intensified effort at regional surveys

---

[10]These are the registers published by Bakhīt and used for this study: three registers for Nāḥiyat Banī Kinānah (*Tapu Defteri* #430 of 930/1523, #401 of 950/1534, and #99 of 1005/1596–97) and two for Liwā᾽ ʻAjlūn (*Tapu Defteri* #970 and #185 of 1005/1596). There is no date given for #970 in the manuscript used by Bakhīt, but he suggests a date of roughly 1538, based on the year of service for an amir named as an *iqṭā*ʻ recipient in one entry (Muḥammad ʻAdnān Bakhīt, *Nāḥiyat Banī Kinānah [Shamālī al-Urdunn] fī al-Qarn al-ʻĀshir al-Hijrī/al-Sādis ʻĀshir al-Mīlādī* [Amman, 1989], 9). Hütteroth and Abdulfattah use the following: *defter-i mufassal* of Liwā᾽ Quds al-Sharīf (#112), Nablus (#100), Gaza (#192), Lajjūn (#181), ʻAjlūn (#185), Ṣafad (#72), and Shām al-Sharīf of Ḥawrān subprovince (#99) (Wolf-Dieter Hütteroth and Kamal Abdulfattah, *Historical Geography of Palestine, Transjordan and Southern Syria in the Late 16th Century* [Erlangen, 1977], 4). Bakhīt also used two of these registers. They date to 1005/1596–97 and reflect the results of the ″new census″ taken at the end of the century, which was the last the Ottomans administered in the Arab provinces.

[11]The Ottomans levied the ʻ*ushr* on charitable *awqāf*. This is why they appear as a source of revenue for *khāṣṣ, timar,* and *za᾽āmāt* holders in the registers.

[12]Ceramicists are slowly beginning to visually differentiate Ayyubid, Mamluk, and Ottoman variations of the Handmade Geometric Painted Ware (Jeremy Johns, ″The Rise of Middle Islamic Hand-Made Geometrically-Painted Ware in Bilad al-Sham [11th–13th Centuries A.D.],″ in *Colloque international d′archéologie islamique*, Textes arabes et études islamiques no. 36 [Cairo, 1993], 65–93; R. M. Brown, ″A 12th Century A.D. Sequence from Southern Transjordan: Crusader and Ayyubid Occupation at el-Wu᾽eira,″ *Annual of the Department of Antiquities of Jordan* 31 [1987]: 267; and idem, ″Summary Report of the 1986 Excavations: Late Islamic Shobak,″ *Annual of the Department of Antiquities of Jordan* 32 [1988]: 225–45) and handmade burnished cookpots with ″elephant ear″ handles (ibid.). One category of crudely handmade bowls, often attributed to ″bedouin″

and the excavation of late medieval sites, is forcing archaeologists working in the country to rewrite the occupational history of late Mamluk and early Ottoman Jordan.[13] On the basis of archaeological data alone it is becoming clear that while certain regions were abandoned by the fifteenth century (such as much of the Kerak Plateau),[14] much of the remainder of the country was still occupied and retained viable local markets and a productive agricultural base.[15]

The most damaging evidence against general economic decline in Jordan at the end of the fourteenth century is the numerous endowments of productive agricultural land located throughout the country and dating to the third quarter of the fourteenth and the first half of the fifteenth centuries. Thus, Jordan′s overall economy, as it can be measured from *awqāf* alone, would appear to be thriving at the very time that the Mamluk economy was in ″decline.″[16] Among the published examples of the endowment of rural land in Jordan by sultans are: the endowment by Barqūq of the villages of Nimrīn, Kafrīn, and Zarā'ah in the Jordan Valley and

---

manufacture, is generally acknowledged by archaeologists to be Ottoman to modern in date (B. Mershen, ″Recent Hand-Made Pottery from Northern Jordan,″ *Berytus* 33 [1985]: 75–87) or twelfth-century to modern (Dr. Roberta Tomber, Museum of London and Wādī Faynān Expedition, personal communication, citing parallels from Petra and Gharandale; the Wādī Faynān pottery is as yet unpublished). For a general downdating of several Mamluk wares to the Ottoman period, consult G. Ziadeh, ″Ottoman Ceramics from Ti'innik, Palestine,″ *Levant* 27 (1995): 209–45.

[13]An important survey in this regard is that of Wādī Faynān (interim reports have been published in recent issues of *Levant;* see also previous note and forthcoming monograph *Archaeology and Desertification: the Wādī Faynān Landscape Survey, Jordan,* ed. G. Barker and D. Mattingly [Amman]). For excavated sites, see Brown, ″Summary Report″ (Shobak); A. M. McQuitty, M. A. Sarley-Pontin, M. Khoury, M. P. Charles, and C. F. Hoppe, ″Mamluk Khirbat Fāris,″ *ARAM* 9 (1997): 181–226 (Khirbat Fāris); and B. J. Walker and O. S. LaBianca, ″The Islamic *Quṣūr* of Tall Ḥisbān: Preliminary Report on the 1998 and 2001 Seasons,″ *Annual of the Department of Antiquities of Jordan* 14 (2003): in print (Tall Ḥisbān).

[14]J. Maxwell Miller, *Archaeological Survey of the Kerak Plateau* (Atlanta, 1991); Brown, ″Late Islamic Settlement Patterns.″

[15]Walker and LaBianca, ″Islamic *Quṣūr* of Tall Ḥisbān″; Walker, ″Mamluk Investment in Southern *Bilād al-Shām*″; Jeremy Johns, ″The *Longue Durée:* State and Settlement Strategies in Southern Transjordan Across the Islamic Centuries,″ in *Village, Steppe and State: The Social Origins of Modern Jordan,* ed. E. L. Rogan and T. Tell (London, 1994), 1–31.

[16]Endowments of rural properties are only one measure of economic health. Other factors that are quantifiable or can be documented textually or archaeologically, and which will be examined in my forthcoming *Life on the Mamluk Frontier, Transjordan 1260–1516 A.D.,* are minting and exchange of coins, prices, distribution and longevity of industrial sites (copper smelting, sugar processing, textile factories, etc.), continuity of local and regional markets, maintenance of roads and caravansaries, evidence of continued exchange of luxury goods (certain categories of glazed wares, imported semi-precious stones, exotic building materials), and educational facilities and programs.

several properties in Egypt, Palestine, Jordan, and Syria for his mosque-madrasah complex in Cairo;[17] Khushqadam′s endowment of a *mazra‘ah* (isolated plot) in the Ghôr and the villages of Marw and Harhar in northern Jordan for his madrasah in Cairo;[18] and Sha‘bān′s endowment of the village of Ādar and a bathhouse and garden in Wadi Kerak in 777/1375.[19]

The following is a preliminary discourse on the success of Mamluk agricultural investment in Jordan in the fourteenth century and its apparent failure by the fifteenth. The oft-repeated wholescale abandonment of this region at the end of the century is far from proven. It remains to be determined to what degree Jordan really was abandoned by the Mamluk authorities and subsequently depopulated and what factors account for this. Was this image of a ″boom and bust″ economy true for the entire country or only parts of it? What were the Mamluk state′s administrative and agricultural objectives in the region and what impact did they have on Transjordanian society, in terms of its economic health and settlement patterns, and the local environment?

In order to assess the regional differences, if any, in settlement history or agricultural development, I have selected individual villages in four different districts in Jordan as case studies: Malkā and Ḥibrāṣ in the Sawād (northern Jordan, between the Yarmouk River and Irbid and southeast of the Sea of Galilee); Nimrīn and Kafrīn in the Lower Ghôr (central Jordan Valley); Ḥisbān in the Balqā’ (central Jordanian highlands, the Madaba Plains); and Ādar (a suburb of Kerak) in the Shira’ (southern Jordanian highlands) (Fig. 1).[20] All six villages are

---

[17]There is no date for the Ghôr endowments—Bakhīt, *Nāḥiyat Banī Kinānah,* 23; M. A. Bakhīt and Nūfān Rajā’ al-Ḥammūd, *Daftar Mufaṣṣal Liwā’ ‘Ajlūn: Ṭābū Daftarī Raqm 185, ‘Anqarah 1005 Hijrī Muwāfiq 1596 Mīlādī* (Amman, 1991), 32. The other endowments appear in an unpublished manuscript (*Waqfīyah* 9/51) and date to 796/1393.

[18]No date—Bakhīt, *Nāḥiyat Banī Kinānah,* 45 and 57; M. A. Bakhīt and N. R. al-Ḥammūd, *Daftar Mufaṣṣal Liwā’ ‘Ajlūn: Ṭābū Daftarī Raqm 970* (Amman, 1989), 187; and idem, *Ṭābū Daftarī Raqm 185,* 32.

[19]Manuscript incomplete, and recipient remains unknown—*Waqfīyah* 8/49, sections relevant to Jordan published in Yūsuf Ghawānimah, *Tārīkh Sharqī al-Urdunn fī ‘Aṣr Dawlat al-Mamālīk al-‘Ūlá (al-Qism al-Ḥaḍārī)* (Amman, 1979), 243–44; idem, ″Al-Qaryah fī Junūb al-Shām (al-Urdunn wa-Filisṭīn) fī al-‘Aṣr al-Mamlūkī fī Ḍaw’ Waqfīyāt Ādar,″ *Studies in the History and Archaeology of Jordan* 1 (1982): 363–71; and M. A. Bakhīt, ″Awqāf During the Late Mamluk Period and the Early Ottoman Times in Palestine and Jordan,″ in *Urbanism and Islam,* ed. Editorial Committee of the Research Project ″Urbanism in Islam, a Comparative Study″ (Tokyo, 1994), 186.

[20]Jordan in Mamluk times was administratively divided between the southern section *(safaqah)* of the Province of Damascus *(Mamlakat Dimashq)* in the north and the Province of Kerak *(Mamlakat Karak)* in the south (Nicola Ziadeh, *Urban Life in Syria Under the Early Mamluks* [Beirut, 1953], 13; Aḥmad ibn Faḍl Allāh al-‘Umarī, *Al-Ta‘rīf bi-al-Muṣṭalaḥ al-Sharīf,* ed. M. Mas‘ūd [Cairo, 1894], 177–81). The northern half of the country consisted of five regions *(‘amal):* the Balqā’ (its

attested historically, having appeared in medieval geographies and been recorded in some detail in Mamluk *waqfīyāt* or Ottoman tax registers or both. All have been either excavated or surveyed and appear in formal archaeological reports. A combined analysis of all of these sources indicates that each village experienced the mixed benefits of an uneven investment in local agriculture by the Mamluk state. Moreover, two were local administrative centers and enjoyed some political prominence: Ḥibrāṣ was one of the largest villages in the Sawād in the Mamluk and Ottoman periods, and Ḥisbān served as the capital (a *wilāyah*) of the Balqā' (an *'amal*) for roughly the first half of the fourteenth century.[21]

I am most concerned in this article with determining when and where (and under what circumstances) agricultural investment in Jordan began by Mamluk officials; quantifying that investment (and determining to what degree that system was exploitative); and identifying when it came to an end, why it did. These questions can only by fully addressed by using all the sources available, that is to combine textual, archival, and archaeological data. The data gleaned from archaeological surveys, in particular, are ideally suited to a rereading and fleshing out of medieval *waqfīyāt* and tax registers. All three sources are concerned with historical and economic geography, their coverage overlapping with and complementing each other in various ways. This is an experiment in methodology that I believe is beginning to bear fruit.

capital shifted among Amman, Ḥisbān, and Ṣalt), Jabal 'Awf (and its capital 'Ajlūn), the Sawād (containing the districts, or *aqālīm,* of Bayt Rās and Fahl/Pella), the Upper Ghôr (with its center of al-Quṣayr), and the Middle Ghôr (its center was 'Amaṭah) (A. G. Walmsley, "Settled Life in Mamluk Jordan: Views of the Jordan Valley from Fahl [Pella]," *ARAM* 9 [1997]: 129; Shams al-Dīn Abū 'Abd Allāh Muḥammad al-Dimashqī, "Nukhbat al-Dahr fī 'Ajā'ib al-Birr wa-al-Baḥr," published as *Manuel de la Cosmographie du Moyen Age,* ed. M. A. F. Mehren [Amsterdam, 1964], 270 ff.). For the rank of the amirs stationed in the local capitals, see Aḥmad ibn 'Alī al-Qalqashandī, *Ṣubḥ al-A'shá fī Ṣinā'at al-Inshā'* (Cairo, 1913–), 5:207–8. This was the agricultural heartland of the country. Southern Jordan, while agriculturally less productive, on the whole was more important politically because of the prominence of Kerak in the Mamluk period. This province included Kerak, Shobak, and the Lower Ghôr. Jordan in the Ottoman period was part of Damascus Province in three parts: the southernmost sections of the subprovince of the Ḥawrān (Qaḍā' Ḥawrān), Liwā' 'Ajlūn, and Niyābat Karak. Four districts in the southern Ḥawrān in this period are located in modern Jordan: Nāḥiyat Banī Kinānah (in the Sawād, today's Irbid District), Nāḥiyat Juhmah, Nāḥiyat al-'Asar, and Nāḥiyat 'Uqbah (Bakhīt, *Nāḥiyat Banī Kinānah,* 1–2).

[21]For an administrative history of Tall Ḥisbān, see Walker, "Mamluk Investment in Southern *Bilād al-Shām,*" and idem, "Mamluk Administration of Transjordan: Recent Findings from Tall Ḥisbān," *Al-'Uṣūr al-Wusṭá* 13, no. 2 (2001): 29–33.

Northern Jordan

One of the richest agricultural regions in Jordan is the ″Sawād,″ the rolling hills and deep wadis located between the Yarmouk River and Irbid. Because it is so close to the border with modern Syria, the Sawād fell under the administration of either Syria or Jordan through the medieval and early modern periods.[22] This location placed it at the crossroads of communications and commerce; an extensive network of roads connected the regional center, Irbid, with the markets of medieval Damascus, Baghdad, Jerusalem, and Cairo.[23]

This region occupies a high plateau (800–900 meters above sea level) above the eastern slopes of the northern Jordan Valley and enjoys temperate weather and good soil.[24] It is well watered, with an average annual rainfall of 376 mm, or 15″, (heaviest in the winter), wadis with running water for at least part of the year, and numerous springs. In the Middle Ages the region was known for its forests of oak, evergreen, and cypress. During the Mamluk and Ottoman periods the Jordanian Sawād specialized in wheat, barley, and olives; today it produces some of the best olive oil in this part of the Middle East.[25] A variety of summer crops are also grown, such as lentils, chickpeas, and carobs. The rolling hills and low grass cover, moreover, make for excellent grazing: sheep and goats were a significant

---

[22]In the thirteenth century Kūrat Sawād was part of Jund Urdunn, a subprovince of the Province *(jund)* of Damascus (Muḥammad ibn ʻAlī ibn Shaddād, ″Al-A'lāq al-Khaṭīrah fī Dhikr Umarā' al-Shām wa-al-Jazīrah,″ published as *Liban, Jordanie, Palestine: Topographie historique d′Ibn Šaddad*, ed. Sāmī Dahhān [Damascus, 1963], 123, citing Yaʻqūb). By the fifteenth century Iqlīm Baysān fell under the authority of Maʻāmilat Dimashq of Mamlakat Shāmīyah (Ghars al-Dīn Khalīl ibn Shāhīn al-Ẓāhirī, ″Kitāb Zubdat Kashf al-Mamālik wa-Bayān al-Ṭuruq wa-al-Masālik,″ published as *Zoubdat kachf el-mamâlik: Tableau politique et administrative de l′Égypte, de la Syrie et du Ḥidjâz sous la domination des soultans mamloûks du XIII au XV siècle,* ed. Paul Ravaisse [Paris, 1894], 44). During the sixteenth century the Ottomans, as part of their administrative reorganization of Bilād al-Shām, defined this area as a *nāḥiyah* (district) in the southern region of Qaḍā' Ḥawrān (Bakhīt, *Nāḥiyat Banī Kinānah,* 3).

[23]Ghawānimah, *Tārīkh Sharqī al-Urdunn,* 39. This was true for the Roman period, too.

[24]Most of the region lies at 400–500 meters above sea level (JADIS entries for Khirbat Malkā and Ḥibrāṣ). Temperatures of the last ten years have ranged from a balmy 39.3° C in the summers to -.92° C in the winter, with an annual average of 18° (www.dos.gov.jo/env/annual/environment_2001). The relatively cool temperatures, high rainfall, high water table, and high percentage of humus in the soil makes this region ideal for agriculture (Kareem, *Settlement Patterns in the Jordan Valley,* 6).

[25]George Adam Smith, *The Historical Geography of the Holy Land* (New York, 1898), 612–13, describes the extensive wheat fields as they existed in the late nineteenth century. For references to olive groves and presses in the vicinity of Malkā in the fourteenth century, see *Waqfīyah* 9/51, fol. 18, l. 18, and fol 19, l. 22. Ottoman taxes on olives, olive oil, and presses have been published in Bakhīt, *Nāḥiyat Banī Kinānah.*

part of the tax base in this region during the sixteenth century.[26] It has always been a densely settled region, with numerous small villages that experienced marked population growth in the fourteenth and the middle of the sixteenth centuries.[27] Because of its continued prosperity into the nineteenth century, the region was among the first in Transjordan to fall under the jurisdiction of the Tanzimat administrators.[28]

The Sawād was, moreover, richly provided with public institutions, financially supported through endowments of largely local farmland. *Zāwiyah*s for Companions of the Prophet, pre-Islamic prophets, and local Sufi shaykhs and small village mosques[29] punctuated the landscape, as they do today.[30] The remains of a barrel-vaulted mosque still stand in the largest village of the region, Ḥibrāṣ; the minaret of another mosque, which once carried an inscription that can be dated to 686/1287, was either dismantled for building material or collapsed at some point during the

---

[26]These taxes, like all others, are published on numerous pages throughout Bakhīt, *Nāḥiyat Banī Kinānah.*

[27]For population figures from the early Ottoman period, see Hütteroth and Abdulfattah, *Historical Geography,* and Bakhīt, *Nāḥiyat Banī Kinānah*. Evidence of population growth in the Mamluk period is based on a reading of ceramics from surface surveys, architectural inscriptions (see below), and written sources. For published reports on archaeological surveys in the region, see T. Kerestes, J. Lundquist, B. Wood, and K. Yassine, "An Archaeological Survey of Three Reservoir Areas in Northern Jordan," *Annual of the Department of Antiquities of Jordan* 22 (1978): 108–35; G. King, "Preliminary Report on a Survey of Byzantine and Islamic Sites in Jordan, 1980," *Annual of the Department of Antiquities of Jordan* 26 (1982): 85–96; G. King, C. J. Lenzen, and G. O. Rollefson, "Survey of Byzantine and Islamic Sites in Jordan, Second Preliminary Report, 1981," *Annual of the Department of Antiquities of Jordan* 27 (1983): 85–437.

[28]The appointment of an Ottoman governor in Irbid in 1851 predated the Syrian Land Reform Law by thirteen years (for Ottoman administration of the Sawād in this period, see E. L. Rogan, "Bringing the State Back: The Limits of Ottoman Rule in Jordan, 1840–1910," in *Village, Steppe and State: The Social Origins of Modern Jordan,* ed. E. L. Rogan and T. Tell [London, 1994], 34–41).

[29]The Ottoman tax registers record 23 mosques in 23 villages in 950/1534 and 28 mosques in 25 villages in 1005/1596–97 (Bakhīt, *Nāḥiyat Banī Kinānah,* 15–16).

[30]Among these are the *zāwiyah*s of Shaykh ʻUthmān al-Ḥamāmī and Shaykh ʻĪsá in Malkā and those of Shaykh Mismār, Banī Ḥamīd, and Shaykh Samādī in Ḥibrāṣ (Table 9 in Bakhīt, *Nāḥiyat Banī Kinānah,* 36–37). Eight *zāwiyah*s are listed in Bakhīt's tax registers as having been supported by properties in Nāḥiyat Banī Kinānah (ibid., 16). How many of the *zāwīyah*s, and not just the *mawāqif,* were located in this region cannot be determined from these registers alone. Biographical dictionaries of the Mamluk period also describe the careers of individuals trained in such local mosques (and perhaps madrasahs). For references to shaykhs and *fiqh* scholars from Ḥibrāṣ, Malkā, and other smaller villages in their vicinity, see Ghawānimah's lists of names compiled from these sources in his *Al-Tārīkh al-Ḥaḍārī li-Sharqī al-Urdunn* (Amman, 1982), 128, 134, 181, 182, and 185–86. (He relies heavily on Ibn Qāḍī Shuhbah, al-Sakhāwī, and Ibn Kathīr.)

last eighty years.[31] According to the *defter–i mufassal* #99, there were three muezzins and three khatibs serving perhaps two mosques in the same village.[32] Large landholdings by Mamluk sultans and amirs account for the cultivation of cash crops (such as olive oil) and the withdrawal of tax revenues levied on them for *awqāf*.[33] According to the early Ottoman *defter*s of *Nāḥiyat Banī Kinānah,* some of the most productive villages (or parts of them) were endowed for institutions located outside the region. Sultan Khushqadam endowed three shares of the village of Marw (population of 28 households) and three shares of Harhar (38 households) for his madrasah in Cairo. The annual revenues for each of these villages in 950/1534 were 9900 and 9100 *aqja* respectively.[34] For Harhar the revenues came entirely from tax on wheat, the yield of which was among the highest in the region.[35] Although the size of the fields was not mentioned in any of three *defter*s for this *nāḥiyah,* those of Marw amounted to 12 feddans (approximately three acres or 1.5 hectares).[36] Although the Ottomans continued to recognize Khushqadam′s endowment, they made the rest of the remaining shares of the two estates the private property *(khāṣṣ)* of the provincial governor.

Parts of three other villages were endowed by amirs for various purposes[37]: Bulūqs (population of 3 households in 1005/1596–97) for al-ʻIzzīyah madrasah in

[31]D. C. Steuernagel, ″Der ʻAdschlūn,″ *Zeitschrift der Deutschen Palestinien Vertrag* 49 (1926): 155–56; Michael Meinecke, *Die mamlukische Architektur in Ägypten und Syrien (648/1250 bis 923/1517)* (Glückstadt, 1992), 2:65, entry #43.

[32]Bakhīt, *Nāḥiyat Banī Kinānah,* 111. This register names properties in Ḥibrāṣ that were made *waqf* for two mosques, but whether these mosques were also located in the village, as Bakhīt asserts, is not clear (ibid., 15).

[33]In the Jordan Valley these cash crops include sugar, bananas, and indigo. The excavated site of Mamluk Tabaqat Fahl falls into the same pattern of land use in this regard (Walmsley, ″Settled Life in Mamluk Jordan,″ 131). Excavations of Bayt Rās (C. Lenzen and E. Knauf, ″Beit Rās/Capitolias: A Preliminary Evaluation of the Archaeological and Textual Evidence,″ *Syria* 64 [1987]: 21–46; C. Lenzen and A. McQuitty, ″The 1984 Survey of the Irbid/Beit Ras Region,″ *Annual of the Department of Antiquities of Jordan* 22 [1988]: 265–74) and Khirbat al-Burz (C. Lenzen and A. McQuitty, ″Khirbet el-Borz,″ *Annual of the Department of Antiquities of Jordan* 29 [1985]: 175–78) provide further archaeological evidence for intensive agriculture and growing population in this period.

[34]Bakhīt, *Nāḥiyat Banī Kinānah,* 38 and 45.

[35]Only Ḥibrāṣ produced as much wheat for that year.

[36]Bakhīt, *Nāḥiyat Banī Kinānah,* 45.

[37]The registers do not provide the date the endowments were originally made. Amirs are generally not named, so it is far from certain that the *awqāf* are Mamluk in origin. While this seems to generally be the case, Bakhīt suggests that the Bulūqs and Dullūzah endowments are Ayyubid (ibid., 15, n. 36). Nonetheless, the *mawāqif* were still productive and the endowments recognized as such by the Ottoman authorities.

Damascus, Dullūzah (14 households in 950/1534) for the same institution, and Ḥawar (17 households in 1005/1596–97) for an unnamed recipient; all three were *timar*s in the mid-sixteenth century.[38] The highest revenues of any recorded year from each of the villages (2400, 2950, and 8220 *aqja* respectively) are primarily from grains; olives also figured prominently among the revenues from Ḥawar (2579 *aqja* in 950/1539).[39] The field size for Dullūzah and Ḥawar were recorded at six (ca. 1.5 acres or .3 hectare) and ten feddans (ca. 2.5 acres or 1.25 hectares), respectively.[40]

The village of Ḥibrāṣ, located eight kilometers northeast of Bayt Rās and twelve kilometers north of Irbid, was one of the largest villages in Mamluk Jordan's Sawād and the largest of the Ottoman's southern Ḥawrān.[41] Archaeological surveys have documented continuous occupation at the site from the Byzantine through Ottoman periods.[42] The remains of two contemporary mosques, both dated by inscriptions to 686/1287, have stood in the modern village of the same name until modern times.[43] The one, comprised of enclosure walls enclosing a small nine-bay mosque of later date, can be attributed to the Mamluk period on account of an inscription that once adorned its minaret, destroyed in the 1970s, and its construction;[44] nine-bay mosques, with the aisles running parallel to the qiblah wall, pointed arches, reused basalt columns (often from Byzantine churches), and deep mihrabs can be found throughout northern Jordan at thirteenth- and fourteenth-century sites.[45] Ḥibrāṣ does not seem to appear in contemporary written sources

[40]Dullūzah: p. 42 (930/1523); Ḥawar: p. 126 (1005/1596–97). In 1005/1596–97, Ḥawar's revenues had dropped to 5600 *aq*/yr.

[41]Bakhīt, *Nāḥiyat Banī Kinānah,* 15.

[42]JADIS site #2223.007.

[43]The twelve-meter high minaret that carried the dated inscription is now gone, but it was recorded in the 1920s by Steuernagel ("Der 'Adschlūn [1926]," 155–56). The inscription, not fully translated in the survey report, was apparently an abbreviated endowment text that carried the name of the donor, Caliph 'Umar ibn al-Khaṭṭāb II. Steuernagel attributes the minaret, on this basis, to 686/1286 (ibid., 156). The mosque to which this minaret was attached was no longer standing at the time of the survey.

[44]The inscription has been reproduced in Yūsuf Ghawānimah, *Madīnat Irbid fī al-'Aṣr al-Islāmī* (Irbid, 1986), 59.

[45]A published floor plan of this mosque can be found in ibid, 55. Mamluk mosques at Tabaqat Fahl, Amman, and 'Azraq (Walmsley, "Settled Life in Mamluk Jordan," 134, Figs. 3–5; 137, Fig. 6; and 137, Fig. 7) and several in the vicinity of 'Ajlūn are of roughly the same scale, construction, and design (Yūsuf Ghawānimah, *Al-Masājid al-Islāmīyah al-Qadīmah fī Minṭaqat 'Ajlūn* [Irbid, 1986]; N. MacKenzie, "Ayyubid/Mamluk Archaeology of the 'Ajlun Area: A Preliminary Typology," *Annual of the Department of Antiquities of Jordan* 46 [2002]: 615–20).

until the middle of the fourteenth century, when historians note it for its connection to scholarship and agriculture.[46] The village continued to grow throughout the Mamluk period and into the Ottoman. The village had a large population by 950/1534 (at 90 households, two "bachelors," and two imams) and has been described as "crowded."[47] It also was a market center, one on the same scale as Kerak, Ṣalt, ʻAjlūn, and Irbid;[48] the market taxes were paid directly to the provincial governor.[49] Taxes on wheat and barley supported, in part, local *zāwiyah*s and mosques.[50]

The much smaller village of Malkā, eight kilometers west of Ḥibrāṣ and seven northwest of Um Qeis, figures prominently in an unpublished manuscript in Dār al-Wathā'iq in Cairo.[51] In this lengthy *waqfīyah* of 796/1393, Sultan Barqūq has endowed several of his personal properties throughout Egypt and Syria for his madrasah complex on the Bayn al-Qasrayn in Cairo. These include businesses in Cairo, all of the district of Baḥrīyah and entire villages in the district of Kursīyah in Egypt, villages near Jerusalem, villages around the south shore of the Sea of Galilee, villages in the Golan, and a share of rural properties in the district of Maʻarrat Nuʻmān. The section of this manuscript that concerns this study deals with villages in the Lower Galilee, specifically one called "Ḥay Malkā."[52] Here is described a hilltop settlement hedged in on all sides by deep wadis, a tight network of villages and hamlets, and well-traveled roads. The land around Malkā, according to the *waqfīyah,* is full of vineyards, olive trees and presses, smaller villages, *mazra*ʻs (isolated plots of farmed land), and shrines. The only evidence in the *waqfīyah* of economic decline is the occasional reference to an outlying settlement in ruins *(kharāb),* fields that have been abandoned, or presses *(maʻāṣir)* that are no longer working *(baṭṭāl)*. This is remarkable, given the fact that the endowment dates to the end of the fourteenth century. Clearly this part of Jordan was still densely settled and economically viable then.

---

[46]Neither Ibn Shaddād nor Baybars al-Dawādār, two local sources for the late thirteenth and early fourteenth centuries, make any reference to this village (Ibn Shaddād, *Liban, Jordanie, Palestine;* Baybars al-Dawādār, *Zubdat al-Fikrah fī Tārīkh al-Hijrah*). On the other hand, in passages cited above from Ibn Qāḍī Shuhbah's chronicle, Ḥibrāṣ emerges in several annual entries, including one for 761/1359 in which the village's qadi is said to have drowned in a flood there that year, and in an obituary for 762/1360, when a religious scholar by the name of Aḥmad ibn Mūsá, a companion of Ibn Taymīyah, dies in the village.

[52]Fols. 18–21 of this manuscript.

The occupational and agricultural history of Malkā provides the perfect example of the intensified investment in the region by the Mamluks in the fourteenth century. Contemporary Arabic sources do not mention this village until the late fourteenth century, when scholars using the *niṣbah* ″al-Malkāwī″ appear in the biographical entries of Syrian chronicles. [53] The relative prosperity alluded to in the *waqfīyah* of 796/1393 seems to have continued into the sixteenth century. Its revenues in ″summer crops″ (melons, beans, and vegetables) and ″trees″ (here olive groves are likely) were among the highest in the region, according to the *defter* of 1005/1596–97. It had its own mosque by mid-century, and its population had doubled in size by the end of the century.[54] The village was still occupied in the late mandatory period and is today a thriving center of olive oil production.[55]

CENTRAL JORDAN—THE BALQĀ'

The Balqā', a highland plateau situated between Wādī Zarqā' and the Sawād in the north to Wādī Mu'jib and the Kerak Plateau in the south, has historically been one of the bread baskets of Jordan.[56] Its annual rainfall (350–440 mm) is sufficient for dry farming, and the high clay content of the local soils allow for a harvest even in drier seasons.[57] Although never a densely settled region, the Balqā' sustained a political importance as a communications corridor. The Mamluks retained the classical period ″King′s Highway″ as the caravan route through Syria and placed their pigeon, postal, and pilgrimage routes, which led travelers from Damascus to

---

[53]Neither Ibn Shaddād nor Baybars al-Dawādār mention Malkā, even though they do write about other villages in Jordan (for passages on Nimrīn and Kafrīn, for example, see Baybars al-Dawādār, *Zubdat al-Fikrah fī Tārīkh al-Hijrah*, 180).

[54]For tax entries for Malkā in 950/1534 and 1005/1596–97, see Bakhīt, *Nāḥiyat Banī Kinānah,* 88 and 162. See also Hütteroth and Abdulfattah, *Historical Geography,* 202 (entry MZ65).

[55]Hütteroth and Abdulfattah, *Historical Geography*. Archaeological surveys in this region 1885–1914 and during the 1920s and 1960s documented many of the sites discussed above (Siegfried Mittmann, *Beiträge zur Siedlungs- und Territorialgeschichte des nördlichen Ostjordanlandes* [Wiesbaden, 1970]; Steuernagel, ″Der 'Adschlūn [1926]″; idem, ″Der 'Adschlūn,″ *Zeitschrift der Deutschen Palestinien Vertrag* 47 [1925]: 206–40 and *Zeitschrift der Deutschen Palestinien Vertrag* 48 [1925]: 1–50, 121–34). (For Malkā, see Mittmann, *Beiträge zur Siedlungs- und Territorialgeschichte,* 24–25 and 257; Steuernagel, ″Der 'Adschlūn [1926],″ 118–19; and JADIS site #2223.016—″Khirbet Malkā.″) The results of these surveys indicate that occupation was most intense during the Roman, Byzantine, and Mamluk periods. Renewed fieldwork in the Malkā region by Oklahoma State University in October, 2003, aimed at updating the database of these earlier surveys (see the author′s upcoming field report, ″The Malkā-Ḥibrāṣ Survey: Archaeological Investigation of Mamluk Agricultural Policy″).

[56]The Balqā' was also known for its fruit and walnut groves.

[57]M. Russell, ″Hesban During the Arab Period: A.D. 635 to the Present,″ in *Hesban 3: Historical Foundations,* ed. L. Geraty and L. G. Running (Berrien Springs, MI, 1989), 33.

either Cairo or Mecca, in this, Jordan′s heartland. The region was also of political importance to the state, as local tribes actively participated in the internal power struggles among the Mamluk elite.[58] The capital of this district *(Wilāyat Balqā')* from early in the fourteenth century until 1356 was the town of Ḥisbān.[59] At 895 meters above sea level, this hilltop site commands a view of the Madaba Plains and the northeast end of the Dead Sea and offers a glimpse, on clear days, of Jerusalem and Jericho. According to al-Ẓāhirī, Ḥisbān was the center of an agricultural district that included over 300 villages.[60] It was also strategically located on several important communications corridors: on the *barīd* and interior pigeon routes of Syria and just off the hajj road from Damascus.[61]

Phase II excavations at Tall Ḥisbān, begun in 1998, are contributing to our knowledge of the Mamluks′ official presence in Transjordan in the fourteenth century.[62] Most of the architecture standing on the tell dates to this period, when a citadel occupied the summit. This complex consisted of what has been identified as the residence of the governor of the Balqā'[63] (a building loosely based on a

[61]Yūsuf Ghawānimah has compiled lists of postal, pigeon, and pilgrimage stops from brief references in al-'Umarī, al-Qalqashandī, Ibn Shāhīn, al-'Aynī, and Ibn Aybak in his *Al-Tārīkh al-Ḥaḍārī,* 64 and 69.

[62]The most recent excavation reports and historical studies related to the project can be found in O. S. LaBianca, P. J. Ray, Jr., and B. J. Walker, ″Madaba Plains Project, Tall Ḥisbān, 1998,″ *Andrews University Seminary Studies* 38, no. 1 (2000): 9–21; B. J. Walker, ″The Late Ottoman Cemetery in Field L, Tall Ḥisbān,″ *Bulletin of the American Schools of Oriental Research* 322 (2001): 47–65; idem, ″Mamluk Administration of Transjordan″; idem, ″Mamluk Investment in Southern *Bilād al-Shām*″; and Walker and LaBianca, ″The Islamic *Quṣūr* of Tall Ḥisbān.″ For on-line overviews of the project and weekly field reports, consult the following web sites: history.okstate.edu/depttour/histarch/index.html (Oklahoma State University) and www.quonic.com/~hisban (Andrews University). The Tall Ḥisbān excavations are under the senior direction of Dr. Øystein LaBianca of Andrews University. The author is Co-Director and Chief Archaeologist of the project. Andrews University began fieldwork at the site in 1968. For a full bibliography of this Phase I work, see B. J. Walker, ″Militarization to Nomadization: The Middle and Late Islamic Periods,″ *Near Eastern Archaeology* 62, no. 4 (1999): 202–32. Tall Ḥisbān is registered in JADIS as site #2213.001.

[63]To date I have found only one name of an amir who is said to have served at Ḥisbān: Jarkas al-Jalālī (d. 791/1388) (Ibn Qāḍī Shuhbah, *Tārīkh*, 4:308). The source does not specify the years he served at this post, only that he was a mere *jundī* when he served as *wālī* at Ḥisbān and was

four-*īwān* plan, with four clusters of rooms opening onto an open-air, paved courtyard), a small *ḥammām,* the remains of a kitchen, and a series of high barrel-vaulted rooms that may have been the barracks. The field seasons of 1998 and 2001 concentrated on the long storeroom of the "governor's residence," a room preserved by an earthquake and fire in mid-century.[64] This space was full of lamps and storage (sugar jars) and serving vessels (glazed relief wares), the latter monumental in size and bearing lengthy dedicatory inscriptions to unnamed amirs.[65] In the second half of the century the military installation on the summit was abandoned, while the town below and surrounding the tell, with an active marketplace and possible madrasah, continued to thrive until the end of the century.[66]

The architectural remains of the citadel and the objects recovered from its storeroom attest to Ḥisbān's role as an administrative center, garrison, and sugar transport point in the fourteenth century.[67] Both tell and town, however, were all but abandoned by the middle of the fifteenth century.[68] The Ottoman *defter*s of the sixteenth century suggest that the population of Ḥisbān had been reduced to a small village. The register of 1538 states that Ḥisbān was the only village between Naʿūr and Wādī Mu'jib and that it had a population of only seven households.[69] The only tax category was "olive oil and grapes."[70] By the end of the century (1005/1596), there was no permanently settled population living there *(khālī)*.[71] The village was not resettled until the late nineteenth century.[72]

---

later promoted to an "amir of 100, commander of 1000" and transferred.

[64]Earthquakes in the vicinity of Ḥisbān are historically attested for 1341, 1343, 1366, 1403–4, and 1458 (Ghawānimah, "Earthquake Effects").

[65]The inscriptions are formulaic and generic: no historically attested name of amir has yet been deciphered. The two most common are: "Among the things made [on order] of the amir" *(mimmā ʿumila bi-rasm al-amīr)* and "Glory, good fortune, achievement, and happiness [to the owner]" *(al-ʿizzah wa-al-iqbāl wa-bulūgh al-āmāl wa-saʿādah).*

[66]Walker, "Mamluk Investment in Southern *Bilād al-Shām*."

[67]There is no evidence for sugar production or processing at the site. However, water mills (of questionable date and use) have been identified during archaeological surveys (Robert D. Ibach, Jr., *Hesban 5: Archaeological Survey of the Hesban Region* [Berrien Springs, MI, 1987], 194). Moreover, the proximity of the tell to the Jordan Valley, its location on important transport routes, and the large quantity of sugar jars found in the storeroom (too many to serve the dietary needs of the garrison alone) suggest that Ḥisbān served as a sugar distribution point.

[68]The absence of fifteenth-century pottery at the site suggests this.

Central Jordan—the Lower Ghôr

The agriculture of the Jordan Valley received considerable attention from Mamluk officials over the course of the fourteenth century. High temperatures (surpassing 45° C in the summers) and an abundance of water ensured that *iqṭāʿāt* located here would be productive. Many factors contributed to the growth of large towns and villages in this region during the late thirteenth and early fourteenth centuries: the destruction of Tiberias and Baisan during the Ayyubid-Crusader wars, the new geographical division and administration of the Jordan Valley by the Ayyubids and Mamluks, security, the *barīd* system of Sultan Baybars (the routes of which now passed through the Ghôr), and the sugar industry.[73] In the Jordan Valley new villages emerged and others were transformed into agricultural storage places (for grains and sugar), industrial sites (primarily for sugar), and centers of large ″plantations″ for large-scale production of grains. Some of the most lucrative *iqṭāʿāt* were located here, and many of these were made *waqf* for sultanic institutions in Cairo.

As quickly as the Jordan Valley benefited from official investment, however, it suffered from its gradual withdrawal. The plague of 748/1347 may have been the initial cause of this decline. Maqrīzī is only one of many sources that describe this event in Jordan. He claims, ″According to the news that I have received, the people of al-Ghôr and Baisan find the lions, wolves, wild asses, and other wild animals dead and on them the trace of the bubo.″[74] The heat and crowded living conditions may have made the effects of the plague worse than in other parts of Jordan. The Ghôr, unlike other regions of the country, did not recover; many villages were abandoned, and the sugar industry eventually collapsed.

It is possible to trace these developments through textual and archaeological sources. Ottoman tax registers for Liwāʾ ʿAjlūn make reference to two villages in the central Jordan Valley endowed by the Mamluk sultan Barqūq for his madrasah-mausoleum complex in Cairo.[75] Nimrīn (185 m below sea level) and Kafrīn were little more than rest stops on a well-traveled road between Kerak and Damascus at

---

[73]Kareem, *Settlement Patterns in the Jordan Valley,* 10–11. For a bibliography on Mamluk sugar, see Walker, ″Mamluk Investment in Southern *Bilād al-Shām*.″ The best archaeological evidence for sugar processing comes from Abū Sarbut and Tall Abū Ghurdān. Tall Ḥisbān and Tabaqat Fihl appear to have been sugar distribution sites.

[74]Kareem, *Settlement Patterns in the Jordan Valley,* 16.

[75]Bakhīt and al-Ḥammūd, *Ṭābū Daftarī Raqm 970,* 102 *(defter–i mufassal* #970) and 125 (*defter–i mufassal* #185). Register #185 is based on the 1005/1591 census. Register #970, on the other hand, is undated, but has been attributed to 945/1538 by its editors on the basis of the name of one *iqṭāʿ* holder (ibid., 9). See also Mehmed İpşarli and Muḥammad Dāwūd al-Tamīmī, *Awqāf wa-Amlāk al-Muslimīn fī Filasṭīn* (Istanbul, 1982), 32, 53, and 94.

the turn of the fourteenth century.[76] By the end of the century they were lucrative enough for the sultan to have set aside the entire village of Nimrīn and shares of Kafrīn for his Cairo complex.[77] Excavations at Tall Nimrīn and surveys of the region have documented a long history of occupation in the area that peaks in the Mamluk period.[78] Evidence of sugar production in the form of water mills and *abaleeg* (sugar jars) has been identified here and in the region.[79] The Ottoman authorities respected Barqūq's endowment in both of these villages, at least through the end of the sixteenth century. They invested in the Ghôr in order to rejuvenate their tax base in the area. While Nimrīn remained a small village throughout, the population of Kafrīn grew to 43 households, which oversaw 20 feddans of some of the richest grain fields in central and southern Jordan.[80] Cotton and sesame replaced sugar cane as cash crops; the Mamluk sugar industry was never revived.[81]

SOUTHERN JORDAN—KERAK PLATEAU

Southern Jordan was dominated by Kerak Castle, which was the capital of its own province *(Mamlakat Karak),* a favored place of exile for deposed sultans, and the

nursery of sons of sultans during the Mamluk period.[82] This is one of the most inhospitable regions of Jordan; it is crisscrossed by deep canyons, is mostly desert, and, for the period under discussion, was frequented by nomadic groups who had a reputation for attacking trading and pilgrimage caravans and local villages. Contemporaries emphasized how difficult travel was there and how little water there was.[83] Nonetheless, villages, mills, *mazār*s, and *mashhad*s were numerous on the Kerak Plateau under Mamluk suzerainty. Many of these fell into ruin, however, over the course of the fifteenth century, as villages were abandoned for the security of the hills on the western and southern fringes of the plateau.[84] The withdrawal of Mamluk troops from the local garrisons, which protected these villages and the road system, quite likely contributed to this state of affairs.[85]

A partially published *waqfīyah* in the Dār al-Wathā'iq in Cairo describes the endowment by Sultan Sha'bān of the village of Ādar and a bathhouse and farmland in its vicinity in 777/1375.[86] The document describes a large and thriving farming community of 140 households (both Muslim and Christian),[87] where a variety of foodstuffs were produced (including walnuts, fruit, wheat, olives, and cheese), and there was local industry (flour mills and oil and wine presses) and public services (mosque, madrasah, bathhouse). However, the *waqfīyah* also bears witness to some degree of economic decline: 10 of the 83 houses in the village were uninhabited, as were several cisterns. By the early Ottoman period Ādar had been

---

[82]Both al-Nāṣir Muḥammad and Barqūq lived here during their periods of exile from Cairo, and it was from here that they plotted the return to their thrones. Al-Nāṣir Muḥammad, moreover, grew up at Kerak, as did the sons of Baybars. For an archaeological description of the Mamluk palace in the citadel, see R. M. Brown, "Excavations in the 14th Century A.D. Mamluk Palace at Kerak," *Annual of the Department of Antiquities of Jordan* 33 (1989): 287–304.

[83]Al-Ẓāhirī, *Zoubdat kachf el-mamâlik,* 43.

[84]Brown, "Late Islamic Settlement Patterns on the Kerak Plateau"; R. Brown, "Late Islamic Ceramic Production and Distribution in the Southern Levant: A Socio-Economic and Political Interpretation," Ph.D. diss., SUNY-Binghamton, 1992, 363–467. Archaeological surveys attest to the widespread abandonment of settlements during this period (Miller, *Archaeological Survey of the Kerak Plateau*). Jeremy Johns argues, however, that the farmers of the Kerak Plateau shifted from a market to a subsistence economy as early as the thirteenth century. For his argument, based entirely on ceramic production, see his "The Rise of Middle Islamic Painted Ware" and "The *Longue Durée*."

[85]For a recent reassessment of this period, see Shawkat Ḥujjah, *Al-Tārīkh al-Siyāsī li-Minṭaqat Sharqī al-Urdun min Janūb al-Shām fī 'Aṣr Dawlat al-Mamālīk al-Thāniyah* (Irbid, 2002), which attributes much of Jordan's social and economic decline in the fifteenth century to amiral rebellions.

[86]*Waqfīyah* 8/49, sections published in Ghawānimah, "Al-Qaryah fī Junūb al-Shām," and idem, *Tārīkh Sharqī al-Urdunn,* 243–44. The name of the recipient of this endowment is missing from the extant manuscript.

[87]Ghawānimah estimates a total population of some 700 people (Ghawānimah , "Al-Qaryah fī Junūb al-Shām," 364).

reduced to a mere *mazra'ah:* an isolated, cultivated field, with no permanent settlement.[88]

CONCLUSIONS

I have come across three Mamluk *waqfīyāt* that record sultanic endowments of agricultural land in Jordan.[89] They are roughly contemporary, dating to the end of the fourteenth century.[90] All three describe a relatively healthy economy and thriving village structure in different parts of the country. These, combined with references to Jordanian villages in contemporary sources and evidence from archaeological surveys and excavations, indicate that in terms of population and agricultural production, Jordan was doing very well throughout the fourteenth century. While there is evidence of decline in some regions of Jordan fifty to a hundred years later (villages are abandoned, certain industries disappear), this is far from true for the country as a whole.

If the Black Death of 748/1347 was the catalyst for economic decline across the Mamluk Empire, why was there an agricultural flowering in Jordan in this very period? What do the flurry of endowments, population growth, and continued market activity mean? Perhaps the importance given to this single event has been exaggerated, and attention should be paid, instead, to other factors, such as environmental change, agricultural diversity, and the peculiarities of Mamluk administration of the Transjordan. Pollen analysis of cores taken throughout Jordan indicates that the higher precipitation that allowed for increased intensive agriculture in the thirteenth and fourteenth centuries began to decrease during the fifteenth.[91] This would have heavily impacted water-intensive crops, such as cane sugar, and would have diminished overall agricultural yields for areas without irrigation.

Political problems may have been an indirect factor in the abandonment of villages in southern and central Jordan. In northern Jordan, where local farming did not have to rely on state support (to repair irrigation canals, for example) and had a diversified agricultural base (not a plantation economy), there is very little evidence of real economic or social decline. On the other hand, administrative centers (and especially those garrisoned with Mamluks, such as Ḥisbān) and "plantation farms" (Nimrīn and Kafrīn) seemed to have suffered the most from

economic and political problems in Cairo, which drew away locally-based soldiers and administrators. The affluence of the fourteenth century and general impoverishment in some of these regions in the fifteenth may be related to the successes and failures of the *iqṭāʿ* system, after its reorganization by al-Nāṣir Muḥammad during his *rawk* of 1313–25.[92] While it is dangerous to base even preliminary assessments on only a handful of villages, such a pattern of regionally based growth and decline is generally supported by archaeological surveys, which document hundreds of sites.

The traditional views on Mamluk ″decline,″ culled largely from Egyptian chronicles, do not do justice to the complexities of economic developments and settlement cycles in Jordan. Here economic trends are not so easily explained by epidemics, changes in trade routes, the depredations of soldiers in urban streets, and abusive taxation practices. Mamluk investment in Transjordan was exploitative and short-term, but only in some districts did it produce a ″boom and bust″ society for the period under consideration.

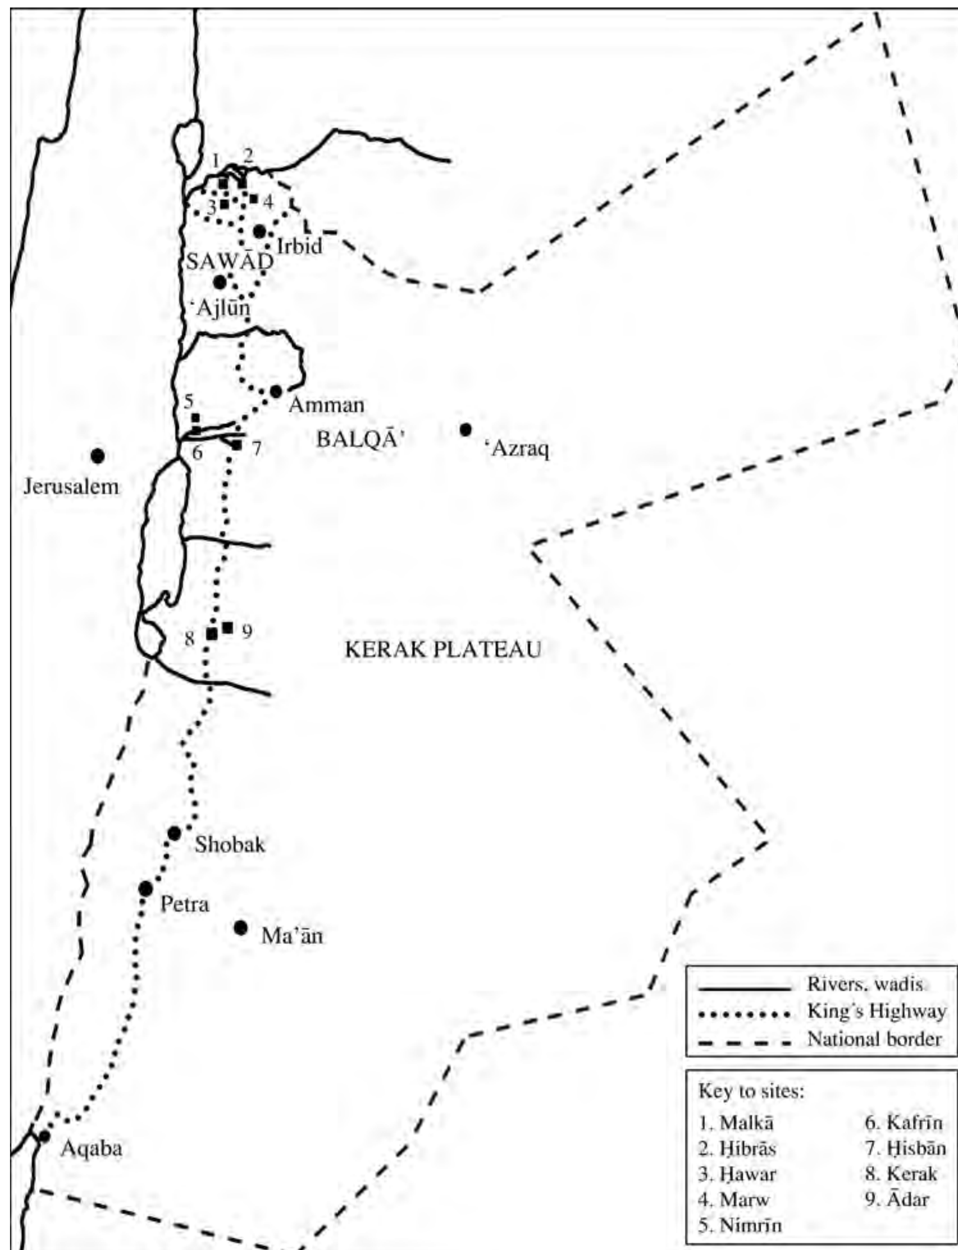

Fig. 1. Agricultural map of Mamluk Jordan.

Fig. 2. Mamluk mosque in Ḥibrāṣ. Built in two phases and reused in modern times, this mosque has never been formally excavated. A recent architectural survey by Oklahoma State University indicates that the central building, a late Ottoman or Mandate-period mosque, was built within the remains of a larger thirteenth–fourteenth-century mosque.

Fig. 3. Interior view of later Ḥibrāṣ mosque. This small, three-aisled mosque is typical of constructions in northern and central Jordan. Like many historical mosques in the region, it had no minaret: a staircase of basalt steps engaged in the exterior face of the qiblah wall led to the roof, from where the muezzin called the faithful to prayer.

Fig. 4. Modern village of Malkā. Malkā produces some of the highest quality olive oil in the region, as it did in the Mamluk period.

Fig. 5. Network of wadis surrounding Malkā. Sultan Barqūq's *waqfīyah* of 796/1393 lists numerous wadis, watercourses, springs, and hills that demarcated his estate in Malkā. It is difficult to identify the nearby wadis today with those detailed by Barqūq's scribe: the residents of Malkā today know the river beds by a variety of names, and there is little consensus among them.

Fig. 6. Tell and grainfields in Ḥisbān. Once the administrative capital of the Balqā', Mamluk Ḥisbān was known for its wheat fields, orchards, gardens, and market. Grains and olives dominate the villagers' agricultural production today.

Fig. 7. *Qa'ah* of Mamluk ″governor's complex″ at Tall Ḥisbān. When first excavated in the 1970s, the flagstones of the central courtyard were in pristine condition, and some walls were preserved to a height of a meter and a half. Although greatly dilapidated today, it remains one of only two Mamluk palaces in Jordan. It is currently undergoing restoration.

Fig. 8. Mamluk sugar jar. The Mamluks produced several different sugar products, each of varying degrees of fine or coarse crystallization and priced accordingly. Sugar cane was cut and boiled and then dried in ceramic cones, where crystallization occurred. The final product was eventually stored in cylindrical or hourglass-shaped ceramic jars for storage and transport. Sugar cones are found in production sites, primarily in the Ghôr. Sugar jars *(abaleeg)* are associated with both production sites and administrative centers, which may have doubled as redistribution points.

Fig. 9. View of Jordan River Valley. The Jordan River and the wadis that flow into it were the focus of intensive sugarcane cultivation during the thirteenth and fourteenth centuries. The industry then largely disappeared in Jordan, as epidemics decimated the workforce and the local *iqṭāʿ* system that supported the industry collapsed. By the sixteenth century cotton and indigo became the main plantation crops in the Ghôr.

Fig. 10. Wādī Mu'jib. This deep canyon, the largest in Jordan, made transport to and from Kerak Castle quite difficult. In spite of this, parts of the Kerak Plateau were fairly densely settled in the Mamluk period with well-to-do farming villages.

Fig. 11. Village of Ādar. Sultan Shaʿbān endowed this village for a charitable purpose, according to a partially published *waqfīyah* of 777/1375. Nothing of the Mamluk village remains, however; the core of the modern village is Ottoman. Today Ādar is a prosperous village of wheat farmers, a large percentage of whom are Roman Catholic.

Fig. 12. ʿAjlūn in the springtime. ʿAjlūn is located in one of the best watered and richest agricultural regions of Jordan. Unlike other areas, this part of northern Jordan appears to have been continuously occupied and agriculturally productive from the Middle Islamic period until today.

The Regime and the Urban Wheat Market: The Famine of 662/1263–64 in Cairo*

Famines and the Cairo Wheat Market

The Nile´s Annual Cycle

The typology of famines in Muslim Egypt is rather simple since famines occurred either as the result of speculation, meaning the withholding of supplies, or as a result of the Nile not rising enough. When the Nile failed to reach its plenitude the effect was twofold: on the year it occurred (the current year) and, of course, the next one. It must be emphasized that the price and availability of grain in the current year were determined by the flow of the Nile in the preceding year, which might have been normal. The shortages that were likely to occur in the current year came about as the result of buying for the future or hoarding in preparation for an impending shortage. In this case the famine took place because of a disturbance in the workings of the market mechanism, and not necessarily as a result of speculation or actual shortage. These observations become clear when one examines the annual flow-regime of the Nile and the resultant availability of grain in Cairo.

The annual rise of the Nile used to begin during the Coptic month of Ba'ūnah (8 June–7 July) and intensified during Abīb (8 July–6 August). The beginning of the rise during Ba'ūnah made it possible for boats loaded with grain to sail from both Upper and Lower Egypt toward Cairo. During Misrā (7 August–5 September, to which five to six extra days are added since Misrā is the twelfth Coptic month), the rising water of the Nile made the canal of Alexandria navigable and boats began sailing toward Cairo with grain and other agricultural products such as flax and sugar cane as well as timber and iron brought to Alexandria by Italian merchants for the government. The Nile usually reached plenitude, i.e., sixteen cubits as measured at the Cairo Nilometer, during Misrā. The new agricultural year began during Tūt (11/12 September–9/10 October) when the seeds needed for the planting of wheat and barley were delivered to the *fallāḥīn* but the actual sowing only began in Upper Egypt during Bābah (11/12 October–9/10 November). The annual rise and subsequent decrease in the level of the Nile came first in Upper Egypt while, in other parts of the country, the preparation of the land for the sowing of

*I am grateful to David Jacobi of the Hebrew University, Jerusalem, for his valuable criticism and suggestions.

grain and barley was done during Kiyahk (10/11 December–8/9 January). The harvest and threshing of the grain were completed shortly before the beginning of the rise of the Nile in Ba'ūnah.[1]

If we shift our attention back to Cairo we can note two parallel events that always took place in the capital: the observation of the rise of the Nile and the arrival of freshly-harvested grain to the ports. Progress in the rise of the Nile indicated what the fortunes of the next agricultural year would be, whereas the amount of grain available was determined by the previous year′s river-flow. Whatever the quantities of grain that arrived in Cairo were, the fluctuations in the market were related to the observation of the rise of the river—which ultimately determined the intensity and volume of the demand. It must be pointed out that the rise of the Nile was measured and announced on a daily basis and the attempt of the first Fatimid caliph in Egypt (973) to ban this, in order to prevent panic, failed.[2] The suppression of information was an ill-conceived idea since it created panic. The rise was public knowledge and clearly observable even without the measurements made at the Nilometer.

How the Cairo Wheat Market Worked

When grain arrived at the grain ports (*sāḥil* pl. *sawāḥil,* meaning docks or wooden jetties) of Cairo it was taxed.[3] This taxation is widely documented for the whole period of the Middle Ages. Ostensibly the government thus had a powerful tool in its hands to combat rising prices and to prevent the starvation of the worst-off segments of the urban population. Abolition of taxes, even temporarily, could have been an effective tool to combat both a brief (or artificial) crisis or a real and acute shortage by encouraging more affordable prices and delaying the worst of the famine for a while. Medieval regimes, however, were very reluctant to abolish

[3]In eleventh-century Cairo there were two main grain ports. One, *sāḥil Maqs,* served for unloading the grain designated for the consumption of the Fatimid palace, while the other, *sāḥil Miṣr,* served the capital and its population. Grain shipped from Upper and Lower Egypt arrived at *sāḥil al-Sa'īd* and *sāḥil Asfal Arḍ* while barley was unloaded at *sāḥil al-sha'īr*. See al-Musabbiḥī, *Akhbār Miṣr,* ed. Ayman Fu'ād Sayyid and Thierry Bianquis (Cairo, 1978), 39, 73, 78, 87, 94.

taxes on grain. For example, in 1025, taxes on grain were only lifted at the height of the famine but this was too late and too little to have any real effect on the prices.[4] Another tool in the hands of the government was the declaration of maximum prices *(tas'īr)* for grain, flour, and bread. This policy was usually implemented more readily and at earlier stages of any evolving crisis yet, as far as can be ascertained from the sources, this always had a negative effect on the market and brought sales to a standstill.[5]

The government had two further means in its hands to combat shortages in grain and high prices: importation or the sale of grain from its own stocks. The importation of grain into medieval Egypt is a complex and little-researched topic and the evidence collected and discussed by Eliyahu Ashtor is inconclusive. We do know that grain was imported to Egypt during periods of shortage at the end of the thirteenth century, and even during normal years, but whether the Mamluk authorities or private merchants were behind the imports during the years of shortage remains vague.[6] As has been demonstrated by Benjamin Arbel's work on Venetian Cyprus in the fifteenth–sixteenth centuries, grain was traded in the eastern Mediterranean and the flow of the trade was determined by regional shortages with grain surplus countries exporting to places affected by poor harvests. Other forces were, however, also at work and price differences were a powerful inducement for the exporting of grain from Mamluk Egypt or Venetian Cyprus (even during

[5]For legal and theological aspects of *tas'īr*, see D. Gimaret, "Les theologiens musulmans devant la hausse des prix," *Journal of the Economic and Social History of the Orient* 22 (1979): 330–39. For practical aspects, see Adam Sabra, *Poverty and Charity in Islam: Mamlūk Egypt, 1250–1517* (Cambridge, 2000), 138, 146.

[6]Eliyahu Ashtor, "The Wheat Supply of the Mamlūk Kingdom," *Asian and African Studies* (Haifa) 18 (1984): 283–85, 287. One of the most explicit references to massive imports of grain to Egypt concerns the famine of 694/1294–95, which was caused by the insufficient rise of the Nile. The imports of grain to Alexandria reached 300,000 *irdabb*s and the grain was imported from Sicily, Constantinople, and the Land of the Franks (perhaps France); but as to who was behind these imports, this is not specified. See Baybars al-Manṣūrī, *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* ed. D. S. Richards (Beirut, 1998), 305–6, 312. In 1396, the arrival of boats loaded with grain lowered the prices of wheat and bread in Fusṭāṭ-Cairo and brought relief to the famine-stricken capital. The crisis of 798/1395–96 was caused by excessive flooding of the Nile in the previous year, but the identity of those responsible for the imports in 1396 remains unknown. See Ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed C. Zurayk (Beirut, 1932), 9:432, 434, 435, 436.

years of shortages) toward markets offering higher prices.[7] The most effective tool the government had to combat rising prices was the selling of grain from its own stocks and forcing people of the ruling class to do the same. This point directly touches upon the essence of the Cairo grain market and needs greater elaboration.

Ira M. Lapidus has pointed out that the ruler procured the grain he needed from the lands under his direct control, shipped it to the capital and stored it in granaries as did people of the ruling class, amirs and administrators. The urban grain market operated parallel to this system, but it was occasionally influenced by the household grain economy of the regime. The ruler and other people of the ruling class sold surplus grain on the urban market and, in time of crisis, diverted and confiscated supplies going to that market. How the grain economy of the Fatimid regime worked is known from al-Maqrīzī's *Khiṭaṭ*. Al-Maqrīzī (1364–1442) combined in his account information derived from Ibn al-Ma'mūn (d. 1192) and Ibn al-Ṭuwayr (1130–1220). Lands belonging to the Fatimid ruler were scattered all over Egypt but the grain shipped for the regime to Cairo came from Upper Egypt. Grain from other regions was shipped to Alexandria, Tinnis, and Damietta and, from there, was transferred to Tyre and Ascalon. Tyre, until its fall to the Crusaders in 1124, received 70,000 *irdabb*s of grain annually while Ascalon (lost to the Crusaders in 1153) received 50,000 *irdabb*s. In Cairo the regime stored 300,000 *irdabb*s of grain in its granaries *(ihrā')* and fodder in two large *shuwan*. The most significant information is supplied by Ibn al-Ṭuwayr, who specifies to whom the Fatimid regime allocated its grain: the employees of the state and the court *(arbāb al-rutab wa-al-khidam),* those who were entitled to state sponsored charities, the black corps of the army and navy, and the royal guest house. The grain intended for consumption by the ruler and his wives and concubines *(jihāt)* was ground at special mills operated by slave-girls of the palace.[8] The Office of the Navy, also known in the Fatimid period as the Office of Holy War, maintained a fleet of Nile boats that belonged to the regime for the shipment of grain and

[7]Benjamin Arbel, "Venetian Cyprus and the Muslim Levant, 1437–1570," in *Cyprus and the Crusades*, ed. N. Coureas and J. Riley-Smith (Nicosia, 1995), 171–72. For imports of wheat to Palestine and Syria in the high and late Middle Ages, see J. H. Pryor, "In Subsidium Terrae Sanctae," *Asian and African Studies* (Haifa) (Studies in Memory of Eliyahu Ashtor) 22 (1988): 127–47; Robert Irwin, "The Supply of Money and the Direction of Trade in Thirteenth-Century Syria," in *Coinage in the Latin East,* ed. P. W. Edbury and D. M. Metcalf (Oxford, 1980), 77; Zohar Amar, *Agricultural Produce in the Land of Israel in the Middle Ages* (in Hebrew) (Jerusalem, 2000), 65–68. Most of these imports came from Sicily with small amounts coming from Egypt.

[8]Ira M. Lapidus, "The Grain Economy of Mamlūk Egypt," *JESHO* 12 (1969): 12–14; al-Maqrīzī, *Musawwadat Kitāb al-Mawā'iẓ wa-al-I'tibār fī Dhikr al-Khiṭaṭ wa-al-Āthār,* ed. Ayman Fu'ād Sayyid (London, 1995), 246–48. For shipping of firewood to Constantinople, see J. Koder, "Maritime Trade and the Food Supply for Constantinople in the Middle Ages," in *Travel in the Byzantine World,* ed. R. Macrides (Aldershot, 2002), 113–14.

firewood *(aḥṭāb)* to Cairo.[9] Altogether the Fatimid regime had one million *irdabb*s at its disposal[10] but one should add the grain sent annually to the Holy Cities of Arabia to the grain allotments mentioned by Ibn al-Ṭuwayr.

Little changed after the transition from the Fatimid-Ayyubid to the Mamluk period. Al-Qalqashandī (1355–1418) notes that grain, barley, and beans received from the lands controlled by the sultan were stored in the sultanic *ihrā'* that were located in Fusṭāṭ and at the arsenal. Fodder, designated for the royal stables, was also stored, as was most of the grain that came from the Manfalūṭ region where the taxes were collected in kind. The stored grain was sent to the sultan's mills, which were also located at the arsenal and occupied a vast closed area. The amirs did what the sultan did but on a reduced scale, storing grain and fodder and thus providing for the needs of their households and troops.[11] The clearest contrast between the household grain economy and the free markets appears in the early fifteenth-century writings of Muḥammad ibn Khalīl al-Asadī. He states that the daily wheat consumption of the capital city was 1,000 *irdabb*s, and this was divided equally between the free market and households. He maintains that the ruling establishment (*aṣḥāb al-mu'n wa-al-rawātib al-sulṭānīyah wa-al-amirīyah,* literally those employed by the sultan and the amirs), the law colleges, and the Sufi lodges consumed 500 *irdabb*s daily. Al-Asadī's figures, however, should not be taken seriously, especially since he states that the yearly consumption of the capital was 360,000 *irdabb*s of wheat, which is a misleading extrapolation from the supposed daily wheat consumption of the capital. The significance of al-Asadī's account is in its being a reflection of medieval people's awareness of the huge inequality that existed in the operation of the urban wheat market wherein a tiny minority enjoyed disproportionate supplies.[12]

It is important to note that the desire for a self-sufficient household grain economy (conduct typical of the Fatimid, Ayyubid, and Mamluk rulers and people of the ruling class during those periods) was also shared by the better-off segments of the urban society. The Geniza documents and the work of S. D. Goitein shed important light on this subject. What clearly emerges is that the wheat market was almost always a buyer's market and that prices fluctuated sharply. Goitein estimates that twelve *irdabb*s of wheat were needed annually "for an average middle-class household."[13] People of the upper middle class, and perhaps even of the middle

middle class (if such terms can be used to describe medieval society), often tried to buy the wheat needed for their household consumption as it arrived at the grain-ports of Cairo. Although they usually managed to provide for themselves they had no surpluses for sale and thus must be distinguished from the people of the ruling class and their vast stocks. It seems that people of the middle middle class could bake bread for themselves either by buying flour from a miller *(ṭaḥḥān)* or a flour merchant *(daqqāq),* yet their main problem must have been getting firewood.[14]

Other segments of the population, the lower middle class, the working class, and the vast urban underclass, were dependent for their supply of bread on the operations of the wheat market. A number of participants were involved in this supply, each with its own role, but access to these participants was class related. Two professional groups, the oven owners and the bakers/bread vendors, were directly involved in the baking and selling of bread. Information on how the oven owner *(farrān)* operated is provided by *ḥisbah* manuals (works dealing with the rules of the market). For instance, according to al-Shayzarī, Saladin's contemporary whose work might reflect more a Syrian than an Egyptian urban reality, the *farrān* used to receive dough from customers and then bake bread for them which was delivered to their homes by boys in his service. The same picture emerges from the *ḥisbah* book of Ibn Bassām, a twelfth-century Egyptian contemporary of al-Shayzarī. The differences between the *farrān* and the *khabbāz* are, however, blurred in their works,[15] an ambiguity that is also characteristic of the writings of Ibn al-Ukhūwah, a fourteenth-century Egyptian author of a *ḥisbah* manual. His chapter concerning these two professional groups, entitled "The rules of *ḥisbah* concerning the *farrān* and the *khabbāz,*" implies that both had ovens and that certain regulations about how these should be operated applied to both of them. Ibn al-Ukhūwah's account mostly deals with the *farrān* who baked bread for people who brought him dough but, in fact, he also baked bread from his own dough for others.[16] His main problem was how to secure fuel that was neither human nor animal waste, to operate the oven. The clearest evidence of the differences between the *farrān* and the *khabbāz* appears in the writings of Ibn al-Ḥājj (d. 1337), author of a moral guide who also presents a vivid picture of Cairo's street life. He corroborates Ibn al-Ukhūwah's depiction of the *farrān* as a baker who

Ḥusām al-Dīn al-Sāmarrāʼī (Baghdad, 1968), 21–23, 61–62; Maya Shatzmiller, *Labour in the Medieval Islamic World* (Leiden, 1994), 107, 108, 220–21.

[16]Ibn al-Ukhūwah, *Maʻālim al-Qurbah,* ed. with partial English translation by R. Levy (London, 1938), 91–92.

baked for others and he refers to his customers as ″owners of the bread,″ meaning he baked them bread from the dough they had brought. The *farrān*′s shop served as a kind of communal bakery and a place of social gathering while the *khabbāz* sold bread from the flour he himself bought and his customers are referred to as ″buyers.″ To what extent, if at all, the *farrān* also baked bread on his own initiative is not alluded to by Ibn al-Ḥājj. As clearly borne out by Maya Shatzmiller′s discussion of the *farrān,* the Egyptian realities alluded to by Ibn al-Ḥājj were quite similar to those in other Muslim cities.[17] We may safely assume that there were also bread vendors who had no ovens and baked no bread but bought a quantity of bread from the *khabbāz* in order to sell it in the streets.[18] They are also referred to as *khabbāz* but, apparently, they served a lower class clientele and neighborhoods farther away from the main markets. Most probably the urban underclass, and perhaps also the working class, were dependent for their daily bread on this type of *khabbāz*.

Daily dependence on the bread vendor-*khabbāz* had serious drawbacks since the price of bread varied on a daily basis and, socially, buying bread on the streets was regarded as demeaning. Food and cooked dishes were sold on the streets but eating was perceived as a private matter. This tension between what was considered to be proper conduct and urban realities is nicely illustrated by Ibn al-Ḥājj. On the one hand, he describes food vendors and the dishes they prepared and sold but, on the other hand, he advocates the partaking of food at home.[19] Another problem, according to the physician Ibn Riḍwān (998–1068), was that the bread baked in Egypt crumbled after a day and became inedible.[20] There were many qualities of bread ranging from white bread of high quality *(ḥuwwārah),* which enjoyed wide popularity and was common in Cairo and Baghdad alike, to low quality bread.[21]

[17]See *Kitāb al-Madkhal* (Beirut, 1972), 4:178, 180, 182–83; Shatzmiller, *Labour in the Medieval Islamic World,* 220–21.

[18]The clearest evidence for *khabbāz* as bread vendor is from Cairo of the mid 440s/early-1050s. A *khabbāz* referred to as *ṣu'lūk* (beggar, vagabond), indicating a low social origin, reduced the price of bread he sold and competed successfully with the *'arīf* (possibly meaning the head of the trade/profession) of the *khabbāzūn*. The market supervisor took actions against the *ṣu'lūk* but the chief qadi supported and rewarded him. See al-Maqrīzī, *Itti'āẓ al-Ḥunafā'*, ed. Muḥammad Ḥilmī Muḥammad Aḥmad (Cairo, 1971), 2:224. For a shop *(ḥānūt)* of a *khabbāz* in Cairo of 1025, see al-Musabbiḥī, *Akhbār Miṣr*, 107.

[19]See Ibn al-Ḥājj, *Kitāb al-Madkhal,* 2:322, 324, 328, 330.

[20]*Medieval Islamic Medicine: Ibn Riḍwān′s Treatise "On the Prevention of Bodily Ills in Egypt,"* English trans. and introduction by Michael W. Dols, Arabic text ed. 'Ādil S. Jamāl (Berkeley, 1984), 90 (trans.), 7 (text). J. D. Latham, ″Some Observations on the Bread Trade in Muslim Malaga (c. A.D. 1200),″ *Journal of Semitic Studies* 29 (1984): 113.

[21]The preference for white bread was deeply rooted in Middle Eastern societies. For Byzantine Egypt, see M. S. A. Mikhail, ″Some Observations Concerning Edibles in Late Antique and Early

Other types of breads common in Egypt were *khushkār,* made of coarse-ground flour, and semolina bread (*samīd*). The price differences between the *ḥuwwārah* and the *khushkār* breads are illustrated by the attempts of the *muḥtasib,* the market supervisor, to regulate their prices during the famine of 1025. He fixed the price of the *khushkār* bread at five *raṭl*s per dirham and that of *ḥuwwārah* at four *raṭl*s per dirham; however, as usually happened with price-fixing, the edict brought the market to a standstill. Following the cancellation of the edict the *samīd* bread was sold at two *raṭl*s per dirham, indicating how unrealistic the price regulation of the market supervisor had been. Although the prices continued to soar the pricing of bread continued to reflect the different qualities and preferences of the customers. The *samīd* was sold later at two *raṭl*s per one and a quarter dirhams while the *khushkār* was sold at two *raṭl*s per dirham.[22]

One last point concerns the highest level of the grain market, where we find both the wheat merchants *(qammāḥūn)* and the brokers *(samāsir)*. The *ḥisbah* manuals do not mention them at all, indicating that they were too powerful to be under the jurisdiction of the market inspector. Their wealth is well attested in the sources, but their precise role in the operation of the market still requires clarification. This is also the case with respect to the difference that existed between the roles played in the market by wheat merchants and brokers.[23]

THE FAMINE OF 662/1263–64

The information concerning the events of 662/1263–64 and Baybars′ grain policy comes from a number of highly authoritative and well-placed contemporary historians. We shall begin with the narrative of Muḥyī al-Dīn ibn ʻAbd al-Ẓāhir (1223–92), who was the head of Baybars′ chancery *(dīwān al-inshā')*. He recounts that, at the beginning of Rabīʻ II 662/end of January–beginning of February 1264, the prices went up and the sultan imposed maximum prices. Although not explicitly

[22]Al-Musabbiḥī, *Akhbār Miṣr*, 48, 72. For types of bread and bakeries, see Ch. Pellat, ″Khubz,″ *The Encyclopaedia of Islam,* 2nd ed., 5:1087–92; R. Mielck, *Terminologie und Technologie der Müller und Bäcker im islamischen Mittelalter* (Hamburg, 1913), 75, 78–79 (I owe the reference to Mielck′s work to the kindness of Thomas Bauer of Münster University).

[23]This ambiguity is reflected by al-Musabbiḥī′s report about the death (in 1025) of Ibn Saʻdān, described as a ″wheat merchant who was one of the respected brokers dealing with wheat at the Upper Egypt Dock in Fusṭāṭ.″ See *Akhbār Miṣr*, 94. For the wealth of a Christian wheat merchant in mid-eleventh century Cairo, see Nāṣir-i Khusraw, *Book of Travels*, 55–56. The memory of the wealth and generosity of a flour merchant who handed out charity to the poor during the 1060s civil war in Cairo still lingered in fifteenth-century Cairo. See Ibn al-Zayyāt, *Al-Kawākib al-Sayyārah fī Tartīb al-Ziyārah,* ed. A. Taymūr (Baghdad, n.d.), 149.

stated, it is clear that Baybars′ edict of maximum prices brought the market to a standstill. The sultan quickly realized his failure at influencing the working of the market and on 7 Rabīʿ II/8 February he rescinded the maximum prices.

Baybars′ subsequent policies were the outcome of his initial failure to influence the working of the market. It seems that on the same day, 7 Rabīʿ II/8 February, he ordered the selling of grain from the stocks of the regime to the amount of 500 *irdabb*s per day. The sale was made exclusively, and at affordable prices, to the poor *(ḍuʿafāʾ)* and widows and restricted to two *wabīʿ* per person. What makes Baybars′ policy unique is his decision to commit the resources of the regime to combat high prices at a very early stage of the crisis. The steps that followed were an extension of this policy towards other social groups and involved people of the ruling class in sharing the responsibility for the implementation of the policy. The names of the poor in Cairo-Fusṭāṭ were registered and amirs were obliged to feed groups of the poor for three months. In addition to this, people who belonged to the civilian society, such as great merchants, witnesses serving at the courts of the qadis, and other wealthy people, took upon themselves the responsibility of providing for the poor *(masākīn)*. To what extent the participation of the people of the ruling class and those of the civilian society in these efforts was voluntary or forced is not alluded to. Baybars undertook to provide for the blind, but the most interesting references are to the Kurds and the Turkmen *(turkumān)* for whom the *atābak*, or commander-in-chief of the Mamluk army, provided.[24] Apparently the Kurds and the Turkmen were both part of the *wafīdīyah* and, as auxiliary troops, their remuneration was low and insufficient in times of dearth. The high price of bread brought them to the brink of starvation and, as organized military tribal units, they had the potential for violence. Baybars, by committing the resources of the state and the ruling class, bought social peace.

According to Shāfiʿ ibn ʿAlī (1251–1330), Baybars′ biographer and the maternal uncle of Ibn ʿAbd al-Ẓāhir, the rise of the Nile in 662/1263–64 was low and, as a result, prices surged.[25] His remark indicates that the crisis of 662/1263–64 was probably caused by massive purchases of grain in anticipation of difficulties in 663/1264–65, but the supplies that existed in 662/1263–64 must have been quite normal and the regime probably had adequate grain resources at its disposal. The

Sadeque under the title *Baybars I of Egypt* (Dacca, 1956), 94–95 (text), 204–6 (trans.); ed. ʿAbd al-ʿAzīz Khuwayṭir (Riyadh, 1976), 188–90. Other accounts are strongly influenced by Ibn ʿAbd al-Ẓāhir: see al-Nuwayrī, *Nihāyat al-Arab,* 29:96; al-Maqrīzī, *Sulūk,* 1:2:507–8.

[25]See Shāfiʿ ibn ʿAlī Ibn ʿAsākir, *Kitāb Ḥusn al-Manāqib al-Sirrīyah al-Muntazaʿah min al-Sīrah al-Ẓāhirīyah*, ed. ʿAbd al-ʿAzīz al-Khuwayṭir (Riyadh, 1976), 74. According to Ibn al-Dawādārī, the rise of the Nile in 661/1262–63 was above 16 cubits but he has no data for 662/1263–64. See his *Kanz al-Durar wa-Jāmiʿ al-Ghurar*, ed. Ulrich Haarmann (Cairo, 1971), 8:94, 106.

fact that the crisis began only in February 1264 does, however, raise some questions. If indeed the crisis was a result of a low Nile and massive purchases of grain for the future one would expect it to have begun earlier (in August–September when the low rise of the Nile had already been recorded) and to have intensified during October–November 1263. Possibly the rise of the Nile was only slightly below 16 cubits and the future purchases, although not that massive, were sufficient to create a depressed market that experienced low supplies and high prices. This trend slowly gained momentum, and erupted in full force during February 1264.

The sources offer clues about Baybars′ household grain economy. Apparently Baybars needed 20,000 *irdabb*s of grain annually to bake bread for the people of his inner circle *(khāṣṣah)* and his *mamālīk* military slaves, in addition to 120,000 *irdabb*s of fodder for his stable. Another biographer of Baybars, Muḥammad ibn ʻAlī Ibn Shaddād (1217–85), says that the state (in his words, Baybars) made charitable distributions of wheat and flour to the poor and devotees in the Holy Cities of Arabia and also distributed large quantities (10,000 *irdabb*s annually) to the poor, mystics living in lodges, and the people living in seclusion in Cairo. These charitable allocations of grain must be distinguished from a special pious endowment *(waqf)* set up by Baybars for buying bread for poor Muslims. It seems that feeding the poor was quite central to Baybars′ conduct as a ruler and believer and, during Ramaḍān, Baybars used to set slaves free and supply food to 5,000 people each night. The freeing of slaves was Baybars′ personal charity, but whether the Ramaḍān food provisions were supplied from Baybars′ own grain or from the state resources remains unclear.[26]

THE WIDER IMPLICATIONS

Two issues need to be addressed when the wider implications of the events of 662/1263–64 are discussed: 1) to what extent Baybars′ policy was unique and 2) what the characteristic features of Cairo′s wheat market in a broader comparative perspective were. As simple as the typology of famine in medieval Egypt is, it should serve as a guide when the response of a regime to a crisis is evaluated. There is no point in comparing what a regime did, or failed to do, during a famine caused by the inadequate rise of the Nile to its conduct in other circumstances. The crisis of 662/1263–64 was a minor one and Baybars′ actions reflect his understanding of the limits of governmental intervention into the market mechanism. Clearly, those most adversely affected were the poor and some foreign military groups and Baybars realized that there was no point in exerting pressure on other

[26]Ibn ʻAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir,* ed. Sadeque, 24, 103 (text), 107, 217 (trans.); Shāfiʻ ibn ʻAlī, *Kitāb Ḥusn al-Manāqib,* 34; Muḥammad ibn ʻAlī Ibn Shaddād, *Tārīkh al-Malik al-Ẓāhir,* ed. Aḥmad Ḥuṭayṭ (Wiesbaden, 1983), 301–2.

participants in the market to lower prices, so he took action on his own. The grain stocks of the sultan and the military and civil elite were adequate and the supplies of new grain (determined by the harvest of 661/1262–63) were normal. The sultan could afford to dispense grain in order to achieve social peace. His policies enhance what is known about his personality, his involvement in the affairs of the state, the way he set a personal example, and his swift and determined response to emergencies.

Baybars′ biographers favorably compare his policies in 662/1263–64 to those of other rulers, whose indifference in times of crises brought great misery to people. Quite understandably they conveniently overlooked the different circumstances of each crisis and Ibn ʻAbd al-Ẓāhir′s comparison of Baybars to the Ayyubid sultan al-Malik al-ʻAdil and his actions in 597/1200–1 is quite misleading. According to Ibn al-Dawādārī (d. after 1335), in 595/1198–99, 596/1199–1200, and 597/1200–1 Egypt suffered a famine caused by the insufficient rise of the Nile. The cumulative effect was devastating and, in 597/1200–1, the signs of depopulation in the capital and the rural areas were visible, with people being reduced to cannibalism. At the height of the famine (in 596/1199–1200, according to al-Maqrīzī, or in 597/1200–1, according to Ibn al-Dawādārī), al-Malik al-ʻAdil distributed grain to the poor and his example was followed by the amirs and people of means.[27] By any comparison al-ʻAdil did more than Baybars did and under the worst circumstances imaginable. If anything al-ʻAdil′s example perhaps inspired Baybars, and providing for the poor by the sultan and other members of the elite during times of crisis became common in the Mamluk period. The responses of the Mamluk sultans, however, varied greatly and fluctuated between intervention and indifference or a late response.[28] It is difficult, almost impossible, to discern clear patterns in the way rulers dealt with crises and the assumption made about the grain ″moral economy″ in Mamluk Egypt is rather speculative, being based on a questionable model (eighteenth-century France and England) and presented with too little textual evidence.[29]

[28]During the famine of 1294–95, for example, people of the military ruling class as well as wealthy civilians, including the historian Baybars al-Manṣūrī (then an amir in Alexandria), provided for the poor, while during the crisis of 1395–96 the sultan Barqūq distributed food and charity to the poor and righteous in the capital (see sources quoted in note 6). For a detailed study of the 1294–96 crisis, see M. Chapoutot-Remadi, ″Une grande crise à la fin du XIIIe siècle en Egypte,″ *JESHO* 26 (1983): 217–46.

[29]See Boaz Shoshan, ″Grain Riots and the ′Moral Economy′: Cairo, 1350–1517,″ *Journal of Interdisciplinary History* 10 (1980): 459–61.

Any comparison made between the unique Egyptian realities and other Mediterranean regions, not to say Western Europe, is difficult and must be carefully handled. According to Paul Magdalino about forty percent of Constantinople′s grain market in the ninth–twelfth centuries was dominated by the household grain economy. The court, the Church, charitable institutions, and private people managed to secure grain supplies for themselves in a way unrelated to the ups and downs of Constantinople′s grain market.[30] Thus a basic resemblance to Cairo does exist but the differences are no less important. Supplying Constantinople with grain, from the point of view of geography (i.e., the regions from which the grain came) and transportation, was a far more complex and demanding task than it was in Cairo, which benefited from the movement of boats from Upper and Lower Egypt toward the capital.

In the case of the Cairo wheat market and, more broadly, the grain economy of Muslim Egypt as a whole, we can truly speak about *longue durée* trends. Al-Kindī, the tenth-century author of a booklet entitled the *Excellencies of Egypt,* outlined the three main grain economy realities of Egypt: 1) the country produced vast surpluses; 2) there was a close correlation between the height of the Nile′s annual rise, the agricultural fortunes, and the level of taxation; and 3) Egypt fed the Holy Cities of Arabia.[31] This was not only a question of a river-dependent agricultural economy, since the Nile and its annual flood also permeated the religious and social life of the country. Moreover, ancient Egyptian customs and festivities continued under the guise of Christianity, and later Islam, well into the nineteenth century.[32]

Al-Kindī′s last point reflected the new seventh-century realties of an Egypt slipping away from Byzantine control. Although the loss of Egypt and North Africa carried many consequences for Byzantium, the shipment of grain from Alexandria to Constantinople had already collapsed earlier. In the sixth century truly vast quantities of grain, estimated at 160,000 metric tons, were being shipped each year by a fleet of 1,200 to 1,800 ships from Alexandria to Constantinople but this *longue durée* system came to an end in the early seventh century. In 618 the distribution of public bread in Constantinople ceased and new patterns of supply

For the early nineteenth century, see E. W. Lane, *An Account of the Manners and Customs of the Modern Egyptians* (repr. New York, 1973), ch. 26. The similarities are striking and these accounts can be read as a continuous sequence.

emerged and were consolidated.[33] Writing about Constantinople after the eighth century J. Durliat has categorically stated: "Constantinople ne fut plus affamée."[34] It must be emphasized that the provision of grain to Constantinople was not only a question of overcoming geographical and administrative complexities, but frequently involved political issues relating to Byzantium's commercial relations with other Mediterranean powers. For example, in the commercial treaties between Byzantium and Venice during the rule of Michael VIII (1259–82), Venetian exports of grain from Byzantium were dependent upon the level of grain prices in Constantinople, giving priority to the needs of the local urban market.[35] Like their Byzantine predecessors, the Ottomans were much concerned with securing orderly grain supplies for Istanbul and preventing shortages. Toward the end of the eighteenth century, these efforts culminated in the creation of a special administration to deal with this problem.[36]

Returning to medieval Cairo and its wheat market, one may conclude that it was torn between the household grain economy of the regime, the ruling elite, the upper echelons of the civil society, and the free market upon which the rest of the population was dependent. Governmental intervention in the functioning of the free market was minimal and no special efforts were made to supply Cairo. This lack of interest in how the population of the capital obtained its bread stands in contrast to the Byzantine and Ottoman policies in regard to Constantinople-Istanbul.

Reconstructing Life in Medieval Alexandria from an Eighth/Fourteenth Century *Waqf* Document*

On 12 Jumādá I 726/16 April 1326, the Mamluk sultan of Egypt, al-Nāṣir Muḥammad, sold a large quantity of property in Alexandria. The purpose of this sale was to finance an increase in the salaries and allowances of the inhabitants of the *khānqāh* (Sufi convent) at Siryāqūs, some twenty miles northeast of Cairo, which he had founded the previous year. The transaction and the subsequent increases in salaries are recorded in a *waqf* (religious endowment) document from the period, now kept at the Dār al-Wathā'iq al-Qawmīyah in Cairo.[1] In the document the property to be sold, which consists of inns, dye-houses, oil presses, and other buildings, is described in great detail. The approximate positions of the buildings in Alexandria are also specified. These details allow the modern historian to collect a large amount of information regarding the spatial relationships between the individual structures and the area they occupied, as well as giving an insight into the activities that took place there.

Currently modern knowledge of the layout of medieval Alexandria (Fig. 1) is fairly sparse.[2] Writers of the period give only a general description of the city, and so this *waqf* document, published by Muḥammad Muḥammad Amīn in 1982,[3] sheds vital new light on this topic. In this article an attempt is made to reconstruct maps of the properties described and, where possible, to determine their approximate location using a combination of the document and the existing reconstructions of

*The majority of the research for this paper was conducted at the University of Toronto, with the support of the Leverhulme Trust. The author would like to acknowledge the contributions of Professor Olivia Remie Constable of the University of Notre Dame, who gave the author numerous helpful suggestions, and Professor Linda S. Northrup of the University of Toronto, who gave countless words of advice and wisdom.

[1]The *waqf* is written on the versos of two documents, 25/4 and 31/5. The rectos contain the original *waqf* of the *khānqāh.*

[2]The map is derived from those published in ʻAbd al-ʻAzīz Sālim, *Tārīkh al-Iskandarīyah wa-Ḥaḍāratuhā fī al-ʻAṣr al-Islāmī* (Alexandria, 1961), 115; idem, *Takhṭīṭ Madīnat al-Iskandarīyah wa-ʻUmrānihā fī al-ʻAṣr al-Islāmī* (Beirut, 1964), (between) 80–81, 96–97; and Martina Müller-Wiener, *Eine Stadtgeschichte Alexandrias von 564/1169 bis in die Mitte des 9./15. Jahrhunderts* (Berlin, 1992), 332.

[3]As an appendix to Ibn Ḥabīb al-Ḥalabī, *Tadhkirat al-Nabih fī Ayyām al-Manṣūr wa-Banīh,* ed. Muḥammad Muḥammad Amīn (Cairo, 1982). The document may be found on pages 419–48.

the city by modern historians, which are based on the historical sources. Consideration will also be given to the role of the properties in the city and its commercial life. A translation of the relevant part of the *waqf* document (lines 15–91) forms an appendix to the article.

Funduq al-Bayḍ wa-al-Qaṣab (Fig. 2, Lines 15–28)

The first property described in the document is listed as being a *funduq* named ″al-Bayḍ wa-al-Qaṣab.″ The modern Arabic word *funduq* means a hotel, and derives from the Greek *pandokheion*.[4] In the Middle Ages it had a similar meaning, being a hostelry where people could store goods and find lodging for themselves and their animals.[5] As Olivia Remie Constable has shown, textual references to *fanādiq* are found in documents dating from at least as early as the year 284/896,[6] and isolated references to them continue to appear during the fourth/tenth century.[7] References to *fanādiq* become much more common during the Ayyubid sultanate (564–647/1169–1249),[8] and throughout the Mamluk Sultanate (647–923/1249–1517) they occupied a position of great importance in the Levant. The majority of the clientele of these *fanādiq* were merchants.

As Martina Müller-Wiener notes, *fanādiq* were administered in a number of ways. Some were owned and administered by families or amirs who were heavily involved in trade, whereas others were dedicated to particular trades or to particular nationalities.[9] The last was particularly true in Alexandria, as European trade was

---

[4]See Olivia Remie Constable, ″Reconsidering the Origin of the *Funduq,″ Studia Islamica* 92 (2001): 195–96. The Byzantines used the term *phoundax* (itself derived from *funduq*) to refer to these buildings. Other buildings similar in function included the Byzantine *mitaton,* and the Muslim *khān* and *wakālah* (Ennio Concina, *Fondaci* [Venice, 1997], 21, 58).

[5]R. le Tourneau, ″Funduḳ,″ *The Encyclopaedia of Islam*, 2nd ed., 2:945. Mirfat Maḥmūd ʻĪsá suggests that *fanādiq* were not themselves used for accommodation, but that they normally had a *rab'* (living quarters) built above them that fulfilled this function (″Dirāsah fī Wathā'iq al-Sulṭān al-Malik al-Ashraf Sha'bān ibn Ḥusayn: al-Munsha'āt al-Tijārīyah wa-Aḍwā' Jadīdah 'alá Takhṭīṭ al-Mi'mārī lil-Fanādiq wa-al-Ribā' fī al-'Aṣr al-Mamlūkī,″ *Al-Mu'arrikh al-Miṣrī* 21 [1999]: 155–56). This distinction does not seem to be drawn in this document.

[6]Constable, ″Reconsidering the Origin of the *Funduq*,″ 196.

[7]See M. Sharon, ″A Waqf Inscription from Ramlah,″ *Arabica* 13 (1966): 77–84; Ibn Ḥawqal, *Kitāb Ṣūrat al-Arḍ,* ed. J. H. Kramers, Bibliotheca Geographorum Arabicorum, vol. 2 (Leiden, 1967), 432–33; and Abū al-Ma'ālī al-Musharraf ibn al-Murajjā ibn Ibrāhīm al-Maqdisī, *Faḍā'il Bayt al-Maqdis wa-al-Khalīl wa-Faḍā'il al-Shām,* ed. Ofer Livne-Kafri (Shfaram, 1995), 200. Although the last of these was written between 1030 and 1040, the account seems to date from the previous century.

[8]André Raymond and Gaston Wiet, *Les Marchés du Caire,* Textes Arabes et Études Islamiques, vol. 14 (Cairo, 1979), 2.

[9]Müller-Wiener, *Stadtgeschichte Alexandrias,* 250–51.

not allowed in Cairo,[10] and hence the town became Egypt′s most important center for trade between the East and the West. However, unless the name has no direct connection to the usage of the establishment, rather like that of an English public house, it would seem to indicate that the *funduq* described here is based around trades, in this case in *bayḍ* (eggs) and *qaṣab* (reeds or sugar cane), rather than being linked to a particular family or nationality.

The *waqf* states that this *funduq* is located on the southern side of the Maḥajjah al-ʻUẓmá, the main road that runs from the Rosetta Gate at the east end of Alexandria to the Green Gate at the west end. Given that the Muslims used the West Harbor of the town,[11] and might be expected to prefer shorter rather than longer trips to transport their goods (particularly in the case of eggs!), a western location on this road is not inconceivable.

The layout of the *funduq* itself seems to be slightly different from that of other Alexandrian *fanādiq* of the Middle Ages. One enters through a door into a vestibule *(dihlīz),* before coming into a central hallway *(qāʻah),* which is surrounded by other rooms, mostly storerooms *(makhāzin)* with a vault *(khaznah)* on the eastern side. The layout of the first floor is similar, with another central hall surrounded by two rooms, a pantry *(khuristān),* a utility room *(murtafaq)* and a bay window *(rawshan)* projecting out from the northern wall. Directly above the bay window is another similar bay window and a small room. One of the major sources for the layout of these buildings, the German traveller Felix Fabri, who travelled to Alexandria in 887–88/1483, describes *fanādiq* belonging to the Venetians, Genoese, and Catalans, and all of them have central spaces like those found here, but these are courtyards, rather than the halls found in this building.[12] He notes that the Catalan and the larger of the two Venetian *fanādiq* he saw are constructed like monasteries,[13] with the Catalan *funduq* in particular having bedrooms around the courtyard.[14] This implies a cloister-like structure, with buildings surrounding the

Bernhard von Breydenbach, another German traveller who made the pilgrimage in this year, notes Alexandrian *fanādiq* belonging to the King of Sicily, the Venetians (two), and the Genoese (Bernhard von Breydenbach, *Die Reise ins Heilige Land*, ed. Elisabeth Geck [Wiesbaden, 1961], 39). Symon Semeonis, an Irish friar who visited the city in 723–24/1323, notes *fanādiq* belonging to Marseilles, Genoa, Venice, the Catalans ″and others″ (Symon Semeonis, *Itinerarium Symonis Semeonis ab Hybernia ad Terram Sanctam,* ed. and trans. Mario Esposito, Scriptores Latini Hiberniae, vol. 4 [Dublin, 1960], 48–49).

[13]Fabri, *Voyage,* 694, 960.

[14]Ibid., 694.

central yard.[15] However, be it a hall or a courtyard, it seems likely that the central space surrounded by other rooms was a standard design for *fanādiq* in Alexandria. Expanding beyond the city, there are also examples of Cairene *fanādiq* from the period built in this way,[16] and Ennio Concina has shown that the design was used for *fanādiq* and similar buildings in Europe, the Byzantine Empire, and throughout the Levant,[17] although it is not clear exactly where it originated. One can imagine that it would be practical, since the central space would provide both an area for maneuvering large bundles of goods and safe overflow storage for times when the stores were full. Fabri describes the two Venetian *fanādiq* as having goods stored in the courtyard,[18] which would seem to support this possibility.

The existence of shops outside this *funduq* suggests two possibilities. Either local merchants set up shops outside *fanādiq* in order to supply travellers with goods, or the travelling merchants carried out some direct trade with the public, rather than trading entirely through agents. Either way, the location of shops outside *fanādiq* was a normal practice at the time.[19]

It is worth noting that there does not appear to be a religious building of any type in this *funduq*. This further supports the suggestion that this was not a building used by foreigners, from the West at least. As Wilhelm von Heyd notes, *fanādiq* used by Europeans had chapels, where Western priests ministered to the inhabitants.[20] In Alexandria this service would not be required by local traders, who could attend religious buildings in the city. Thus the absence of a religious building in the *funduq* suggests that it probably catered to local inhabitants, rather than Europeans.

Two of the buildings surrounding the *funduq* are of particular interest. The ruined bath on the west side is interesting as there seems to be a link between baths and *fanādiq*. It is understandable that hot, sweaty travellers might be relieved to find a bath near the *funduq* in which they were staying, but what is interesting is that the bath is ruined. The historian al-Maqrīzī (766–845/1364–1442), in his

---

[15]This is also in accordance with the description given by Wilhelm von Heyd in *Histoire du Commerce du Levant au Moyen Âge* (Leipzig, 1923), 2:430.

[16]For other examples from the period, see Sylvie Denoix et al., *Le Khan al-Khalili et ses Environs: Un Centre Commercial et Artisanal au Caire du XIII^{e} au XX^{e} Siècle,* Études Urbaines, vol. 4/1–2 (Cairo 1999), 2:8–10 and 105–8 (both in Arabic section).

[17]Described in Concina, *Fondaci.*

[18]Fabri, *Voyage,* 960.

[19]See ʻĪsá, "Dirāsah fī Wathā'iq," 143.

[20]Heyd, *Histoire du Commerce*, 2:433. According to Fabri's work, this is true of the Genoese, Catalan, and at least one of the Venetian *fanādiq*. See Fabri, *Voyage,* 691–92, 959. Muslim *fanādiq* did sometimes contain mosques or rooms for prayer. However, this is not the case with regard to either of the *fanādiq* mentioned in this document.

description, or *Khiṭaṭ,* of Egypt, refers to two *fanādiq* in similar locations in Cairo. The Funduq ʻAmmār al-Ḥammāmī, in the area of Suwayqat al-Masʻūdī, was built on the site of a ruined bath,[21] and the great *funduq* of the Office of Inheritances, in the area of al-Akfānīyīn, was built next to similar ruins.[22] This might suggest that there was something provided by such ruins that *fanādiq* required. The most likely answer is that *fanādiq* required large quantities of water for both the inhabitants and their beasts. However, in the face of a lack of definite evidence, this must be regarded as mere speculation for the moment.

The second building of interest is the madrasah on the other side of the baking oven and ruined bath. The madrasah is that of Abū Ṭāhir ibn ʻAwf, which was established by Riḍwān al-Khashī, the vizier of the Fatimid caliph al-Ḥāfiẓ, in 533/1137.[23] Unfortunately, the identification of this madrasah is of limited use in establishing the precise location of the *funduq*. Although the madrasah was well known in the Mamluk period, nothing remains of it today[24] and its exact location is unknown.

FUNDUQ AND SESAME OIL PRESS (*FUNDUQ WA-MIʻṢARAT AL-SHĪRAJ*, FIG. 3, LINES 28–45)

The second property described consists of two buildings, another *funduq* and a sesame oil press. It is difficult to determine the exact location of these two buildings, as no information is given regarding this apart from that they are on the eastern side of Musk Alley, as shown. The fact that they are bordered to the south by three markets might suggest that they are on the northern side of the Maḥajjah al-ʻUẓmá, between the East Mosque and the Sea Gate, for as Müller-Wiener notes, it is here that most of the markets were located.[25] However, this location is by no means certain.

This second *funduq,* which is not named, is constructed in a similar fashion to the Funduq al-Bayḍ wa-al-Qaṣab, although its layout is more complex. Once again, it has the central hall surrounded by stores. However, instead of another hall on the first floor it has a wooden gallery *(riwāq khashab)* which goes around the space above the hall below and crosses it from east to west.[26] This seems more

---

[21]Ḥammām Ibn Qaraqah, listed in al-Maqrīzī, *Al Mawāʻiẓ wa-al-Iʻtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, n.d.), 2:81.

[22]Ḥammām ʻAjīnah, listed in ibid., 2:81.

[23]Sālim, *Tārīkh al-Iskandarīyah,* 63–4. See also Ibn Ḥabīb, *Tadhkirat al-Nabih,* 430, n. 4.

[24]Sālim, *Takhṭīṭ Madīnat al-Iskandarīyah,* 79–80.

[25]Müller-Wiener, *Stadtgeschichte Alexandrias,* 241.

[26]A similar arrangement is found in the layout of the Funduq al-Ḥujar, in the area of Bāb al-Zuhūmah in Cairo. This building is recorded in the *waqf* of the sultan Barsbāy, written in

in accordance with the standard design of *fanādiq* described earlier, in that the central space at ground level is open to the elements. The gallery is surrounded by rooms upstairs, in what seems to be the usual arrangement. The stores on the eastern side of the first floor are used by *(maḥmūl ʻalá)* shops in the Carpenters′ Market to the south. Again, there are shops outside the door, suggesting direct trade was carried out with the public, and there are no religious buildings in the *funduq,* implying that it catered mainly to local inhabitants.

Immediately to the south of the *funduq* is a sesame oil press. This is a simple, two-storey building with a baking oven, an animal stall, and a variety of pieces of equipment for making the oil in a small rectangular area on the ground floor. On the first floor are two stores. The existence of this press is interesting as, according to Subhi Labib, Egypt imported oil, most particularly sesame oil,[27] which was rarely produced in the country.[28]

It is not clear if there was a link between the press and the *funduq,* or whether they are mentioned as being together purely for convenience′s sake. The *funduq* door, the public fountain, and two shops to the north of the *funduq* door are contributory to *(ḥāmilah ilá)* the mosque next door. This fact, and the fact that several stores are used by two shops in the Carpenters′ Market, as mentioned above, suggest a fairly high level of interaction between the *funduq* and other local properties and institutions. In the case of the stores that are used by the shops in the Carpenters′ Market, the use of storage space nearby is understandable. However, the precise relationship between the mosque, its shops, and the *funduq* is less clear. It seems that the *funduq* is required in some way to contribute to the mosque′s upkeep, but what form this takes, and why only parts of the property are regarded in this way, remains a mystery. It may be that the incomes of these parts of the property are a *waqf* for the mosque.

GLASS-WORKS (*ZAJJĀJAH,* FIG. 4, LINES 45–52)

The next property described is a glass-works, which according to the document is located in an area known as the (two) baths of al-Akhawayn. The location of this area is unknown, but as the property contains a well that is described as being on the Nile, this might place it on the western side of the city, where the *khalīj* from the river passes through it.

The glass-works, which the *waqf* states was originally a soap-works *(ṣabbānah),* consists of a vestibule that goes past two rooms and a well, before ending at a

---

846/1442. It also has an upper storey that overlooks the courtyard, although this does not include a gallery (see Denoix, *Khan al-Khalili,* 2:8–10 [Arabic section]).

[27] Labib, *Handelsgeschichte Ägyptens,* 39

[28] Ibid., 321.

hall. On the opposite side of the hall is a store, a room where the glass is made, and a *sābāṭ,* which Muḥammad Muḥammad Amīn and Laylá ʿAlī Ibrāhīm describe as a raised passageway which would normally pass between two buildings above ground level.[29] Since the *waqf* does not state that the rest of the building is above ground level, this definition does not seem to be appropriate here. It is more likely to be a roofed passageway at ground level. A number of properties in this document include these structures, as will be shown below. The passageway contains a number of pieces of equipment that are left over from when the building was a soap-works.

It is interesting that the glass-works is bordered by the house of a Jewish jeweler to the north, and the house of a (presumably Muslim) swordsmith to the east. The existence of these craftsmen side by side suggests that Alexandria may not have had sharply delineated quarters defined by the religions of their inhabitants, but consisted rather of a mix of peoples living throughout the town. However, in the face of a lack of further evidence, it is difficult to say how far this one instance is representative of the general situation.

DYE-WORKS (*MAṢBAGHAH,* FIG. 5, LINES 52–57)

This dye-works is one of two properties that the *waqf* describes as being located in an area called "al-Qamarah."[30] As ʿAbd al-ʿAzīz Sālim notes, in the Classical era the gate at the western end of Alexandria was known as the Gate of the Moon.[31] It might be that the area near the gate would have picked up its name. If one were to assume that the name of the gate was carried over after the Muslim conquest, becoming Arabicized to "Bāb al-Qamar,"[32] before falling out of use in favor of the name "al-Bāb al-Akhḍar" (the Green Gate), it might be that the name of the area nearby would also have become Arabicized, becoming "al-Qamarah" (the crescent moon).[33] This would place this property at the west end of Alexandria, near the Green Gate.

One enters the dye-works through a vestibule containing a well, before coming into a hall, on the opposite side of which is another hall, a *sābāṭ,* a room, and a staircase leading up to another room. On the north side of the building, to the west of the vestibule, is another area where dyeing kettles are made.

---

[29]Muḥammad Muḥammad Amīn and Laylá ʿAlī Ibrāhīm, *Al-Muṣṭalaḥāt al-Miʿmārīyah fī al-Wathāʾiq al-Mamlūkīyah* (Cairo, 1990), 60.

[30]The other is the slaughterhouse listed next in the document.

[31]Sālim, *Tārīkh al-Iskandarīyah,* 19.

[32]This is the name used by the Arabic sources (Sālim, *Takhṭīṭ Madīnat al-Iskandarīyah,* 42).

[33]It is known that the Muslims did not change the layout of the town when they conquered it (ibid., 69).

Textiles formed a large proportion of the industry of Alexandria. As one of the major trade centers between the East and the West, it was well positioned to take advantage of the dyes that passed through the town. Labib describes numerous dyes that came to Egypt from India and places further east.[34] Thus it is likely that this building was very important to merchants who dealt in textiles. It is probably no accident that it was built immediately to the north of the silk *funduq*.

SLAUGHTERHOUSE (*MASLAKH,* FIG. 6, LINES 57–61)

This is noted as being the second property in al-Qamarah, but beyond that little information is given. The properties around the building are mentioned, consisting of two houses and a dye-works. However, the description of the building itself is very brief.

DYE-WORKS (*MAṢBAGHAH,* FIG. 7, LINES 61–69)

This property is located in an area called al-Qaṭṭābīn, and would appear to be on the other side of the area of Bi'r Ḥar, to the east of the slaughterhouse just mentioned, as the document states that the road runs from this property west to Bi'r Ḥar, whereas the road was described as running east from the previous property to the area. Assuming the area is not huge, this would place this property in the western end of the city, near al-Qamarah. This proposed location is further supported by the existence of a well on the Nile canal inside the building.

The description of this building is slightly confused, particularly as the Arabic word ″*mutaqābil*″ may mean either ″being opposite″ or ″being together with.″ In particular, the two *īwān*s are described as ″*mutaqābil*″ but then it is stated that one is in the north, and the other in the west. The map given presents what seems to be the most likely arrangement.

SCALDING-HOUSE (*MASMAṬ,* FIG. 8, LINES 69–72)

The description of this building is very brief. It is described as being a large building roofed with wood and palm fronds in the area of Lesser Ḥaddādīn. The properties surrounding it are also mentioned, consisting of a blacksmith′s shop, an oil press, and the Qaysārīyat al-Nashā, which may be a perfume workshop. Apart from that there is no further information.

SESAME OIL PRESS (*MA'ṢARAT AL-SHĪRAJ,* FIG. 9, LINES 72–78)

This property is in the area of Dār al-Jadīdah, Qaysārīyat al-A'jām, and Furn al-Sabbānah. ″Qaysārīyat al-A'jām″ translates as ″the trade complex of the non-

[34]Labib, *Handelsgeschichte Ägyptens,* 334–35.

Arabs,″ which might place the property in the eastern half of Alexandria, near the harbor used by foreigners.

The description of the property is confused, seeming to make little sense when it is drawn out, and so the map presented here should be seen as a particularly rough reconstruction. In particular, it has been assumed that the entrance passage turns to the north, in order to allow for the existence of rooms on either side of it, even though this is not specified in the document. Again, the existence of this press seems to contradict Labib′s suggestion that sesame oil was rarely produced in Egypt.

SLAUGHTERHOUSE (*MASLAKH,* FIG. 10, LINES 79–83)

This slaughterhouse is described as being in the area of the Great Market, to the south of it. Considering that the *funduq* and sesame oil press described in lines 29–45 of the document are described as being to the north of the Great Market, this would place this property somewhere to the south of these, perhaps on the northern side of the Maḥajjah al-ʻUẓmá, between the East Mosque and the Sea Gate, where most of the markets were located.

The description of the property itself is extremely brief, and as it seems to consist of only a vestibule and a *sābāṭ,* it is not clear exactly where the actual slaughter of animals takes place. It is surrounded by a shop, a bench where skins are sold, a mosque, and an area where taro is grown.

BAKING OVEN (*TANNŪR,* FIG. 11, LINES 83–91)

The last urban property described in the document[35] is a baking oven on the southern side of the street running from it in the direction of Saqīfat al-Zardī. It includes an upper level, which seems to include a way down to the hall below. However, it is not clear how this is achieved, and so a way down has not been marked on the map.

CONCLUSION

It is important, when conducting a study of this type, to remember that one is dealing with possibilities, rather than definite facts. The information presented in the *waqf* document is unclear, with the descriptions of the buildings being vague and sometimes confused. This suggests that the scribe was not actually at the properties when the descriptions were written. In addition, it is notable that towards the end of the list of properties the descriptions gradually become shorter and less detailed, with more difficulties regarding the feasibility of the layouts described.

---

[35]The document also describes a piece of rural property which is sold to help finance the *waqf.*

This, combined with increasing omissions of words (particularly *″yantahī″* [extends] in the description of borders) suggests that the scribe may have become either rushed or bored with this part of his work. Given that the rest of the document is carefully written, the latter seems more likely. One additional problem with the descriptions of the properties sold is that they lack any measurements.

As a result of the problems with the descriptions, the maps presented here must be regarded as possible interpretations, rather than definite representations. Likewise, the interpretations of the relations between the properties, the surrounding environment, and the local inhabitants, based as they are on sparse historical records and a relatively small quantity of modern scholarship, must also be regarded as remaining open to debate. However, despite the tentative nature of the reconstructions presented here, they present a model that may be enhanced and refined as more information becomes available in the future, and so remain a valid contribution towards our knowledge of the geography and history of Alexandria.

Regardless of the problems with the reconstruction of properties, this document still sheds an important light on al-Nāṣir Muḥammad and his involvement in Levantine trade. The properties being sold by this sultan represent a wide range of trades and commodities, including reeds or sugar cane, eggs, sesame oil, glassmaking, dyeing, slaughter of livestock, and preparation of meat and bread, to say nothing of income from accommodating merchants and travellers in the *fanādiq*. As has been noted by Eliyahu Ashtor and Ira M. Lapidus, the Mamluk sultans and amirs of Egypt, including al-Nāṣir Muḥammad, were frequently involved in the exploitation of products of particular commercial importance, of which sugar was one,[36] so his ownership of a *funduq* which may have been involved in this important trade is not surprising. However, it is interesting to note how many other trades al-Nāṣir Muḥammad was involved in. It would not be unreasonable to suggest that this mercantile policy might also have been employed by the Mamluk amirs, in order to avoid being vulnerable to crises in the market for a particular commodity.

Many of the trades represented by these properties declined significantly during the eighth/fourteenth and ninth/fifteenth centuries. Most particularly, the trade in sugar, textiles, glass, oil, and soap suffered in the face of increasing European competition.[37] Amalia Levanoni traces the origins of this decline back to excessive expenditure during al-Nāṣir Muḥammad′s reign, during which there was also a

Kedar, Variorum Collected Studies Series (Croft Road, Hampshire, and Brookfield, Vermont, 1992), 237–40; and Ira M. Lapidus, ″The Grain Economy of Mamluk Egypt,″ *Journal of the Economic and Social History of the Orient* 12 (1969): 1.

[37]Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad ibn Qalāwūn (1310–1341)* (Leiden and New York, 1995), 140–41.

significant decline in the transit trade with Europe.[38] In this light, the sale of a number of properties associated with trades that would eventually wane seems ominous, although it may be too early to read any greater significance into it.

The use of contemporary legal documents is a relatively new field in Islamic studies, simply due to the fact that it is only recently that collections of such documents have become available to modern scholars. In addition to giving insights into both the possible geography and urban life of medieval Alexandria and the mercantile policy of al-Nāṣir Muḥammad and the Mamluk amirs, this article illustrates one way in which these documents may be used to complement the evidence of textual sources, illuminating aspects of urban history that they neglect.

[38]Ibid., 142–96.

APPENDIX

15.[39] . . . All of the *funduq* that is in the protected port of Alexandria, known as Funduq al-Bayḍ wa-al-Qaṣab.

16. He is appointed to sell it[40] and the four shops outside its door and the upper level overlooking the north side of the *funduq* mentioned

17. and its shops mentioned. It is on the Maḥajjah al-ʻUẓmá. On the southern side of it [the road] on the east side are two of the shops of its [the *funduq*'s] property, and on the west side of it are two shops

18. also of its property. One enters from the door of the *funduq* to a vestibule that has a platform on the western side of it. Then one enters a hall

19. in which, on the eastern side, there are three stores containing the property of others. Next to them is a door through which one enters a vault, which is part of the property of this *funduq*.

20. That is going round in a circle from the south.[41] On the west side there are also three stores. On the north side to the east of the vestibule are two stores,

21. and to the west of the vestibule is one store. On the opposite side of the *funduq* are three stores. The door of the overlooking upper level mentioned is to the west of the two western shops mentioned.

22. One goes up from it on a stone staircase to a vestibule, then to the door of a marbled hall. On the western side of the hall is a room, and opposite it is a room like it. On

23. the southern side is a platform, next to which is a door to the utilities. Opposite the platform on the northern side is a bay window made of baked brick and lime. In it are

24. windows with wooden shutters looking out over the road. Next to the bay window is a pantry in which is a wooden staircase. One goes up it to a bay window, above the bay window

25. mentioned, with windows with wooden shutters also looking out over the road. Next to it is a small room in which is a staircase. One goes up it to the roof above.

26. Four borders surround that [property]. The southern [border] extends to the crypt, which is the tomb of the Muslims. Its second border, which is the northern [border], extends to the

27. main street, which is the Maḥajjah al-ʻUẓmá, in which is its door. The eastern [border] extends to a house known as [belonging to] Shihāb al-Ḥall, the

---

[39]The description begins on the fifteenth line of the document.

[40]Reading *"li-bayʻihi."*

[41]In other words, from south to north one has a store, another store, another store, and then a vault.

house of Muḥammad al-Karābilī and the upper level known as
28. [that of] Ibn al-Zarqā. The western [border] extends to the ruined bath and the baking oven, which separate it from the ʿAwfī madrasah. And [also being sold is] all of
29. the *funduq* and the sesame oil press and the five shops outside their doors, which are in Alexandria in the area of
30. Musk Alley. The sesame oil press is outside the *funduq* mentioned. The doors of these places are on[42] the east side
31. of the alley mentioned. One sees their doors from the west. One enters the *funduq* through the door to a vestibule on the southern side of which is a platform,
32. [then] one enters a hall. On the northern side of it are four stores, in one of which is a cistern. On the eastern side of it are also four stores
33. and a staircase with stone stairs. One goes up it to a long passageway in which are six stores. These stores are used by shops in the Carpenters´ Market.
34. Some of them are religious bequests. On the southern side of the lower part of the *funduq* are three stores. On the western side is a false door. On the eastern side
35. is a staircase that one goes up on stone stairs to a second level, on top of the stores below, and a wooden gallery with wooden bannisters. In the middle of the
36. gallery is a gallery with wooden bannisters extending from it, from the east side, to the west side. On the northern side of the
37. second level are four rooms, on the eastern side are five rooms, on the southern side are four rooms, and on the western side are four rooms.
38. Then one goes down to the hall of the *funduq* and one finds next to the platform of the vestibule a door in which is a staircase. One goes up it to the roof of the *funduq* mentioned. One goes out of the *funduq* and one finds next to it, on the southern side, the door of the oil press. One enters through it to a small rectangle in which is a baking oven. Opposite it is
39. the sesame oil [grind]stone. On the northern side are oils and kneading troughs. Above the oil press shop is a store for sesame seeds. To the west of it [the store] is another store. To the north
40. of the [grind]stone is an animal stall. The two stores were property of the *funduq* mentioned. To the south of the door of the oil press are three shops, and to the north of its door
41. is the door of the *funduq,* the cistern of a public fountain, and the two remaining shops. The door of the *funduq* and the cistern of the public fountain[43] and the two shops next to

---

[43]Reading ″*ṣahrīj al-sabīl*.″

42. the cistern are contributory[44] to a mosque there. That is surrounded by four borders. The southern [border] extends to the two shops separating the southernmost shops
43. outside the door[45] from the Great Market, which extends from it to the Carpenters′ Market on the east side and to the market . . .[46]
44. on the west side. The northern [border] extends to the mosque mentioned and to the *funduq* known as [that of] al-Jamālī ʻAbd Allāh ibn Ḥasan ʻAlī. The eastern [border extends] to the Qaysārīyah
45. al-Jukundārīyah, known now as Sufi dwellings. The western [border] extends to the street in Musk Alley, and in it is the door. And [also being sold is] all of
46. soap-works, which is now a glass-works for making glass in the protected port of Alexandria in the area of the two baths of al-Akhawayn, on the
47. eastern side of the passing alley, which is on the northern side of the two baths mentioned. One enters through its door into a vestibule in which, on the left
48. of the one entering, is a room. Opposite it is a utility room. Next to the door of the room is a cistern, then one enters a hall, in the eastern side of which is a *sābāṭ*
49. and two pillars. In it is a copper dome for making soap and also basin troughs for the soap. Opposite this *sābāṭ* is a room, next to which is
50. a well on the Nile canal. On the opposite side of the hall is a large room for making the glass, next to which is a store. Four borders surround that. The southern [border] extends to
51. the main street to the two baths mentioned and other places. The northern [border] extends to the house of Mūsá the Jewish jeweller. The eastern [border extends] to the house of Muḥammad
52. the swordsmith. The western [border] extends to the main alleyway, and in it is its door. And [also being sold is] all of the dye-works
53. that is in the port of Alexandria in the area of al-Qamarah. One enters through its door into a vestibule in which is a well, then one enters a hall in the southern side
54. of which is an *īwān*.[47] Opposite it is a place in which dyeing kettles are made. Opposite it is a *sābāṭ* with pillars. Next to it is a room, and next to the room is a staircase. One goes up
55. it on stone steps to another upper room above the lower room mentioned. Four borders surround that. The southern [border extends] to the silk *funduq*

---

Thirty Years after Lopez, Miskimin, and Udovitch

Some thirty years ago, Robert Lopez, Harry Miskimin, and Abraham Udovitch boldly set out to depict the economic panorama of post-plague Europe and the Middle East in their article, ″England to Egypt, 1350–1500: Long-Term Trends and Long-Distance Trade.″[1] Within the confines of England, Italy, and Egypt, they described a widespread pattern of economic deterioration. This degeneration, they argued, was the product of several factors. One of these was the little ice age.[2] The little ice age was a period of climatic change that broke the warm spell in northern Europe and brought with it drenching rains and horrifically cold winters. In England, this heavy rainfall coupled with icy winters ushered in a famine the like of which had never been seen before or since.[3] In other areas, such as southern Europe, it may have accelerated soil erosion. In the Middle East and Central Asia, they speculated that it might have ushered in a dry spell that brought similar catastrophic famines to these regions. Another factor that affected all of these regions was the intensification of warfare.[4] From the Hundred Years War in Europe to the campaigns of Tamerlane in the Middle East, warfare brought with it widespread devastation to urban and rural areas alike. Finally, they argued that plague ushered in a major demographic retrenchment that was followed by a severe and widespread economic depression.[5]

Lopez, Miskimin, and Udovitch focused on two major aspects of the subsequent economic depression: social stratification and the lack of bullion engendered by the imbalance of trade flows between East and West, North and South.[6] Economic dislocation, they argued, brought with it an end to the comparatively open and democratic society of the age of prosperity and separated society into two

---

differentiated compartments. At the top were the rich and powerful few and, at the bottom, were the hard-pressed and degraded multitude.

The second focal point of their argument follows from the first: the enriched upper stratum of society poured money into the luxury goods of long-distance trade. The result of this trade was that gold and silver flowed from Northern to Southern Europe.[7] From Southern Europe, it flowed to the Levant.[8] From the Levant, the drain of bullion finally found a resting place on the shores of India, from which highly valued spices were exported.[9]

Their analysis of the economic dislocations of the fourteenth and fifteenth centuries beg for a fresh scrutiny. I will challenge here both the importance of these international trade flows and the universality of economic stratification in Western Europe and the Middle East.

I will focus on other factors that test their depiction of this period as one of unremitting depression and stratification in all the areas that they study. Lopez, Miskimin, and Udovitch found an equally dismal scenario in England, Italy, and Egypt. I will contest some of their findings here by comparing the situation in England with that in Egypt, illustrating the important contrasts in the economic reaction of both economies to depopulation from the Black Death. This analysis will, at the same time, shift our focus away from long-distance trading patterns to the more significant developments that were taking place in the domestic economies of these two regions.

Regarding the situation in England, Harry Miskimin offered a picture of economic depression aggravated by increasing disparities in the incomes of the upper and lower stratum of society. This was coupled with increasing purchases by the upper class of luxury goods flowing in from the south. I contend that this picture is at best incomplete, and in many areas contradicts more recent research on the economic profile of England after the Black Death.

By any economic measure of income, the most prosperous caste in England was the landholders. If a rising disparity between rich and poor became evident, one must then ask if this upper stratum of society benefited or lost from events that followed plague depopulation. If it is Miskimin's contention that the upper stratum of society became relatively wealthier in the wake of the plagues, then we must look to this class to discern a pattern of wealth distribution from the poorer classes to the richer ones.

Plague depopulation in England brought with it a situation in which landholders found themselves challenged by the relative scarcity of rural labor and abundance

---

[7]Ibid., 101–6.

[8]Ibid., 109–10, 114–15.

[9]Ibid., 128.

of arable land. Landholders were faced with conditions in which the price scissors threatened their economic status. On the one hand, the decrease in grain prices ate away at their revenues. On the other hand, peasant demands for reduced rents and higher wages exposed them to increased costs of production.[10] English landlords attempted in vain to battle with the economic demands of scarce labor, but their failure to effectively band together over a long period of time meant that market forces eventually ruled the day.[11] Wages rose, rents decreased, and both of these phenomena took place within the context of falling grain prices.[12] Landlords, not their peasants, were squeezed by the new economy which arose in the wake of the plague. Not for nothing is the fifteenth century known as the ″golden age of the peasantry.″ This was not an era of rising disparities in income; it was, in fact, quite the opposite.

On another economic level, Harry Miskimin glides over dramatic changes that were taking place in the English economy. The collapse of the manorial system, rising per-capita incomes, and scarcity of labor created opportunities for peasants to become producers in rural industries that were cropping up.[13] Most notable is the rise of the cloth industry. Here, finished goods took the place of unfinished wool in the export industry. Granted, the overall revenues from wool and cloth exports dropped, but one must keep in mind that population had dropped significantly at the same time. Per-capita exports of finished goods certainly increased, and the

new phenomenon of exporting finished cloth was one that would never be reversed.[14] Of equal or greater importance was the increase in demand and supply in the domestic market for cloth, due to higher incomes below the economic strata of the landlords. The rise of the peasantry equaled the rise of a new class of consumers that buoyed England's economy in the fifteenth century.[15]

England's economy was not suffering from rising income disparities, nor was it suffering from a collapse in trade; domestic consumption more than made up for the loss of raw wool exports. Was this even an economic depression, as Miskimin maintains? The answer here would again be no. The profile of a classic economic depression is missing. Rising wages and rising profits in the arena of proto-industry are hardly hallmarks of an economic depression. An overall rise in per-capita income also serves to negate the profile of a classic economic depression.[16] I would argue that post-plague England in fact went through a positive period of what we would now call "structural adjustment." We will look at this again as we turn to study the case of Egypt after the Black Death.

Egypt provides us with a sharp contrast to events that took place in England. Here, landlords were highly successful in squeezing the peasantry in the wake of the plague. The reasons for this lie in the complex mechanism of landholding that existed in Egypt. Egyptian landlords were economically less tied to their individual estates due to frequent transfer of estates from one hand to another, the lack of inheritance, scattered holdings, and, above all, the filtering role played by the Egyptian urban-rural bureaucracy.[17] The net result was that Egyptian landlords

[16]At this point, not only had the marginal and average product of labor increased significantly, but the total agrarian product and even landlord revenues were reaching and exceeding their pre-plague levels. See Mayhew, "Population," 244 (Table I for comparison of 1300 and 1526 output in monetary terms), 248 for his comment on living standards in the early sixteenth century, and 250–51 for more analysis of the full recovery in absolute terms in the early sixteenth century. To mention one local case, Durham priory provides an interesting example of an area that had suffered heavy losses in the fifteenth century (not only from the plague but also from Scottish raids) and was now in full recovery. See R. B. Dobson, *Church and Society in the Medieval North of England* (London, 1996). At this point the output of tin and lead were back up to their pre-plague levels as well, and were soon to expand much further in scale. See Dyer, *Standards of Living,* 103–4.

[17]Aḥmad ibn ʻAlī al-Qalqashandī, *Ṣubḥ al-Aʻshá fī Sināʻat al-Inshā*ʼ (Cairo, 1913–19), 13:118–23;

were able to successfully collude and squash peasant demands for reduced rents.[18] However, Egyptian landlords won little more than a Pyrrhic victory. As Udovitch correctly points out, the Egyptian agrarian economy was ruined by the plague, its revenues falling from some nine million dinars to little more than a million dinars over a century and a half.[19] The beleaguered peasants fled their lands, flocking to urban centers as the irrigation system slowly collapsed around them.[20] No one stood to benefit from this situation, and the profits of the spice trade offered the elite only a token compensation for the returns they lost in Egypt's hitherto rich agrarian sector.

Furthermore, pressure on urban centers from rural flight, coupled with the collapse of the irrigation system, seems to have led to a situation in which the price scissors were the reverse of those found in England. Grain prices rose and wages, at least in the mid-fifteenth century, seem to have dropped in the wake of

the plagues.[21] England and Egypt provide us with a mirror in which opposite outcomes arose from the same exogenous input.

But there is more that should be said here about the output of ″proto-industrial″ goods, particularly textiles, the engine of pre-modern manufacturing. Miskimin correctly points to the growth of a finished cloth industry in England, and Udovitch correctly points out that the cloth industry in Egypt suffered from both decreased output and higher prices. These changes within the domestic market signaled major transformations in economic development. Why was English cloth both cheaper and more abundant in the wake of the plagues, while Egyptian cloth became both scarcer and more expensive?

The reasons lie in different changes in aggregate supply and demand curves and I would like to turn your attention to graphs that illustrate the trend in both economies. This particular example analyzes the supply and demand for wool in the domestic economies of England and Egypt before and after the Black Death. Taking a 50% loss of the population as a given for our hypothesis, we can see the alternative outcomes for both countries.[22]

For England, the quantity of arable land and hence grain for the domestic market decreased, but not as much as population. Following the plagues, there was more land available for the production of wool for finished cloth on the domestic market. The amount of land devoted to pasture for wool actually increased after the plagues.[23] This was due to the fact that the lower demand for grain had increased the amount of land available for other products. (See Fig. 1.)

Because the grain supply decreased less than the population (demand), the equilibrium point moved down and to the right. (See Figs. 2 and 3.) There was less grain being grown, but at a cheaper price. Because of the redistribution of income down the social scale, there were now more consumers demanding finished

---

[21]See my forthcoming book, *The Black Death in World History: The Case of England and Egypt* (Austin, in press).

[22]Ibid.

[23]Slicher Van Bath, *The Agrarian History of Western Europe* (London, 1963), 14; Mate, ″East Sussex Land Market,″ 57–60. Mate notes that some lords reversed their practice of trying to increase surplus extraction and instead tried to increase, and, where possible, diversify production. Mate particularly singles out the knightly families as being especially active in this process. See also Hilton, *English Peasantry,* 45. Hilton also notes that more landlord income was reinvested in agricultural buildings (ibid., 213–14) and Dyer estimates that the percentage of revenue reinvested by landlord aristocracy in buildings for agricultural use more than doubled between the early fourteenth century and the early fifteenth century (from 5% to more than 10%). See Dyer, *Living Standards,* 80. That landlords began to keep their own accounts and concentrate on fewer estates, rather than relying exclusively on reeves and bailiffs, is also indicative of increased concentration on flexible and rationalized production (ibid., 94, 100).

cloth and hence the demand for wool was greater.[24] At the same time, the supply of domestic wool had increased. The equilibrium point moved down and to the right: more wool was available at a lower price.

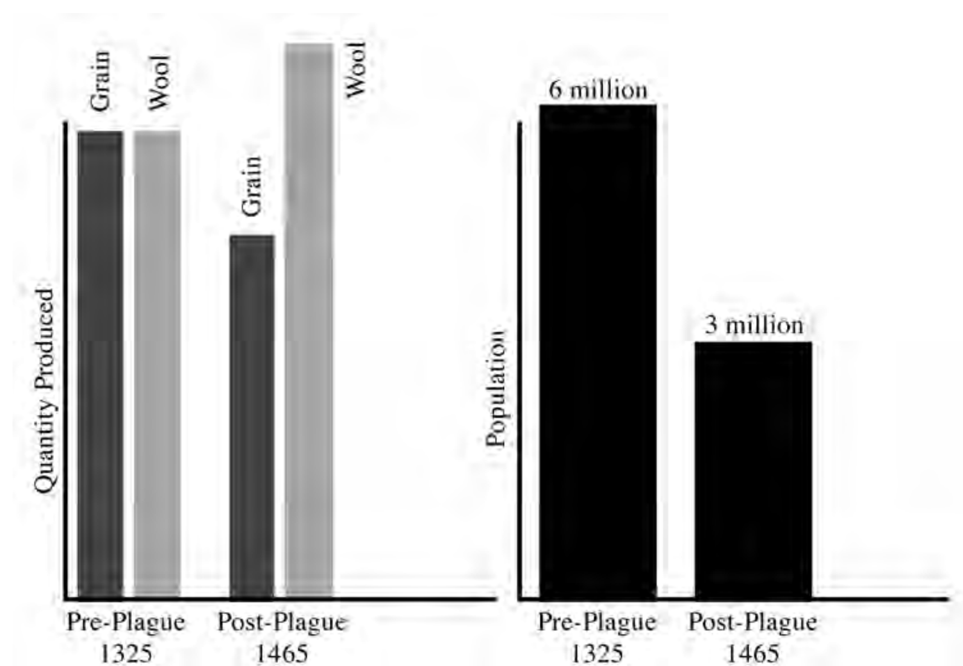

Fig. 1. Output of grain and wool in England. Population of England.

[24]Dyer, *Standards of Living,* 158–59.

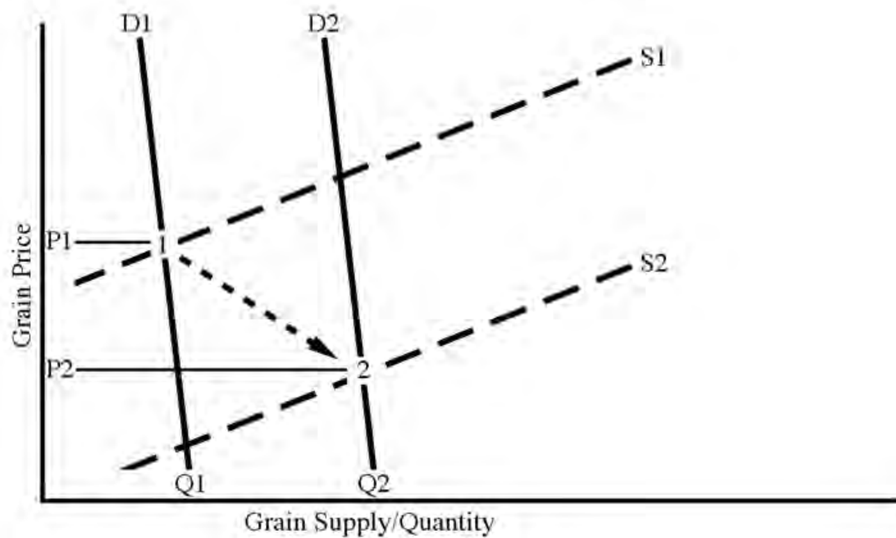

Fig. 2. Grain supply and demand in England.
D=Demand S=Supply P=Price Q=Quantity

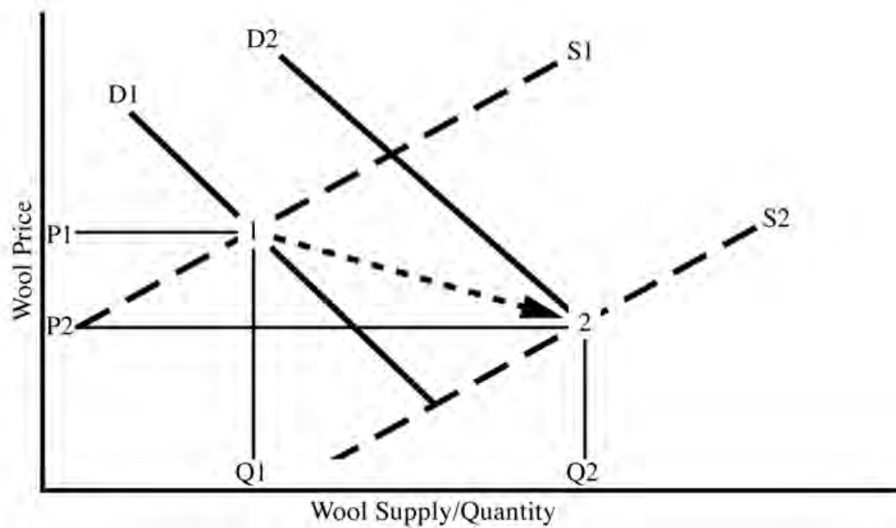

Fig. 3. Wool supply and demand in England.

Egypt´s profile for the same two goods looks quite different. The quantity of arable land and hence grain for the domestic market had decreased more than the

drop in population. (See Fig. 4.) The supply of grain had decreased more than the number of plague survivors; hence you now had not only less grain, but the grain that was available cost more.[25] The equilibrium point for grain moved up and to the left, now selling at a higher price. (See Figs. 5 and 6.) At this point the differential elasticities of the demand curves become important. Regardless of the price, people will always demand a certain amount of basic nutrition, in this case grain, and hence the demand curves are steeper than those for wool, which people can forego during extremely hard economic times. The demand curves for wool are accordingly more elastic, closer to the horizontal than the vertical. Because the demand for grain is less elastic, it will tend to ″crowd out″ the demand for wool. If only so much land was available in Egypt′s ruined irrigation economy, wool was sacrificed to make space for grain.

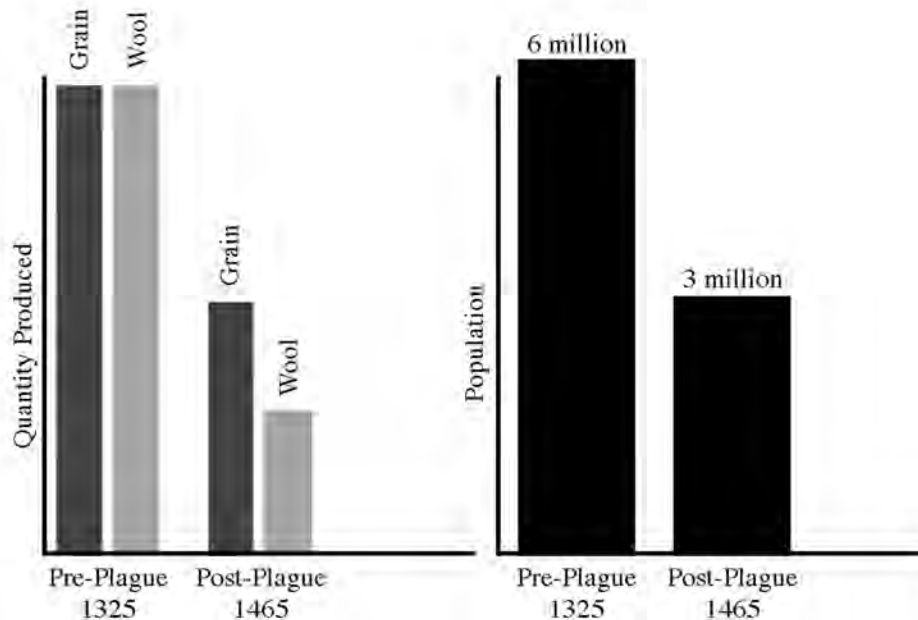

Fig. 4. Output of grain and wool in Egypt. Population of Egypt.

[25]See Borsch, *The Black Death.*

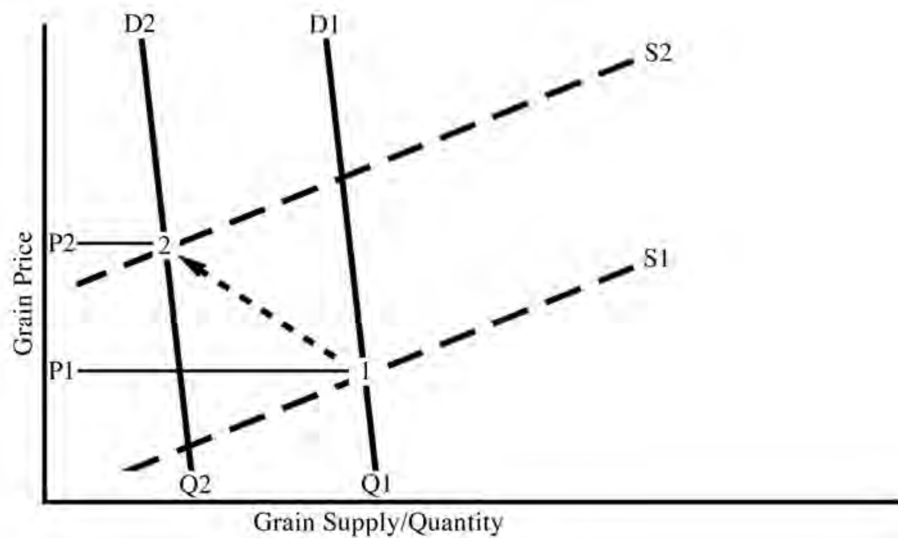

Fig. 5. Grain supply and demand in Egypt.

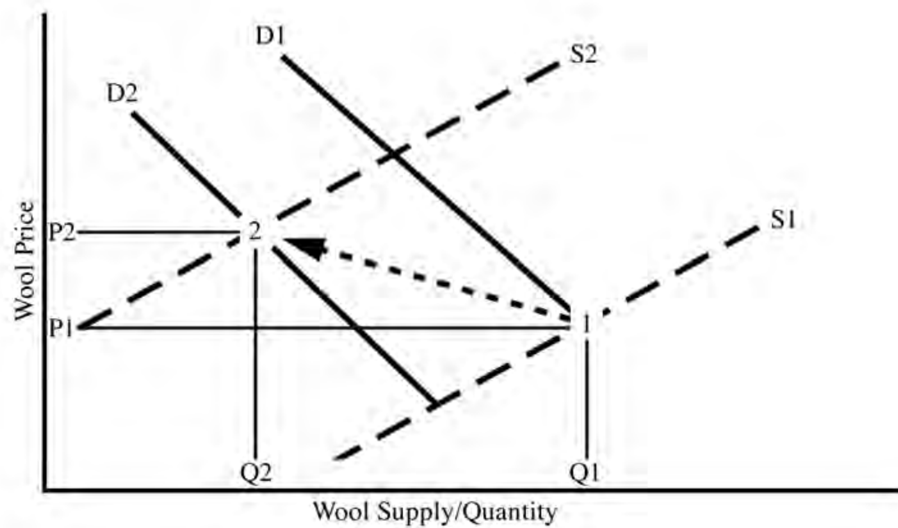

Fig. 6. Wool supply and demand in Egypt.

The significantly reduced supply of wool was actually great enough that there was now not only less wool, but it was selling at a higher price. This was despite the

fact that demand for finished cloth by impoverished consumers had decreased. The equilibrium point moves up and to the left: less wool selling at a higher price.

I have belabored this point to demonstrate how these two economies were moving in opposite directions. England was developing a more commercialized domestic market while the other economy, Egypt, was going through a process of de-commercialization.[26] This process can be seen in a number of other areas besides the production of wool. Examples can be seen in the reduced production of flax and sugar in the Egyptian economy,[27] and increased production of pig iron and other manufactured products in the English economy.[28]

To sum up, the picture presented here challenges the universality of trends that Lopez, Miskimin, and Udovitch presented. Economic developments in England were not so dismal as depicted by Miskimin; social stratification and bullion flows did not play the role that he contended they did. On the other hand, developments in Egypt seem to have been far more disastrous than that portrayed by Abraham Udovitch. Bullion flows, as significant as they were, pale in comparison to developments within the domestic economy, and social stratification played a far more marginal role in England, even as it may have played a more significant role in Egypt. These opposing outcomes should be the focus of future research in this area as scholars attempt to find a discernible global pattern of the calamitous fourteenth and fifteenth centuries.

The Rise of a New Class? Land Tenure in Fifteenth-Century Egypt: A Review Article

There is a consensus among historians of Mamluk Egypt that the fifteenth century was a turning point in the country's social and economic history. For some, the key element lies in demographics, in the failure of the Egyptian population to recover from repeated blows dealt by the arrival of the Black Death and subsequent recurrences of epidemic disease. For others, the arrival of the Portuguese in the Indian Ocean spelled the end of Egypt's central role in the transit trade between the East Indies and the Mediterranean. Still others argue that Egypt's manufacturers were unable to keep pace with technological improvements taking place in Europe. Whatever one's perspective, however, it is difficult to deny that insufficient attention has been paid to Egypt's most important economic resource, agriculture. The fifteenth century saw fundamental changes in the types of land tenure and the identity of landholders.

In this context, ʿImād Badr al-Dīn Abū Ghāzī's book *Fī Tārīkh Miṣr al-Ijtimāʿī: Taṭawwur al-Ḥiyāzah al-Zirāʿīyah Zaman al-Mamālīk al-Jarākisah* (On the social history of Egypt: the development of landholding in the age of the Circassian Mamluks)[1] helps to fill an important gap. Abū Ghāzī uses a variety of sources, including Ottoman registers that have only recently begun to be utilized by Mamluk historians, to examine changes in landholding in the last century of Mamluk rule.[2] Although Abū Ghāzī is a Marxist historian, he begins by setting himself up in opposition to those historians, Marxist or otherwise, who see Egypt as an example of Oriental despotism or the Asiatic Mode of Production. These historians have argued that Egypt's riverine agricultural system made it inevitable that state property would predominate over private property in agriculture.[3] Here he is clearly correct. Although a series of Egyptian states were involved in maintaining the system of canals and dikes that irrigated much of Egypt's farmland, this never prevented the existence of private ownership of land or the growth of a class of landowners with substantial holdings. One need only observe the example of Roman Egypt to see

[3]Abū Ghazī, *Fī Tārīkh Miṣr al-Ijtimāʿī,* 5.

that private land ownership has been prevalent in some periods.[4]

Abū Ghāzī argues that the fifteenth century saw the sale of large quantities of agricultural land by the state to private parties, and that by the end of the Mamluk Sultanate, a new class of private landowners was coming into existence.[5] Abū Ghāzī bases these conclusions on a study of Ottoman documents, especially the *daftar*s of the *Ruznāme*. These sources detail the origins of private landholdings, *waqf*s, and *rizqah*s. Using them, he can trace sales from the Mamluk Bayt al-Māl which resulted in land being alienated by the state into private hands.

In order to understand the significance of this process, however, one must go back to the year 1315, when the Mamluk state reached its highest degree of centralization. It was in that year that the Mamluk sultan al-Nāṣir Muḥammad instituted his famous *rawk* (cadastral survey) in Egypt. In fact, the survey began in Syria in 1313, and was not completed in Aleppo until 1325.[6] In Egypt, the process was finished by April 1316, with the sultan reserving 10/24 of Egypt's agricultural land for himself and his mamluks. The remainder was turned into *iqṭā'*s for the amirs and members of the *ḥalqah*.[7] At this point, with the exception of limited *waqf* lands that were held over from the previous period, all of Egypt's taxable agricultural land was to be turned over to the state *dīwān*s or else made into *iqṭā'*. While it is not possible to examine all of the implications of the Nāṣirī *rawk* in this essay, the important point with regard to land tenure is that the sultan controlled almost all of Egypt's land, either for his own use, or to be distributed as temporary *iqṭā'*s. Private ownership of agricultural land was insignificant and *waqf* land limited.

It appears that this centralized system was still largely in place in the year 1400. It is not clear when things began to change, but there are good reasons to believe that the alienation of state lands was limited prior to the fifteenth century. Ulrich Haarmann's study of the decline of the *awlād al-nās* as a military force shows that the *ḥalqah* continued to hold significant *iqṭā'*s until 1397, but had lost almost all of them by 1480.[8] The following table, which I have compiled based on the information from two surveys of Egypt's lands contained in Ibn al-Jī'ān's *Al-Tuḥfah al-Sanīyah fī Asmā' al-Bilād al-Miṣrīyah,* gives a sense of how significant

the alienation of state lands in the fifteenth century became.[9]

Table 1: Villages containing *waqf*s, private estates, and *rizqah*s in 1376 and 1480

Year	*Waqf*	Private Estates	*Rizqah*
1376	66	49	?
1480	885	607	1425+

What this table clearly shows is that the Mamluk state was alienating lands at a furious rate during the fifteenth century. By the latter part of the century, *waqf,* private, and *rizqah* land were present throughout the Egyptian countryside. In the cases of *waqf* and private estates, the increase in the number of villages containing these types of tenure was more than tenfold. Since Ibn al-Jīʻān counted 2,163 villages in Egypt, not counting some villages in Giza that were under the control of the royal *dīwān,* we can calculate the percentage of villages in Egypt containing these types of land tenure at these two dates:

Table 2: Percentage of Egyptian villages containing *waqf,* private property, and *rizqah*s in 1376 and 1480

Year	*Waqf*	Private Property	*Rizqah*
1376	3.0%	2.2%	?
1480	40.9%	28.0%	65.8%

Unfortunately, Ibn al-Jīʻān′s numbers are not specific enough for us to calculate the exact amount of land that fell into each category. While he does give figures for the amount of *rizqah* land in each village, there was clearly *rizqah* land whose extent he did know with precision. The total amount of *rizqah* land that he counted was 78,975.5 feddans, or an average of 55.4 feddans per village containing *rizqah*

[9]Cairo, 1974. The data is presented in raw form in Heinz Halm, *Ägypten nach den mamlukischen Lehensregistern* (Wiesbaden, 1979).

land. This amounts to less than two percent of Egypt's total agricultural lands in 1315. Despite the incompleteness of our evidence, and even if we assume that Ibn al-Jī'ān's information was better for 1480, when he wrote his survey, than it was for 1376, one cannot avoid concluding that all three types of tenure were spreading very quickly.

One thing that we cannot learn from Ibn al-Jī'ān's work is exactly when these changes were taking place. Here, Abū Ghāzī's work is very helpful. He has examined 40 original deeds of sale from the Bayt al-Māl from the Mamluk period, and another 530 deeds he identified in the Ottoman archives in Cairo.[10] He believes that these are only a fraction of the original documents, but they give him a substantial sample from which to work. Having compiled these deeds, Abū Ghāzī can identify the periods in which most of the sales of lands from the Treasury occurred. He finds that the periods 853–72 (1449–67) and 903–22 (1498–1517) saw the greatest number of sales, comprising 40.1% and 36.7% respectively of the total.[11] These periods correspond to the reigns of a number of mid-fifteenth century sultans and that of the final twenty years of Mamluk rule, especially the reign of Sultan Qānṣūh al-Ghūrī. The first large group of sales occurred in the reign of Sultan al-Ashraf Barsbāy (1422–37), and the reign of al-Ashraf Qāytbāy (1468–96) also saw a significant number, although not as many as one might expect given his long reign.[12]

The timing of these sales is curious. As Abū Ghāzī points out, the justification sometimes cited in the documents, that the sales are necessary to raise money to fund a war, is not convincing. The chronology of the sales does not correspond to the periods of greatest military threat to the Mamluk empire, which Abū Ghāzī identifies as the years 800–20 (1397–1418) and 880–900 (1475–95), when the Mamluks were at war with Tamerlane and the Ottomans, respectively.[13]

For Abū Ghāzī, the explanation for this phenomenon lies not in military necessity, but in economic crisis. He proceeds to recite the usual list of weaknesses of the fifteenth-century Egyptian economy: demographic decline, decline of the transit trade, the failure of the state to control the Nile floods, bedouin raids in the countryside, exorbitant taxation of the peasantry, monetary crisis, etc. Following Fernand Braudel's analysis, he concludes that while the West was able to recover quite quickly from the Black Death, the "East" did not.[14] While he puts his finger on a number of key aspects of fifteenth-century Egyptian economic history, his

[13]Ibid., 61.

[14]Ibid., 67–69.

explanation is not convincing. Indeed, it is not really an explanation so much as a laundry list of economic woes which are assumed to have reduced the income of the Mamluk state, which then compensated by selling off state lands that had been assigned as *iqṭā*ʻs.

There are several problems with this analysis. First of all, in many cases, the buyer of state lands was the sultan himself. This is particularly true of Sultan Qānṣūh al-Ghūrī, who used a combination of purchases from the Bayt al-Māl and ″exchanges″ (*istibdāl*s) of property with existing *waqf*s to build his massive endowment. Indeed, as Muḥammad Muḥammad Amīn and Carl Petry have shown, the size of many royal *waqf*s was so large that the revenues generated were too great to be intended to fund the *waqf* itself.[15] It is likely that the sultans were setting aside sources of revenue for themselves and their progeny, and in this sense, acting much as most founders of endowments did.

Furthermore, if one examines the chronology of major economic crises in the fifteenth century, it is not clear whether it would correspond to the periods in which the Bayt al-Māl was doing most of its business in land sales. Although it is very difficult to assess the rise or fall of revenues from trade, it is clear that the worst agricultural crises of the Mamluk period occurred in the period 1373–1404.[16] Although later crises did occur in 1415–16, 1449–52, 1469–70, and 1486–87, these dates do not match up well with the data collected by Abū Ghāzī. Furthermore, later crises do not seem to have had the impact that the great crises of the late fourteenth and early fifteenth century did. Clearly it is true that Egypt′s agricultural revenues declined in the fifteenth century, but to what degree did this result from agricultural decay or from the alienation of state lands into private hands?[17]

I have argued elsewhere that the sudden rise in the number of *waqf*s in the mid-fifteenth century should be understood in the context of the changing character of the Mamluk elite.[18] It is at this very time when Haarmann shows that the military role of the *awlād al-nās* was in serious decline that the number of *waqf*s established by the descendents of mamluks increases considerably. While some of

[18]Sabra, *Poverty,* 93.

these *waqf*s were funded by urban properties, others were based on the donation of rural estates. The large increase in the number of *waqf*s in the fifteenth century should be seen as part of a process by which members of the Mamluk elite and their descendents privatized state resources, especially agricultural land, for their own benefit.[19] The tide of centralization which had reached its height in the reign of al-Nāṣir Muḥammad was now receding, and at an increasingly swift pace.

Abū Ghāzī identifies three consequences of this process of the privatization of agricultural lands.[20] First, he argues that a change in land tenure was taking place; the *iqṭā‘* system was collapsing. Second, the shift of resources into private hands was fundamentally changing the social structure of the country at the expense of the Mamluks. Finally, the corruption which had taken hold of many aspects of the Egyptian economy, evident in the sultans′ monopolies over certain commodities, now extended to the land market, since the land sales were frequently made to the sultan′s retainers.[21] Based on his study of the Ottoman *daftar*s, Abū Ghāzī[22] can identify 275 villages in Egypt and Syria where lands were sold to private parties. The prime beneficiaries of these sales were Mamluk amirs, who were the buyers in 40.6% of sales, the *awlād al-nās* (23.6%), bedouin chiefs and village shaykhs (8.4%), state bureaucrats (6.1%), jurists and judges (5.1%), and sultans and their families (2.5%).[23] Obviously, the fact that some purchases must have been significantly larger than others means that the role of rulers and their families was probably much larger than these statistics indicate. He does not identify the gender of the buyers, but my own study of *waqf*s by the *awlād al-nās* found that up to 50% of the founders in that category were women.[24] One may also suspect that the role of bedouin shaykhs may have been larger. As the research of Jean-Claude Garcin has shown, the bedouin were of increasing significance as landholders in fifteenth-century Egypt, especially in the province of Sharqīyah and in Upper Egypt.[25]

---

[19]There are some interesting parallels between the privatization of the state in fifteenth-century Egypt and a somewhat similar process that occurred in the Ottoman Empire in the eighteenth century. See Ariel Salzmann, ″An Ancien Régime Revisited: ′Privatization and Political Economy in the Eighteenth-Century Ottoman Empire,′″ *Politics and Society* 21 no. 4 (December 1993): 393–423.

For Abū Ghāzī, the fifteenth century was a turning point in Egyptian history. The system of land tenure was changing from that of state ownership of the majority of agricultural lands which were doled out in *iqṭā'*s to a new reality in which private property predominated. The owners of these lands constituted a new social class who would eventually have asserted themselves politically. In fact, however, two factors prevented this social transformation. The most important, in Abū Ghāzī's view, is the Ottoman conquest. Although the Ottomans did not abolish all of the private holdings and *waqf*s, they reversed the trend towards privatization of land. As he puts it, foreign invasion "aborted" the "possibilities latent in society."[26] Only in the nineteenth century did private ownership of land become a permanent feature of the Egyptian agricultural economy. To paraphrase the title of Peter Gran's well-known book, the "Mamluk roots of capitalism" were uprooted by the Ottomans only to re-emerge under the khedives.

This argument is problematic in a number of ways, most obviously because it is conjectural. There is no way to test what would have happened had the Ottoman conquest never occurred. More importantly, however, there are good reasons to question whether capitalism (as we know it, anyway) could have developed out of late Mamluk society. As Abū Ghāzī himself notes, lands purchased from the Bayt al-Māl rarely remained private holdings for long. Usually they were turned into *waqf* quite quickly. Almost two-thirds of the property sold by the Mamluk treasury remained in the hands of the purchaser, his family, or his *waqf* after the Ottoman conquest.[27] This demonstrates that the market for land was limited. Furthermore, 63.6% of land sales were eventually turned into *waqf* lands. After the Ottoman conquest, that figure rose to 88.89%.[28]

In short, what happened in Egypt in the fifteenth and early sixteenth century was not the formation of a class of private landowners who operated in a widespread land market. Rather the state gradually sold off much of its lands to the military elite, their children, local officials, and even to the sultans themselves. To prevent the state from reasserting its rights over these lands, the new owners quickly turned them into trusts and endowments. Since these trusts and endowments were sacrosanct under Islamic law, and since they frequently benefited various religious institutions or the poor, it was much harder for the state to recover what it had lost. Each sultan was faced with a dilemma: he needed to reward his retainers and provide for his family. He may also have wished to construct a monument to preserve the memory of his rule and to gain support from the religious scholars

---

shaykhs in reclaiming lands in al-Buḥayrah, see Michel, "Villages désertés," 224–29.

[26]Abū Ghazī, *Fī Tārīkh Miṣr al-Ijtimā'ī,* 112.

[27]Ibid., 113.

[28]Ibid., 106.

and the ordinary people. Yet he could not seize the endowments of his predecessors without earning the condemnation of the religious classes. Furthermore, to seize others′ endowments would virtually guarantee that his own *waqf*s would be seized after his death. Thus, each sultan found that it was in his best interest to leave the existing endowments alone and concentrate on building his own. In order to maintain the support of his retainers, he made sure that land was made available to them for the same purpose.

We have no way of knowing what would have happened had this process continued unchecked. Perhaps subsequent sultans would have followed the model of al-Ghūrī and built their own *waqf*s on the ruins of others′. Perhaps they would have confiscated many of the *waqf*s on the premise that sales from the Bayt al-Māl were illegitimate. They might have attempted to return to the status quo ante and reinstitute the *iqṭā‘* system in full. We also do not know what an economy dominated by *waqf* would have meant for the peasantry or for industry. Contrary to what has been argued at times, *waqf* and commercial agriculture are by no means incompatible. There is no way to determine whether the *waqf* administrators would have turned into agricultural entrepreneurs or simply waited for their rents to pour in.

Despite these weaknesses it must be said that Abū Ghāzī′s book is an important one. It raises significant historical questions, provides new evidence for Mamluk economic history, and brings new sources to bear on the problem. In particular, his systematic use of the Ottoman archives to answer questions about Mamluk history is an important innovation, one which will undoubtedly influence future students of Mamluk history.

Book Reviews

Iḥsān ʻAbbās, *Tārīkh Bilād al-Shām fī ʻAṣr al-Mamālīk, 648–923 H./1250–1517 M.* (Amman: Maṭbaʻat al-Jāmiʻah al-Urdunīyah, 1998). Pp. 400.

Reviewed by Josef Meri, Institute of Ismāʻīlī Studies, London

The Palestinian scholar Iḥsān ʻAbbās´s career spanned over five decades during which he made outstanding contributions to diverse branches of knowledge, ranging from modern Arabic literature and especially Palestinian, Iraqi, and medieval Arabic poetry, to literary studies of Sicily and Andalusia, biographical literature, and history. His monograph *Tārīkh Bilād al-Shām fī ʻAṣr al-Mamālīk,* which was published in 1998, represents the best general study of the history of Mamluk Syria to date. Although a literary scholar by training, ʻAbbās is no stranger to historical studies. His contribution to Mamluk studies, which is represented by the present work under review, is his first monograph published as part of the Committee for the History of Bilād al-Shām series, jointly published by the Universities of Jordan and Yarmuk, though ʻAbbās jointly edited, along with the Ottoman historian Muḥammad ʻAdnān al-Bakhīt, the seminal three volume *Proceedings of the Second Symposium on the History of Bilād al-Shām during the Early Islamic Period up to 40 A.H./640 A.D*. (Amman, 1987). The series editors are to be commended for producing over the years excellent studies and edited conference proceedings. It is to be hoped that the series will be given a new impetus through fostering closer international collaboration and by focusing on social, cultural, and legal aspects of the history of Bilād al-Shām.

Regrettably, the history of Mamluk Syria has traditionally taken a backseat to that of Egypt. Given the paucity of studies that focus on Mamluk Syria, ʻAbbās´s *Tārīkh Bilād al-Shām* is a most welcome contribution which is to be recommended for graduate study and for reference. This study will also appeal to scholars in the West and the Islamic world who are interested in the political, economic, and military history of the Mamluk Sultanate in Greater Syria. It should also be required reading for advanced undergraduates in the Middle East who lack any substantive knowledge of the pre-modern history of their own region.

The work is clearly and intelligibly presented in an accessible fashion and includes maps of the northern and southern regions of Bilād al-Shām as well as a useful glossary based on Muḥammad al-Baqlī´s lexicon of Mamluk words and expressions, many of which are derived from al-Qalqashandī´s *Ṣubḥ al-Aʻshá*.

Iḥsān ʻAbbās did not regard himself as a historian. In deference to his colleagues, ʻAbbās states that his study does not have any pretensions to be a detailed monograph of Mamluk history. Indeed, the author explicitly states that others have covered aspects of Mamluk history far more thoroughly than he has. Such humility and

deference to one´s colleagues are rare qualities among academics. Indeed, ʿAbbās´s view of the political and dynastic history of the Mamluk state from the reign of Sultan Qalāwūn onwards is clear when he admits that ″it is not exciting, not because of the periods of unrest that it contains, but rather because it repeats itself in a boring fashion″ (p. 286). For ʿAbbās, it is not the often recurring themes in the political-dynastic history that are at the core of his analysis, but rather those events, policies, and cultural developments that had an impact on Syrian society. Distilling the history of Greater Syria from the broader dynastic and political history of the Mamluks, whose administrative and political base was at Cairo, is a difficult task, but one which ʿAbbās admirably fulfilled.

In the introduction, ʿAbbās comments on the bias of sources toward the Syrian Mamluks themselves rather than being oriented toward Bilād al-Shām (p. 5). Moreover, he observes that most of the sources deal with the battles the Bahri Mamluks fought against the Crusaders and the Mongols and that, in general, their geographical focus tends to be on Damascus. ʿAbbās begins by offering a brief overview of historical works pertaining to the Mamluk dynasty, including some rarely-mentioned sources. Here he invokes Ibn Khaldūn´s influence on later writers like al-Sakhāwī (d. 902/1497).

ʿAbbās provides an overview of the Mamluk Sultanate and its organization. Chapter One provides a brief overview of the institution of the sultanate, the system of investitures, dress, processions, banquets, royal residences, the royal kitchen, stables, and resting places. Chapter Two focuses on the political, economic, social, cultural, and artistic developments in Bilād al-Shām. Noteworthy is ʿAbbās´s alphabetically-organized gazetteer, which summarizes the most peculiar features of the principal villages, towns, and cities of Greater Syria and which is derived from the writings of medieval geographers and travelers (pp. 96–105). This is followed by a brief discussion of European travelers and pilgrims in Bilād al-Shām.

Chapter Three presents the reigns of twenty Mamluk rulers and discusses their involvement in the political and administrative affairs of Bilād al-Shām. ʿAbbās succinctly outlines their achievements, the major battles they fought, their political alliances, rivalries, and economic policies. Especially noteworthy is ʿAbbās´s discussion of Baybars´ (r. 658–76/1260–77) rule, in which he deftly outlines Baybars´ achievements, including his massive public works campaigns, reform of the postal service between Cairo and Damascus, reform of the judiciary and the appointment for the first time of four chief qadis, the organization of the Arab tribes, and promotion of good relations with the leader of the Ismaʿili community in Syria. Baybars also restored major shrines, such as the Dome of the Rock Mosque in Jerusalem and the Cave of the Patriarchs in Hebron. As a historian of pilgrimage places, I was struck by the near absence of a discussion of Baybars´ repairing and endowing shrines such as the tomb of Noah at Karak for pious

visitors and the meaning of such undertakings within the religious framework both locally and regionally. ʿAbbās's discussion of interfaith relations might have been augmented, though he does provide an interesting succinct discussion of the relations between Bilād al-Ḥabash and the Mamluk sultan al-Malik al-Ashraf Barsbāy (r. 825–41/1426–37).

Understandably, ʿAbbās does not address cultural history, popular customs, or traditions at any great length. In his discussion of the peasants *(fallāḥīn),* he observes that little information about the daily lives, beliefs, and practices of this segment of society exists. Yet we do know a great deal about their lives from pilgrimage guides and travel accounts, among other sources (see Josef Meri, *Cult of Saints Among Muslims and Jews in Medieval Syria,* Oxford, 2002). A recommended complementary work to *Tārīkh Bilād al-Shām,* which more fully addresses social life in Greater Syria, is Ibrāhīm Zaʿrūr's *Al-Ḥayāh al-Ijtimāʿīyah fī Bilād al-Shām fī al-ʿAṣrayn al-Ayyubī wa-al-Mamlūkī* (Damascus, 1993).

One of the most noticeable deficiencies in this work is its lack of footnotes, which is compensated for by a well-organized overview of the Mamluk state in Greater Syria. Moreover, the publisher should have been more attentive to standardizing the foreign language references in the footnotes and in the bibliography. Despite these rather minor flaws, Iḥsān ʿAbbās is to be heartily appreciated for producing an otherwise excellent introduction to the history of Mamluk Syria.

BADR AL-DĪN MAḤMŪD AL-ʿAYNĪ, *ʿIqd al-Jumān fī Tārīkh Ahl al-Zamān: al-ʿAṣr al-Ayyūbī (Part 1: 565/1168 [sic 1169]–578/1182).* Edited by Maḥmūd Rizq Maḥmūd (Cairo: Dār al-Kutub wa-al-Wathāʾiq al-Qawmīyah, Markaz Taḥqīq al-Turāth, 2003). Pp. 432.

REVIEWED BY KONRAD HIRSCHLER, University of Kiel

Al-ʿAynī (d. 855/1451) contributed with his voluminous universal chronicle *ʿIqd al-Jumān* (The necklace of pearls) to the blossoming, encyclopedic historiography of the later Mamluk period. Having pursued a career as a distinguished courtier, he is a typical example of the intimate link between the exercise of power and the production of historical knowledge in this period. During the course of his life he held a variety of offices, chief among them the posts of *muḥtasib, nāẓir al-aḥbās,* and Hanafite chief qadi. This prominent standing within the ruling elite was certainly reinforced by al-ʿAynī's command of Turkish. Thus, this chronicle

represents a valuable contemporary source for understanding Mamluk grand politics of the author′s period.

With the exception of an extract in the *Recueil des historiens des Croisades,* the process of editing this chronicle has begun quite belatedly. It is only in the mid-1980s that the first editions were published. In one such edition, ʻAbd al-Rāziq al-Ṭanṭāwī al-Qarmūṭ (al-Azhar) brought out the final and, from a factual point of view, most interesting part of the chronicle: his two volumes covered respectively the years 815/1412 to 823/1421 (Cairo: Maṭbaʻat ʻAlā', 1985); and the years 824/1421 up to the chronicle′s end in 850/1447 (Cairo: al-Zahrah lil-Iʻlām al-ʻArabī, 1989). In another edition, Muḥammad Muḥammad Amīn (Cairo University) started from the beginning of the Mamluk period and published in four volumes the text for the years 648/1250 to 707/1308 (Cairo: al-Hay'ah al-Miṣrīyah al-ʻĀmmah lil-Kitāb, 1987–92). Regrettably, he did not complete his project, and the parts dealing with the events and obituaries of the following ninth/fourteenth century are yet to be published.

Maḥmūd Rizq Maḥmūd (al-Minyā University) has now embarked upon the task of editing the parts of the *ʻIqd al-Jumān* concerned with the Ayyubid period, i.e., from 565/1169 to 647/1250, the point where Amīn′s edition starts. The present first volume reports the rise of the dynasty until 578/1182, the start of the last decade of Ṣalāḥ al-Dīn′s rule. In contrast to the final parts of the chronicle, dealing with events either witnessed by al-ʻAynī himself or taken from a variety of sources, obviously, this part does not add significant new detail to Ayyubid history. Nevertheless, the author integrates the main Ayyubid and Zangid sources, most importantly al-Qāḍī al-Fāḍil, al-ʻImād al-Iṣfahānī, Ibn al-Athīr, Abū Shāmah, and Ibn Shaddād, into the skillful and coherent narrative typical of Mamluk encyclopedic historiography.

This historiography′s aim ″to survey, to comprehend, to control, to consummate″[1] the material is apparent throughout the text. For example, the year 567/1171–72 starts with the end of the Fatimid dynasty in Egypt under Ṣalāḥ al-Dīn, neatly structuring the events in sections introduced by ″firstly,″ ″secondly,″ etc. Then the Syrian side of the story with regard to Nūr al-Dīn is introduced in a separate section. Finally, the year′s narrative culminates in the developing strife between the two protagonists. By comparison, a text of the Ayyubid period, such as Abū Shāmah′s *Kitāb al-Rawḍatayn,* narrates the same events in a radically different style: the focus shifts continually between the two protagonists. At the same time, other subjects, such as Frankish raids, appear in the course of the text as independent sections, which ″interrupt″ the narrative. It is on this historiographical level that the main interest of al-ʻAynī′s text on the Ayyubids lies: the increasing number of

---

[1]Tarif Khalidi, *Arabic Historical Thought in the Classical Period* (Cambridge, 1994), 184.

edited Ayyubid and Mamluk chronicles will contribute to our understanding of the developing historiographical styles and the different historical perceptions.

Similar to the two previous editions by al-Qarmūṭ and Amīn, the present edition is based on the two manuscripts: MS Ahmet III 19/2911 (microfilm copy in Maʻhad al-Makhṭūṭāt) and Dār al-Kutub MS 1584 *tārīkh*. The text was then collated with the chronicle's main Zangid and Ayyubid sources. The edition is of high quality, providing in detail the variant readings. Nevertheless, considering the numerous other extant manuscripts of the *ʻIqd al-Jumān,* it would have strengthened the edition if the "Cairo canon" Ahmet III/Dār al-Kutub had been supplemented by additional manuscripts. This will be even more relevant for the future edition of the text covering the later Ayyubid period: the editor states in his introduction that the period between 620/1223 and 647/1250 will be edited solely on the basis of the Dār al-Kutub manuscript. It is hoped that he will look for additional material.

The generous textual apparatus makes this edition a helpful starting point for early Ayyubid history. The clarifications of personal and geographical names, as well as the explanations offered for difficult terms, facilitate the reading considerably. On the same level, the indexes of personal names, groups, geographical names, and technical terms are very useful.

AḤMAD IBN MUḤAMMAD IBN ʻARABSHĀH, *Fākihat al-Khulafāʼ wa-Mufākahat al-Ẓurafāʼ*. Edited by Ayman ʻAbd al-Jābir al-Buḥayrī (Cairo: Dār al-Āfāq al-ʻArabīyah, 1421/2001). Pp. 674.

REVIEWED BY ARNOUD VROLIJK, Leiden University

Aḥmad ibn Muḥammad Ibn ʻArabshāh[1] (791–854/1389–1450) was born in Damascus. When Timur Lenk conquered the city in 1400–1 he was taken to Samarkand. In his youth he traveled and studied extensively in Central Asia. Later in his life he served under the Ottoman Sultan Mehmed II, for whom he conducted his correspondence in Arabic, Turkish, Persian, and Mongol. He returned to Syria in 1421 and finally settled in Egypt in 1436. His main work is a rather unflattering biography of Timur, *ʻAjāʼib al-Maqdūr fī Nawāʼib Taymūr* (The wonders of

[1]On the author and his work see al-Sakhāwī, *Al-Ḍawʼ al-Lāmiʻ li-Ahl al-Qarn al-Tāsiʻ* (Cairo, 1353–55/1934–36), 2:126–31, and J. Pedersen, "Ibn ʻArabshāh," *The Encyclopaedia of Islam,* 2nd ed., 3:711–12.

destiny, or the vicissitudes of Timur), a text that was first edited by Golius in 1636. Other works by him include a panegyric dedicated to Sultan Jaqmaq and an Arabic translation of Sa'd al-Dīn al-Warāwīnī's version of the *Marzubān-nāmah,* a Persian collection of animal fables in the vein of Ibn al-Muqaffa''s *Kalīlah wa-Dimnah.*

The present work, *Fākihat al-Khulafā' wa-Mufākahat al-Ẓurafā'* (The caliphs' fruit and the elegant people's banter), is an expanded version of Ibn 'Arabshāh's own translation of the *Marzubān-nāmah*. According to Ḥājjī Khalīfah, it was completed in Ṣafar 852/April–May 1448.[2] The work lacks the crisp succinctness of *Kalīlah wa-Dimnah,* and the extensive use of *saj'* or rhymed prose makes it dull and ponderous in the eyes of a modern reader. A scholar like Robert Irwin found "the inflated, metaphorical style . . . hard going."[3] On the other hand, Reuben Levy asked for clemency on the part of the modern reader by stating that medieval authors "catered for different conditions and a different taste. To [them], elaborate imagery and embroidered speech were the means of attracting and holding the attention not of readers, but of listeners; because the tales were recited by rhapsodists to audiences who were enthralled as much by the music of the heaped-up epithets and gracefully involved periods in which the tales were told as by the narratives themselves."[4]

The *Fākihah* is by no means a rare text; any important collection of Islamic manuscripts in the Western world possesses at least several copies. It has also been the subject of numerous editions since Freytag published his *Fructus imperatorum et iocatio ingeniosorum* (Bonn, 1832–52). There is an 1869 edition by the Dominican fathers of Mosul, and the popularity of the text in nineteenth-century and early twentieth-century Egypt is amply demonstrated by twelve Cairo editions published between 1276/1860 and 1325/1908, some of them with *Kalīlah wa-Dimnah* in the margin. Somehow, the interest of the reading public in the *Fākihah* seems to have dwindled after the early twentieth century, but recently it was revived by an edition by Muḥammad Rajab al-Najjār, the well-known Egyptian specialist in Mamluk literature (al-Ṣafah, Kuwait: Dār Su'ād al-Ṣabāḥ, 1997).

The present work was edited by Ayman al-Buḥayrī, whose interest in anecdotes of the caliphs and mirrors for princes is reflected in his other editions as well.[5] For this edition of the *Fākihah* al-Buḥayrī used two manuscripts from the National

[5]Al-Itlīdī, *Nawādir al-Khulafā'* (Cairo, 1998); Ibn Ẓafar, *Al-Sulwānāt* (Cairo, 1999); and Ibn Qutaybah, *Al-Sulṭān* (Cairo, 2002).

Library of Egypt, the MSS Adab Taymūr 764 and Adab Ṭal'at 4606, and a 1909 edition he refers to as an imprint of ″al-Maktabah al-Ḥalabīyah,″[6] an edition not cited in 'Āyidah Ibrāhīm Nuṣayr′s bibliography of early twentieth-century Egyptian imprints.[7] The editor considers MS Adab Taymūr 764 as an autograph (p. 9), presumably because it contains the author′s own colophon and also because of its date, which the author reads as *awākhir* Rabī' I 850/25 June–4 July 1446. It is more likely however, that the date is *awākhir* Rabī' I 852/3–12 June 1448, which corresponds almost exactly with Ḥājjī Khalīfah′s information on the subject.[8] However, the fact that a manuscript contains the author′s colophon does not necessarily imply that it actually is an autograph. In fact, we find Ibn 'Arabshāh′s own colophon repeated in a number of manuscript copies, for instance the Berlin MS Petermann 295 and Leiden Or. 135. An old Cairo edition I was able to consult, al-Maṭba'ah al-Sharafīyah 1316/1898, also has it. None of these three appear to be directly related to the Taymūr manuscript. Other arguments against the editor′s assertion are that the Taymūr manuscript is copied in two different hands and that the first page of the manuscript contains a *tarḥīm,* an expression generally used for deceased authors.[9] On the whole, however, the Taymūr manuscript appears to be a valuable textual witness, containing authentic readings that have not been preserved elsewhere. Regarding it as an autograph, the editor claims to have adopted it as the base text of his edition (p. 10). It is therefore somewhat puzzling to see that al-Buḥayrī′s edition is not based on this particular manuscript at all: a short collation of the facsimiles and the edited text reveals that the first four lines of the manuscript text with the *tarḥīm* have been omitted; likewise, the text of the colophon (p. 577) is not that of the Taymūr manuscript.

It is quite difficult to go beyond this superficial comparison, because al-Buḥayrī′s edition lacks a critical apparatus that would enable the reader to check the provenance of each part of the text. Thus, it is impossible to see what role the other textual witnesses have played in establishing the text. Instead of a critical apparatus there is a footnote apparatus, which contains biographical and geographical information drawn from classical sources like *Al-Bidāyah wa-al-Nihāyah* by Ismā'īl ibn 'Umar Ibn Kathīr (ca.. 1300–73) or *Mu'jam al-Buldān* by Yāqūt al-Ḥamawī (1179–1229).

[7]'Āyidah Ibrāhīm Nuṣayr, *Al-Kutub al-'Arabīyah Allatī Nushirat fī Miṣr bayna 'Āmay 1900–1925* (Cairo, 1983), 230.

[8]See the facsimile text on p. 18 of al-Buḥayrī′s edition. Prof. Jan Just Witkam′s advice on the matter is hereby gratefully acknowledged.

[9]Facsimile page of the manuscript on p. 15 of the edition, l. 4: ″taghammadahu Allāhu ta'ālá bi-raḥmatihi wa-riḍwānihi″ (May God, exalted is He, cover him with His grace and favor). For this *requiescat* remark after the names of deceased authors see Adam Gacek, *The Arabic Manuscript Tradition: a Glossary of Technical Terms and Bibliography* (Leiden, 2001), 54.

The greater part of the footnote apparatus, however, is devoted to lexical items. For his explanation, the editor draws upon his own personal knowledge of the Arabic language without reference to lexicographical works. It is not altogether clear what criteria the editor used: a fairly common word like *sirḥān,* ″wolf″ (p. 26), is footnoted, while an obscure word like *ghaḍanfar* for lion (p. 249) remains unexplained.

The value of the edition would have been much enhanced by a thorough introduction to the author, his text, and its social and literary environment, the so-called *Sitz im Leben*. A half-page description of the textual sources of the edition, a single page on edition technique, and one and a half pages on the life of Ibn ʿArabshāh must be regarded as too scanty. A bibliography of consulted works would also have been helpful. Minor defects of the edition are the introduction of modern-style punctuation and the absence of the folio numbers of the most important manuscript source.

The merit of this edition lies in its multiple indexes, covering almost a hundred pages, of Quran verses, *aṭrāf* of prophetic traditions, poetry, names of persons, geographical names, lexical items, proverbs and fixed expressions, and a succinct subject index. Unfortunately, the indexes are not free of errors. For instance, in the index of ″nations and places″ *Āl Qusṭanṭīn* (the Byzantines, p. 482) and the town of Amul (p. 566) are missing. Baghdad appears twice, once under *Baghdād* and once under *Madīnat al-Salām*. The index of personal names cites the names just as they are given in the text without any critical arrangement, which makes them difficult to find. Thus, the Imam Abū Ḥanīfah is entered under al-Nuʿmān, Ibn Sīnā under Abū ʿAlī, Ibn Khaldūn under Abū Hurayrah, and the Mamluk sultan al-Malik al-Ẓāhir Jaqmaq under Abū Saʿīd. The poet′s name is ʿUmar ibn al-Fāriḍ, not ʿAmr ibn al-Fāriḍ. Kisrā is a title, not a person. Finally, Ibn ʿArabshāh himself is not mentioned in the index. In the glossary, words of non-Arabic origin tend to be missing, such as the Greek word *Saqmūniyā* (scammony, p. 201) and the Persian titles *dawādār, bazdār,* and *khaznadār* (p. 466).

In terms of book production, it must be said that the edition is carefully typeset, well printed and bound, and reasonably priced. Despite its shortcomings in terms of editorial scholarship, this edition will help to make Ibn ʿArabshāh′s work more accessible to modern readers. For this, one must be grateful to the editor.

SHAWKAT RAMAḌĀN ḤUJJAH, *Al-Tārīkh al-Siyāsī li-Minṭaqat Sharqī al-Urdun min Junūb al-Shām fī ʻAṣr Dawlat al-Mamālīk al-Thāniyah* (Irbid: Mu'assasat Ḥamādah lil-Dirāsāt al-Jāmiʻīyah wa-al-Nashr wa-al-Tawzīʻ, 2002). Pp. 308.

REVIEWED BY BETHANY J. WALKER, Oklahoma State University

The continuing debate over the decline of the Mamluk state is revisited from the ″periphery″ of the empire in this work by Shawkat Ḥujjah. The book examines the Burji Mamluk period in Jordan and assesses the general political, economic, and demographic decline of the state from the vantage point of the Jordanian provinces, southern Mamlakat Dimashq and Mamlakat Karak. In its chronological scope, methods, and organization, it builds on the work of the Jordanian historian, Yūsuf Ghawānimah, on his country in the Bahri Mamluk period.[1] The present work is the author′s unrevised doctoral thesis, advised by Dr. Ghawānimah[2] and completed at Yarmouk University in Irbid in 1996. Only the conversion of footnotes to chapter endnotes differentiates this publication from his original dissertation.

Ḥujjah′s book opens and closes with the theme of Mamluk decline, a popular topic among Jordanian historians. According to the author, the factors behind this decline and those that most heavily impacted southern Bilād al-Shām are many-fold: natural disasters, Mongol invasions, bedouin incursions, political competition among the Syrian amirs, and the weakness of the central government (p. 9). The marked demographic transformation of the region in the late Mamluk period—the abandonment of villages, general population decline, and shifts in settlement—is the principal indicator of political decline for most historians and archaeologists working in Jordan today. Ḥujjah′s work was conceived, in part, as a contribution to this debate. While he repeats many of the mantras of the academic establishment in this regard, he reads a wider variety of sources and does so with an eye to social history.

The city of Kerak, the capital of Mamlakat Karak, occupies central stage in this book and is presented as a microcosm of southern Syria in the ninth/fifteenth century. Ḥujjah′s narrative focuses on the reigns of Sultans Barqūq and Faraj and the many armed uprisings by amirs and tribal shaykhs alike that were launched from that city. It was the rebellions of the Syrian amirs, the author argues, that

[1]Among Ghawānimah′s most important studies on Mamluk Jordan are *Tārīkh Sharqī al-Urdun fī ʻAṣr Dawlat al-Mamālīk al-Ūlá, al-Qism al-Siyāsī* and *Tārīkh Sharqī al-Urdun fī ʻAṣr Dawlat al-Mamālīk al-Ūlá, al-Qism al-Ḥaḍārī,* both published in Amman in the mid-1980s. He has written a cultural history of Amman and, more recently, brief paperback reports on medieval Irbid, the mosques of ʻAjlūn, and saints′ shrines in Jordan, as well as a monograph on Jerusalem.

[2]Personal communication, Yūsuf Ghawānimah.

weakened the government in Cairo, created chaos and civil war in Jordan, and drove the general demographic and economic collapse of the Syrian provinces. The introduction and six chapters of his book reflect themes that account for these developments: the strategic importance of Jordan to the Mamluk state; political events during the sultanates of Barqūq and Faraj and after Faraj's death; the political role of the Jordanian tribes; and trade and communications in the region.

In his well-organized and clearly written introduction, Ḥujjah describes those sources that have yielded the most data on political, economic, and social conditions in Jordan in the ninth/fifteenth century. He relies on an assortment of contemporary sources—administrative manuals (al-ʻUmarī's [d. 749/1348] *Kitāb Masālik al-Abṣār fī Mamālik al-Amṣār*), travelogues (largely Ottoman: the eleventh/seventeenth-century *Al-Riḥlah al-ʻIyashīyah* and *Al-Riḥlah al-Khayārī*), chronicles and biographical dictionaries (primarily Syrian: Ibn Qāḍī Shuhbah's [d. 851/1447] *Tārīkh* and Ibn Ṭūlūn's [953/1546] *Mufākahat al-Khillān fī Ḥawādith al-Zamān*), and biographies of the Burji Mamluk sultans (for instance, Ibn Ṣaṣrā's [d. 800/1397] *Kitāb al-Durrah al-Muḍī'ah fī al-Dawlah al-Ẓāhirīyah,* which covers Barqūq's reign)—that have until now been underutilized. The bulk of his primary material comes from the microfilm archives of the University of Jordan library that Dr. Muḥammad ʻAdnān Bakhīt, Jordan's leading Ottomanist, created in the mid-1980s. This is a large repository, comprised of copies of Mamluk and Ottoman-period manuscripts housed in collections in Jerusalem, Cairo, Damascus, Istanbul, and libraries throughout Europe.[3] The University of Jordan archives has transformed research in the country since the mid-1980s, allowing Jordanian scholars to work on topics that had previously required international travel. Like the majority of Islamic historians in Jordan today, Ḥujjah relies most heavily on local sources that focus on the Transjordan, and particularly the provincial capital of Kerak, such as ʻAbd al-Bāsiṭ's (d. 920/1514) *Nayl al-Amal fī Dhayl al-Duwal.*

The author justifies his focus on Jordan for the Burji Mamluk period in Chapter 1, where he emphasizes the centrality of geographic Transjordan as a communications corridor, the political role of its tribes and administrative centers (such as Kerak and ʻAjlūn), and the fertility of the *iqṭā'āt* located there. The chapter opens with a linguistic discussion of the term *al-ghūr* and cites numerous poetic references to the term—a section, in all, that contributes nothing to the book. The rest of Chapter 1 is devoted to the technical administration of Transjordan under the Burji Mamluks: the location of provincial and district boundaries, and the frequent transfer of administrative centers. While such topics have been dealt

[3]For the holdings of this collection, see the published catalogues in Muḥammad ʻAdnān Bakhīt et al., *Catalogue of Arabic Manuscripts (on Microfilm),* vols. 1–3 (Amman, 1984-86).

with in detail by other historians,[4] Ḥujjah's innovation is the attention he showers on the changing fortunes of Mamlakat Karak in this period, as it loses its independent administrative status and is finally added to the District of Jerusalem (Niyābat al-Quds) in the early tenth/sixteenth century. The political rationale for the redistricting of this province, as well as the political fallout that such administrative changes produced, remain important themes for the rest of his book.

In Chapter 2 the author begins to analyze the chaos of the Burji Mamluk period by illustrating the many ways amirs stationed in Transjordan and the citizens and tribesmen of the region created and reacted to political conflicts. This chapter deals primarily with Sultan Barqūq, whose reign was interrupted by the insurrection of Amirs Yalbughā al-Nāṣirī and Minṭāsh in 791/1388. As al-Nāṣir Muḥammad was forced to many years before him, Barqūq spent his exile year imprisoned in the jail of Kerak Castle, from where he was able to consolidate his personal ties with residents of Kerak Town and the leadership of the Banī ʿUqbah and the Jarm. Kerakis, townsmen and tribesmen alike, were united in their support of Barqūq, according to this reading of the sources, and played a central role in returning him to the throne. Underneath the author's narrative are the strains of modern nationalism, in which political loyalty, particularly among the tribes, is applauded. It is not clear whether this double-entendre was deliberate, but it is occasionally encountered today in Jordanian historiography. An innovative analysis of texts on the Jordan River Valley closes this chapter (pp. 79–82), in which Ḥujjah investigates the poor management practices that may have contributed to the collapse of the agricultural sector in the valley at the turn of eighth/fourteenth century, such as the diversion by the *mushadd al-ghūr* of water to his own plots, and extortion, forced sales of produce, and hoarding of food goods by other government officials (p. 81).

Civil war is the theme of the third chapter, which deals with Jordan during Faraj's sultanate. Although he exaggerates the impact of Timur's invasions on Jordan (pp. 119–29), he makes a good argument for the centrality of Kerak, its official personnel, and its residents in the revolts of Mamluk amirs (Mahtar ʿAbd al-Raḥmān in 807/1404; Shaykh al-Maḥmūdī and Nawrūz al-Ḥāfiẓī in 813/1410) and tribal shaykhs (pp. 115–19). The chapter primarily examines the careers of the governors of Kerak and of its citadel, which averaged a year or two in length during Faraj's reign, and evaluates the way in which their rivalries, imprisonments,

[4]Maurice Gaudefroy-Demombynes, *La Syrie à l'époque des Mameloukes d'après les auteurs arabes: description géographique, économique et administrative* (Paris, 1923); Nicola Ziadeh, *Urban Life in Syria under the Early Mamluks* (Westport, Conn., 1970); and, more recently, Ṭāhā Ṭarāwinah, *The Province of Damascus during the Second Mamlūk Period (784/1382–922/1516)* (Kerak, Jordan, 1994).

armed revolts, and poor administration devastated the economic base of Kerak Province and Gaza. Here Ḥujjah emphasizes the role of the tribes in these troubled times, as marauding bands plundered and destroyed villages in the absence (or weakness) of local Mamluk garrisons, forcing residents to abandon their settlements and take refuge in the nearest citadels (pp. 250 ff). His textual references are perhaps the strongest evidence to date for the relationship between ″bedouin predations″ and the shift from lowland to highland settlements in the fifteenth century, a phenomenon long identified through regional surveys but never sufficiently explained by archaeologists. In his concluding arguments for this chapter, the author attributes the decline of Jordan during Faraj′s reign to: 1) the power struggle among the sultan′s top amirs in Syria; 2) Timur′s invasion of Syria (the effects of which were felt in northern Jordan); and 3) the pillage and destruction of Jordanian centers by soldiers and tribes.

Stories of local interest frame Chapter 4, which chronologically covers the post-Faraj years, between 816/1413 and 922/1516. Here the author recounts those political events of the period that either took place in Jordan or had the greatest impact there. Among these are the establishment of the rival sultanate of Ibn Thaqāl, a.k.a. ″al-Sufyānī,″ in ʻAjlūn in 816/1413, as well as several short accounts of the rapid rise and fall of several governors of Kerak. The author then lists those governors *(nawāb)* of Kerak, ʻAjlūn, and Salṭ (merged into one administrative district sometime in the third quarter of the eighth/fifteenth century), and the Jordan River Valley *(al-ghūr)*. He makes ample use of biographical sources for this purpose, including Ibn al-Jīʻān ([d. 901/1496] *Al-Qawl al-Mustaẓraf*), Ibn Ṭūlūn ([d. 954/1546] *Mufākahat al-Khillān fī Ḥawādith al-Zamān*), and Ibn Iyās ([d. 930/1523] *Badāʼiʻ al-Zuhūr fī Waqāʼiʻ al-Duhūr*). This chapter provides a convenient list in Table 2 of the governors of Kerak during the reigns of Barqūq and Faraj (pp. 168–70). Ḥujjah concludes this chapter with a diatribe against the later governors of Kerak, accusing them of destroying Jordan through their political rivalries (which led to oppression of the peasants and tribal devastations in their absence), corruption (they essentially bought their governorships) and political opportunism (leading to their exile and imprisonment), collaboration with foreign powers, and irresponsible land management (pp. 185–87).

The final two chapters of the book enumerate Jordan′s tribal groups (and their roles in the political debacles of the period) and highlight the central role that the region played in Mamluk trade (the pilgrim markets of ʻAqabah, ʻAjlūn, and Zarqāʼ; lists of merchandise produced and sold; domestic and transit trade routes) and communications (the hajj route from Damascus, for example, passed through the middle of Jordan). While these are interesting and useful summaries for the newly initiated, such topics are standard fare for Jordanian master′s theses and doctoral dissertations. Moreover, the handwritten maps of trade routes on pp. 281

and 283, which are appendices for Chapter 5, are illegible and, thus, not usable. Likewise, the author´s commentary on archaeological surveys in Irbid reflects a superficial understanding of such fieldwork and does not contribute to his arguments about the structure of caravan trade networks (p. 253). Nonetheless, Ḥujjah makes more meaningful assertions about the civil resistance of townsmen (and particularly those of Kerak) vis-à-vis the Mamluk governors (p. 116–17) and their united self-defense against tribal raids (p. 230).

One of the strengths of Ḥujjah´s monograph is his broad foundation of written sources. One of its weaknesses is his uncritical reading of these sources and sweeping generalizations based on a few of them: applying the special circumstances of Kerak to the whole of Jordan, for example, and using Ottoman-period travelogues to comment on the socio-political state of towns and villages in the Mamluk period. Moreover, the author neglects some key sources that would have refined and, in some instances, contradicted his conclusions, such as Ottoman tax registers (translated into Arabic and published in Jordan by Bakhīt in 1989 and 1991, thus readily available to the author at the time of writing his dissertation)[5] and the large body of archaeological literature (providing a wealth of data on demographics, settlement, environment, and material culture and trade) found in nearly every university library in the country.

These criticisms aside, Ḥujjah´s study is a thorough, interesting, and extremely useful analysis of the political conditions that impacted Jordanian society and economy in the ninth/fifteenth and early tenth/sixteenth centuries. As a provincial history (and one of the few books on Jordan) and one focused on the transition between the Bahri and Burji periods, readers will find it a most welcome contribution to Mamluk studies. Ḥujjah´s interpretation of the role of the Syrian amirs in the decline of the Mamluk state, his understanding of the political role of the Jordanian tribes, and his interest in the impact of both on local agriculture are topics that are multi-disciplinary in appeal and fresh in approach.

Fustat Finds: Beads, Coins, Medical Instruments, Textiles and Other Artifacts from the Awad Collection. Edited by Jere L. Bacharach (Cairo: American University in Cairo Press, 2002). Pp. xi + 235.

REVIEWED BY WARREN C. SCHULTZ, DePaul University

This book is both a celebration of the role played by the Egyptian physician Henri Amin Awad in the preservation of material culture objects from Fustat *and* a poignant reminder of the lost opportunities to learn more about this important site for the history of early to medieval Islamic Egypt. As the Introduction points out, Dr. Awad opened a clinic in the Fustat region in 1950, and shortly thereafter began accepting small unidentified objects of ″no real market value″ (p. 4) from his poor patients in exchange for medical treatment. Over the course of the next few decades, Dr. Awad obtained, examined, studied, occasionally published, and eventually donated many such objects to several institutions and universities in Egypt and abroad. Thus the word ″collection″ in the subtitle of this volume is to be understood broadly as referring to material which funneled through Awad′s holdings before ending up elsewhere, and should not be taken to mean a set of material currently in his possession or in a single location.

The Introduction states that Dr. Awad had the initial difficult choice before him as to whether he should accept these items or refuse to take them since leaving them *in situ* ″until scientific teams of archaeologists could examine them″ would be the preferred situation in an ″ideal world″ (p. 3). This of course is a key issue of some controversy in the scholarly arena (not to mention those of government policy and legal regulations) and readers of the book will undoubtedly have their own strong views on this matter. While it is certainly true that artifacts with specific site references are of the most value to scholars present and future, it is also valid that items with only the most general provenance—i.e., found in the Fustat region—are of use to scholars. It is in that spirit that this book was prepared.

The book is divided into thirteen sections of varying lengths. The majority were prepared especially for this volume, although two are revised versions of previously published material (those coauthored by Hamarneh and Amin). All provide detailed descriptions of the items therein, and some also situate the significance of their items in wider arenas of knowledge. The contents are: the ″Forward″ by Ibrahim ʻAbd al-Rahman and ʻAbd al-Rahman ʻAbd al-Tawwab; ″Introduction″ by Jere L. Bacharach; ″Beads″ by Peter Francis, Jr.; ″Bone, Ivory & Wood″ by Jere L. Bacharach and Elizabeth Rodenbeck; ″Coins″ with initial comments by Jere L. Bacharach, and identifications by Michael L. Bates, Peter Mentzel, Norman D. Nicol, and Luke Treadwell; ″Copper Coinage of Egypt in the Seventh Century″ by Lidia Domaszewicz and Michael L. Bates; ″Glass Weights

and Vessel Stamps" by Katharina Eldada (the longest contribution); "Glass Vessel Stamp Data for *Materia Medica*" by Sami K. Hamarneh and Henri Amin Awad; "Medical Instruments" by Sami K. Hamarneh and Henri Amin Awad; "Medical Prescriptions" by Henri Amin Awad; "Metal Objects" by Jere L. Bacharach and Elizabeth Rodenbeck; "Textiles" by Nancy Arthur Hoskins; and an appendix, "Selected Bibliography of Published Works by Dr. Henri Amin Awad."

The overwhelming majority of the items listed and described in this volume are from the periods before the establishment of the Mamluk Sultanate. (The main exceptions to this observation are the numerous Mamluk coins listed in the "Coins Section" and two Mamluk-era medical prescriptions.) Nevertheless, the Mamlukist will find the book a useful resource for situating in wider contexts any Mamluk-era material culture artifacts that s/he may have occasion to analyze. The contributions on "Beads" and "Textiles" in particular serve as both useful primers (to the non-specialist) for those knowledge-fields as well as detailed catalogues of the items described.

Some comments regarding the "Coins" section are in order as more than four hundred coins described therein are linked to the Mamluk era. The coins listed in this section are all now preserved at the American Numismatic Society in New York. In light of that, the omission of their ANS accession numbers from the catalogue (as was done in the section on "Glass Weights and Vessel Stamps") is unfortunate, since those numbers not only provide the date of donation, but are what make it possible to track down specific coins in the collection. Still, it is convenient to have this list gathered in one place, as the following example points out: given the usual assumption about the limited circulation of copper coins, the large number of mintless *fulūs* of Sultan Baybars from the Fustat region as found in the Awad collection adds credence to the argument advanced by Michael Bates that these coins were struck in Egypt as well as in Syria.

Finally, the Introduction also points out that Dr. Awad donated many coins to several Egyptian museums in addition to those given to the ANS, but that "it proved to be too complex a problem to track down the gifts to these various institutions" (p. 5). I certainly have great empathy for this problem, and what follows is only a minor quibble. Nevertheless, even a preliminary and general list of what went where, gleaned perhaps from the personal records of Dr. Awad, would have been useful information for any scholar whose work might benefit from tracking down additional specimens. For, as Bacharach and Rodenbeck point out, it is first necessary to build up a database of artifacts in order to use material culture in the effort of writing "the history of everyday life in Fustat and other Mediterranean and Middle Eastern cities" (p. 32).

SHIHĀB AL-DĪN AḤMAD IBN MUḤAMMAD IBN ʻUMAR AL-ANṢĀRĪ IBN AL-ḤIMṢĪ [841–934], *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān.* Edited by ʻUmar ʻAbd al-Salām Tadmurī. (Beirut: al-Maktabah al-ʻAṣrīyah lil-Ṭibāʻah wa-al-Nashr, 1419/1999). Three volumes.

REVIEWED BY CARL F. PETRY, Northwestern University

The publication of an important historical text heretofore accessible only from scattered manuscripts covering disparate chronological portions of the whole in a legible format is a welcome event. The editor has consulted the known fragments of Ibn al-Ḥimṣī´s text to produce what appears at first glance to be a carefully annotated and documented edition. Tadmurī states (pp. 63–68) that the surviving fragments of the *Ḥawādith* are preserved in the Feyzullah Library (Istanbul) for the years 851–900, Cambridge University (UK) for the years 901–8, and Suhāj University (Egypt) for the final period 909–30. The latter two manuscripts were examined from photocopies held by the Manuscript Institute of the Arab League in Cairo. The three volumes do not follow the chronological divisions imposed by the manuscript fragments, but are divided between the years 851–901 (vol. 1), 902–23 (vol. 2), 923–30 (vol. 3—to which are appended short episodic fragments and surviving, but incomplete, lists of necrologies).

The editor notes that chronological lacunae occur at various stages of all three manuscripts, while other writers likely contributed entries that the author included without overt acknowledgment. Some were inserted after his demise. The edited text of the original is preceded by the editor´s detailed introduction that includes a biography of the author, a list of his teachers, a summation of research on his career by a scholar identified as Laylá ʻAbd al-Laṭīf, a discussion of the editor´s consultation and collation of the three manuscript fragments, a list of the author´s writings (surviving or undiscovered), and a statement about his place in the historiography of Mamluk Egypt and Syria (pp. 9–68).

This place, although infrequently acknowledged in contemporary scholarship of the period,[1] is significant. Ibn al-Ḥimṣī spent most of his mature years in Damascus, second city of the Mamluk Empire. Keenly observant of the turbulent events unfolding there during the final decades of rule by the Circassian sultans and their viceroys, Ibn al-Ḥimṣī reveled in reporting factional infighting waged by the military elite and their civilian adjutants. His rich tapestry of local happenings, personally witnessed, is interspersed by descriptions of intermittent visits by officials

[1]For example, Brockelmann mentions Ibn al-Ḥimṣī only once, in a one-line reference that does not provide the author´s *nisbah* (Carl Brockelmann, *Geschichte der arabischen Litteratur* [Leiden, 1938], S2:41, #12a).

from Cairo, the imperial center, and reference to broader developments in foreign lands. The *Ḥawādith* is therefore a valuable, indeed indispensable, source for the history of Damascus, and Syria more generally, during this era that preceded the Ottoman conquest. No student of the region can afford to ignore it now that Professor Tadmurī has made the work readily available.

A cautionary note is necessary, however. I have had occasion to consult the original manuscript (#1438) held by the Feyzullah Library myself. Among its more striking entries is a discussion of circumstances surrounding the succession to the Sultanate of "Iraq and the East" following the alleged death of Ya'qūb Bak ibn Uzun Ḥasan in Shawwāl of 898/August 1493 (fol. 132a; see below for correct death date). Ibn al-Ḥimṣī castigates Ya'qūb's vile behavior when he states that the sultan responded to a request for an *iqṭā'* from the son of a notable with his own demand for "an abomination" *(fāḥishah)* in return for its bestowal. Upon the youth's complaint to the sultan's mother, she upbraided her son for his conduct. Ya'qūb responded by slaying his parent in shocking fashion—while intoxicated. When his brother learned of the murder, he attacked Ya'qūb and killed him. The army then rose against the brother, executed him, and ultimately selected a grandson of Uzun Ḥasan via another line, Rustam Bak, as sultan. This lurid episode is certainly unsettling. Matricide is a crime condemned unconditionally in any society. Yet it raises perspectives vital to understanding the background to Ya'qūb's death and Rustam's succession, a noteworthy episode in Aqqoyunlu history (Ibn al-Ḥimṣī's details themselves may be questioned; Ya'qūb was assassinated in 896/1490 rather than in 898).

But the editor omitted this episode from the printed version (vol. I, 343–44). His rendition jumps from request for the *iqṭā'* to the brother's murder of Ya'qūb. With the deletion, the text reads as if Ya'qūb murdered the boy, which appears as the occasion for the army's deposition of him. This amounts to an unconscionable distortion of the original. It is the one case that I encountered (I was unable to obtain a complete copy of the original or to examine it *in toto;* the original was brought down to the Süleymaniye). Yet if the editor made this deletion, for whatever reason, he may have committed similar distortions elsewhere throughout the manuscripts. The otherwise admirable result may thus be unreliable for accurate historical reference and should be consulted with caveats.

ʻUMAR IBN AL-FĀRIḌ, *ʻUmar ibn al-Fāriḍ: Sufi Verse, Saintly Life.* Translated and introduced by Th. Emil Homerin (Paulist Press: New York and Mahwah, NJ, 2001). Pp. xvii + 360.

REVIEWED BY MICHAEL WINTER, Tel Aviv University

ʻUmar Ibn al-Fāriḍ (576–632/1181–1235), arguably the greatest mystical poet in Arabic, lived in a century exceptionally rich in famous Sufi poets, writers, thinkers, and shaykhs, many of whom were recognized as *awliyā',* saints, or friends of God. The best-known names are Muḥyī al-Dīn ibn al-ʻArabī, Jalāl al-Dīn Rūmī, Abū al-Ḥasan al-Shādhilī, Shihāb al-Dīn ʻUmar ibn Muḥammad al-Suhrawardī, Sayyidī Aḥmad al-Badawī, Ibrāhīm al-Dasūqī, Najm al-Dīn Kubrā, and Ḥajjī Bektāsh. The personalities and the works of many Sufi writers and shaykhs were loved and admired by many Muslims, but also gave rise to controversies. ʻUmar Ibn al-Fāriḍ was one of them. His poetry was loved, well known, and influential, and found a host of commentators. Yet his poetry and mysticism were also a subject of repeated attacks and controversies, particularly during the Mamluk period. His mysticism and religious attitudes were often associated with those of Ibn al-ʻArabī, although, as Th. Emil Homerin notes, it is not likely that the two famous contemporary mystics knew of each other.

Ibn al-Fāriḍ lived most of his life in Cairo, but also spent fifteen years in Mecca. He was devout and learned in the Islamic sciences. Yet it was his poetry that brought him fame and ultimately recognition as a *walī,* a saintly man. Homerin has been studying this Sufi poet, his life, his poetry and ideas as they were expressed in his mystical poetry, for a long time. His first book, *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, His Verse, and His Shrine*[1] was the first thorough study of Ibn al-Fāriḍ. That study introduced the poet, giving his biography and his ideas and religious views as they are reflected in his poetry. Also described are the controversies that took place about his doctrines that seemed to certain scholars contrary to Islamic orthodoxy, and his eventual acceptance by most Muslims and his reputation as a *walī.* These developments happened in Cairo during the Mamluk period. Homerin described in detail the ideas, personalities, and forces that were at play around Ibn al-Fāriḍ's mysticism. The book discusses the poet's legacy and status in later times, up to the twentieth century.

The present book has the objective to make Ibn al-Fāriḍ's poetry and ideas accessible to a wider readership of people who may not know Arabic but are interested in mysticism, Sufism and Islam in general, and classical Arabic poetry.

[1]Columbia, S.C.: University of South Carolina Press, 1994.

Arabists and other specialists in the field will also find the book useful for deepening their knowledge of Arabic Sufism.

The book, which opens with a comprehensive introduction about Ibn al-Fāriḍ and his poetry (pp. 7–37), is an annotated reader of translated selections of Ibn al-Fāriḍ's most famous poems, parts of authoritative Arabic commentaries, and also the biography, or rather hagiography, of the poet written by his grandson ʻAlī, Sibṭ Ibn al-Fāriḍ. It is entitled *Dībājat al-Dīwān* (Adorned proem to the *dīwān*) (the collection of Ibn al-Fāriḍ's poems edited by his grandson.) ʻAlī received the information about Ibn al-Fāriḍ from Kamāl al-Dīn ʻAlī, one of the poet's sons. The *Adorned Proem* presents the poet's physical description and some highlights of his life in Cairo and Mecca. We are told that Ibn al-Fāriḍ turned down offers by al-Malik al-Kāmil, the Ayyubid sultan of Egypt, to prepare for him a grave next to the sultan's mother in the domed shrine of al-Imām al-Shāfiʻī, and also returned money sent to him by the ruler, as befits a saintly man. Various miracles were attributed to Ibn al-Fāriḍ.

ʻAlī relates that during one of his pilgrimages to Mecca, Ibn al-Fāriḍ unexpectedly met Shihāb al-Dīn al-Suhrawardī, the renowned Sufi shaykh and writer, who also came from Iraq to perform the hajj duty. The two mystics were indeed contemporaries, but whether this encounter was a historical fact is doubtful.

Finally, Ibn al-Fāriḍ's death and his awesome funeral procession are described in detail.

The *Adorned Proem* reports an incident that happened around 687/1288, during the reign of Qalāwūn, the Mamluk sultan. ʻAbd al-Raḥmān Ibn Bint al-Aʻazz, a well-known scholar who was vizier and later a high ranking qadi, slandered a prominent Sufi shaykh named al-Aykī for ordering his disciples to study Ibn al-Fāriḍ's longest and most important poem, "Naẓm al-Sulūk," translated by Homerin as "Poem of the Sufi Way." It is also the longest Sufi poem in Arabic, spanning over 761 verses. Ibn Bint al-Aʻazz, like many of Ibn al-Fāriḍ's critics afterwards, accused the poet of promoting the doctrine of *ḥulūl,* or incarnation of the Holy in a human form, thus annihilating the separation between God and His Creation, contrary to the belief of Islamic orthodoxy. The author of the *Adorned Proem* reports that as a punishment from God, Ibn Bint al-Aʻazz was dismissed from his high positions. Later he repented, and even recited Ibn al-Fāriḍ's verses during his next hajj. God accepted his prayers, and he was again entrusted with the judgeship.[2]

In the center of the book is the full and annotated translation of "Naẓm al-Sulūk"

---

[2]A fiercer controversy about Ibn al-Fāriḍ's poetry and doctrines raged in 874–75/1469–70 during the reign of Sultan Qāytbāy. Al-Biqāʻ, an alim who was the poet's fiercest critic, suffered humiliation and exile. See Homerin, *From Arab Poet to Muslim Saint: Ibn al-Fāriḍ, his Verse, and His Shrine,* 62-73.

(″Al-Tā'īyah al-Kubrá,″ the ode rhyming on *tā'*). The translator decided on a verse-by-verse commentary, printed on the pages facing the text of the translation, a graphically successful solution. This poem is full of motifs, allusions, and imagery from the Quran, the hadith, and the Sufi tradition. Homerin′s wide knowledge of all these sources makes his commentary extremely useful even to experts in Islamic culture and vital to the wider public. Only the principal themes of the ″Poem of the Sufi Way″ will be mentioned here: the love of the mystic for God; the Day of the Covenant;[3] the Light of Muḥammad;[4] *dhikr;*[5] and many allusions to figures and ideas from the Quran and Arab poetry. As Homerin makes clear, Ibn al-Fāriḍ′s mystical ideas, images, and allusions are not original. The poet drew on the Sufi heritage and literature. For example, Junayd of Baghdad (d. 297/910) developed the doctrine of the Day of the Covenant, and the writings of Sahl al-Tustarī (d. 289/896) were important for the belief in the Light of Muḥammad. The influence of the great al-Ghazālī (d. 505/1111) on later mystical theories and attitudes are also discernible in the work of Ibn al-Fāriḍ, as in the ideas of many other Sufis. Yet the artistic rendition of these mystical elements was Ibn al-Fāriḍ′s own contribution that brought him fame, admiration, and sometimes denouncement.

In the Introduction (pp. 35–36) Homerin notes correctly that medieval and modern commentators, who persisted in reading the ″Poem of the Sufi Way″ as Ibn al-Fāriḍ′s spiritual autobiography, have failed to appreciate the presence of the lyric ″I,″ the dramatic persona so essential to the poem′s craft. That ″I″ is at times the lover, at others ″Muḥammad′s Light,″ and at times a combination of both. Homerin adds: ″Many sections of the poem, such as that on divine emanation and the various levels of existence, would be more the product of doctrine, reason, and reflection than of personal mystical experience.″ Homerin also points to the poem′s openly didactic character.

I fully agree with Homerin′s analysis and conclusions. I would emphasize more the strong apologetic strain used by Ibn al-Fāriḍ that is evident in many verses in this poem. The poet repeats the message that in spite of the fact that the lover has experienced union with the Holy, he is committed to fulfill the religious

---

[3]*Yawm al-Mīthāq,* the day in pre-eternity on which God made His covenant with the spirits of humanity before their existence in creation, after Quran 7:127.

[4]The pre-eternal entity, a type of logos principle, God′s first emanation and the instrument of all subsequent creation. According to one hadith, Muḥammad said: ″I was a prophet when Adam was still between water and clay,″ and in a divine saying, God says to Muḥammad: ″If not for you, I would not have created the heavens.″ Even after the death of the human Muḥammad, the Prophetic Light continues to appear on earth among the gnostics and friends of God. Homerin, *Ibn al-Fāriḍ*, 29.

[5]″Recollection,″ the Sufi ritual of calling God′s names in unison, often to the point of ecstasy, to recollect past union with God in order to return to the Day of the Covenant.

laws and follow the mainstream of Islamic theology. ″I have not transgressed the two truths: The Book, and the traditions of our Prophet″ (p. 155, verse 280). Other examples in a similar vein are: p. 287, verse 743, p. 203, verse 454, and the translator′s comment on p. 202, for verses 454–55.

I have found that the most interesting part of Ibn al-Fāriḍ′s apologetics is his repeated denial of his belief in *ḥulūl,* the divine′s incarnation into a human form that would annul the separation between God and His creation. This strong denial is significant, since Ibn al-Fāriḍ′s poetry in general and ″Al-Tā'īyah al-Kubrá″ in particular were associated with the doctrine of *ḥulūl,* particularly among his critics. The poet knew exactly what he was being accused of, although, as we have seen, he was not the creator of that doctrine. For example: ″When did I ever shift away from my saying: ′I am her′ or say—how wrong indeed!—′She dwells in me′?″ (p. 153, verse 277).[6] For another example, see p. 289, verse 749. Perhaps the most explicit expression to that effect is p. 155, verse 284: ″So in the clearer of the two visions I have a sign that keeps my creed free from any incarnation.″

The book is an important literary and scholarly achievement. The two poems which Homerin translated and annotated are by far Ibn al-Fāriḍ′s most celebrated ones, ″Naẓm al-Sulūk″ being the most important Sufi poem in Arabic. The ″Wine Ode″ (Al-khamrīyah) is a short poem about mystical love, which in Sufi imagery is likened to wine. The translation of the ″Wine Ode″ is followed by selected portions of the commentary by Dāwūd al-Qayṣarī (d. 747/1345), a supporter of Muḥyī al-Dīn ibn al-ʻArabī′s mystical doctrines. As Homerin explains, the commentary gives us an idea about the interpretative strategies used by Sufis. He notes that this poem could be read as a classical Arabic wine and love poem, without the mystical dimension.

It is hard to translate poetry; all the more so when the texts are the difficult and beautiful mystical poetry composed in Arabic in the Middle Ages. I have compared many verses of the original with the translation, and I am deeply impressed at how faithful to the original text and at the same time elegant and lucid the translation is.[7]

Finally, the cover art of the book ought to be mentioned, not only because of its beauty in form and colorful decoration, but because Th. Emil Homerin tells how special this painting is to him. Mark Staff Brandl, an international artist, theorist and critic, who is his friend from childhood, created it. One sees a sort of colorful and imaginative calligraphy echoing the Arabic sounds *ta*, *ti,* and *tu*, the

---

[6]Ibn al-Fāriḍ′s use of the feminine gave rise to accusations that he was referring to God in the feminine form.

[7]Only in one place did I not like Homerin′s translation. On p. 215, verse 496, he translates *al-maʻīyah* as ″withness.″ Even the quotation marks do not make this translation seem right. But, of course, it is easier to criticize than to translate.

past tense suffix for the second person masculine and feminine, and then the first person. The artist was inspired by verse 218 of the ″Tā'īyah,″ whose message is that lovers in union transcend duality as ″You,″ and become ″I.″ This is one of the central motifs of the poem.

MAJDĪ ʻABD AL-RASHĪD BAḤR, *Al-Qaryah al-Miṣrīyah fī ʻAṣr Salāṭīn al-Mamālīk, 648–923 H./1250–1517 M.* ([Cairo]: al-Hay'ah al-Miṣrīyah al-ʻĀmmah lil-Kitāb, 1999). Pp. 376.

REVIEWED BY WILLIAM TUCKER, University of Arkansas at Fayetteville

Originally an M.A. thesis in history at al-Minufīyah University (Egypt), the present volume is a study of village life in Egypt from ca. 1250 to 1517. The author seeks to elucidate the role of the Egyptian peasant village in the economy and politics of the Mamluk period through consultation and analysis of major Egyptian Mamluk-era authors in both published works and manuscript sources. The results are presented through the prism of economic, social, cultural, and religious life.

The book consists of an introduction, six chapters, and a conclusion. The source materials include a judicious mixture of chronicles, biographical dictionaries, administrative handbooks, topographical works, travelers′ accounts, etc. Baḥr seems to have used these materials carefully and critically, although the obvious problem is that of ferreting out reliable and substantial information on country dwellers, particularly poor cultivators, from these religiously or politically elite authors.

Chapter 1 provides interesting and useful information about the village administrators, *ʻumdah*s, as well as the village agricultural technical specialist (?), the *khawlī*. Baḥr′s discussion of the latter is particularly interesting because it provides insight into the knowledge and planning involved in cultivation in Mamluk Egypt, as well as peasant perceptions of this official and, for that matter, the *ʻumdah*s.

Chapter 2 details the various forms of *dawāwīn, iqṭā*ʻs, and *awqāf* present in Egypt during this period. Although the information here is clearly of value, the informed reader will recognize much of it from previous studies, e.g., those of Professors Sato, Ayalon, etc. The chapter concludes with some mention of individually-owned land, but, probably because the sources available do not contain nearly as much information on this issue as one would like, the author furnishes much less information here than the present reviewer would like to have seen.

Baḥr devotes Chapter 3 to an examination of the Mamluk feudal system and to the various officials involved in its performance and maintenance. The discussion

of the activities of the *nāẓir*s, the *mustawfī,* and other officials, whether administrative, technical, or fiscal, is interesting and offers insight into the ways in which peasants were controlled, disciplined, and, indeed, exploited. In many respects this section is the most valuable part of the book because of its actual engagement with peasant life and the methods of control exerted by Mamluk feudal interests operating in the countryside.

In Chapter 4 the author investigates such issues as irrigation, crops planted, and markets, and inevitably, the range of disasters and catastrophes that blighted the lives and livelihoods of Egyptian rural dwellers. On the latter point, the materials cited are useful but betray a surprising unfamiliarity with some of the basic secondary sources that deal with these serious problems (as, for example, this reviewer′s own study of disasters and Mamluk peasants published more than twenty years ago in *JESHO,* in 1981, to be exact).

Chapters 5 and 6 offer the reader some insight into social life, daily existence, and religious identity and worship in the countryside. We learn, for instance, about the work, homes, and health problems of Mamluk-era peasants. In this respect, Baḥr′s work complements the writings of some Western scholars about European peasant life. The contents of Chapter 6 particularly, while interesting, do not add substantially to what we already know about mosques and churches in Egypt during this period, although the detailed treatment of rural Christians′ religious institutions is valuable.

All in all, this book constitutes a serious attempt to illuminate the economic and social base of Egyptian society in a very important era and, as a result, merits a careful reading. That being said, there are obvious problems with this volume. First of all, the information presented by many of the Mamluk authors is, not surprisingly, very sketchy and ultimately tells us more about the Mamluk masters than about their peasant producers. Secondly, the present author′s impressive knowledge of the primary source material is not matched by a parallel awareness or utilization of modern studies, especially those of non-Egyptian scholars. If nothing else, a rapid perusal of the bibliographies provided in *The Cambridge History of Egypt,* Volume 1, should have offered valuable assistance in such an effort.

I readily understand the problems of procuring books from countries other than one′s own, but I feel quite certain that at the very least *The Cambridge History of Egypt,* if not other sources, must be available in Egyptian academic libraries. It is important that we all, wherever we are, try to learn from and utilize all of the available scholarship regardless of its country of origin. That is, in the final analysis, the impetus for the *Mamlūk Studies Review*′s admirable policy of offering reviews of so many books on the Mamluks coming from the contemporary Arab world.

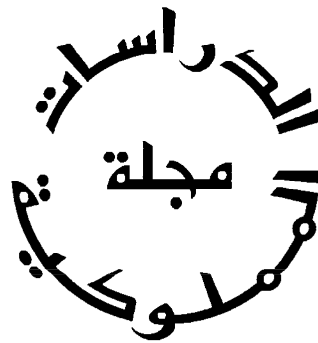
Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).



ء	ʼ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʻ				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ـُو	ū	ـِي	ī
ـَا	ā	ـُوّ	ūw	ـِيّ	īy (medial), ī (final)
ى	á	ـَو	aw	ـَي	ay
				ـَيّ	ayy

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before ″sun″ letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, mi'ah, ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʻi, Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

Published by the MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. The print copy should have full and proper diacritics, but the disk copy should have no diacritics of any kind.

Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page http://www.lib.uchicago.edu/e/su/mideast/medoc.html. This site provides a link to the searchable Mamluk bibliography maintained by MEDOC and has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

ISSN 1086-170X.

″Mediators and Wanderers″: Ulrich Haarmann and Mamluk Studies

The recent and untimely passing of Ulrich Haarmann, Director for Modern Oriental Studies at the University of Berlin, has not only deprived *Islamwissenschaft* of one of its greatest modern influences but the field of Mamluk Studies of one of its most important Continental exponents. For while the corpus of Haarmann′s scholarship was predictably wide-ranging in the time-honored Orientalist tradition, his reputation rested primarily on the bedrock of his published dissertation on early Mamluk historiography.[1] Indeed, his many subsequent contributions to the general study of Mamluk civilization may be said to have characterized the main thrust of his scholastic career. Haarmann felt that a ″deeper understanding″ of the general ″Mamluk phenomenon″ could be achieved by studying particularly the interrelationship of Mamluks and non-Mamluks. However, he believed that it was ″[e]qually critical″ to analyze the ″relationship between Mamluk fathers and their non-Mamluk descendants, the so-called *awlād al-nās*. . . .″[2] To that end, Haarmann insinuated in the late 1980s that one of his primary ambitions as an historian was to produce ultimately a ″comprehensive study of [the] military, economic, and cultural standing . . . from 1250 to 1517″ of this vital but little-understood stratum of medieval Syro-Egyptian society.[3] A culturally as well as ethnically hybridized group, the *awlād al-nās* fulfilled a crucial social function as ″mediators and wanderers between the foreign [Turco-Circassian] elite and the local Arabic-speaking population of Egypt and Syria.″[4]

That Haarmann, a philologist by training, should take such a keen interest in culture is unsurprising. Since the early nineteenth century, language and culture have been closely intertwined in the German *wissenschaftlich* tradition, especially in the works of such lights as Johann Gottfried von Herder, Wilhelm von Humboldt,

Jacob Grimm, and Franz Bopp. Indeed, theoretical advances in historical linguistics have often foreshadowed the development of related ideas in social and cultural anthropology.[5] Thus, while Haarmann praised the philologist Helmut Ritter, best known perhaps for his association with *Bibliotheca Islamica*, as ″the most important German Orientalist of our century,″ he also acknowledged the singular achievement of Carl Heinrich Becker in introducing critical method into the study of Islamic history.[6] One-time Prussian Minister of Culture and a founding father of *Der Islam,* Becker argued that Islamic cultural systems were capable of producing dynamic socioeconomic change. His adaptation of the idea of ″cultural circles″—the grouping of related cultural traits derived from the *Kulturkreis* theory prominent in contemporary *mitteleuropäisch* ethnology and anthropogeography—seems to have been particularly revelatory to Haarmann, for whom *Sozialgeschichte* seems to have been largely the product of *Kultur* anyway. Certainly, his belief in a pre-logical concept like the *kollektiv Bewusstsein der Zeit* as a source of historical change invokes the same *Volksgeist* of the *Kulturkreis*—the fundamental psychic principle shaping the traits of the ″cultural circle.″[7] Indeed, Haarmann′s cataloging of the various traits of the *awlād al-nās* could be interpreted as an effort at decoding their *Weltanschauung,* another configurative concept of Austro-German culture-area theory.[8]

Empowered by the synergistic relationship between *Philiologie* and *Kulturgeschichte,* Haarmann came to notice in Mamluk historical texts how a relatively small, discrete social group—*awlād al-nās*—occupied a unique and strategic nexus in Mamluk civilization, bridging the cultural interstices between the alien-extracted *umarā*' (their own fathers) and the indigenous ulama (their colleague/competitors). The lack of meaningful scholarship about these people, he believed, was the outcome chiefly of an historiographical bottleneck created initially in the medieval period by ″non-Mamluk scholars″ attempting to communicate what they believed was the cultural irrelevance of the *nās* and *awlād al-nās*. Haarmann sought actively to counteract the ″bias″ he detected in this discursive, ulama-authored literature by drawing attention to the importance of more objective archival materials.[9]

The endowment deed *(waqfīyah),* for instance, was not only an important—and largely untapped—source for understanding the socioeconomic foundations of cultural institutions in fourteenth and fifteenth century Syro-Egypt but, because it was ″an intrinsically legal genre of writing″ allowed ″no space for manipulation by a scholar. . . .″ They served, moreover, as ″a precious correlate to the often biased reports on academic life and strife found in contemporary . . . literature.″ The deeds studied by Haarmann revealed in particular that while the madrasah, which provided state-sponsored stipends for sufis, served as a physical nexus ″between popular and academic religious life in the time of Barqūq,″ it also segregated members of *awlād al-nās* from participating directly in the cultural life within its precincts.[10] Haarmann drew attention as well to library inventories as portals into the contemporary intellectual and cultural life not only of ulama but also the Mamluks (and presumably their dependents), for whom ″[b]ook-collecting was an expensive yet widespread hobby.″ One such inventory, of the library of a fourteenth-century Jerusalem shaykh, demonstrated significant holdings in sufi-oriented materials but little interest in the very historical literature in which Haarmann himself detected so much bias against the *nās* and *awlād al-nās* .[11]

Despite Haarmann′s best pedagogical efforts, these non-Mamluk progeny have fallen by the scholastic wayside. Largely ignored by David Ayalon, except as military reservists, then ″underestimated″ by Ira Lapidus in terms of their social and cultural significance in Mamluk urban and court life, the *awlād al-nās* experienced not transparency but invisibility as subject matter during the crucial formative years of the field.[12] There has been subsequently little remediation. Even now, an extemporaneous cross-cutting of scholarship on Mamluk administrative, intellectual, socioeconomic, and military subjects reveals few traces of their historical passage. Haarmann′s study of the *awlād al-nās* stands, therefore, as the *ne plus ultra;* of sad necessity, it will remain incomplete. Still, his contributions to date, particularly the several published revisions of a seminal article that achieved final form only in 1998, provide vital insights into the sociocultural processes of this otherwise unheralded group.[13]

[12]Haarmann, ″Arabic in Speech,″ 83, n. 5; 105, n. 114.

[13]The article began in 1977 as a conference paper [″Mamluks and *awlād al-nās* in the intellectual life of fourteenth century Egypt and Syria″] delivered at the Seventh Oxford-Pennsylvania History Symposium in Oxford. After two published revisions (1988 and 1995) it achieved its final incarnation as ″Joseph′s law—the careers and activities of Mamluk descendants before the Ottoman Conquest of Egypt,″ in *The Mamluks in Egyptian politics and society*, ed. Thomas Philipp and Ulrich

Indeed, Haarmann′s self-avowed goal was to detect the ″patterning of . . . non-Mamluk cultural activities.″[14] Whereas their Mamluk fathers had undergone a process of acculturation, these non-Mamluk offspring—the *awlād al-nās*—had had a kind of interculturative experience, wandering between the ″two heterogeneous traditions″ represented by the *umarā*ʾ and ulama. Though not an anthropologist per se, Haarmann was nevertheless seeking to understand the cultural role of one of the chief carriers of social process in the ″highly polarized″ environment of late medieval Syro-Egypt. The *awlād al-nās* functioned primarily as interlocutors *(Dolmetschern)* between the bias of the Arabic-speaking ulama and the parochialism of the Turkish-speaking *umarā*ʾ*,* their placement at the social ″fulcrum″ symbolized by the heraldic emblem of the pen-box. All cultures, of course, undergo a certain degree of internal differentiation. But the *awlād al-nās* appear to have been something more than just culturally different. Haarmann at times gives an impression almost of alienation. For a group trapped eternally between the ″barracks″ *(Kasernen)* and the ″mosque colleges″ *(Moscheehochschulen)* this is not altogether surprising. Haarmann did not believe, however, that the *awlād al-nās* were ″caught helplessly″ between the two cultural camps. He felt that despite the informality of their social status, they at least ″recognized their potential of surviving and indeed thriving as *born* . . . mediators.″ Still, their *Mittlerstellung* could not have been a comfortable cultural space to inhabit.[15]

Overshadowing their medial position were of course the ulama, who flatly ″declared culture and science their own proper domain.″ Because of such absolutist claims to communicative competence the ulama had little incentive to understand the culturally ″other″ in Mamluk society. Even the appearance of Arabic-Qibjaq glossaries and Turkish grammars in early fourteenth-century Syro-Egypt, which Haarmann considered an important potential breakthrough in intercultural *Kommunikation,* did little to stimulate ulama interest in the literary sources of the *Türkentum,* which in addition to their (con)fusion of *Faktum* and *Legende* were viewed as entirely too pagan to be incorporated into the ″hallowed genre of Islamic writing.″ Any possible ″intercultural perspective″ the ulama might have developed naturally ″was stifled by various self-imposed dogmatic restrictions.″[16] These very same ulama, however, were not so shy about generating their own

[16]Haarmann, ″Alṭun Ḫān und Čingiz Ḫān bei den ägyptischen Mamluken,″ *Der Islam* 51 (1974): 1–36; idem, ″Arabic in Speech,″ 84, 85.

vehemently anti-Turkish propaganda, accelerating the historical development of ″the traditional stereotype of the Turkish barbarian . . . not only without culture but by their very nature . . . excluded from it.″[17] Neither were they above passing windy judgments even about the use of some of the Turks′ own military equipment. Ulama authors debated whether the preference shown by the Turks for the use of the standard, if foreign, Persian bow constituted unacceptable innovation. But, as this bow helped the Mamluks guarantee the integrity of the *ummah,* it finally passed muster by the ulama.[18]

Haarmann seems to suggest that neither the Mamluks nor their progeny, despite some genuine intellectual capacity, ever succeeded in engendering a more cosmopolitan sensitivity toward their cultural diversity. Language, both written and spoken, created not cultural unity but cultural apartheid within late medieval Syro-Egyptian society. The *awlād al-nās,* whose first language after all was Arabic rather than Turkish, seemed unable to convert their linguistic competence into communicative competence. Though ethnic hybrids themselves with ″unencumbered access . . . and membership rights in . . . the military and civil worlds,″ they failed to negotiate any hybridized cultural rules favoring their communicative equality. What cultural freedom they already enjoyed—to use ″exotic materials without restraint″ in their writings—they failed for the most part to exploit. The ″split identity″ exemplified by the Egyptian chronicler and *walad al-nās* Ibn Aybak al-Dawādārī was, Haarmann regretted, an all-too-rare demonstration of ″the latitudes of eccentricity and independence of mind which the *awlād al-nās* could enjoy . . . if only they were ready to use it.″ [19]

That the monologic ulama found the cultural aspirations of the *nās* and *awlād al-nās* so insubordinate reflects not so much chronic miscommunication or existential crisis as the contrived distortion of cultural politics. Yet, even in an atmosphere of ″petrified conservatism,″ those cultural politics occasionally folded back on themselves. Amidst the general subsidence of intellectual life in fifteenth century Syro-Egypt, Haarmann detected some subtle changes in the normal ″xenophobic″ discourse of the ulama. For instance, the alim Muhibb al-Dīn Muḥammad ibn Khalīl, better known as Abū Ḥāmid, came to manifest an ″ambivalent attitude″ in his political writings about the culturally ″other″ Turco-Circassians. While initially critical of their vanity, ignorance, and un-shari‘ah-like tendencies, he decided ultimately that the Mamluks were not total boors. It was instead the

[19]Haarmann, ″Arabic in Speech,″ 101, 110–12.

ulama who were actually ″intolerably self-righteous and pernicious.″ Ergo, Abū Ḥāmid′s famous epithet: ″ẓulm al-turk wa-lā ʻadl al-ʻarab.″ His ″vacillation between denigration and adoration″ typified for Haarmann ″the profound instability″ which existed in relations between the *umarā*ʼ and ulama. The cultural dichotomy reflected in Abū Ḥāmid′s writings condemned him, like any *walad al-nās,* to the ″no-man′s land″ between the ″fortified trenches″ occupied by the *umarā*ʼ*,* on the one hand, and the ulama, on the other.[20]

Such cultural ambivalence resided not only among contemporary Arab ulama but also among some of their Persian and Maghribi colleagues. The Shafiʻi jurist and theologian Faẓl Allāh ibn Rūzbihān Khunjī Iṣfahānī, for instance, though a foreign alim was nevertheless a ″sensitive″ observer of late Mamluk civilization. While not uncritical of all he saw, the erudite Khunjī clearly expressed at times ″pro-Mamluk sentiment,″ praising them not only for their physical defense of Islam but also its cultural support in what he considered to be its true ″homeland″ *(bayẕat al-Islām)*. In fact, Haarmann believed that Khunjī′s masterpiece, the *Tārīkh-i ʻĀlam Ārā-yi Amīnī,* was composed in part to resolve the author′s cultural ambivalence, his ″oscillating and contradictory judgments,″ about Mamluk civilization.[21] The legendary Maghribi alim, Ibn Khaldūn, viewed the Turkish elite of the Mashriq from his own historicist perspective as a natural stage in the development of Arabo-Islamic history, praising them for their combination of true belief and nomadic virtues.[22]

While the Mamluks themselves possessed a certain *Kollektivverhalten,* it is unclear what kind of *Kaste* their offspring formed. Indeed, Haarmann asked in 1988 ″[t]o what degree did [the *awlād al-nās*] form at all a clearly definable separate group . . . ?″[23] A decade later he concluded that because of their ″informal″ social status between two more traditional corporate groups, the *awlād al-nās* lacked any ″tangible collective identity . . . or resulting group solidarity.″[24] Yet, there are other instances when he thought of them as relatively ″well consolidated,″ a ″corporate body,″ even briefly a ″subsidiary″ *Militararistokratie*.[25] In fact, they

[23]Haarmann, ″Arabic in Speech,” 104.

[24]Haarmann, ″Joseph′s law,″ 83.

[25]Ibid., 66, 77; idem, ″The Sons of Mamluks as Fief-holders in Late Medieval Egypt,″ in *Land Tenure and Social Transformation in the Middle East*, ed. Tarif Khalidi (Beirut, 1984), 143.

probably did not constitute a corporate but rather a social group. Both recruited from birth, had limits to membership, internal structure, common purpose, and possessed a certain longevity. The principal difference lay, however, in perpetuity. The *umarā'* and ulama, because they spanned virtually the whole of Islamic history, are examples of corporate groups. The *awlād al-nās* appear by comparison to have been a much shorter-lived phenomenon, in short, a social group. Even Haarmann had trouble identifying and dating them securely.[26]

While the *awlād al-nās* shared little social solidarity with their ulama colleagues, they did enjoy a certain economic solidarity with their *umarā'* fathers. As internal distributions of *iqṭā'* to both the royal and non-royal *awlād al-nās* declined in the late fourteenth century, forcing a corresponding economic collapse of their social power, they relied more on their fathers' establishment of so-called family *awqāf* to support them. While this conversion of public, often *iqṭā',* land first into private property and then into tax-exempt charitable institutions deprived the military of much of its material base, it "fitted perfectly the needs of Mamluk fathers and their sons." It also had the effect at least in medieval Cairo of creating an unexpected but "important link" among the Mamluks, their non-Mamluk offspring, and local learned civilians. In the real estate business servicing this conversion of private estates into pious foundations, the *awlād al-nās* may have taken the opportunity to expand their definition of interlocutor to include "broker."[27]

How did the fathers of the *awlād al-nās* figure into their sons *Weltanshauung*? Haarmann believed that while they were probably more consciously affected by the ill-will *(Ressentiment)* of local civilians, many turned intentionally toward the civilian world, eager to eschew "a world smelling of horses, sweat and weaponry."[28] This was probably easier to do in Syria than Egypt, Haarmann thought, given the gravitational pull of the "parental Turkish heritage" exerted by the court in Cairo and the relatively more developed social power of the Syrian ulama.[29] Some went so far as to disavow their fathers' Hanafi "Turkish" *madhhab,* though they may have been drawn back together again by their mutual attraction to sufism.[30] Did disaffected *awlād al-nās* ever embrace the traditional Arabo-Islamic cultural beliefs in individual honor, freedom, and egalitarianism that contradicted the values of their fathers' slave/client subculture?

Sadly, Haarmann's coda to his own study of the *awlād al-nās* seems unnecessarily pessimistic—that "the 'culture' of the Mamluks will remain largely inaccessible

and elusive to us″ because of scholarly bias in the primary sources.[31] Perhaps. But Haarmann′s thoughtful decoding of those ″mediators and wanderers″ has already suggested some deeper implications not only about the long-range intelligibility of that ″culture″ but about the constant value of his own scholarship. He makes us see, foremost, that the structure of Mamluk society was epiphenomenal, an unintended consequence of the intersubjective struggle in late medieval Syro-Egypt to define and redefine communicative competence among the *nās, awlād al-nās,* and ulama. Though confronted by both cultural options—e.g., exploiting ″exotic materials″—and social circumscriptions—e.g., having Turkish mothers—the *awlād al-nās* were clearly not functionalist automata but rather interactionist strategizers. Haarmann was not perhaps as self-conscious a social theorist as, say, Ira Lapidus, but his instinctive interactionism stands up well against Lapidus′s elaborated structural-functionalism. Haarmann′s interest in interpreting cultural patterns rather than explaining social laws, his close collaboration of cultural anthropology and history, his focus on the dynamic process of negotiating cultural meaning rather than on the customary stasis of maintaining social structure all serve to mark his primary intellectual contribution as such.

MCGILL UNIVERSITY

Notes on Mamluk Madrasahs

The core of Ulrich Haarmann´s diverse scholarly interests was his fascination with the literary sources for Mamluk history. His pioneering research on various forms of Mamluk literature—chronicles, travelogues, biographies, religious tracts, *furūsīyah* manuals, etc.—is indispensable for scholars.[1] Not so well known, however, is his occasional interest in documentary sources, most notably in two articles published in the eighties, one entitled ˝Mamluk Endowment Deeds as Sources for the History of Education in Late Medieval Egypt.˝[2] This article reflects the increasing interest given to the history of Mamluk institutions by scholars during the past two decades, using to some degree *waqfīyah*s as primary sources.[3] In the present article I shall assemble some data on Mamluk madrasahs from two secondary sources that have been neglected and which help fill in some of the gaps left by *waqfīyah*s. One of these is al-Asyūṭī´s fifteenth century *shurūṭ* manual devised for judges, witnesses, and notaries in preparing legal documents;[4] the other is al-Nuwayrī´s chronicle contained in his encyclopedia written in the early fourteenth century for the use of chancery clerks.[5]

AL-ASYŪṬĪ´S MODEL

In several publications I have used al-Asyūṭī´s *Jawāhir* as a basis for comparing juristic formulations of how legal documents should be prepared with the actual practice of notaries and judges in late fourteenth-century Jerusalem. [6] I have found that despite variations, documents consistently conform to juristic models. Although it would be interesting to compare and analyze any number of extant Mamluk *waqfīyah*s with al-Asyūṭī´s models, such an exercise, I am convinced, would probably confirm my earlier conclusions. Instead, focusing on al-Asyūṭī´s model for endowing a madrasah I shall summarize what he thought an ideal Mamluk college might be and, at the same time, draw attention to his descriptions of certain positions mentioned in such documents.

Himself a Shafi‘i, al-Asyūṭī states at the outset that his model could serve for any of the legal schools.[7] He devotes little space to the physical aspects of the building, satisfied with the general comment that ″it is to be described and delineated in full . . . along with every place endowed for it.″[8] As we shall see, al-Asyūṭī also covers the possibility that the endower might choose to attach subsidiary educational facilities to the madrasah proper, namely a school for orphans and institutes for teaching the Quran and reciting hadith. He might also endow books for the madrasah. But the author´s main interest lies in the personnel of the madrasah and its adjuncts: their duties, functions, and qualifications. These personnel are not discussed systematically but for our purposes can be divided into administrators, educational and devotional staff, and custodians.

ADMINISTRATORS OF THE MADRASAH

The endower *(wāqif),* who for charitable purposes and an afterlife in paradise provides the inalienable funds for the institution, bears ultimate responsibility for administering it, but he can be, and often is, represented by a controller *(nāẓir)*:

> The controller is in charge of the interests of the madrasah, its maintenance, and that of its endowments, along with obtaining its rents, revenues, and profits and disbursing them for legal expenses.[9]

---

[6]E.g., ″Documents Related to the Estates of a Merchant and His Wife in Late Fourteenth-Century Jerusalem,″ *Mamlūk Studies Review* 2 (1998): 93–193; cf. idem, ″The Nature of *Khānqāhs, Ribāṭs,* and *Zāwiyas* under the Mamlūks,″ in *Islamic Studies Presented to Charles J. Adams,* ed. Wael B. Hallaq and Donald P. Little (Leiden, 1991), 91–106.

[7]Al-Asyūṭī, *Jawāhir,* 1:342, 343.

[8]Ibid., 342.

[9]Ibid., 343.

In addition to the initial paper work, his duties begin with construction of the building, its maintenance, repair, and improvement, in which he may be assisted by a manager *(mutawallī)*. In addition, the controller disburses an annual amount for furnishings and supplies, including carpets and mats, oil and lamps. He is expected to be present at the madrasah on class days in order to insure that the teachers, students, and functionaries perform their duties according to the stipulations of the *waqf*.[10] He can also be assisted by a revenue collector *(jābī)*.

Teachers, Students, and Devotional Staff

Al-Asyūṭī´s madrasah is staffed by a professor *(mudarris)* supported by ten teaching assistants *(mu'īdūn),* and a factotum *(naqīb)* who distributes sections of the Quran to the students on class days. This staff is responsible for teaching fifty students *(faqīh)* who are divided into ten beginners *(mubtadi'ūn),* twenty intermediates *(mutawassiṭūn),* and twenty finalists *(muntahūn)*.[11] Although al-Asyūṭī does not say so, these numbers should be regarded as examples since they obviously depend on the revenue from the endowment, and, as is well known, many Mamluk madrasahs had four professors, one for each school of jurisprudence. In any case, all of the students and the staff were to receive a salary or stipend as stipulated in the actual deed, to be determined, presumably, by the endower and disbursed by the controller.

> The professor is to sit with his students in the qiblah section of the madrasah for one hundred of the customary class days of the spring and autumn, conducting lessons for the students in the applications *(furū')* of *fiqh* and other sciences as stipulated by the endower. When the professor has completed his lessons, each of the ten teaching assistants presides over five students and repeats and discusses the lessons with them, causing them to understand what they find difficult.[12]

Once a year the finalists and intermediates are required to repeat what they have memorized to the professor, whilst the beginners are obliged to demonstrate their writing skills once a month. Unfortunately al-Asyūṭī says nothing further about the curriculum of the madrasah, but the fact that it is associated with a school of law and that the professor teaches applications of *fiqh* indicates that law continued

[10]Ibid., 345.
[11]Ibid., 343.
[12]Ibid., 344.

to play a central role, similar, perhaps, to its importance in the Saljuq colleges researched by George Makdisi.[13]

Two persons are assigned to the madrasah to conduct prayers. Each of these imams is to lead assembled Muslims, including the staff and students of the madrasah, in the five daily prayers as well as special nighttime prayers in Ramaḍān. He should be assisted by the muezzin, who is responsible both for proclaiming the public invitation to the five daily prayers and performing them behind the imam and transmitting them to the worshippers. He pronounces the amen after supplicatory prayers and glorification of God *(takbīr)* after the Ramaḍān prayers.[14] Provision for public prayers in the madrasah supports Amīn's observation that Mamluk madrasahs took on many of the devotional activities of mosques.[15]

Custodians

Most prominent of those charged with the upkeep of the madrasah is the architect *(mi'mār).* He is responsible for building and maintaining the madrasah and those structures which constitute its endowment. Specifically he supervises the construction workers and purchases their supplies—both tools and materials such as wood, stone, stucco, dirt, etc.[16] Next in importance is the doorkeeper *(bawwāb),* if only because he controls and limits access to the building:

> . . . he prevents all from entering except students, salaried employees, and worshippers. He does not permit common folk and plebeians to sleep or settle in the madrasah or to engage in play, talk, or sport. Nor will he permit any common people or anyone else who is not employed by the *waqf* to use the ablution facilities. . . .[17]

Obviously, then, the madrasah was to be reserved for the exclusive use of the teachers and students, except for worshippers at times of prayer only, and it was the doorkeeper's duty to insure this character of the building. To keep it clean, swept, washed, and illuminated, al-Asyūṭī's model appoints a janitor *(qā'im).*

Oddly enough, al-Asyūṭī gives more detail regarding the personnel and activities of the adjunct educational institutions than he does about the college itself. Each of these facilities is to be closely administered and supervised by the controller of the madrasah.

[17]Ibid., 344.

School for Orphans *(Maktab Aytām)*

If the endower provides for a school for orphans, it can be placed over the portal of the madrasah or elsewhere in the building. Here an unspecified number of poor and needy Muslim [orphan] boys who have not yet attained puberty are taught memorization of the Quran by a teacher *(mu'addib),* assisted by a tutor *(ʻārif).* Classes are held six days a week, with Fridays and Tuesday and Thursday afternoons free.[18] Al-Asyūṭī stipulates that the teacher is to be "a good and religious man, virtuous and chaste, who has memorized the Book of God and is of good fortune."[19] As for methods of instruction, the Quran is to be taught by "inculcation *(talqīn),* memorization *(taḥfīẓ),* and repetition *(murājaʻah),* by repeating and correcting the verses until the boy knows and can repeat the verse himself."[20] But the curriculum of the school is not restricted to memorization of the Quran, for the students are also taught "to read and write, make excerpts from books, and perform ablutions and prayers in the school at the specified times."[21] When students reach maturity, the controller replaces them with those who have not. A boy who completes memorization before puberty remains at the school until he has attained it . Both the staff and the students receive daily rations of bread in addition to salaries for the former and spending money for the latter, with special disbursements on religious holidays. Supplies such as pens, ink, inkwells, and tablets are to be provided to the orphans plus a full set of seasonal clothing:

> Winter: a chemise, drawers, a cotton *jubbah,* a fur, a blue wool cap, and black Bulgarian leather sandals. Summer: a chemise, drawers, a white *jubbah* of beaten cotton, a cap, and yellow sandals.[22]

Although there is no suggestion that the *maktab* might provide candidates for admission to the madrasah, this possibility should not be overlooked. By the same token, *maktab* graduates might be able to enrol in either of the two departments which the endower might establish at the madrasah.

[20]Ibid.
[21]Ibid., 346–47.
[22]Ibid., 346.

Quran Academy *(Dār lil-Qur'ān al-'Aẓīm)*
This academy is designed to train experts in the seven recitations of the Holy Book. The students practice daily under the supervision of a shaykh and give recitals every day after supplications for divine rewards for the endower, his family, and the Muslim dead in general. The pious and virtuous shaykh should have memorized the Quran and be ″proficient in delivering the seven recitations in the manner in which Gabriel recited to the Prophet.″[23] He might have ten students, all of whom have already memorized the Quran and now embark on advanced study of Quranic sciences and recitations under his supervision. When the students successfully complete their studies, they are awarded a license *(ijāzah) b*y the shaykh and are promoted to the position of reciter *(muqri')* in the academy. There they serve for as long as funds are available for their stipends from the endowment and for the new students who replace them. Thus, al-Asyūṭī states, the devotional and educational activities of the academy will be perpetuated. Funds are to be provided for a janitor *(qā'im)*.

Center for Prophetic Tradition *(Dār al-Ḥadīth al-Sharīf al-Nabawī)*
Unlike the madrasah, the Orphan School, and the Quran Academy, the Hadith Center was apparently designed for strictly devotional, as opposed to educational, purposes. Thus there was no teaching staff, only hadith reciters; al-Asyūṭī gives twenty as an example; they sit seven days a week, either in the center itself if there is a special chamber or on seats in the madrasah, reciting traditions to those Muslims who had gathered there. These readings were to be performed

> correctly and precisely, without solecisms or alterations, from noble works such as the *Ṣaḥīḥ*s of al-Bukhārī and Muslim, al-Baghawī′s *Al-Maṣābīḥ*, al-Nawawī′s *Al-Adhkār,* and other books transmitted from virtuous scholars as well as eloquent and excellent exhortations.[24]

Some Mamluk madrasahs did contain several of these elements. Quite common, moreover, were institutions that combined Sufi devotional practices with the educational activities of madrasahs and the prayers and sermons of the mosque. These institutions have been studied from several points of view.[25] Moreover, in

---

[23]Ibid., 347.

[24]Ibid., 348–49.

[25]See Amīn, *Al-Awqāf,* 238–40; Fernandes, *Evolution,* 33–46; Berkey, *Transmission,* 44–94; Th. Emil Homerin, ″Saving Muslim Souls: The *Khānqāh* and the Sufi Duty in Mamluk Lands,″ *Mamlūk Studies Review* 3 (1999): 59–84.

his model *waqfīyah* for *khānqāh*s, al-Asyūṭī provides for the possibility that the four schools of jurisprudence might be taught there as well as ″grammar, linguistics, exegesis, Arabic, prosody, hadith, and other sciences that it is legally permissible to study.″[26] In this respect it is to be stressed that al-Asyūṭī did not intend to describe any specific institution but merely to provide models covering eventualities. Nevertheless, they do give insight into the desired nature and milieux of education in Mamluk madrasahs.

Al-Nuwayrī′s Chronicle

Almost two-thirds of al-Nuwayrī′s comprehensive encyclopedia for chancery clerks and scribes is devoted to regional annals of Muslim territories. The long section on Egypt begins with the Tulunids and ends in 731/1331. Al-Nuwayrī is important for us because he held positions in the bureaucracy that enabled him to gain and record first-hand information about the administration of royal endowments. Furthermore, he was not reluctant to judge what he observed with a critical eye. Thus in 703/1303–4 he relates that he became ″an administrator in the Bureau of Royal Crown Property of Egypt and elsewhere,″ and took up residence in the newly opened Madrasah Nāṣirīyah.[27] There, as an official in this bureau, he observed how the *waqf* for the madrasah was administered by virtue of his access to its endowment deeds. This experience he used as the basis of his account of the madrasah in the *Nihāyah*.[28] This institution had a checkered history as we shall see from al-Nuwayrī himself. Significantly, for the study of endowment deeds as sources for institutional history, al-Nuwayrī states that he decided to summarize the *waqfīyah* for the Madrasah-Turbah of al-Nāṣir Muḥammad faithfully, ″in spite of its length and deviation from the chronological order [of the annal],″ because, he says,

> in similar cases, after an extended passage of time, *waqfīyah*s have been concealed so that knowledge of the endowments and stipulations fades. Furthermore, after bandying these deeds and stipulations about among themselves the supervisors and administrators appropriate the endowments and change the disbursements contrary to the stipulations of the *waqf,* using custom as a pretext. Thus the endower′s intentions are abandoned in favor of the administrators′ opinions and ″customary expenses.″[29]

---

[26]Cited in Little, ″Nature of *Khānqāhs,″* 99.
[27]Al-Nuwayrī, *Nihāyah,* 32:73.
[28]Ibid.
[29]Ibid., 63.

Here, then, is an explicit warning that *waqfīyah*s in general contain only the intentions of the endower without guarantee that they will be observed. This is true, al-Nuwayrī states, even during the endower's lifetime, even, moreover, if he be the sultan:

> I was confirmed in the decision [to reproduce the terms of the endowment] by what happened in this blessed [Nāṣirīyah] madrasah from the very beginning, despite the endower's remaining alive, despite ample reason to scrutinize it, despite the appointment of chief judges, notable ulama and distinguished jurisprudents to teach there. All this notwithstanding, the stipulation of the endower was violated in many respects, and the salaries fell short of the endower's provisions, even though there was a surplus of funds. . . .[30]

Before examining the infractions we shall look at al-Nuwayrī's version of the history of the madrasah and its endowment deed. As is well known, the original tomb-college complex had been endowed and partially constructed by the sultan Kitbughā during his short reign (694–96/1294–96). After his deposition, work ceased until 698/1298–99, when al-Nāṣir returned to power. With the advice of chief qadi Zayn al-Dīn ibn Makhlūf, controller of royal properties, the sultan bought the building and endowed it with a monthly income of 18,000 dirhams from rents in Cairo and environs alone. According to al-Nuwayrī, only two days before al-Nāṣir's departure for Syria in 698 to meet the Ilkhan Ghāzān in battle, this same Ibn Makhlūf had himself, and his descendants, appointed as controllers of the *waqf* and as professors of Maliki jurisprudence in the madrasah. But this audacious action in the judge's favor emboldened one of his assistants in the Crown Property Bureau, Shams al-Dīn ibn ʿUbādah, to advise the sultan to change the terms of the *waqfīyah* in such a way that it would not exclude the sultan and his freed eunuchs from the benefits of the endowment. This the sultan did and replaced Ibn Makhlūf as controller by al-Nāṣir's freed eunuch, al-Ṭawāshī al-Amīr Shujāʿ al-Dīn ʿAnbar al-Lālā al-Khāzindār, and other Qalawunid freed eunuchs after him.[31] This is not the place to discuss the role of eunuchs in Mamluk endowed institutions;[32] suffice it to say for the time being that ʿAnbar was an extremely powerful individual in the Mamluk state, holding as he did controllership of three

---

[30]Ibid.

[31]Ibid., 61–62.

[32]See Shaun Marmon, *Eunuchs and Sacred Boundaries in Islamic Society* (New York, 1995); David Ayalon, *Eunuchs, Caliphs and Sultans: A Study of Power Relationships* (Jerusalem, 1999).

other endowments along with Command of the Prophet′s Eunuchs, Bridle of the Royal Harem, and an Amirate of Ten Eunuchs of his own.[33] When al-Nuwayrī asked Ibn ʻUbādah why he had arranged for the eunuch to replace Ibn Makhlūf as controller of the Madrasah Nāṣirīyah, he replied that he wanted only to requite the qadi for excluding him from the offices of the *waqf*.[34] In any case, this act of spite had adverse consequences, as will be seen below.

Contents of the Revised *Waqfīyah*: Physical Features of the Tomb-College

As was the case with many Mamluk endowments the building contained both a domed mausoleum *(qubbah),* presumably intended for the founder, and a madrasah proper. The madrasah, again according to Mamluk custom, contained four *īwān*s (recessed chambers), each being reserved for the study of jurisprudence according to each of the four dominant legal schools, as well as Quranic exegesis and recitation. It is noteworthy that the choice *īwān*—the *qiblī* (southern)—was designated for the Malikis, perhaps because of Ibn Makhlūf′s influence. This unusual primacy given his school was reinforced when the document was certified by the chief Hanafi judge, stating that ″the magistrate *(ḥākim)* to whom supervision would revert should be a Maliki.″[35] Al-Nuwayrī claims that, perhaps inadvertently, when the madrasah opened the Hanafis and Hanbalis were each mistakenly installed in the *īwān* designated for the other, but this was later rectified.[36] The madrasah was divided into two stories that provided living accommodations for the teaching staff, the students, and imams so that they could ″devote themselves to study of ′the noble science [*fiqh*?].′″[37] It should be remembered, moreover, that al-Nuwayrī himself resided there for a time as an administrator of the endowment. The deed also mentions the use of the building by non-residents and its availability for prayers and other religious duties.[38]

The *Qubbah*

The tomb in the middle of the domed chamber was separate and isolated, being reserved for burials. When the building was opened in 703/1303, al-Nāṣir had the body of his mother moved there and later buried a daughter in the same place.[39] He himself was buried in the complex next door established by his father Qalāwūn.

[35] Ibid., 69.

[36] Ibid., 61.

[37] Ibid., 66.

[38] Ibid., 64.

[39] Ibid., 74.

Besides tombs the *qubbah* contained space for prayers and teaching. For these purposes an imam was to be appointed to lead Muslims in prayer five times a day and a shaykh to teach Prophetic tradition. In addition there were to be twenty-five Quran readers who took turns in reciting and in praying for the endower, his family, and Muslims in general.[40] Four freed eunuchs of the sultan or his father were to be assigned to the *qubbah* for unspecified duties. Judging, however, from the example of those eunuchs appointed to the tomb chamber in the Qalāwūn complex, their constant attendance there served as a reminder of the gravitas *(nāmūs)* of the deceased sultan and of the decorum which was to be maintained in the burial chamber.[41] A doorkeeper limited access to the *qubbah* and the madrasah. Two special janitors *(qā'im)* and three caretakers *(farrāsh)* were to be responsible for cleaning and furnishing the chamber, its court, ambulatory, and water basin.[42] The endower instructed that ″the necessary carpets, inlaid candlesticks, brass basins, and other implements be provided,″ such as lamps, water utensils, spittoons, and ″red and white ʻAbadānī mats.″[43]

The Madrasah

The *waqfīyah* actually names the four scholars who were to serve as professors in the madrasah, three of whom were chief qadis, the only exception being the Shafiʻi *mudarris*.[44] These four are designated to teach the applications of *fiqh* at convenient times between sunrise and sunset. Preceding these lessons, each class is to recite passages from the Quran and, following the lessons, conduct prayers for the endower.[45] The controller is to appoint an unspecified number of teaching assistants who are charged, as in al-Asyūṭī′s model,

> to examine their students and to provide explanations and corrections to those who need them, encouraging them to work without stint in extra repetition and explication. . . .[46]

---

[40]Ibid., 64.

[41]See Aḥmad ibn ʻAlī al-Maqrīzī, *Al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Cairo, 1854), 2:380.

[42]Al-Nuwayrī, *Nihāyah,* 32:65.

[43]Ibid., 74, 66.

[44]Ibid., 60–61.

[45]Ibid., 66–67.

[46]Ibid., 67.

A *naqīb* is also to be appointed, as in al-Asyūṭī´s model, plus a *dā'ī,* presumably one who conducts invocational prayers for the founder and others. For ritual devotions an imam is to be appointed to lead the five daily prayers and to ″perform the duties of the imamate according to madrasah custom.″[47] No less than eight muezzins are to be installed in the madrasah and the *qubbah,* with two chiefs ″familiar with the timing of prayer, responsible not only for the calls to prayer but also assisting in their performance, glorification of God, and commemoration of the dead.″[48] A librarian *(shāhid)* is to be placed in charge of books to insure that they circulate for study only inside the building. In addition to the doorkeeper, who is to deny access to suspicious characters and curiosity seekers, a wheel-driver *(sawwāq)* is to oversee the waterworks for the building, and the controller is to disburse funds for, among other things, Nile water to fill the cisterns.[49]

FINANCES

Whereas al-Asyūṭī´s model does not itemize any financial details of a model madrasah, al-Nuwayrī provides full details for the Nāṣirīyah Madrasah. There is no need to reproduce his list of all the properties in Egypt and Syria along with their revenues for the benefit of the institution. But it is noteworthy that al-Nuwayrī points out an error in the delineation of its resources: the property in question was not endowed in toto but

> was among the property inherited by the sultan al-Nāṣir from his father Qalāwūn and other family members, amounting to approximately eighteen shares of the total value. This amount alone was available to the endowment, and the clerk´s inclusion of all this property *(khān)* was an error and oversight. . . .[50]

But al-Nuwayrī´s chief criticisms of the financial aspects of the *waqf* are directed toward the misappropriation of funds intended for the personnel of the building. The financial arrangements stipulated by the endowment deed are somewhat complicated in that some are specified for individuals such as professors and imams and others for groups of unspecified number such as teaching assistants and students. Nevertheless, comparison of al-Nuwayrī´s figures with those for the *khānqāh* established in 717/1316 by al-Malik al-Nāṣir shows some degree of correspondence in spite of generally higher salaries in the madrasah. Thus, although

---

[47]Ibid.

[48]Ibid., 64.

[49]Ibid., 68.

[50]Ibid., 72.

the four professors in the madrasah and the chief Sufi in the *khānqāh* were to be paid two hundred dirhams a month, there was a discrepancy of sixty dirhams for the imam*s* and nineteen for the custodians.[51] But the important point for our purposes is that the first controller of the madrasah *waqf,* al-Ṭawāshī Shujā' al-Dīn, deliberately violated the provisions of the deed and the actual income of the endowments. Thus al-Nuwayrī, sometime after he took up residence in the madrasah in 703, discovered that the income exceeded the expenditures by ″a substantial amount.″[52] Al-Nuwayrī claims that he made it his business as administrator to correct the situation so that a hiatus of three months in which there were no expenditures was no longer in effect But the finances were not regularized until Shujā' al-Dīn died in 724/1324 and was replaced by the viceroy al-Amīr Sayf al-Dīn Arghūn, who made the *waqfīyah* public and applied its provisions.[53] At this time it became clear that the former had paid only half of the salaries and stipends due to the teaching assistants and students and had appropriated three months′ disbursements for himself. This practice the new controller abandoned and by distributing the income as stipulated in the deed increased the number of students and doubled their stipends.[54]

CONCLUSION

At the risk of belaboring an obvious point, I hope I have shown that as commendable as the increasing use of documents in general and *waqfīyah*s in particular for Mamluk history may be, it is clear that they cannot be used autonomously, at face value. On the basis of al-Nuwayrī′s first-hand experience I have suggested that *waqfīyahs* expressed only pious intentions that could easily be subverted in practice, whether intentionally or not. Unfortunately, such frank, authoritative disclosures are rare in Mamluk historiography. Not so clear, however, is the influence exerted by the *shurūṭ* manuals on the drafting and formulation of *waqfīyah*s. In other words, how far did jurisprudential standards for legal, legitimate endowments, such as those embodied in al-Asyūṭī′s model, impinge on the drafting of actual documents, regardless of the possibilities and intentions of application?

Stephan Conermann and Suad Saghbini
Christian-Albrechts-Universität zu Kiel

Awlād al-Nās as Founders of Pious Endowments: The *Waqfīyah* of Yaḥyá ibn Ṭūghān al-Ḥasanī of the Year 870/1465

We are indebted to Ulrich Haarmann for important insights into the fascinating world of the activities and careers of Mamluk descendants, who, according to their own Mamluk tradition, had access neither to the privledged status of the political and military elite nor to the economic resources of the country.[1] Unfortunately, Ulrich Haarmann died all too early and therefore his plan to write a comprehensive monograph on the *awlād al-nās* was not realized. In the first part of the following article, we give a short outline of Ulrich Haarmann´s theses on this topic within a broader Mamluk context. The *waqf* deed which forms the basis for this article was discovered by him to contribute valuable insights into certain activities of the *awlād al-nās*. For this reason, we have presented a complete edition of it.

I

The most striking feature of the Mamluk era in Egypt and Syria, a period which lasted some 250 years, is its unusual polarization of society. A predominantly Arab population was ruled by an elite of enfranchised military slaves, exclusively of Turko-Circassian stock, engaged in constant self-regeneration because of its self-imposed rules.[2] Membership in the Mamluk class was open only to those who

[2]Still the best introduction is David Ayalon, ″Aspects of the Mamluk Phenomenon,″ *Der Islam* 53 (1976): 196–225 and 54 (1977): 1–32. But see also Ulrich Haarmann, ″Der arabische Osten im

were free-born non-Muslims of Turko-Circassian stock outside the Islamic sphere of power, who were then enslaved, brought to Egypt, converted to Islam, trained in chivalry, and finally manumitted. Only those fulfilling these criteria could belong to the ruling class and share the resulting political, military, and economic privileges. A substitute family grouped around a specific master *(ustādh)* constituted the smallest unit within this ruling Mamluk caste.[3] It bore the name of its *ustādh* and became extinct only upon the death of its last member. Mamluk ideals called for fierce and lifelong loyalty to the master, and staunch solidarity with the comrades grouped around the same foster-father. Loyalty and solidarity lent position and social stability to the individual Mamluk. The drawback of this pronounced esprit de corps was an internal rivalry between the various Mamluk ″families,″ a resulting general conflict within the ruling Mamluk caste, and especially the inevitable loss of power when the respective protector was overthrown or died.[4] But despite the tensions inherent in the system, the model of the Mamluk ″non-hereditary one-generation nobility″[5] actually seems to have promoted stability, perhaps in part due to its simplicity. At any rate, one can assume that the longevity of Mamluk rule over the autochthonous populations of Egypt and Syria may also—perhaps even primarily—be attributed to the Mamluk principle of constant self-renewal. On the other hand, a model of society which barred its own offspring from acceding to power did not prove to be viable in the long run. Every principle is, after all, based on the idea that no, or very few, exceptions from the rule are permissible. And it is exactly here that difficulties set in. A cursory glance at the list of rulers indicates that a dynastic line of succession existed during the entire era of Mamluk rule. Whereas only seven genuine Mamluks ruled in the years from 684/1250 until 784/1382, there were seventeen sons of Mamluk fathers. And even during the subsequent period, the Circassian era from an ethnic point of view, eight out of a total of twenty-four sultans were born in Egypt. One reason

for this remarkable fact may have been that, as far as the line of succession was concerned, nomadic oligarchic traditions competed with hereditary monarchial ones well into the ninth/fifteenth century.[6] Only with the accession of al-Mu'ayyad Shaykh (r. 815–24/1412–21), after the interregnum of Caliph al-Musta'īn (812/1415), did the policy of enthroning a new ruler acquire its ultimate form. Upon the death of a sultan who had previously emerged as the victor from wrangling between the strongest amirs, his son was accepted as the nominal leader by a tacit agreement until the question of the genuine successor had been settled. The princes, who often were still young, usually moved back to second rank without much resistance. Of course, these young princes were ambitious as well, and relinquishing the prestigious sultan's office must have been difficult for some of these *sīdī*s—as the sons of sultans and sultan's Mamluks were called.[7] And the desire inherent in any father to pass on to his son the opportunities and sinecures he himself had enjoyed was, of course, a powerful motivation as well. In the ninth/fifteenth century two sultans abdicated during their own lifetime to stand aside for their sons' benefit—an absolute novelty in Mamluk history. But there was a fixed pattern. When the time for finding the strongest amir had passed, the predecessor's son resigned without further ado. Not only did the deposed *sīdī*s remain unmolested under the leadership of the new strong man, but they sometimes were also valued company for the new ruler and his offspring.

The question of Mamluk adherence to principle thus illustrates the system's perviousness in the upper echelons. It also brings into focus a group which has been rather neglected in the few contemporary attempts at classifying the entire population, namely the sons and grandsons of the Mamluks.[8] Above all, the numerous

[8]For example, one could consult Aḥmad ibn 'Alī al-Maqrīzī (d. 845/1412), *Ighāthat al-Ummah bi-Kashf al-ghummah* (Beirut, 1980); Tāj al-Dīn 'Abd al-Wahhāb ibn 'Alī al-Subkī (d. 771/1370), *Mu'īd al-Ni'am wa-Mubīd al-Niqam,* ed. David W. Myhrman (London, 1908); or Abū Ḥāmid al-Qudsī (d. 888/1483), "Badhl al-Nasā'iḥ al-Sharqīyah fī mā 'alá al-Sulṭān wa-Wulāt al-Umūr wa-Sā'ir al-Ra'īyah," Berlin Ahlwardt MS 5618. We are presently preparing Abū Ḥāmid al-Qudsī's

progeny of the Mamluk serving class, as distinct from the protégés of the ruler and his Mamluks, are of sociohistorical importance in their own right. We know from the contemporary chronicles and additional prosopographic sources that these Mamluk offspring not only participated in numerous social functions, but also developed a distinct collective identity. For example, they were called by a collective name: *awlād al-nās*. This term not only signified the second generation of Mamluk sons but also the grand- and even the great-grandsons. The name points to common roots as a specific feature. They were united in their being ″sons of the nobles,″ i.e., the Turko-Circassian elite. The *awlād al-nās* represented the opportunities and limits of development in Mamluk society. They were connected to the realm of the state, the army, and the economy dominated by the Mamluks through their fathers without really belonging to them. Characteristically, they usually had Arab names.[9] Their place of birth made the *awlād al-nās* Egyptians without the local populace accepting these second generation (and thus second class) ″Turks″ as their own. Many Mamluk sons, who often had an Egyptian mother and spoke Arabic as well as Turkish, assumed the role of mediators between the two worlds. Yet, psychologically and socially their situation was not enviable. Their ambitions were strictly circumscribed from the outset. On the one hand, religious scholars and other segments of the population resented them as a visible manifestation of ″Turkish″ domination. On the other hand, they were refused access to the highest offices of the state by the Mamluks. But even in this the Mamluks were inconsistent, because the highest offices of state were held by the sons of amirs in the middle of the eighth/fourteenth century under Sultan Ḥasan (r. 748–52/1347–51).[10] Even during the subsequent systematic ″re-Mamlukization″ of the army and state leadership there were still two *awlād al-nās* amongst the nine imprisoned amirs of highest rank when Sultan Barqūq (r. 784–91/1382–89) was overthrown in 791/1388–89.[11] At this time their share in the middle and lower ranks rose to a quarter and more than a half respectively.[12] Certain high offices, such as the commandant of Cairo or the administrator of the ruler′s tournament grounds, were

apparently accessible to Mamluk progeny.[13] Moreover, just like retired officers or their widows, they had access to the institution of pension fiefs (*al-rizqah al-mabrūrah*),[14] and frequently seem to have accumulated substantial real estate in rural areas, as we shall see.

Generally speaking, any of the *awlād al-nās* could enter a military career. This was because the Mamluk army not only included especially privileged sultan′s Mamluks who upheld the system and the less-esteemed amir′s Mamluks, who were dispersed over the whole empire, but also the so-called *ḥalqah*[15] as its third armed force. This honorary legion commanded by sultans′ sons consisted of cavalrymen of highly diverse origins including Mamluk offspring, free Kurdish and Mongol warriors, Bedouins, Turkmen tribal chiefs in Syria, and meritorious civilians.[16] Until 854/1450 the *ḥalqah* absorbed the Mamluks′ sons.[17] Afterwards this force lost some of its military prowess because of the infiltration of non-military elements and thus some of its social prestige, especially since its members could buy out of participation in military missions.

The mediating role of the *awlād al-nās* became particularly clear in the religious and scientific life of the period.[18] The military career of a Mamluk son was usually accompanied by religious activities. They were the cultural interlocutors between barracks and madrasahs, polo fields and sufi convents, between officers and scholars. The two groups were mutually dependent on each other and needed to collaborate for the welfare of the Islamic community, according to the belief of contemporary theologians. But not everyone pursued this double track. Many sons of Turkish mothers remained attached to the court and were content with the restricted military career open to them and the culture maintained in the citadel and in the private homes of the amirs. Still others pursued a purely academic career and were successful as calligraphers, traditionists, legal scholars, historians, or even poets.

The case that Ulrich Haarmann discussed in his study on Mamluk descendants[19] and that we would like to present here has less to do with this intellectual world and deals only indirectly with the internal affairs of military careers. It concerns the material affairs of the *awlād al-nās* and their position in the Mamluk economy.

Documents that have recently come to light have given fresh impetus to research into the social and economic history of the Mamluk empire.[20] Apart from the documents thus far known to us from the Monastery of St. Catherine in the Sinai[21] or the archives of the Temple Mount in Jerusalem,[22] we are indebted to our Egyptian colleague Muḥammad Muḥammad Amīn for the collection, compilation, and cataloguing of the various documents from Islamic, especially Mamluk, times that were kept in Cairo in diverse places, relocated again and again, and relabeled (or lost) in the process.[23] These comprise private documents, which were issued and witnessed or certified before a notary or a judge, as opposed to the public documents issued by the state chancellery. Hence they include not only business documents but also endowment deeds.[24] Among the roughly 900 documents from Cairo surviving from Mamluk times are those dealing with 200 proceedings involving Mamluk sons and grandsons and even granddaughters.[25] They represent a surprisingly close-knit network of the different Mamluk groups of society. Franchisers and franchised cofound an endowment, civilians and military personnel do business together, and elsewhere Mamluks sell property to amirs′ daughters and vice versa.[26]

As an example Ulrich Haarmann chose a document from the second half of the ninth/fifteenth century that concerns the properties of a certain Yaḥyá ibn Ṭūghān al-Ḥasanī.[27] Yaḥyá ibn Ṭūghān was a Mamluk′s son, as his name suggests.

This Yaḥyá is not mentioned in chronicles and biographical works, but his father appears to have been the sultan′s correspondence secretary *(dawādār)* Ṭūghān al-Ḥasanī ″al-Majnūn,″ who enjoyed high social status, as indicated by the fact that he could buy his own mamluks.[28] Yaḥyá served as a soldier in the *ḥalqah*[29] and drew his pay from this position. Generally speaking, Mamluk officers, members of the *ḥalqah,* and certain non-military state employees were paid by military benefices *(iqṭā‘),* i.e., by allocation of the tax revenue of a certain district.[30] Such tax fiefs were measured out according to the services of the beneficiary. In keeping with the Mamluk principle of perpetually renewing the elite upholding the state through the recruitment of new mamluks from the steppe, they were non-hereditary in principle. But this principle frequently conflicted with the predictable desire of the individual amir to retain freely disposable property secure against seizure. Legal loopholes were developed to avoid this obligation to sell, which provided the notaries and the qadis of the time with a very lucrative practice.[31] For example, it was tolerated that a Mamluk return his *iqṭā‘* voluntarily to the fief office and then purchase it as unentailed private property *(milk)* which then could be sold, bequeathed, or transferred into an endowment.[32]

The man in question, Yaḥyá ibn Ṭūghān, also held rural property and as such was representative of the affluence to which a member of the second generation could attain due to the munificence of his father, even in the second half of the ninth/fifteenth century. As mentioned above, the reputation of the *ḥalqah* had already diminished by this time. This situation was also reflected in the distribution of fiefs to the Mamluk sons. While the share of the *awlād al-nās* in the total tax revenue of Egypt had been a substantial 13.67% in the year 777/1376, it had decreased a generation later to 2.5% and finally amounted to a negligible 0.15% in 885/1480.[33] This process of the gradual ″de-fiefing″ of Mamluk progeny, however, is certainly not the equivalent of pauperizing this group, but only means that many of the *awlād al-nās* had managed to transfer their *iqṭā‘* estates into private ownership or endowments—ultimately by illegal means.

Cairo is 571 jīm.

Yaḥyá´s ″property″ consisted of areas in the district of Barshans in the province of Manūfīyah, north of Cairo,[34] and in Shinrāqá in the province of Gharbīyah, still further to the north.[35] During the fourteenth century, the first piece of land was a fiefdom of the *sīdī* Amir Ḥājj, the son of Sultan al-Ashraf Shaʿbān (r. 764–78/1363–77), whereas the second was used by unnamed military forces until we rediscover it in the land registry as *iqṭāʿ* of the *ḥalqah* in 802/1400.[36] It is this ″property,″ the size of which is always expressed in terms of a proportion of the district´s collectively owned and administered cultivated land (*ḥissah*),[37] that was deeded by Yaḥyá completely to his relatives and offspring, as we can see from his endowment deed *(waqfīyah)* from the year 870/1465.[38]

As an aside, let us mention that such *waqfīyah*s, which constitute the most detailed and important sources of Egypt´s and Syria´s socioeconomic history in the ninth/fifteenth century, have only very gradually been taken note of by historians.[39] Few have been edited, still fewer translated and analyzed.[40]

The ultimate purpose of an endowment principally established ″for eternity″ and whose conditions could not be altered was to perform an act pleasing to God.[41] There was a distinction between a charitable endowment *(waqf khayrī),* which could provide for the building and maintenance of mosques, Quran schools, caravanserais, and drinking fountains, and a family endowment *(waqf ahlī or dhurrī),* which was established for the benefit of one′s own children and grandchildren or other relatives. Family endowments were very popular because they could ensure an income for one′s own progeny under the pretense of an altruistic act, hold one′s property together, or evade the inheritance laws of the Quran. In view of these rather secular purposes of the family endowment, the institution was quite controversial among the religious scholars. It was nonetheless commonplace in everyday life.[42] This was so because private property was totally unprotected against seizure by the state. Yet the immunity of endowments provided a certain safeguard against wide-spread confiscation. In addition, properties once deeded could be exchanged for less valuable real estate with high profits. This was often formally safeguarded by designating one′s own offspring ″poor″ and ″needy″ or by assigning a small part of the endowment income to a charity. One consequence of this practice was that the amount of land available for military fiefs was reduced to one-third its former size within a period of one hundred years.

As already mentioned, we have access to Yaḥyá ibn Ṭūghān′s complete *waqf* deed. With regard to form and content it fully complies with the usual legal stipulations for a family endowment. Following the invocation[43] and after having

presented the evidence of witnesses,[44] the *wāqif,* who is classified as honorable,[45] provides information about the size of the endowment. Above all, this includes a detailed description of the boundaries of the district of Yaḥyá's *ḥissah*,[46] whose precisely-assessed yields[47] were primarily intended to benefit his own relatives. According to the decree of a judge this was a regular *waqf* conforming to the shari'ah, which could not be sold, transferred, given away, or exchanged.[48] The first part of the document closes with a commonly used quotation from the Quran by stating that the endowment conditions could not be altered until the day that God inherits "the earth and whoever is upon it" because He is "the best of heirs." (Quran 19:41 and 21:89).[49] It is only then that the real conditions of the deed are stated. The revenue accruing from the properties donated by Yaḥyá ibn Ṭūghān were to be paid out in decreasing proportions to his offspring, his sister, his half-sister, his mother, the surviving grandmother on his mother's side, and finally his wives and his stepmother.[50] Yaḥyá made especially elaborate provisions for his burial place. Quran readings were to be performed at that site every Friday, while recitals at his son's home were deemed sufficient on weekdays.[51] In accordance with common practice, revenues accruing from the endowed property were to be transferred in a descending line to the children and grandchildren of the donor and their offspring and to his near relatives. Should there be no surviving heirs, the revenues from the *waqf* passed to charitable institutions in the cities of Mecca and Medina, the holy places of Islam.[52] Yaḥyá ibn Ṭūghān reserved for himself the right to monitor the observance of the deed's provisions during his lifetime.[53] Upon his death this responsibility was to be passed on to Mamluk amirs whom he mentioned by name as first, second, and third choices. The first amir was a certain Kumushbughá ibn 'Abd Allāh al-Timrāzī.[54] As fourth potential executor he appointed the chief eunuch of the sultan's palace *(zimām al-ādur al-sharīfah),*[55] an expert in administration, who would have ensured that the provisions of the

endowment were not infringed upon in favor of someone else′s offspring. In closing, the document details the usual obligatory reservations,[56] a penalty clause,[57] the judge′s decision, and the witnesses′ signatures.[58]

Transforming private property into a foundation was a commonplace custom at the level of Mamluk sons in the time of Yaḥyá ibn Ṭūghān. Amirs and sultans, but above all their wives, daughters, sons, and grandsons systematically turned their property into endowments at the end of the ninth/fifteenth century.[59] The office of foundation administrator was well paid, even though it was a matter of intense discussion as to whether it was permissible for the donor (or the donor′s offspring) and the administrator to be one and the same person. A genuine shadow economy developed around the institution of foundations, especially since the property of the deceased was no longer protected against official seizure.[60] When the fiscal coffers were empty in 896/1491, the otherwise pious Sultan Qāytbāy (r. 872–901/1468–96) decreed that the country′s *waqf* institutions had to pay the equivalent of five months′ income to the state.[61] Hundreds of documents on exchange transactions *(istibdāl)*[62] are preserved from the late Mamluk period concerning the exchange of otherwise non-negotiable *waqf* properties with other (probably) less valuable real estate with the blessing of documents clerks.[63] Increasingly, the sultans transformed their rapidly growing income from confiscations and other forced measures into endowments. The same applied to royal real estate. These revenues could then be put to use for the maintenance of their own clientele without any public body interfering. Thus, a private business sector of considerable scale evolved.[64]

[64]Petry, *Protectors,* chapter 7.

The other documents to which we have access—two collections of papers concerning exchanges and sales—give us information about the subsequent fate of the *waqf* of Yaḥyá ibn Ṭūghān.[65] Twenty years after the original grant of 870/1465 the son of the donor, Muḥammad al-Sibā'ī, and the primary executor, Kumushbughá ibn ʻAbd Allāh al-Timrāzī, sold parts of these properties to two civilians. One share was then sold to a Mamluk daughter on behalf of and probably by order of her father in 890/1485. The other part was subsequently sold to a Mamluk son, Ibrāhīm ibn Khushqadam, in 891/1486, and then transferred to a sultan′s guard, i.e., a Mamluk, three years later. He in his turn, together with his wife, once again transformed the endowed property into a foundation in 898/1493.

Diverse acts of sale, endowment, and exchange thus complement each other and serve as a blueprint for the understanding of Mamluk land and capital policies, especially in the Circassian period. The transitory ownership of land illustrates the ready availability of real estate, even though some of it should actually have remained non-negotiable as *waqf* indefinitely. Contrary to strict shariʻah regulations it was, as already mentioned, common to release endowed property from its *waqf* stricture. In view of the shortage of freely disposable land only this kept the Egyptian property market afloat in the ninth/fifteenth century.

Above all, we are shown a less stratified society in which not all real estate transactions ended up in the hands of the powerful Mamluk elite. Rather, one gains the impression that Mamluk descendants were important mediators, brokers, and quite frequently also fronts in such transactions. The *awlād al-nās* represented a mobile intermediary group between the ruling Mamluk caste and the local elite. Together with the eunuchs[66] they form a group of extreme importance for the understanding of Egypto-Syrian society during Mamluk times. Their role as mediators calls into question the notion of a rigid social dichotomy. The Mamluk principle was compromised at several levels so that Mamluk sons not only had the opportunity to share power with Mamluks on an individual basis, but can even be perceived as a distinct group in their own right. In conclusion it is to be hoped that Mamluk progeny and their hybrid culture will continue to be of interest, especially since the extant material offers ample scope for further research.

CHRISTIAN-ALBRECHTS-UNIVERSITÄT ZU KIEL

Religious Endowments and Succession to Rule: The Career of a Sultan´s Son in the Fifteenth Century

No subject attracted Ulrich Haarmann's attention more during the last years of his life than the phenomenon of the Mamluks' sons *(awlād al-nās)* in late medieval Egyptian and Syrian societies.[1] We still know relatively little about this group and its relation to the other sections of society. On these questions Ulrich Haarmann was preparing a monograph which now must remain unfinished due to his premature death. Thus, much still remains unclarified.

A crucial source for further work, which surely has not yet received the appropriate attention, are the numerous private documents of the time, of which the endowment deeds in particular are the focus here.[2] They give insight into the financial and personal conditions of founders and their families much more than the chronicles and biographical literature do, and thus afford us a glimpse of things that otherwise pass unnoticed in the literature. While we cannot always avoid hypothetical solutions, use of such documents allows us to raise questions and suggest answers which otherwise would not be the case basing ourselves on the traditional sources. This is the case here with our study of the sultan's son al-Mu'ayyad Aḥmad, who in 865/1461 succeeded his father al-Ashraf Īnāl (r. 857/1453–865/1461) to the throne. In keeping with the conventions of that time, he remained in power for only four months before he was deposed by his highest

[1]See Ulrich Haarmann, ″Joseph's Law: The Careers and Activities of Mamluk Descendants before the Ottoman Conquest of Egypt,″ in *The Mamluks in Egyptian Politics and Society*, ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 55–84; idem, ″The Sons of Mamluks as Fief-Holders in Late Medieval Egypt,″ in *Land Tenure and Social Transformation in the Middle East*, ed. Tarif Khalidi (Beirut, 1984), 141–68.

[2]An introduction to the institution of Islamic foundations *(waqf)* in Egypt as well as an up-to-date summary of research, including editions of endowment deeds, is given in Doris Behrens-Abouseif, ″Waḳf,″ *The Encyclopaedia of Islam*, 2nd ed., 11:63–69. From the time of the Mamluk sultanate there are almost 1000 private documents preserved in three Cairo archives: the National Archives (Dār al-Wathā'iq al-Qawmīyah), the National Library (Dār al-Kutub al-Qawmīyah), and the Ministry of Endowments (Wizārat al-Awqāf). They are all described in Muḥammad Muḥammad Amīn, *Catalogue des documents d'archives du Caire de 239/853 à 922/1516* (Cairo, 1981).

military officer and successor al-Ẓāhir Khushqadam (r. 865/1461–872/1467).[3] The few events of his short sultanate have so far not been given sufficient attention and we have failed to appreciate their deeper meaning due to our not taking into account the evidence provided by documents. The documentary evidence not only sheds more light on the reign of Aḥmad but also may suggest something about the experiences of other sultan´s sons in the fifteenth century.

In his ultimately futile attempt to succeed his father, al-Mu'ayyad Aḥmad had much more favorable conditions than the other sultans´ sons of the fifteenth century, and it surely was not certain that he would be overthrown after only a few months. Born in Ghazza in 835/1431, while his father served as governor *(nā'ib),* he studied there in his youth with local scholars and during his father´s sultanate gradually moved up the military hierarchy. At the time of his father's death he was already commander-in-chief of the army *(atābak)* and leader of the annual pilgrimage caravan. When he succeeded his father on the throne on 14 Jumādá I 865/25 February 1461, he was already 30 years of age and thus older and more experienced than other pretenders to the throne before him. Yet even such military, political, and administrative experience could not prevent his overthrow on 19 Ramāḍān 865/28 June 1461 and his several years of detention in the Alexandrian fortress that followed.

His sultanate did not begin without promise; at the beginning he seems to have controlled his father's mamluks effectively and prevented their notorious plundering. This criterion of good rule, seemingly crucial for this late phase of the Mamluk sultanate—i.e. keeping control over the perennially erratic mamluk factions—he at first fulfilled even better than his father had. This earned him the gratitude of the population and the appreciation of contemporary observers.[4] Such a successful start was only possible because he possessed a sufficient reserve of cash for distribution—a topic which will be discussed below. His luck, however, did not last. Aḥmad could not meet the demands of all the mamluk factions equally so that an opposition soon emerged among those mamluks who had already been disadvantaged under his father and were not willing to accept this situation under another sultan. The commander-in-chief Khushqadam appeared early on as the focus of this dissident group.[5] Aḥmad tried to defend his position by relying on rank-and-file mamluks, which in turn caused displeasure among his own al-

---

[3]For al-Mu'ayyad Aḥmad see his biography in Muḥammad ibn 'Abd al-Raḥmān al-Sakhāwī, *Al-Ḍaw' al-Lāmi' li-Ahl al-Qarn al-Tāsi'* (Beirut, 1934), 1:246. For historical events see Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* University of California Publications in Semitic Philology, vol. 7 (Berkeley, 1929).

[4]Al-Sakhāwī, *Ḍaw',* 1:246; Ibn Taghrībirdī, *Nujūm,* 652.

[5]Ibn Taghrībirdī, *Nujūm,* 659–64.

Ashrafīyah mamluks.[6] Only a few weeks later, civil war broke out in Cairo and Aḥmad's political isolation soon became apparent when his own mamluks deserted to the other side. Even the offer of high state positions failed to appease his opponents and he was forced from office.[7]

He was confined to the fortress of Alexandria where his condition soon improved. In the second half of 865/1461 Aḥmad was released from the dungeon. Complete rehabilitation, however, took place only with Khushqadam's death in 872/1467. One of the first official acts by the new sultan, Timurbughā, was the granting of freedom of movement within Alexandria for Aḥmad as well as restoring the social position and material wealth of the former al-Ashrafīyah mamluks.[8] Aḥmad appears to have withdrawn from politics at this time. About his life during the following years the narrative sources remain silent with one remarkable exception: already an influential and frequently consulted member of Alexandrian society, in early 887/1482 he became a shaykh, i.e., he was elected to the executive body of the Alexandrian branch of the al-Shādhilīyah Sufi order and led the meetings *(dhikr)* from that time on.[9] Thereafter he seems to have remained in Alexandria for the remainder of his life with the exception of 884/1479 when he was allowed to travel to Cairo to attend the funeral of his mother Zaynab.[10] After his death in Ṣafar 893/January 1488 his body was sent to Cairo and buried in his father's mausoleum.[11]

Up to this point the saga of Aḥmad′s life seems to be typical of a dethroned and exiled sultan. Fortunately, however, the endowment deed of al-Mu'ayyad Aḥmad which is preserved in the Dār al-Wathā'iq in Cairo[12] allows us fuller

[9]Al-Sakhāwī, *Ḍaw',* 1:246. The importance of such a leading position in this popular and decentralized order should not be underestimated. It could be a hint that Aḥmad still maintained political influence after his time as sultan. For the al-Shadhilīyah order's social implications see Eric Geoffroy, *Le soufisme en Egypte et en Syrie sous les derniers Mamelouks et les premiers Ottomans: orientations spirituelles et enjeux culturels* (Damascus, 1995); Alexander Knysh, *Islamic Mysticism: A Short History* (Leiden, Boston, 2000), 208ff.; P. Lory, ″Shadhiliyya,″ *EI*², 9:172–75.

[10]Al-Sakhāwī, *Ḍaw',* 1:244.

[11]Ibid., 246.

[12]The endowment deed of 20 Jumādá II 865/2 April 1461 (called [DW] H in the following) is written on the reverse of an endowment deed ascribed to al-Ashraf Īnāl carrying the number DW 51/346 (Amīn, *Catalogue,* no. 137). The foundations of Īnāl are the subject of my Ph.D. dissertation, now in preparation. It includes an edition and annotated translation of Īnāl's two preserved endowment deeds, which are: Dār al-Kutub al-Qawmīyah MS 63 *tārīkh* from 28 Shawwāl 862/8 September

access to the details of Aḥmad′s life and raises questions about the connection between rulership and benefactors′ activities, succession to the sultanate, and the aims of rulership. This document tells us that Aḥmad, shortly after his assumption of power, purchased land shares in no less than 37 Syrian and Egyptian villages and then bequeathed them to his family's existing foundation (*waqf ahlī).* This family foundation shall be called here (DW). It had been created by Aḥmad′s father al-Ashraf Īnāl shortly before his death a few months earlier.[13] It consisted of 18 properties[14] in Cairo's best quarters as well as shares in 20 Syrian and Egyptian villages.[15] The income from renting the real estate as well as the levy *('ibrah)* paid annually by these agricultural lands was intended for the maintenance of Īnāl's family, i.e. his only wife Zaynab, his sons Aḥmad and Muḥammad, and his daughters Fāṭimah and Badrīyah.[16] The two important offices of the foundation's inspector *(naẓar)* and administrator *(wilāyah),* who determined the distribution of the foundation's income, resided characteristically with Zaynab.[17] No effort was

---

1458 (Amīn, *Catalogue,* no. 884) as well as the already mentioned Dār al-Wathā'iq al-Qawmīyah MS 51/346 from 10 Ṣafar 865/25 November 1460 (Amīn, *Catalogue,* no. 137). A third document, which was originally preserved in the Cairo Ministry of Endowments, has only been recently lost: al-Awqāf MS 910q from 17 Dhū al-Hijjah 861/5 November 1456 (Amīn, *Catalogue,* no. 392). Furthermore, several sales documents *(bay')* are preserved in the Cairo archives, in whose transactions Īnāl was involved as vendor *(bā'ī):* al-Awqāf MS 643j from 13 Jumādá I 863/18 March 1459 (Amīn, *Catalogue,* no. 396; edited in Zaynab Muḥammad Maḥfūẓ, ″Wathā'iq al-Bay' fī Miṣr khilāl al-'Aṣr al-Mamlūkī,″ Ph.D. diss., Cairo University, 1977); Dār al-Wathā'iq MS 20/122 from 19 Jumādá I 864/12 March 1460 (Amīn, *Catalogue,* no. 131; edited in 'Imād Badr al-Dīn Maḥmūd Abū Ghāzī, ″Dirāsah Diblūmātīyah fī Wathā'iq al-Bay' min Amlāk Bayt al-Māl fī 'Aṣr al-Mamāmlīk al-Jarākisah, ma'a Taḥqīq wa-Nashr ba'ḍ al-Wathā'iq al-Jadīdah fī Arshīfāt al-Qāhirah,″ Ph.D. diss., Cairo University, 1995, 2:169–93); Dār al-Wathā'iq MS 27/176 from 27 Dhū al-Hijjah 864/13 October 1460 (Amīn, *Catalogue,* no. 135; edited in Maḥfūẓ, ″Wathā'iq al-Bay'″). Additionally, the existence and the dating of some former sales documents of Īnāl's and Aḥmad ibn Īnāl's, which are lost today, can be proved by quotations in the preserved documents.

[13]Aḥmad's sales deed dating from 7 Jumādá II 865/20 March 1461 has not survived. However, its date is known by a quotation in (DW) H, line 122. Īnāl's family endowment from 10 Ṣafar 865/25 November 1460 is documented in (DW) A.

[14](DW) A, nos. 1–11, 13–16, 18, 39. These properties were trading houses and market halls, apartment houses, stores, stables, bakeries and public baths. They were situated in the main Cairo commercial districts Bayn al-Qaṣrayn, Būlāq, and al-Fuṣṭāṭ.

[15](DW) A, nos. 19–38.

[16](DW) H, lines 131–46. Refers to (DW) A, lines 132–42.

[17](DW) A, lines 835–38. The appointment of the founder or a close relative as foundation inspector was fiercely discussed by contemporary observers and considered partly illegal. See Taqī al-Dīn 'Alī ibn 'Abd al-Kāfī al-Subkī's (d. 1355) unpublished treatise ″Al-Qawl al-Mū'ib fī al-Qaḍā' al-Mūjib,″ in Carl Brockelmann, *Geschichte der arabischen Litteratur* (Berlin, 1902), 2:87; likewise Khalīl ibn Aybak al-Ṣafadī, *Al-Wāfī bi-al-Wafayāt,* ed. Josef van Ess (Wiesbaden, 1974), 9:478

made to hide such a conflict of interest. With the additional properties acquired by Aḥmad, the foundation's capital and thus the family's fortune was substantially enlarged. Otherwise, he did not modify the dispositions made by his father.

Aḥmad's maneuver must be seen in connection with his father's earlier foundations. Apart from the family trust just mentioned (DW), Īnāl had endowed another foundation, for which documentary evidence also remains and which will here be designated (DK).[18] This was a foundation with an appearant charitable purpose *(waqf khayrī),* which consisted of a large building complex erected in the northeastern Cairo cemetery *(ṣaḥra'),* which in addition to a mausoleum *(turbah)* for the sultan and his family, contained a college *(madrasah),* a Sufi convent *(khānqāh),* a Friday mosque *(jāmi'),* and a hermitage *(zāwiyah).*[19] To underwrite the building's construction and permanent expenses he created several additional foundations, the documents for which are unfortunately now lost.[20] However, we do know about the endowments of Syrian and Egyptian lands added to the foundation's capital in the years 1458 and 1459.[21] Īnāl took these additional agricultural lands from both the state treasury *(bayt al-māl),* and from land he had personally acquired earlier.[22] The tasks of inspection and administration, including

(both quoted in Haarmann, "Joseph's Law," 72, n. 90).

[18]Dār al-Kutub MS 63 *tārīkh*.

[19]For the mausoleum, which was erected in 854/1450, see Michael Meinecke, *Die mamlukische Architektur in Ägypten und Syrien (648/1250 bis 923/1517)*, Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe, vol. 5 (Glückstadt, 1992), 2:372; Max van Berchem, *Matériaux pour un Corpus Inscriptionum Arabicarum: Egypte,* Mémoires de l'Institut français d'archéologie orientale, vol. 19 (Cairo, 1894–1903), 395–97, nos. 271 and 405. For the convent, finished in 858/1454, see Meinecke, *Mamlukische Architektur,* 2:378f. For the college/ mosque, which was finished in 860/1456 in seven months and became active shortly thereafter, see Meinecke, *Mamlukische Architektur,* 2:379; Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* ed. Muḥammad Muṣṭafá, Bibliotheca Islamica, vol. 5 a-e (Wiesbaden, Cairo, 1960–75), 2:333.

[20]The course of events and the dates of the individual endowments cannot be reconstructed. Only the deed for the Friday mosque, dating from 20 Jumādá II 862/5 May 1458 is quoted. See (DK) E, line 46f. Probably these lost documents were written on the similarly lost first part of the document (DK).

[21]The relevant endowment deed is the preserved collective deed Dār al-Kutub MS 63 *tārīkh* (see n. 12 above). The first of these additional endowments is dated from 21 Shawwāl 862/1 September 1458, when Īnāl endowed 14 different fiefs in the Syrian province of al-Ṭarābulus. One week later, on 28 Shawwāl 862/8 September 1458, he endowed a fief located in the Egyptian province of al-Gharbīyah. Two months later, on 3 Muḥarram 863/10 November 1458, he endowed six fiefs located in the Egyptian provinces of al-Jīzah, al-Muzāḥamīyatayn and al-Ushmūnayn. On 18 Ramaḍān 863/19 July 1459 he further endowed three fiefs in the Syrian province of Jabal Nābulus. See documents (DK) A, B, D, E.

[22]The lands endowed in documents (DK) A and (DK) D had been part of the state treasury's property previously. In connection with the lands endowed in documents (DK) B and (DK) E

distributing the income, whose purpose was largely unspecified, were performed exclusively by Īnāl himself. He thus exercised virtually complete discretion over the disbursement of funds. After his death these tasks were to be transferred to his son and successor Aḥmad.[23] After 1459 there seem to have been no further endowments for the benefit of the college, at least no further documents in connection with this are known.

Contemporary observers complained that the motive for this sort of charity was really profit for the founders.[24] The inseparable connection between charitable motives and clear self-interest was a typical feature of endowments. This subject has been written about in recent academic literature so abundantly that it need not be dealt with again here.[25] Perhaps for our purpose, it is only important that this general distrust of endowments is additionally confirmed by the structure of Īnāl's building complex. Its clearly unconventional character—which reminds us of a component system rather than a unified conception of a foundation—tells us

---

sales-deeds are mentioned dating from 11 Shawwāl 862/12 August 1458 and 24 Shaʿbān 863/26 June 1459 respectively. However, neither of these is preserved. See (DK) B, lines 51–54; (DK) E, line 24f. For endowments of lands that had been state property before, see Doris Behrens-Abouseif, "Sultan Qāytbāy's Foundation in Medina, the *Madrasah,* the *Ribāṭ* and the *Dashīshah,*" *Mamlūk Studies Review* 2 (1998): 64.

[23](DK) D, lines 40–42; (DK) E, lines 39–47. For the problems of a single person being both founder and foundation's inspector, see n. 17 above.

[24]The examples of Ibn Khaldūn and Abū Ḥāmid al-Qudsī are quoted in Haarmann, "Joseph's Law," 71f.

[25]See especially Carl F. Petry, "A Paradox of Patronage during the Later Mamluk Period," *The Muslim* World 73 (1983): 182–207. A remarkably apologetic religious explanation for establishing foundations is provided by Khalid A. Alhamzeh, "Late Mamluk Patronage: Qānṣūh al-Ghūrī's Waqf and his Foundations in Cairo," Ph.D. diss., Ohio State University, 1993, 185–90. For the caritative motive for endowing, see Adam Sabra, *Poverty and Charity in Medieval Islam: Mamluk Egypt, 1250–1517* (Cambridge, 2000), 69–100. For the psychological factor of endowing in times of plague epidemics, wars, and other insecurities, which should from today's point of view not be underestimated, see Jonathan P. Berkey, *The Transmission of Knowledge in Medieval Cairo: A Social History of Islamic Education* (Princeton, 1992), 142–46. For political advantages, especially the legitimation of power, for which the foreign-born Mamluk upper class had to pay, see Berkey, *Transmission of Knowledge,* 130–34. For economic advantages and advantages in inheritance law for the founder, see Berkey, *Transmission of Knowledge,* 134–42. The foundation's contributions to maintenance of communal government in a modern sense are dealt with for Ottoman times by works of İ. Metin Kunt, "The Waqf as an Instrument of the Public Policy: Notes on the Köprülü Family Endowments," in *Studies in Ottoman History in Honour of Professor V. L. Ménage*, ed. Colin Heywood and Colin Imber (Istanbul, 1994), 189–98 as well as André Raymond, "Les grands waqfs et l'organisation de l'espace urbain à Alep et au Caire à l'époque Ottomane (XVIe–XVIIe siècles)," *Bulletin d'études orientales* 31 (1979): 113–28. For the conditions of foundations in Central Asia, which were rather similar, see Richard D. McChesney, *Waqf in Central Asia: Four Hundred Years in the History of a Muslim Shrine, 1480–1889* (Princeton, 1991), 37–39.

about the investor's desire for an expandable model. Such a model could be expanded gradually, depending on how the financial situation of the founder permitted or required it. Īnāl not only wanted to promote Islamic culture, but, to a much larger extent, the accumulation of his own fortune.[26]

Both aspects were inseparably connected. If on the one hand charitable endowments were only established if the founder could have at the same time his hidden profits, then on the other hand, only their public benefit made the acceptance of endowments by society possible. The justification for Īnāl's additional endowments (DK) in favor of his large building complex may have been rising expenses or perhaps a decrease in the foundation's annual income *('ibrah)*. Otherwise the endowment of agricultural lands, a majority of which originally belonged to the government, would have had no legal basis.[27]

One of the peculiarities of late medieval endowments was a frequent combination of charitable endowments with those whose purpose was to provide for the endower's family *(waqf mushtarak)*. This feature was understood as disguising the founder's true motives, which was the enrichment of his family, by presenting it in the guise of charity.[28] Often enough, however, there were cases of simple family trusts *(waqf ahlī)*, which were not disguised as charitable institutions.[29] Īnāl's foundation (DK) was a family type of investment with a charitable veneer. Yet the other foundation (DW) was, perhaps due to time pressure, a simple family trust. Surely such things were legally disputed, yet there must have been good reason why a respectable Hanafi judge, surely incorruptible at 94 years of age, gave this endowment legal validity. He was, interestingly enough, the same judge who had certified the endowment (DK).[30]

---

[26]Īnāl's funerary complex differs remarkably from the complexes of other sultans. Its completion took a long time, and its design is not homogenous. See van Berchem, *CIA Egypte*, 406.

[27]An examination of the real decrease in the value of currency in the fifteenth century would be revealing. Additional endowments probably had become necessary because of diminished productivity of those lands which had already been endowed for the college/mosque. For inflation at that time, see Subhi Y. Labib, *Handelsgeschichte Ägyptens im Spätmittelalter (1171–1517)*, Vierteljahrschrift für Sozial- und Wirtschaftsgeschichte, Beiheft Nr. 46 (Wiesbaden, 1965), 423–40.

[28]Muḥammad Muḥammad Amīn, *Al-Awqāf wa-al-Ḥayāh al-Ijtimā'īyah fī Miṣr (648–923/1250–1517): Dirāsah Tārīkhīyah Wathā'iqīyah* (Cairo, 1980), 72–78.

[29]Legitimation for this was given by a saying of the prophet (hadith), in which he allowed the donor to consume part of the donation's yield on his behalf. See Aḥmad ibn 'Alī Ibn Ḥajar al-'Asqalānī, *Bulūgh al-Marām* (Cairo, n.d.), no. 784 (quoted in Rudolf Peters, "Waḳf," *EI*^{2}, 11:59.

[30](DW) A, line 663; (DK) H, lines 11–17; (DK) L, lines 8–15; (DK) N, lines 7–12. The chief judge *(qāḍī al-quḍāh)* was Sa'd al-Dīn al-Muqaddasī al-Dayrī. See M. K. Salibi, "Listes chronologiques des grands cadis de l'Egypte sous les Mamelouks," *Revue des Etudes Islamiques* 25 (1957): 105.

The previous ownership of the properties endowed in (DW) is also interesting. Only the trading house *(wakālah)* mentioned last in the document had been purchased by Īnāl before the endowment was established.[31] The remaining properties and agricultural lands seem to have come into his possession in a more obscure way. Some were part of earlier foundations whose dates are even mentioned in the document (DW).[32] These, it can be assumed, Īnāl had acquired by exchange transactions *(istibdāl)*.[33] Such a case was recorded by a chronicler in connection with one of the properties endowed in (DW): in Rabī' I 860/February 1456 Īnāl had acquired several ramshackle apartment houses and shops on the main street of Bayn al-Qasrayn by exchanging them for equivalent buildings. Afterwards, he immediately demolished them and built new apartment houses, shops and a large market hall *(qaysārīyah)* on this valuable piece of land.[34] All this then became part of an endowment by Īnāl, whose deed was issued on 25 Rabī' I 861/20 February 1457.[35] In this instance, Īnāl showed his business acumen since he had not acquired the properties completely, but only a lower-priced share of 75 percent, which nevertheless made him majority owner with full freedom of action to demolish the buildings. The previous owner, a nearby mosque, still held a quarter of the shares, yet had lost their right to a say in the matter. Īnāl had taken over unprofitable

---

[31]This is building no. 39, mentioned in (DW) A, lines 760–80. The sales deed from 30 Rabī' II 864/23 February 1460 is lost. However, the date of the purchase is mentioned in (DW) A, line 861f.

[32]It remains to be determined whether the former endowment deeds are still extant. In Īnāl's deed (DW) A no information is given concerning the former endowers. Accordingly, no detailed assertions can be made about earlier conditions. Only the previous dates of endowment are given for some of the objects. Hence, village no. 38 had formerly been endowed on 1 Rabī' I 847/29 June 1443. See (DW) A, lines 755–59. Further endowments are supported by documentary evidence from 28 Rajab 859/14 July 1455 (among others, apartment house no. 8a; see [DW] A, line 228f.); 25 Rabī' I 861/20 February 1457 (market hall no. 11 and shops and apartment houses no. 13; see [DW] A, line 289f.); 28 Rabī' II 861/25 March 1457 (apartment house no. 15 together with villages nos. 20–37; see [DW] A, lines 667f., 707f.); 18 Ramaḍān 863/19 July 1459 (two apartment houses no. 7; see [DW] A, line 178f.; on the same day Īnāl also endowed his foundation of deed [DK] B).

[33]Contemporary observers bitterly complained about the negative phenomenon of *istibdāl* transactions. See Amīn, *Awqāf,* 241 f.; Behrens-Abouseif, "Qāytbāy's Foundation," 63; idem, "Qāytbāy's Investments in the City of Cairo: Waqf and Power," *Annales Islamologiques* 32 (1998): 33; Ulrich Haarmann, "Der arabische Osten im späten Mittelalter 1250–1517," *Geschichte der arabischen Welt*, ed. Haarmann (Munich, 1994), 251.

[34]Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper (Berkeley, 1931), 2:255; ibid., ed. M. K. 'Izz al-Dīn (Cairo, 1990), 573; Meinecke, *Mamlukische Architektur*, 2:381. Concerned are the objects in (DW) A, nos. 11–13, erected in 627/1230.

[35](DW) A, line 290.

property and ensured at the same time through a majority holding that he alone could determine the means necessary to increase its value.[36]

On the other hand, other endowed property in (DW) had not been part of earlier foundations.[37] Yet the documents remain completely silent about their former ownership. Even if there is the possibility that the beginning of the document, which is lost today, contained the relevant information, doubt still remains. Too many other possible means of acquisition need to be taken into account, such as confiscation or a more or less concealed takeover of properties and agricultural lands abandoned due to recurring plague epidemics, which normally would have reverted to the heirs or to the state treasury.[38]

A further peculiarity of the foundation (DW) is the timing of its establishment—only three months before Īnāl's death. Perhaps one can assume that Īnāl at that time already knew about his approaching death, for this foundation appears to be a hasty enterprise intended to secure the family's material needs after his death. In contrast, the foundation (DK) was created over a long period of time. By transferring property into the possession of foundations his estate was made secure. Crown land did not have to return to the state treasury, while private family property *(milk)* was to a large extent shielded from the danger of confiscation. An additional precautionary measure by Īnāl was the installation of his wife Zaynab as administrator of the foundation. She had already been involved with all of his earlier foundations and thus had substantial experience in endowment management. Above all, however, as a woman she was in a substantially safer position than was her son Aḥmad, who would have to contend with the difficult task of establishing his rule.[39]

---

[36]Sultan Qāytbāy, who ruled only a few years later, regularly used this method for the accumulation of his foundation property. Similar methods are also attributed to Sultan Barsbāy. See Behrens-Abouseif, "Qāytbāy's Investments," 33.

[37]Concerned are objects nos. 2, 5, 6, 8b, 9, 10, 12–14, 16–18.

[38]Behrens-Abouseif, "Qāytbāy's Investments," 33f.

[39]For women as inspectors of foundations see Carl F. Petry, "Class Solidarity versus Gender Gain: Women as Custodians of Property in Later Medieval Egypt," in *Women in Middle Eastern History: Shifting Boundaries in Sex and Gender*, ed. Nikki R. Keddie and Beth Baron (New Haven, 1991), 122–42, as well as my article "Was geschah in der Zeit zwischen Barsbāy und Qāytbāy? Überlegungen zu einer Neubewertung des späten Mamlukensultanats" (forthcoming). Also in connection with Zaynab, there is documentary evidence of caritative foundations. Accordingly, in 865/1460–61 she began with the construction of a hospice *(ribāṭ)* in Mecca. This project, however, had to be given up after the dethronement of her son Aḥmad on 19 Ramaḍān 865/28 June 1461. Yet an adjacent public well *(bi'r)* was finished. See Muḥammad ibn Aḥmad al-Fāsī, *Shifā' al-Gharām bi-Akhbār al-Balad al-Ḥarām*, ed. Ferdinand Wüstenfeld (1859; reprint, Hildesheim and New York, 1981), 2:111; Meinecke, *Mamlukische Architektur*, 2:384. Another hospice in the Cairo quarter of Bayn al-Qasrayn, which is seriously decayed today, might also have been erected on behalf of Zaynab.

What was going on inside Aḥmad′s head when he took over the sultanate from his father? Possibly he had no illusions about his hopeless situation, having in mind the examples of earlier unlucky sultans′ sons.[40] In that case he would have used the little time remaining to him as sultan to make his possessions *(milk)* secure by endowing them before they could be confiscated. Whether he would also have transferred crown land into foundations like his father did if he had had more time cannot be known. However, that would explain Aḥmad′s attempt to put down the rebellion against him and to delay his dethronement. In this case his activities as founder are an important, although largely unseen, aspect of his short sultanate. More plausible, however, is the scenario of Aḥmad figuring out ways to retain the throne. He was more experienced and mature than were his unsuccessful predecessors. Furthermore, the family's endowments provided him with funds which might have enabled him to control the mamluk factions by paying them. In a state like the late Mamluk sultanate, which increasingly suffered from shortages of money, the most important yet at the same time most difficult task of a ruler seems to have been to meet the financial demands of these factions. Only with cash funds could one successfully rule and calm the unrest paralyzing most domestic affairs. The largest endowment entrepreneur was the most powerful ruler too. Consequently, Īnāl had tried to establish a dynasty in order to give the country continuity and stability.

Even if Aḥmad's attempt to permanently succeed his father on the throne bore no success—despite a good beginning—the family's history was still not over. The first years were difficult. Aḥmad's successor al-Ẓāhir Khushqadam also had trouble maintaining the loyalty of his own mamluks. Because of the empty state treasury, he ordered Īnāl's family foundations to hand over their annual income to the treasury. According to the chronicler Ibn Taghrībirdī, this amounted to a total of one million army dinars *(dīnār jayshī),* which surely is an exaggerated amount. Nevertheless, it gives us an idea of the dimensions of these foundations.[41] For comparison, the annual fief-levy for the highest army offices at that time amounted to 250,000 army dinars.[42] Under Sultan al-Ashraf Qāytbāy (r. 1468–96), who had married a cousin of Aḥmad's, Fāṭimah bint ʻAlī ibn Khāṣṣbak, the family regained

[40]The succession of a sultan and the mostly futile attempts of founding a dynasty in the fifteenth century are examined by Agatha Rome, ″Die kurze Regierungszeit der mamlukischen Sultanssöhne in der tscherkessischen Phase (784/1382–922/1517),″ M.A. thesis, University of Basel, 1995.

[41]Ibn Taghrībirdī, *Nujūm,* 7:693.

[42]Haarmann, ″Der arabische Osten,″ 234.

its influence.[43] They also had close connections to the powerful state chancellor *(dawādār)* Yashbak min Mahdī after he married one of Aḥmad's daughters.[44] When Zaynab died in 884/1479, the supervision of the foundations was turned over to the now-rehabilitated Aḥmad, who, as we already have seen, was to gain a substantial social position in Alexandria as shaykh of a Sufi order.

The documents also show him in later years still actively managing the endowments. Thus in 871/1467 he brought a suit, together with a certain Abd al-Raḥīm al-Barizī,[45] against the administrators of a foundation of a certain Sayf al-Dīn Qānim Atābak al-'Askar al-Manṣūr, a former officer of Īnāl's.[46] In 891/1486 he went to court over a share in the fortune of the deceased Alexandrian Kārimī merchant Sharaf al-Dīn Ya'qūb ibn Muḥammad.[47] In 908/1502 a former slave of Aḥmad's named Dilbār bint 'Abd Allāh added to a foundation which she had established together with him during his lifetime.[48] Apart from (DW) H, however, Aḥmad created other endowments. This is shown by an entry in a contemporary land register *(rawk)* in which a village named al-Sanjarīyah, located in the Egyptian province of al-Daqahlīyah, is registered as an endowment of Aḥmad's. This is not mentioned in the available documents.[49]

We furthermore know that the foundation (DW) was administered by Aḥmad's descendants in the sixteenth century. There is documentary evidence of exchange transactions *(istibdāl)* in the years 902/1496, 921/1515, 974/1566, and 997/1589 respectively.[50] Finally, one may conclude that by examining the documents one gains substantial insight into important aspects of al-Ashraf Īnāl's and his son al-Mu'ayyad Aḥmad's policies. A more exact analysis of their foundations would support Carl Petry's assumption of a "clandestine economy."[51] However, they did

[51]For the notion of a "clandestine economy" see Carl F. Petry's *Protectors or Praetorians? The Last Mamluk Sultans and Egypt's Waning as a Great Power* (Albany, 1994), 196–219.

not enrich themselves due to greed. On the contrary, in times of a permanent shortage of money and an unsettled Mamluk system, sultans needed cash reserves urgently in order to maintain power. This, in turn, was necessary to restore the country's stability and continuity, and in particular to control and contain the unrest between the different Mamluk factions. This also helps to explain the sultans´ regular attempts to establish dynasties. Aḥmad's case was the first time a sultan's son of the Circassian sultanate possessed the necessary prerequisites to succeed his father to the throne. The fact that even he was overthrown seems more surprising than predictable. Thus Aḥmad's short sultanate should be judged not as another futile temporary solution, but as a missed opportunity to improve the situation and to pacify and stabilize internal conditions in Egypt.

The Privatization of "Justice" under the Circassian Mamluks

The failure of military and palace entitulature to match the actual functions of those who bore the titles was a fairly pervasive aspect of Mamluk rule. Thus, for example, the *dawādār*, or Bearer of the Sultan's Inkwell, exercised much wider powers than his ceremonial title might suggest. Under the Bahri Mamluk sultans, the *dawādār* was not only in charge of the chancery, but also controlled, or at least exercised responsibilities for, foreign affairs, the *barīd* (state postal service), and espionage.[1] Similarly, the chief duty of the *mihmāndār* (the officer in charge of receiving guests) seems to have been to liaise with powerful Arab tribal shaykhs, particularly the Banū Faḍl, the paramount Arab tribe in the Syrian desert.[2]

Ḥājib may be translated literally as "doorkeeper" or "chamberlain" and *ḥājib al-ḥujjāb* as "chief doorkeeper." However, it is questionable whether the *ḥājib al-ḥujjāb,* a senior officer in the Mamluk regime, actually spent much of his time in opening and closing the sultan's door, or in screening petitioners and others who sought audience with the sultan. In "Studies in the Structure of the Mamluk Army," David Ayalon described the function of the *ḥājib al-ḥujjāb* as follows: "The main function of the *ḥājib al-ḥujjāb* was the administration of justice among the mamluks of the amirs according to the laws of *Yāsa*. His authority was independent, but during the time that the office of *nā'ib al-salṭana* was in existence he was sometimes obliged to consult with the holder of that office. It was also his duty to present guests and envoys to the sultan and he was in charge of organizing military parades." Ayalon additionally noted that originally there were three *ḥājib*s, but Barqūq increased their number to five.[3] Ayalon's description of the *ḥājib*s as enforcers of the Mongol law code of the *Yāsa* echoed the views previously put forward by A. N. Poliak.[4] However, Ayalon later came to reconsider the matter

and, in a series of carefully researched and cogently argued articles, he demonstrated that the *ḥājib*s did not administer justice according to the Mongol *Yāsa*.[5] Since Ayalon discussed the matter, others have gone further and doubted the very existence of Chingiz Khan's *Yāsa* in the sense of a written code of Mongol law and custom.[6] Even so, according to Ibn ʻArabshāh, there was some kind of written code called the *Yāsa*, which was produced and read out every time a new Great Khan was chosen.[7]

Be that as it may, if the *ḥājib*s were not administering justice according to the Mongol *Yāsa*, what were they doing? The role of *ḥājib*s in the Bahri Mamluk period has been discussed by Jørgen Nielsen in a monograph devoted to *maẓālim*, or "secular royal jurisdiction."[8] As he notes, *maẓālim* literally means 'wrongful exactions.'[9] However, the word was commonly used to refer to the discretionary jurisdiction of rulers and governors to settle grievances and respond to petitions without directly basing themselves on the shariʻah. *Maẓālim* overlapped with *siyāsah* and "the maẓālim under the Mamlūks in practice became involved in a particular form of siyāsa."[10] This last "is the prerogative of the head of state—whether caliph or sultan—to set aside the Sharīʻa, to supplement it, and to influence its interpretation and application."[11] Nielsen has noted the claims advanced by al-Subkī, al-Maqrīzī, and al-Qalqashandī that *ḥājib*s took over the administration of *maẓālim* ("secular" or "political justice") and in doing so usurped much of the authority of the qadis.[12] The three authors cited seem to be implying that the *ḥājib*s exercised some kind of judicial authority not just over members of the Turkish mamluk military caste, but also over the population at large. Nielsen, basing himself on detailed chronicle references to the exercise of *maẓālim* or *siyāsah* justice by the

sultan and his officials in the Bahri period, is inclined to the view that the accusations made by al-Subkī, al-Maqrīzī, and al-Qalqashandī were unfounded. Those accusations are of a piece with more general complaints by civilian and religious writers about the various ways in which the Mamluk elite allegedly infringed the provisions of the shari'ah. Nielsen's overall conclusion was that "the maẓālim was primarily occupied with considering the oppression, arrogance, mistakes or plain inefficiency of officialdom."[13]

There is no reason to doubt the correctness of Nielsen's conclusion insofar as the administration of *maẓālim* justice in the Bahri period is concerned. However, of the authors cited on the *ḥājib* and his usurpation of judicial authority, Tāj al-Dīn al-Subkī wrote his curious treatise on the importance of good intentions in all walks of life, the *Kitāb Mu'īd al-Ni'am wa-Mubīd al-Niqam,* quite late in the Bahri period (in the early 760s) and al-Qalqashandī and al-Maqrīzī wrote in the Circassian period. Al-Subkī was already uneasy that the Turks had made the *ḥājib* a judge and that he tended to follow the authority of *siyāsah,* rather than shari'ah.[14] In chronicles written in the Circassian period, we find reports of incidents that tend to support the generalized accusations made in al-Subkī's *Mu'īd al-Ni'am* and in al-Maqrīzī's *Khiṭaṭ*. Indeed, not only did the *ḥājib*s usurp judicial powers that were formerly exercised by the qadis, but other military officers also did the same.

However, the military usurpation of judicial powers only seems to have become flagrant and pervasive in the opening decades of the fifteenth century. Al-Qalqashandī finished compiling his chancery encyclopedia, the *Ṣubḥ al-A'shá,* in 814/1412. According to al-Qalqashandī, under the Mamluk sultans, *ḥājib*s had acquired a jurisdiction over cases not suitable for the courts, such as ones relating to the *dīwān*s (financial offices).[15] In a separate section of the encylopedia al-Qalqashandī dealt with *maẓālim* and the various forms that *maẓālim* petitions took depending on what officer or official they were presented to.[16] It would appear then that by al-Qalqashandī's time *maẓālim* cases were not the exclusive prerogative of the sultan and the *ḥājib.*

Al-Maqrīzī's *Khiṭaṭ*, a topographical work that ranged more widely than merely topographical issues, was written ca. 827/1424. In it, in the section devoted to the office of *ḥājib,* he complained that, whereas in the early Mamluk period the

jurisdiction of *ḥājib*s did not extend beyond dealing with military matters, such as disputes between *jundī*s (soldiers) concerning *iqṭā'*s and so forth, in his own time the *ḥājib*s had taken upon themselves to arbitrate on matters that had been previously dealt with by qadis according to the shari'ah. "Nowadays *ḥājib* is the term applied to the various amirs who give judgement over the *nās."* Although *"nās"* here may be translated simply as "people," it is possible that al-Maqrīzī intended the term to refer only to members of the military elite. (However, the case of the Persian merchants cited below suggests that he may after all have been using *nās* in the first and more general sense.) He went on to claim that the *ḥājib*s tended to be swayed in their judgements by bribes that were handed to the *ra's nawbat al-nuqabā'* and "today the *ḥājib* judges over everything great and small regarding the *nās,* whether it be a matter of shari'ah or *siyāsah* jurisdiction." *"Siyāsah"* was a Satanic word in al-Maqrīzī's eyes.[17]

In a subsequent section devoted to *siyāsah* jurisdiction, al-Maqrīzī denounced the corruption and arbitrary proceedings of the *ḥājib*s. They did what they wished and they proliferated to such an extent that in one year there were 86 *ḥājib*s. According to al-Maqrīzī, the rot began with the case of a group of Persian merchants whom the Hanafi chief qadi had put in prison for failing to pay import dues in 753/1352 during the reign of al-Ṣāliḥ ibn Muḥammad ibn Qalāwūn. The chief *ḥājib,* Sayf al-Dīn Jurjī, exercised his authority, based on *siyāsah,* in order to set those merchants free and exact the dues demanded by the merchants' creditors. "From then on the *ḥājib* did what he wished in judging over the people *(nās)*."[18]

According to Ibn Ḥajar, in 823/1420 (only a few years before the *Khiṭaṭ* was compiled) the sultan al-Mu'ayyad Shaykh (who was then very ill and approaching death) had decreed that *ḥājib*s should exercise no jurisdiction in shari'ah matters. However, the sultan's decree remained in force for only a couple of days, as the mamluk amirs campaigned so vigorously against it that the sultan was compelled to rescind his decree and proclaim that they could indeed exercise jurisdiction in shari'ah affairs. Immediately following this royal volte-face, the Hanafi chief qadi and the senior *ḥājib* clashed. Though it is not entirely clear what the clash was about, it seems that the *ḥājib* refused to hand over an accused man to the qadi's jurisdiction and had his messenger flogged. The sultan, when he heard of the matter, was enraged and told the *ḥājib* that if he, the sultan, had been enjoined to conform to the jurisdiction of shari'ah law, he would have done so immediately. He then reissued the decree that only qadis could exercise jurisdiction in shari'ah

matters and the *mashāʿilī*s (urban dogsbodies who functioned as lamplighters, removers of night-soil, and police constables, as well as town-criers) went round the city proclaiming this. The *ḥājib*, enraged by this, had one of the *mashāʿilī*s flogged, but when the Hanafi qadi complained, the *ḥājib* excused himself by claiming that he had had the *mashāʿilī* flogged for a different matter altogether. After that things quietened down for a bit.[19]

Ibn Taghrībirdī, in his account of the reign of al-Mu'ayyad Shaykh (815/1412–824/1421), under the year 819/1416, states that the deputy *dawādār* did not at that time exercise justice among people *(nās)* nor were orderlies *(nuqabā')* stationed at his door. The same applied to the deputy head of guards *(ra's nawbah thānī).*[20] Ibn Taghrībirdī continues that the first deputy *dawādār* to exercise those prerogatives was Qurqmās al-Shaʿbānī, while the first deputy *dawādār* was Aqbīrdī al-Minqār. Qurqmās was appointed deputy *dawādār* in 824/1421 or in 825/1422. (Ibn Taghrībirdī is inconsistent on the chronology of Qurqmās's career).[21] The chronicler also gives inconsistent information about Aqbīrdī's career, but evidently he became deputy head of guards during the sultanate of al-Mu'ayyad Shaykh, since he died before the sultan did.[22]

A few decades later there was a renewed clash over the respective spheres of influence of the qadi and the *ḥājib,* when the Sultan Jaqmaq clashed with the Maliki qadi in 856/1452. In this case a Muslim had successfully brought a case against a Jewish trader dealing in Circassian mamluks and had had it judged according to shariʿah law. However, the Jew refused to accept shariʿah jurisdiction and threatened to take the case elsewhere, whereupon the qadi had him flogged. Then the Jew appealed to Jaqmaq, who summoned the qadi and rebuked him for encroaching on what properly belonged to *siyāsah* jurisdiction and told him that he had given judgement in error. The qadi was then briefly deposed.[23]

[20]Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Berkeley,1909-36), 6:356; translated by William Popper as *History of Egypt, 1382–1469 A.D. Translated from the Arabic Annals of Abu l-Maḥasin ibn Taghrî Birdî by William Popper,* University of California Publications in Semitic Philology, vols. 13–14, 17–19, 22–24 (Berkeley, Los Angeles, 1954–), 3:38.

[21]Ibn Taghrībirdī, *Nujūm,* 6:356, 7:255f.; Popper, *History,* 3:38; 5:168f.

[22]Ibn Taghrībirdī, *Nujūm,* 6:347, 458; Popper, *History,* 3:32, 108. The (intrinsically trivial) problem here is that Ibn Taghrībirdī describes Aqbīrdī as having exercised justice among the people with orderlies at his gate before being promoted to the governorship of Alexandria in 818/1415, and this is at least a year before the he says the deputy head of guards began to exercise the new prerogatives.

[23]Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper (Berkeley, 1930), 1:129f.

Ibn Taghrībirdī reported the above incident in his chronicle *Ḥawādith al-Duhūr*. In his other chronicle, *Al-Nujūm al-Zāhirah* (which is more closely focused on the character and deeds of the Mamluk sultans), he spells out how arbitrary and widespread the administration of ″justice″ had become by mid-fifteenth century. At the end of his annal for year 861 (1456–57) he observed that the ″year ended with the authority of the judges *(ḥukkām)* of shari'ah and *siyāsah* set at naught by the power of the purchased mamluks *(julbān)* of the Sultan Inal. Anyone from the people *(nās)* with a claim against anyone whomsoever went to one of these mamluks to secure his claim and no sooner had he informed the mamluk of what he wished than he secured what he wished from his opponent in the case. For at the gates of the most important of these mamluks a sort of head of guards *(ra's nawbah)* and military police *(nuqabā')* were stationed, while some had a *dawādār*. The mamluk would then send for the other man in the case and, after threatening him with a beating and other punishment, he would command the man to satisfy the plaintiff's claim, whether that claim was true or false. If he did not pay he would immediately be beaten and thrashed. Everyone learned about this and went to them to have their affairs settled and people *(nās)* deserted the judges *(ḥukkām)*. So the purchased mamluks became very powerful and the judges' authority reached a nadir.″[24]

Ibn Taghrībirdī returned to the theme in his account of the events of 863/1458–59. At this time, ″the power of the purchased mamluks exceeded all limits, while the authority of the judges of Egypt was absolutely null. Anyone who had a just claim, or the semblance of such a claim brought his charge against his opponent only before the purchased mamluks, and immediately he would secure what he claimed from his opponent, justly or otherwise. So everyone, especially merchants and sellers of any kind of wares, feared the mamluks and most men gave up their businesses, fearing the loss of their capital . . . ″[25]

Despite the efforts of various scholars to assign a precise meaning and function to the *naqīb* (pl. *nuqabā'*), the term does not seem to have been used very precisely. According to Ayalon, the *naqīb al-jaysh* was a sort of chief of military police with responsibility for arrests and escorting the condemned to execution. He also had responsibilities for mustering and parading troops. The *nuqabā' al-ḥalqah* were his deputies in Cairo. There was also a *naqīb al-mamālīk* who may have had similar duties, but only with respect to mamluks and not the rest of the army.[26] Popper also gave the *naqīb al-jaysh* a role as military policeman and adds that he

[26]Ayalon, ″Studies in the Structure,″ 64–65.

had many opportunities for collecting bribes.[27] However, from the passage in the *Nujūm al-Zāhirah* just cited above, it would appear that the term *naqīb* was used in a general sense to refer to the junior officers employed to guard the ad hoc courts of the mamluks and to enforce their decisions. Al-Maqrīzī also notes that the *naqīb*s, like the *ḥājib*s, were especially associated with *maẓālim* sessions, which they attended as court officers.[28]

The administration of *maẓālim* was also associated with the platforms *(dikak*, s. *dikkah)* from which the mamluk officials gave their verdicts. The *dikak* were sited at the gates of the mamluk amirs' houses. In 910/1505 the sultan al-Ashraf Qānṣawh al-Ghawrī, moved by piety, banned the great officials among the amirs from stationing *nuqabā'* at their gates and he banned all trials except those that were conducted according to the shari'ah.[29] Something similar happened in 919/1513–14, when Qānṣawh, under the impetus of a sudden surge of piety brought on by the outbreak of plague in Egypt, again issued a decree abolishing the ″platforms″ and their attendant officers *(nuqabā')* and messengers *(rusul).* It is clear from the context of this decree that he was attempting to abolish the practice of mamluk officers selling justice to all and sundry. However, like al-Mu'ayyad Shaykh, Qānṣawh faced pressures from his officers to have their profitable jurisdiction restored to them. They argued that since they were no longer able to give justice, the people *(nās)* have no way of securing their rights *(ḥuqūq)*. Whereupon Qānṣawh partially backed down and allowed the platforms to be re-established, but he decreed that the *nuqabā'* and messengers should henceforth be debarred from taking too large a percentage from plaintiffs in order to advance their cases.[30]

The usurpation by amirs and mamluks of some of the judicial functions of the qadis may explain why some mamluks studied shari'ah law. It is a notable feature of the Circassian period that a number of mamluk officers were well versed in Hanafi jurisprudence. The amir Ṭāṭār (later the sultan al-Ẓāhir Ṭāṭār) is probably the most famous example. According to Ibn Taghrībirdī, during the short reign of al-Muẓaffar Aḥmad (824/1421), Ṭāṭār presided and delivered judgements in the stables of the Cairo Citadel. He ″decided cases between the people and settled the affairs most judiciously, for he was a man of outstanding ability, alert and intelligent, and had a good knowledge of jurisprudence and other subjects; he loved to study

especially the teachings of the Ḥanafite masters, for he held them in high honour."[31] There are, however, other examples. Tamurbughā, who also rose to be sultan (872/1467–8), had an excellent knowledge of Hanafi jurisprudence.[32] The amir Sayf al-Dīn Sūdūn al-Maghribī (d. 843/1439–40), who rose to be a deputy *ḥājib* before being politically disgraced, is a particularly interesting example. According to Ibn Taghrībirdī, Sūdūn was obsessive in his study of jurisprudence and invariably supported the case of the weak against the strong. This meant that if he heard a case between a trooper and a peasant, he would always give judgement in favor of the peasant, even if the trooper was actually in the right.[33]

It is quite likely that there were other amirs and mamluks who tried to deliver justice according to the precepts of the shari'ah, or at least according to a sense of equity, but evidently other mamluks were selling verdicts for money and receiving petitions in order to exercise patronage and develop local clienteles. The "justice" and "protection" that these officers offered will not have differed very much from that offered by Don Corleone in Mario Puzio's novel *The Godfather*. We are dealing here with a mostly subterranean history. At first the *ḥājib*s, acting as delegates of the sultan, exercised a kind of administrative jurisdiction over matters relating to the army and the *dīwān*s. Then they took to hearing cases presented by merchants and other civilians and thereby encroached on the jurisdiction of the qadis, at which point judicial and executive powers became utterly confounded. Then other quite junior officers, such as the deputy *dawādār,* arrogated the same jurisdiction to themselves. Then even purchased mamluks took to receiving petitions from all and sundry and using their muscles to enforce their ad hoc jurisdiction. However, the fragmentary and somewhat speculative nature of the evidence of abuses in *maẓālim* jurisdiction described above is obvious. Pious chroniclers complained repeatedly about the way that the provisions of the shari'ah were being breached, but they did not actually dwell upon the matter, nor did they systematically record the way in which *maẓālim* justice was delegated and diffused to such an extent that justice shaded into racketeering and any mamluk with a sword could pose as an officer of the law. It was hardly a matter for celebration.

Sultan al-Ghawrī and the Arts

In the last decades of Mamluk rule the visual arts flourished, despite a deplorable economy and a fatal political and military situation. The reigns of Sultans Qāytbāy and al-Ghawrī each in its own way turned a page in the history of Mamluk art. Judging from the handsome and richly decorated monuments and from the originality of the objects produced during his reign, Qāytbāy appears to the modern viewer to have been a great patron of the arts. For his contemporaries, however, he was regarded more as a sponsor of religious and philanthropic foundations rather than as a patron of artistic creations. The image conveyed by his chroniclers and biographers is of a good and pious Muslim ruler who founded a large number of religious institutions and restored and refurbished major mosques and shrines in his empire. Together with his amirs he also contributed to Cairo's revitalization and embellishment. In addition to his piety, however, Qāytbāy must also have had an esthetic appreciation of the visual arts; otherwise it is difficult to explain the explosion of decorative ideas that characterizes the monuments and the art objects produced during his reign. Nevertheless, it was the pious works rather than the esthetic innovations that shaped his image in late Mamluk historiography. His successful military campaigns against the Ottomans and the Turcoman principalities which threatened the borders of the Mamluk empire and his humble life-style, not to mention his performance of the hajj—a rarity among the Mamluk sultans—earned him the reputation of being a pious and good sultan.[1]

The profile of his successor, Sultan Qānṣūh al-Ghawrī, that emerges from the chronicles is indeed quite different from Qāytbāy's pious image. It is of a monarch with clear artistic and hedonistic inclinations.[2] Seen in retrospect and considering

its catastrophic end, al-Ghawrī´s reign could by no means be evaluated favorably. Even if the causes of the fall of the Mamluk empire were complex and began long before his reign, that it happened during his reign had to be attributed to his conduct and his politics, in contrast to Qāytbāy, who appears as having been able to stave off that fate. From the perspective of the modern art historian, however, the reign of al-Ghawrī, had it not coincided with the final stage of Mamluk history, could have changed the history of Mamluk art. It was a tragic coincidence that al-Ghawrī did not have the personality needed for that particular time in Mamluk history when the empire was facing fatal threats from inside and outside its territory which ultimately led to its downfall.

Al-Ghawrī has already attracted a relatively good deal of scholarly attention. ʻAbd al-Wahhāb ʻAzzām in the 1940s and Barbara Flemming in the 1960s dealt with the remarkable literary activities at his court; Esin Atıl discussed his patronage of the art of the book; and more recently Carl F. Petry focused on the political history of his reign. This article discusses the artistic vision of this sultan as a whole while speculating on its origins and motivations.

Sultan Qānṣūh al-Ghawrī was sixty years old when he came to power in 906/1501. A mamluk of Qāytbāy, he was first appointed governor of Upper Egypt, then governor of Tarsus in northern Syria and subsequently grand chamberlain in Aleppo and governor of Malatya. Upon his return to Cairo he became great *dawādār* and great *ustādār*.[3]

Like Qāytbāy before him, al-Ghawrī had to deal with inherited economic and fiscal problems, with increasing Safavid and Ottoman pressure, with Portuguese threats, and with domestic unrest. Although he was well aware of his precarious military situation, which he tried to cope with by modernizing the army and consolidating fortifications, al-Ghawrī became increasingly absorbed by his role as glamorous ruler and patron of the arts.

Ibn Iyās describes the sultan as having a distinguished and awesome appearance, which he cultivated and enhanced with lavish ceremonial *(muhāb jalīl mubajjal fī al-mawākib, mil' al-ʻuyūn fī al-manẓar)*. His opulent dress and hedonistic tendencies *(al-mazaḥ wa-al-mujūn)* earned him the reputation of preferring pleasure to work. Both Ibn Iyās and the historian al-Ḥalabī describe his rule as characterized by the pursuit of pleasure and luxury and by his taste for literary colloquia.[4] He loved fine clothes, perfumes, scents, and jewelry; he wore many rings with precious stones; and he preferred a golden belt to the traditional draped girt of Baʻalbakī fabric. He was a gourmet who ate from golden vessels, and he loved flowers.

[4]Petry, *Twilight*, 12.

Al-Ghazzī describes him as fat with a big belly. Ibn Iyās says that al-Ghawrī's faults outweighed his merits and he criticized him for his greed and profligate ways, which were paid for by harsh and tyrannical measures that led to economic crisis.

COURT AND CEREMONIAL

One of the features of al-Ghawrī's court life was his predilection for the *a'jām,* who were numerous in his entourage as well as in his army. According to Flemming the *a'jām* frequently mentioned by Ibn Iyās might have been not just Iranians, as the term usually means, but rather Turcomans from Iranian lands.[5]

His Fifth Corps *(al-ṭabaqah al-khāmisah),* whom he armed with handguns in one of his attempts at modernizing the army, included Persians and Turcomans along with local recruits of mamluk origin and Egyptian birth. Ibn Iyās connects al-Ghawrī's weakness for the *a'jām* with his enthusiasm for the Nasīmīyah order, whose founder was 'Imād al-Dīn Nasīmī, a Turkish sufi poet of the esoteric and occult-oriented *ḥurūfī* school.[6]

A'jām were also among the court musicians and poets who accompanied the sultan wherever he went. One of his *nadīm*s, or boon companions, was Ibn Qijiq, the chief of the musicians.[7] Another was a man whom Ibn Iyās calls *"al-'ajamī al-shanaqajī*, a Turkish word for potter. He was very close to the sultan, and as a result enjoyed great prestige and influence. He went on political missions to Damascus and Aleppo, and he headed an embassy to the Safavid shah Ismā'īl.[8] There were other *a'jām* among the artists and intellectuals of the sultan's entourage and in the communities of the great Mamluk religious foundations.

Al-Ghawrī was particularly interested in regal esthetics, and often took into his own hands the staging of his processions and parades and the elaborating and inventing of court rituals. At the same time as he elaborated the royal processions, including those of his family, to enhance his image, he abolished the traditional and important procession of the grand *dawādār,* who at that time had the status of a grand vizier, a measure which Ibn Iyās deplored.[9]

Among his innovations was replacing the finial with a bird that was carried above the sultan's head in processions with a gold finial called a *jallālah,* which

[9]Ibid., 104.

had the shape of a crescent.[10] When his wife went on pilgrimage he designed a special procession for her in the course of which her camel, carrying an empty palanquin, paraded across the city.[11] He also let his son, although he did not have any official function in the pilgrimage, cross the city in a grand procession behind the *maḥmal* litter.

Ceremonial elephants were another of al-Ghawrī′s innovations. When Ibn Qijiq was sent to Syria, he arrived in a procession that included three elephants, an unusual scene at that time. The first of these elephants to be mentioned was brought from Africa in 916/1510; it was one year old and the populace, who had not seen an elephant in more than four decades, was thrilled at the spectacle. (In contrast, elephants were a common sight at the Timurid court). A few months later another elephant followed,[12] and from then on elephants became part of the Nile festival which celebrated the Opening the Canal or Khalīj of Cairo.[13] Al-Ghawrī also enjoyed watching animal combats, and attended elephant fights as well as the more common bull and ram fights.[14]

Al-Ghawrī was following Qāytbāy′s example when he sponsored the games and parades of lancers which his predecessor had revived after a long period of neglect.[15] These performances used to take place during the pilgrimage season. On the occasion of the visit of Ottoman and Safavid ambassadors the sultan proudly displayed his lancers to his guests to demonstrate *″furūsīyat ʻaskar Miṣr,″* or the chivalry of Egyptian soldiers.[16]

Most important was the innovation al-Ghawrī introduced to the Mamluk throne or *dikkah*. Until his reign the Mamluk sultan sat in state in the *ḥawsh* of the Citadel on a portable bench above which a yellow tent was erected on particularly solemn occasions. This bench was called *dikkat al-ḥukm,* which means ″bench of judgment″ or ″bench of government″ (Fig. 1).[17] Al-Ghawrī replaced this bench with a masonry structure called *masṭabah,* built with richly lavish polychrome stones and marble and decorated with a gilded frieze inscribed in relief with his

name. The bench had a *wazrah*[18] or marble dado four cubits high. Ibn Iyās was impressed, commenting that no monarch had ever had such a thing before.[19]

This new form of throne, however, did not meet everyone's approval.[20] After al-Ghawrī died on the battle field of Marj Dābiq, his successor, al-Ashraf Ṭumānbāy, demolished the *masṭabah* and reestablished the *dikkah* on which he sat in state, just as Qāytbāy had done.[21] This was more likely to have been a symbolic gesture than an expression of esthetic preference.

The *masṭabah* attracted the attention of the artist who illustrated the Turkish *Shāhnāmah* commissioned by Sultan al-Ghawrī. In this manuscript the painter borrows Mamluk architectural patterns to depict scenes of enthroned rulers and other episodes. In two miniatures published by Atıl the throne differs from the usual type depicted elsewhere in the manuscript in being a masonry structure consisting of a domed canopy standing on an elevated platform and resting on four columns of granite and porphyry. Marble decoration of Mamluk style is also recognizable (Fig. 2). The frontispiece of al-Ghawrī's anthology of Turkish poetry held in the Staatsbibliothek in Berlin shows an enthroned ruler, probably the sultan himself, seated in a similar structure. The ruler sits under a domed canopy crowned with a balustrade with a spherical object at either end (Fig. 3).[22] These could be what Ibn Iyās describes as *ifrīz,* or a decorative band of white marble with two gilded pomegranates. The representation of an enthroned ruler in the frontispiece of a book of poetry composed by a monarch recalls Timurid and Ottoman traditions.

FESTIVALS

Music and dance are often mentioned at al-Ghawrī's court. The sultan himself is reported to have danced at the mosque or Dome of Yashbak, accompanied by musicians.[23] Such performances, which must have been related to sufi rituals and *samā',* also took place in profane settings, as in the pleasure palace on the island of Rawḍah.[24]

Ibn Iyās describes at length a feast held on the island of Rawḍah near the Nilometer. The sultan's palace, together with the Nilometer and the adjoining

mosque with its minaret, were entirely covered with lights, as were all houses along the shores of the island and Fusṭāṭ on the opposite shore, with its great aqueduct tower built by al-Ghawrī. The sultan′s great galley, which had cost 20,000 dinars to build, was anchored near the Nilometer with all its masts illuminated. Fireworks were shot from fifty boats floating around the island′s southern tip, where the event took place. Music accompanied the spectacle. By order of the sultan, all twenty-four grand amirs appeared in their boats on the Nile, each with his ceremonial band or *ṭablakhānah*. The sound of their drums and trumpets rose from the Nile along with the sultan′s own orchestra playing on the island, creating a ″formidable thunder″ *(al-ra'd al-qāṣif).* Al-Ghawrī watched the nightly scene from the roof of his palace. Ibn Iyās remarked that nothing like it had ever been done before during the Mamluk sultanate, not even in Barqūq′s or al-Mu'ayyad′s reigns. [25]

Another author, al-Sharīf Ḥusayn ibn Muḥammad al-Ḥusaynī, gave a similarly vivid description of the celebration of the Prophet′s birthday at the Citadel.[26] The sultan sat in a blue tent surrounded by all religious dignitaries. After the banquet and the distribution of the robes of honor, the procession of the great amirs took place, each bowing before the sultan and reciting a couple of panegyric verses. Then came the sufis wearing *khirqah*s with long sleeves to present their *samā'* or musical performance; they danced until midnight. At that point the sultan, wearing a blue *khirqah* himself, joined the sufis and danced with them until morning.[27]

Literature

Al-Ghawrī′s taste for literature is well documented.[28] He was knowledgeable in poetry, history, hagiography, and music. He composed poems in Turkish and in Arabic.[29] According to the author of the *Nafā'is* he also spoke Persian, Kurdish, and Armenian. Al-Ghawrī was a patron of Egyptian poets. Once when he received an offensive message in the form of a poem from the Safavid shah Ismā'īl, he launched a literary campaign in Cairo, inviting all poets to counter-attack with their own verses. Ibn Iyās dedicates several pages to this event.[30]

[30]Ibn Iyās, *Badā'i' al-Zuhūr,* 4: 221-28.

Despite its significance for the history of literature, the fact that al-Ghawrī commissioned the first rhymed Turkish translation of the *Shāhnāmah* has not been recorded by Arab historians. Its translator, Ḥusayn ibn Ḥasan ibn Muḥammad al-Ḥusaynī al-Ḥanafī, of *sharīf* genealogy, credits Sultan al-Ghawrī in his introduction with being a bibliophile who possessed several copies of the *Shāhnāmah* in his library. This fascination with the *Shāhnāmah* and the art of the book had no precedent among Mamluk monarchs. The translator seems to have been one of several *a'jām* whom the sultan appointed in the religious foundation of al-Mu'ayyad. Ibn Iyās mentions a person of *'ajamī* origin named al-Shaykh Ḥusayn al-Sharīf al-Ḥanafī who was appointed in 908/1503 as the Hanafi shaykh of the madrasah-*khānqāh* of Sultan al-Mu'ayyad Shaykh and held this post "to this day," i.e., to the date of the manuscript, which is 922/1516.[31] On another occasion in 917/1511 the historian mentions a man of *'ajamī* origin and *sharīf* descent who was summoned to the court to translate a Persian poem sent by Shah Ismā'īl.[32] Most likely this person is identical with the *Shāhnāmah* translator and the sufi shaykh at the Mu'ayyadīyah.[33]

Another *sharīf,* also of eastern origin and with a similar name, Ḥusayn ibn Muḥammad al-Ḥusaynī, was the author of *Nafā'is al-Majālis al-Sulṭānīyah,* a book that records al-Ghawrī's scholarly colloquia for the year 910/1504-5.[34] The *Nafā'is,* of which the copy dedicated to the sultan is now in the Topkapi Museum in Istanbul, consists of the protocols of the sessions organized by the sultan to discuss political, religious, and literary themes with the ulama. Al-Sharīf Ḥusayn's Arabic is deficient; he must have been of Turkish or Persian origin. In his book he reports that in 910/1504 al-Ghawrī gave him a *waẓīfat taṣawwuf,* i.e., he appointed him to a sufi position in his own religious foundation; but for some reason the author never received his salary from there. In one of al-Ghawrī's literary sessions, the origins of the *Shāhnāmah* were discussed. Sultan Maḥmūd of Ghaznah was mentioned as asking his advisers what would be more likely to make him immortal, the sponsoring of a book or a monument, to which he received the answer that a monument falls in ruins after a certain time, whereas a book is more likely to

---

[31]Ibid., 54. This information is confirmed in the introduction of the manuscript itself by the translator, who states that it was completed at the Mu'ayyadīyah in 916/1511. Flemming, "Šerīf," 89.

[32]Ibn Iyās, *Badā'i' al-Zuhūr,* 4:221.

[33]According to a Turkish source, the translator of the *Shāhnāmah* had the *nisbah* "al-Āmidī" attached to his name. He was close to the Ottoman prince Jem, who came to Cairo in 1481, and he died in Cairo in 920/1514. 'Azzām, *Majālis,* 1:45f.; Flemming, "Šerīf," 85, 90, quoting Mehmed Tahir, *Osmanlı Müellifleri* (Istanbul, 1334–43/1916–25), 2:256. This is, however, in contradiction to Ibn Iyās, who testifies that in 1516 he was still at the Mu'ayyadīyah.

[34]'Azzām, *Majālis,* 1:36, 90.

survive. This story might have inspired al-Ghawrī with the idea that a Turkish translation of the *Shāhnāmah* might endow him as well with immortality.[35]

Sultan al-Ghawrī and Italian Painters

Like the Ottoman sultans, Sultan al-Ghawrī had a portrait of himself made by a European artist. It shows him with the famous great turban *(takhfīfah kabīrah)* with two long horns, also known as *nā'ūrah,* i.e., waterwheel. This turban, which has been well described by Ibn Iyās, seems to have been typical of this sultan's reign.[36]

The tradition of Muslim sultans sitting for portraits by Italian artists was initiated by the Ottoman sultan Mehmed the Conqueror and was also cultivated by Iranian and Mughal monarchs. It seems that Italian artists also had the opportunity of portraying both Qāytbāy and al-Ghawrī. A portrait of the latter, published by Julian Raby, is datable to the late sixteenth century, but must have been based on an earlier work; it shows the sultan as quite an old man wearing the great double-horn turban described by Ibn Iyās. Another portrait showing a younger al-Ghawrī was published by 'Azzām without any reference to its origin (Fig. 4).[37] A painting in the Louvre, attributed to a Bellini disciple, depicts the reception of an embassy by al-Ghawrī (despite its Damascene setting); it suggests that Italian artists were admitted to the sultan's presence.

Leonardo da Vinci seems to have had contacts with the Mamluk court. In his diary the artist writes that he was sent by a Mamluk *daftardār* of Syria during the reign of Qāytbāy on a special mission to the Taurus mountains.[38] This mission, for which the diary itself gives no date, has been dated by his biographers to between 1482 and 1487, on the grounds that Leonardo, whose journey to the Middle East is not contested, seems to have been absent from Europe during this particular period. Moreover, Leonardo's diary contains the text of a letter to this amir in which he apologizes for his delay in submitting his report.[39] This letter refers to an earlier extended correspondence with the amir with whom he seems to have been familiar. It is possible that this *daftardār* was al-Ghawrī himself, who at the beginning of his career, between 889/1484 and 894/1489, was sent by Qāytbāy to this area *(al-bilād al-ḥalabīyah)* on military missions against the Ottomans and also as governor of Tarsus, prior to his appointment to Aleppo in 1489. The Taurus mountains form the northern part of the province of Cilicia, which borders

Syria to the north and where the city of Tarsus is situated. Tarsus itself was integrated into the Mamluk empire during the reign of al-Nāṣir Muḥammad. In the late fifteenth century it became involved in the border skirmishes between the Ottomans and the Mamluks; when the Ottomans conquered Syria, Tarsus became part of their Aleppo governorate. Al-Ghawrī was involved in warfare in this area, and could well have sent a European to survey the territory.[40] There is an artistic connection between Leonardo and the late Mamluks: the pattern of the logo he made for his workshop is a knotted rosette very reminiscent of late Mamluk metalwork decoration.[41]

ARCHITECTURE

An episode recorded by Ibn Iyās in 917/1511 demonstrates al-Ghawrī's interest in architectural history. Shortly after he had the fortifications of Alexandria restored, the sultan had a gypsum model of the city made by an architect from there called Ibn al-Ṣayyād. This model must have been large, for the sultan had to ride to the northern outskirts of Cairo to see it. It showed Alexandria with its walls and towers and with the Pharos, built in the Ptolemaic period in the third century B.C., which once stood there, represented to scale: "wa-al-manār allatī kāna *(sic)* bihā wa-qadr ʻarḍihā wa-ṭūlihā."[42] This model must have been historical, or at least combination of the actual Alexandria with historical landmarks, because at that time the ancient Pharos had already been gone for approximately 180 years.[43] The protocols of al-Ghawrī's colloquia show that he was interested in history and in ancient monuments. He also inquired about the pyramids, their builder , and their purpose.[44]

Ibn Iyās criticized the sultan for squandering funds on useless constructions, and misusing the *bayt al-māl* funds for decorating and gilding walls while neglecting his duties as the supreme judge. In fact, the list of the monuments he erected during his reign clearly shows the relative predominance of secular buildings: residential structures, the restoration of the palaces of the Citadel,[45] a palace near the Nilometer at Rawḍah,[46] and another expensive pleasure complex at Maṭarīyah,

near Yashbak′s *qubbah,*[47] for which an aqueduct was built to pipe water from the Nile to create a pond. His major secular building seems to have been the complex of the hippodrome at the foot of the Citadel, which he also equipped with a great aqueduct.[48] There he built a garden with imported trees and a pool surrounded by residential and ceremonial structures with loggias. Sometimes he would spend several days there; for holding audiences and receiving embassies he preferred it to the Citadel.[49]

The reign of Sultan al-Ghawrī introduced innovations in architectural forms and in the relationship between architecture and its decoration. The exquisite stone-carving characteristic of Qāytbāy′s architecture was replaced by the use of ceramics in architectural decoration, as can be seen in the sultan′s minaret at the Azhar mosque. The minaret is strikingly tall and has a double-headed upper story. The facetted middle shaft is inlaid with blue ceramic in the pattern of repetitive arrows.

The two minarets of the mosque of Qānibāy al-Rammāḥ, built during al-Ghawrī′s reign, combine the double head with a rectangular two-storied shaft. Stone carving is kept to a minimum, confined to the *muqarnas* of the balconies. Here for the first time since the octagonal minaret of al-Māridānī, built more than a century and a half earlier, a new minaret design was created.[50]

The funerary complex of Sultan al-Ghawrī is in many respects an innovative monument. It was built on both sides of the main street or *qaṣabah* of al-Qāhirah (Figs. 5, 6). There was already a Cairene tradition of building religious complexes on both sides of a street, such as the mosque and the *khānqāh* of Shaykhū,[51] and the complex of Bashtāk, which had a bridge connecting a mosque with a *khānqāh* across a street.[52] By building his twin minarets above the towers of the southern gate, Bāb Zuwaylah, al-Mu'ayyad Shaykh similarly straddled the street with a monument. In the northern cemetery Sultan Barsbāy arranged the structures of his religious complex on both sides of the road.

Al-Ghawrī′s buildings in the city center display a bold and unprecedented arrangement.[53] In the complex the mosque is located on the western side of the main avenue; the mausoleum, the *khānqāh,* and the *sabīl-maktab* are on the eastern

side. Actually, although the *waqfīyah* defines it as *khānqāh,* it was not a traditional *khānqāh* with boarding facilities; it consisted only of a gathering hall without living units for the sufis. The traditional *khānqāh,* with living units for the sufis had already disappeared, being replaced by a multifunctional institution which served as a Friday mosque at the same time as it included a teaching curriculum for students and sufi services.[54] These multifunctional foundations usually included a *rab',* or group of apartments, which the endowment deed does not dedicate specifically to the sufis or the students, but instead specifies that it be rented to whomever the administrator of the *waqf* judged suitable. The fusion of the *khānqāh* with the mosque-madrasah reflected the total integration of sufism in late Mamluk religious life.

The fact that the *khānqāh* in al-Ghawrī's complex was an independent structure, separate from the mosque, should not, however, be interpreted as a response to some change in the status of the sufis or their rituals. The stipulations of al-Ghawrī's *waqf* indicate that his foundation was structured like all other Mamluk foundations of this period, such as Qāytbāy's funerary complex. There, however, all activities took place within the same structure. The splitting off of the *khānqāh,* therefore, was only an architectural device with an esthetic purpose rather than a response to a functional requirement. It served the design to place a structure on the other side of the street, facing the mosque. The sultan's mausoleum was not adjacent to the mosque, as one would expect on the basis of Mamluk architectural traditions, which regarded the optimal location for a princely mausoleum to be on either side of the prayer hall and overlooking the street. This layout combined proximity to the sanctuary and its sacred associations with visibility from the street.[55] The layout also allowed the sultan to build a mausoleum with a width equal to that of the prayer hall, which only occurs in the funerary madrasah of Sultan Ḥasan.[56]

Al-Ghawrī's mausoleum was attached to the *khānqāh,* which included a Mecca-oriented hall with a mihrab, in front of which sufi gatherings were to take place; the mosque, also called madrasah in the *waqfīyah,* fulfilled the functions of a Friday mosque. The splitting of the *khānqāh* thus created a second mosque to which the mausoleum could be attached. It served the design of a symmetrical composition that fully dominated the street in the very heart of the city.

The western building had a protruding minaret to the south. A massive four-story rectangular tower of conspicuous height, this minaret had a four-headed upper

structure covered with blue tiles.[57] Ibn Iyās claims that this was the first four-headed minaret ever to be built in Cairo. The *waqfīyah* describes the tiles as of lapis blue color *(qāshānī azraq lāzuwardī)*.[58] The color must have been similar to the blue ceramic decoration of the sultan′s minaret at al-Azhar. A drawing by Pascal Coste shows that the blue tiles of the minaret covered the entire third floor as well as the four-headed top and that they were pierced in their center, where they were attached by a nail. Moreover, nails were driven between the tiles to provide additional support (Fig. 7).[59] An inscribed cartouche is included in the ceramic revetment.

The minaret faced the mausoleum dome, which was similarly covered with blue tiles.[60] A nineteenth-century drawing by Girault de Prangey shows the dome prior to its collapse, covered with tiles (Fig. 8).[61]

Both the minaret and the dome, with their blue tiles, must have been an unusual spectacle. On the north-eastern side the *sabīl-maktab* projected onto the street on three sides, also an innovation. A wooden roof connected the two buildings, providing shade for the street market.

The first stipulation of the *waqf* refers to the maintenance of the tiles, stating that they should be replaced as soon and as often as needed. Tiles had not been used since the domes of al-Nāṣir Muḥammad at his mosque and his palace at the Citadel, which also had a ceramic revetment, so Cairene craftsmen were no longer accustomed to the construction of tiled domes. This may explain why, soon after the building was finished, the dome of al-Ghawrī had to be pulled down and rebuilt.[62] The sultan himself sat on the roof of the madrasah under a tent to supervise the work. The minaret also had to be rebuilt. Ibn Iyās writes that its upper structure was rebuilt in brick; it collapsed in the nineteenth century and was replaced with a five-headed structure.

The use of ceramics in architectural decoration was fashionable in Cairo in the Bahri Mamluk period. Faience mosaic decoration, influenced by Ilkhanid Iran, was used on a limited number of buildings, the earliest extant example of which is the mosque of al-Nāṣir Muḥammad at the Citadel, and the latest the mosque of

Sultan Ḥasan.[63] Underglaze-painted tiles were produced in the fifteenth and sixteenth centuries in Damascus and in Cairo. Underglaze-painted epigraphical blazons and tiles for lintel decoration were produced during Qāytbāy's reign.[64] The dome of Sultan al-Ghawrī used to have an underglaze-painted ceramic band on the drum.[65] Sultan al-Ghawrī had some renovation work done on the dome of Imām al-Shāfiʿī and may have also tried to decorate it with green tiles. Creswell mentions green rectangular tiles found covering the upper five meters of the dome.[66] Both Sultans Qāytbāy and al-Ghawrī are reported to have undertaken restoration work on the sanctuary, but no source mentions that the dome of Imām al-Shāfiʿī was covered with tiles. Al-Ghawrī might have started such a revetment project, but been unable to complete it.

The workshop that produced the tiles for Sultan al-Ghawrī continued to operate in the early Ottoman period. Green tiles, also pierced in the center, cover the mausoleum dome of Shaykh Abū al-Saʿūd, built by Sulaymān Pasha. The mosque of Sulaymān Pasha also has green and blue tiles, and the minaret of Shāhīn al-Khalwatī has green tiles at the conical top. The mausoleum of Amir Sulaymān, built in 951/1544, is adorned with underglaze-painted blue and white tiles in the tympanum between the lintel and the relieving arch, and with a blue and white underglaze inscription on the drum.[67] This type of architectural decoration continued to be seen on many buildings of the Ottoman period. The blue dome of al-Ghawrī's mausoleum had a particular significance; it included the relics of the Prophet along with the Quran said to have belonged to the caliph ʿUthmān,[68] which up to then had been housed in the building called *ribāṭ al-āthār,* which had fallen into disrepair. Its founder had been the vizier Bahā' al-Dīn ibn Ḥannā (d. 707/1303), who had purchased the relics from a family in Yanbūʿ and installed them in the *ribāt* which he founded for that purpose on the Nile shore south of Fusṭāṭ. Ever since its founding the shrine had been a place of pilgrimage, one that al-Maqrīzī describes as lively and filled with great numbers of worshippers.[69] Sultan al-Ashraf Shaʿbān (1363-76) endowed it with a Shafiʿi madrasah, and Sultan Barqūq (1382–89)

built a dam on the Nile banks. The relics were moved to al-Ghawrī's mausoleum accompanied by a grand procession. Ibn Iyās comments that relocation of the relics was a violation of the founder's *waqf* stipulations.

Although al-Ghawrī does not seem to have cultivated the religious aspect of his image very much, the transfer of the relics to his mausoleum was undoubtedly meant to add to its prestige by making it a place of pilgrimage. His *waqfīyah* stipulates that a eunuch had to be present in the mausoleum to serve the visitors and pilgrims who came to see the relics and the Quran of ʻUthmān.[70]

Ibn Iyās also mentions that the *khānqāh* of al-Ghawrī had a magnificent Quran which was originally in the *khānqāh* of Baktimur. Since that *khānqāh* had fallen into ruins more than a century earlier, al-Ghawrī must have acquired it from Baktimur's heirs, paying a thousand dinars. This Quran was comparable only to the one which al-Nāṣir Muḥammad bought for his *khānqāh* at Siryāqūs, which had fetched the same price of a thousand dinars.[71] The Quran of Baktimur's *khānqāh* could have been the famous Quran of Uljaytū which is now in the Dār al-Kutub in Cairo; it is inscribed with the name of al-Nāṣir Muḥammad, Baktimur's master, and the statement that it was made *waqf* by Baktimur.[72] A Quran box that was once in the Mosque of al-Ghawrī, and is now in the Islamic Museum in Cairo, could have contained this Quran.[73] Although it is anonymous, its style puts it in the reign of al-Nāṣir Muḥammad, Baktimur's patron, who might have given the box with the Quran of Uljaytū as gifts to his favorite amir.[74]

Sultan al-Ghawrī seems to have had a predilection for the color blue. The tent in which he used to celebrate the Prophet's birthday at the Citadel was blue, like the color of his *khirqah,* and as were his dome and the top of his minaret. The Uljaytü Quran of Baktimur's *khānqāh* is illuminated predominantly in blue.

The evolution of the arts in al-Ghawrī's reign was not the by-product of an intense religious patronage, as was the case with his master Qāytbāy. With all his acknowledgment and admiration for Qāytbāy's achievements, al-Ghawrī himself had different motives. His approach to the arts was from the outset profane rather than pious. He worked carefully at constructing his image as a poet and scholar and a patron of secular arts, pursuing the kind of princely image that was cultivated by the Timurid, Safavid, and Ottoman princes, but was unfamiliar in the culture of

the Mamluk court. Moreover, there is an undeniable Iranian flair to al-Ghawrī´s cultural life, which is evident in his entourage of *a'jām* and his preoccupation with the *Shāhnāmah*. His literary colloquia demonstrate his interest in Iranian history and culture with references to Timurid princes and citations of poems by Ḥusayn Bāyqarā. The fashion of ceramic revetment points to the same source of inspiration. One may also speculate that the layout of his complex, with the madrasah facing the *khānqāh,* was inspired by descriptions he might have heard of Samarqand and Ulūgh Beg´s Rājistān.

The obsession with regal glamour in this critical phase of Mamluk history, however, raises the question of al-Ghawrī´s true motives. Was his patronage inspired merely by frivolity and hedonism? Or was it perhaps part of a political agenda? Al-Ghawrī´s major enemies, the Safavid shah Ismā'īl and the Ottoman sultan Selim, were both of royal lineage. The former descended from an alliance of a sufi saint with royalty; the latter had a long royal genealogy. That al-Ghawrī was defensive about his own humble origins is clearly documented in the *Nafā'is*. In one of his colloquia the sultan is reported to have claimed that the Circassians were of Arab origin, descended from the Ghassanid tribe which had converted to Islam, an idea that had already surfaced during the reign of Sultan al-Mu'ayyad Shaykh.[75] A vendetta, however, forced the Ghassanid chieftain to escape and seek refuge at the court of the Byzantine emperor Heracles, where he converted to Christianity. The emperor eventually granted him and his people the land that became henceforth Circassian territory.[76] In another session, al-Ghawrī claimed again to be of Arab stock as a result of his Circassian origin, which thus qualified him to be a true *khalīfah!*[77]

Sensitivity over of the Mamluk lack of pedigree seems to have been provoked by the Ottomans. Again in the *Nafā'is* it is reported that Jānibak, a Mamluk envoy to the court of Bāyazīd II (1481–1512), was told that the Holy Cities should not be governed by the sons of unbelievers *(awlād al-kafarah),* but rather by a *sulṭān ibn sulṭān,* in other words, the Ottomans. To this Jānibak replied that on the Day of Judgement lineage would play no role; nobility is defined by knowledge and *adab* rather than descent.[78] Al-Ghawrī is quoted as saying that *adab* is the most important thing in the world *(mā fī al-dunyā aḥsan min al-adab).*[79] On another

occasion the Mamluks are said to have replied to the Ottoman scorn at their lack of lineage with the question, ″And who was the Prophet′s or Abraham′s father?″

Al-Ghawrī, sensitive about the shortcomings of his pedigree, seems to have launched the Circassian-Arab legend to bestow on himself an Arab nobility that would enable him to stand up to his rivals. His appropriation of the Prophet′s relics for his mausoleum should be seen in this light. Al-Ghawrī seems to have been trying to modernize the image of the Mamluk sultanate shortly before its collapse, by adopting the artistic language of the great powers at that time, the Ottomans and the Safavids, hoping perhaps that this image might deter his enemies and perhaps rescue his kingdom.

Between Qadis and Muftis: To Whom Does the Mamluk Sultan Listen?

In spite of the proliferation of scholarship on many aspects of life during the Mamluk era, one aspect of Mamluk society that still has not received the attention it deserves—despite the fact that it is crucial to our understanding of the dynamics of life during that time—is the relationship between members of the religious elite.

In this article, I propose to examine the relationship between two groups of religious officials, qadis and muftis, as reflected in their debates in both public and private forums. I will examine the role played by each group and their efforts to influence the changes occurring in society as well as the role of the sultan in endorsing changes in the law suggested by the religious scholars.

In order to do so, I will focus primarily on two cases which best reflect the extent of disagreement and competition which existed among the individuals who were members of these religious groups. The cases selected will show that the debates between religious scholars were frequently characterized by great tension and often led to the public´s opposition to the views of one of the two parties.

Debates between qadis and muftis focused mostly on conflicting interpretations of a point of law. The chronicles frequently report heated debates that took place in a *majlis* presided over by the sultan. The intense discussions would usually be provoked by a question put to the assembly of distinguished scholars by the ruler or an important amir. Occasionally, the full argument relating to the disagreement was expounded upon by a member of the two groups in a short *risālah,* or in a *fatwá.* As a result, we can follow the lines of argumentation of the two groups by consulting the extant *risālah*s or *fatwá*s, or by reading accounts in the chronicles. The examination of the full texts of these *risālah*s and *fatwá*s together with the comments provided by the medieval chroniclers also throws light on the legal procedures that introduced changes in the law. Indeed, this helps us understand how a legal opinion pertaining to a specific case could eventually become binding and take the form of a general law imposed by the ruler.

Before discussing the cases which were the object of disagreement between muftis and qadis, let me review the duties and responsibilities which were attached to their respective positions.[1]

---

[1]For general information on the qualification, responsibilities, and function of medieval qadis see

In his book on Islamic chancery al-Qalqashandī has a section entitled ″Al-Ijāzah bi-al-Iftā' wa-al-Tadrīs″ (License to teach and issue legal opinions).[2] From the title of this section we are already informed that in order to issue a valid legal opinion *(fatwá)* an individual should first receive a license allowing him to do so. The *ijāzah* represents the certification that the individual is authorized to issue a legal opinion according to a specific school of law. Medieval chronicles mention a number of religious scholars who had received *ijāzah*s from prominent scholars. Thus, Ibn Ḥajar al-'Asqalānī mentions in the obituaries for the year 801 that Jamāl al-Dīn al-Zuhrī al-Shāfi'ī had received such a license from his father in the year 791 (″wa-adhana lāhu abūhu fī al-iftā'″).[3] Elsewhere he writes that Muḥammad ibn Muḥammad al-Ghazzī (b. 724), a student in Jāmi' al-Ḥākim, had received a license to issue *fatwá*s from al-Badr Ibn Hilāl.[4] In the obituaries for the year 846 al-Sakhāwī writes about Muḥammad ibn 'Abd al-Raḥmān al-Maḥallī, who was a companion of Ibn Jamā'ah for ten years. Al-Maḥallī had received from the latter an *ijāzah* giving him permission to teach jurisprudence and to expound orally and ″use his pen″ to issue *fatwá*s according to the Shafi'i school of law.[5] Al-Qalqashandī himself had received an *ijāzah* from his shaykh, Sirāj al-Dīn Abū Ḥafṣ, known as Ibn al-Mulaqqin, when the latter had reached the port of Alexandria where the scholar was resident in the year 778.[6]

An individual could receive more than one *ijāzah* issued by different shaykhs. Presumably the more *ijāzah*s the individual had, the more reliable his opinion was. Thus, al-Sakhāwī writes in the obituaries for the year 846 that Qadi Shams al-Dīn al-Qurashī al-Shāfi'ī, who was born in al-Maḥallah in 763, was given an *ijāzah* by Maḥmūd al-'Ajlūnī. He was also given an *ijāzah* permitting him to teach and issue *fatwá*s by al-Bulqīnī in the year 809, while in 782 he had been given an *ijāzah* by Ibn 'Aqīl.[7] In the obituaries for the year 852 he writes about his own shaykh, Ibn Ḥajar al-'Asqalānī, and says that he had received *ijāzah*s to teach and to issue *fatwá*s from al-Bulqīnī, Ibn al-Mulaqqin, and al-Abnāsī.[8]

Al-Qalqashandī provides us with the text of his own *ijāzah,* which is interesting

because it throws light on the qualifications of a mufti and the latitude that its possessor enjoyed in the interpretation of the law. In it one reads: ″Knowledge is the strongest form of worship *(ʻilm aqwá asbāb al-ʻibādah)*. . . . Since the aforementioned [person] has grown and was brought up in the climate of knowledge and virtue *(ʻilm wa-al-faḍīlah)* and has shown high moral standards *(akhlāq)* and has been in the company of distinguished shaykhs and jurists working under their guidance . . . he has been given the license to teach according to the school of law of al-Imām al-Shāfiʻī . . . and to issue *fatwá*s *(an yuftī)* to whomever approaches him for a legal opinion whether in written or oral form *(khaṭṭan aw lafẓan)* according to his own *madhhab*. This license is issued to him because he has been found perfectly eligible and highly qualified due to his vast knowledge.″ The *ijāzah* was certified and signed by a number of religious scholars.[9]

As is clear from the preceding, the mufti′s qualifications rested on his knowledge of the various fields of the religious sciences in his *madhhab*. It is not therefore surprising to read that the ones given *ijāzah*s were individuals who had proven themselves as scholars in their *madhhab*. These individuals often occupied teaching positions or at least, as in the case of al-Qalqashandī, were qualified to do so. This point is confirmed by information found in *waqf* documents. For example, one reads in the *waqfīyah* of Sultan Ḥasan that the founder appointed to the Qubbah a teacher-mufti *(mudarris muftī)* qualified to teach Quran exegesis.[10] The same document refers to a salary of three hundred *nuqrah* dirhams being paid to the *qāḍī al-qudāh* Tāj al-Dīn al-Subkī al-Shāfiʻī, who was *qāḍī al-qudāh* in Damascus, to perform the duties of mufti *(ʻalá waẓīfat al-iftā')* during his lifetime and after him to his successor as *qāḍī al-qudāh* in Syria, provided that he also performed the functions of mufti *(yaqūm bi-waẓīfat al-iftā')*.[11] The *waqfīyah* refers also to the appointment of a shaykh *miʻād,* who should be a mufti well known for his religiosity *(ʻālim muftī mashhūr bi-al-diyānah)*.[12] The *waqfīyah* of al-Mu'ayyad Shaykh stipulates that the *shaykh al-ṣūfīyah,* who was from the Hanafi *madhhab,* should be well acquainted with the works of jurisprudence of his own school and the works of the religious scholars of the other schools of law.[13] He had to be qualified to teach and to issue *fatwá*s. The *waqfīyah* of al-Jamālī Yūsuf al-Ustādār also mentions the appointment of a Shafiʻi religious scholar qualified to teach and issue *fatwá*s. As per the founder′s instructions the individual chosen, Shaykh Abū al-Maʻālī Muḥammad al-Khwārizmī al-Shāfiʻī, was to take up residence in the

foundation, a *khānqāh*. The shaykh was to be paid a salary for issuing legal opinions.[14]

Interestingly, it appears from these cases that the issuing of legal opinions was remunerated by a fixed salary paid from the *waqf*. In general, muftis who did not occupy endowed positions were also remunerated for their legal opinions. This, of course, opened the door for bribes and entailed the payment of large sums of money by rulers or amirs in return for a favorable opinion being issued by the mufti. On the other hand, since the issuance of *fatwá*s had become a lucrative business, religious scholars too fell prey to corruption as they began giving licenses to issue *fatwá*s to individuals who were not qualified to be muftis, in return for handsome sums of money. This poor state of affairs seems to have become widespread by the end of the fourteenth century. In the obituaries for the year 795, Ibn Ḥajar al-ʻAsqalānī mentions Aḥmad ibn ʻUmar ibn Hilāl al-Iskandarānī, then al-Dimāshqī, a Maliki *faqīh* whom he praises as a good scholar. However, he wrote, he was to be blamed for accepting bribes *(rishwah)* to give licenses to issue *fatwá*s *(ʻalá al-idhn fī al-iftā')* to individuals who were not qualified. He was often denounced for this by other religious scholars.[15]

An individual could have his license to issue *fatwá*s revoked if his peers called his performance or qualifications into question. Al-Sakhāwī mentions that in the year 852 a *majlis* attended by the sultan and by al-Qalqashandī, al-Manāwī, and other Shafiʻi scholars met to reconsider the position occupied by Shaykh Ibn Jamāʻah, shaykh of the Ṣāliḥīyah in Jerusalem, at the request of al-Sirāj al-Ḥimṣī. The latter had claimed that Ibn Jamāʻah was not qualified to teach and accused him of issuing *fatwá*s which were faulty![16] Ibn Ḥajar wrote concerning the Shafiʻi scholar Ibn al-Naqqāsh that his exegesis was rather peculiar and that he favored the amirs.[17] Ibn al-Naqqāsh's friendship with Sultan Ḥasan saved him temporarily from the attacks of Quṭb al-Dīn al-Hirmāsī. Yet, as al-Maqrīzī reports, in the year 760 he was summoned in front of a *majlis* attended by Qāḍī ʻIzz al-Dīn ibn Jamāʻah at the request of Quṭb al-Dīn al-Hirmāsī and was accused then by al-ʻIrāqī of issuing *fatwá*s not in conformity with the teachings of the Shafiʻi *madhhab*.[18] Ibn Ḥajar, who is more explicit, adds that he was accused of issuing *fatwá*s to some Copts. As a result, Ibn al-Naqqāsh was forbidden to issue *fatwá*s. He was

also prevented from giving public sermons *(majālis al-wa'ẓ)* unless he read from a book.[19]

Regarding the qualifications of qadis, al-Qalqashandī wrote that the position of qadi was given to qualified individuals known for their caring, honesty, piety, and humility. He adds that the position should go to someone who is going to exert his personal *ijtihād* to ensure that justice prevails after having relied on the evidence presented by litigant parties, making sure that all are treated equally.[20]

Ibn Abī al-Dam al-Shāfi'ī defines *qaḍā'* as a *farḍ kifāyah* whose aim is to order people, compelling them to accept a ruling. When issuing a verdict in his capacity as judge, a qadi was bound by the testimony of witnesses and the evidence pertaining to the case he was examining. After consulting the various juridical sources he should be prepared to render his judgement. However, in cases where the judge could not find any precedent or help from the sources consulted, he was asked to use his *ijtihād,* if he considered himself a worthy *mujtahid.*[21] Otherwise, as al-Ṭarābulusī suggested, it was imperative for him to refer to a mufti "in cases for which he does not find any information that can help him formulate his judgement; if he considers himself a *mujtahid* he could use his own *ijtihād* or use analogical reasoning based on precedent before rendering his judgement. But if he does not consider himself a *mujtahid* he should ask a mufti for an opinion and render his judgement on the basis of it. In any case, the qadi should never render a judgement without having full knowledge of the legal issue."[22] In issuing a legal opinion, a mufti had a wider scope of proofs at his disposal than a qadi, taken from his own *madhhab* or other *madhhab*s. This latitude often allowed the mufti to propose opinions and solutions to problems which sometimes clashed with the narrower interpretations of the qadis. Accordingly, it is not surprising to see rulers and their amirs resort to the muftis whenever they wanted to legitimize some course of action or behavior which would normally raise criticism and opposition on the part of the religious scholars. Obviously, in doing so they were taking a risk, since the result of the *fatwá* was not guaranteed always to favor them. In spite of the resort to bribery already referred to, the mufti might still speak his mind and oppose the ruler. Thus, the dilemma for the ruler and the amirs would be whether to act on their own and face the wrath of their opponents, or to have some religious scholar sanction their actions. Often in cases which required measures which made it necessary to skirt the law, such as the illegal appropriation of

[22]'Alī ibn Khalīl al-Ṭarābulusī, *Mu'īn al-Ḥukkām fī-mā Yataraddad bayna al-Khaṣmayn min al-Aḥkām* (Cairo, 1973), 26.

funds, for example, Mamluk rulers found themselves forced to consult the religious scholars. Since the measures contemplated by the ruler were considered illegal, religious scholars were put in an awkward position. Indeed, by providing an opinion which would favor the upholding of the law they would clearly oppose the ruler′s wishes and thus run the risk of incurring the ruler′s wrath. Few of them would take this risk if the ruler′s actions threatened their self interest. In general, by the end of the fourteenth century, upholding the letter of the law required courage. Accordingly, Ibn Ḥajar al-ʻAsqalānī praises Qāḍī Tāj al-Dīn al-Ṭarābulusī, who was mufti in Dār al-ʻAdl, saying that he would insist on his rulings and he would not knuckle under like others did.[23] Al-Maqrīzī writes that in the year 780 Barqūq, who was then *amīr kabīr,* convened a *majlis* to which he invited judges and other religious scholars to discuss the possibility of seizing land which had been endowed for mosques, madrasahs, *khānqāh*s, and *zāwiyah*s as well as a number of other endowments. This caused an uproar among some of the scholars who spoke against it. Al-Bulqīnī, who was present at the meeting, remained silent, possibly in an effort to avoid voicing his opposition to Barqūq′s request. When he was asked for the reason for this silence his answer was, ″No one asked for my opinion.″ So Barqūq indicated that he should speak and he was forced to voice his opposition to the confiscation of any legal endowment. Ibn Abī al-Baqā', who was also present at this meeting, stood up and in an apologetic way addressed the group of amirs, saying that they were in positions of authority and the decision was theirs. After an angry dispute al-Bulqīnī said, ″Oh amirs, you order the qadis [to give you their opinion] but if they don′t provide the opinion you want you dismiss them.″[24]

Ibn Ḥajar al-ʻAsqalānī mentions that in the year 803, when the Mongol Tīmūr had invaded Sivas and was advancing toward northern Syria, a *majlis* was convened to decide whether it was legal to seize half or a third of the merchants′ capital in order to equip the army. The request in itself was not unique but the answer provided was indeed revealing. The qadi Jamāl al-Dīn al-Malaṭī answered the ruler: ″If you decide on your own, you have the authority to do so *(fa-al-shawkah lakum),* but if you want to base your decision on our issuing a *fatwá* to that effect, then it is impossible for any of us to do so *(wa-in aradtum dhālika bi-fatāwinā fa-hādhā lā yajūz li-aḥad an yuftī bih).*″[25] Such an answer is quite interesting since it was uttered by someone who was often accused of favoring illicit behavior.

---

[23]Ibn Ḥajar al-ʻAsqalānī, *Inbā' al-Ghumr,* 9:22.

[24]Al-Maqrīzī, *Sulūk* , vol. 3 pt. 1, 345–46.

[25]Ibn Ḥajar al-ʻAsqalānī, *Inbā' al-Ghumr,* 4:191. Elsewhere (4:350) the author writes that al-Maḥallī′s answer was: ″If you are acting from a position of authority then all the power is yours. As for us, we will not issue such a *fatwá* nor would we accept to endorse it″ *(wa-lā nuḥillu an yuʻmal).*

Indeed, this mufti was often accused of issuing *fatwá*s making it legal to eat hashish, and, says Ibn Ḥajar, he often exerted himself to find subterfuges (*ḥiyal)* to allow *ribā*.[26]

Issuing *fatwá*s which supported a view which was contrary to the traditional interpretations of jurists could have far reaching implications. Indeed, if adopted by the ruler and embraced by a group of scholars, such *fatwá*s could ultimately lead to changes and open the way for the widespread adoption of practices previously considered illegal by the majority of religious scholars. Muftis like al-Bulqīnī and al-Subkī were known to have defied the traditional views of their school of law without hesitation, despite the disapproval of their peers, because their legal opinions were supported by the ruler and the military elite. Al-Suyūṭī, who was aware of the legal implication of their *fatwá*s, provided an apologetic explanation for their behavior, saying that even though they had opened the door for illegal practices, they were responding to the needs of their time. Furthermore, he did not hesitate to claim that a *fatwá* should in fact reflect the reality of the time.[27]

The opinions of muftis seem to have played a major role in introducing legal changes. Accordingly, we should pay closer attention to the content of *fatwá*s and the way they were formulated, since in the long run, when the public uproar faded, they were often followed by the imposition of a law. The greater the prestige of the scholar issuing the opinion, the more effective his opinion and the weaker the chances that it would be challenged by his peers. Some qadis had forged quite a reputation for themselves and seem to have been put to the test. Muftis from the Syrian part of the empire seem to have been particularly effective in challenging the qualifications of other scholars. Ibn Ḥajar al-ʻAsqalānī notes the arrival in Cairo in the year 828 of Yūsuf ibn Quṭb al-Dīn al-Ḥanafī from Aleppo and his boast that no other scholar could compare to him. So the sultan al-Ashraf Barsbāy, eager to test the validity of his claim, summoned a group of renowned Hanafi scholars to a *majlis.* He asked for a collection of *fatwá*s to be brought. He then ordered that one *fatwá* should be assigned to each mufti for comment. Accordingly, Shaykh Niẓām al-Dīn Yaḥyá, the shaykh of the Ẓāhirīyah; Shaykh Badr al-Dīn al-ʻAntābī; Shaykh Sirāj al-Dīn, who was the shaykh of the Shaykhūnīyah; Ṣadr al-Dīn ibn al-ʻAjamī; Shaykh Saʻd al-Dīn ibn al-Dīrī, shaykh of al-Mu'ayyadīyah; and Shaykh Yūsuf, respectively, were ordered to provide their legal opinion on the questions assigned to each of them. They all agreed except for shaykh Yūsuf, who said he only wrote opinions in his home. So they all proceeded to write. Once they had finished, the sultan forwarded their opinions to the Hanafi *qāḍī al-qudāh* Zayn al-Dīn for him to examine and decide who was

[27]Al-Suyūṭī, *Al-Ḥāwī lil-Fatāwī* (Beirut, n.d.), 1:206–10.

right and who was wrong in his answer.[28] On the basis of this, are we to understand that the *qāḍī al-quḍāh* had the power to oversee the *fatwá*s of other religious scholars? Until we have more information on the dynamics regulating *fatwá*s and the interaction between scholars at different levels any answer to this question would be pure speculation.

As far as ceremonial and public appearances go, it is certainly clear that the *qāḍī al-quḍāh* enjoyed a higher status than the mufti of Dār al-ʻAdl. Indeed, concerning Dār al-ʻAdl al-Maqrīzī writes that the custom was for the sultan to sit in the Īwān Kabīr and the qadis of the four schools of law to sit at his side. The Shafiʻi qadi, who enjoyed a higher status, would sit to his right, followed by the Hanafi, then the Maliki, and finally the Hanbali. However , after the rule of Sultan al-Nāṣir Muḥammad, this order changed and the four qadis took their place on either side of the sultan. The Shafiʻi qadi sat to the right, followed by the Maliki and the *qāḍī ʻaskar,* then the *muḥtasib* of al-Qāhirah, then the Shafiʻi mufti of Dār al-ʻAdl. The Hanafi qadi would sit to the sultan′s left, followed by the Hanbali.[29]

Regardless of who took precedence over the other in legal or ceremonial matters, the question remains: to whom did the sultan listen when he was seeking advice? And whose decision was implemented when it came to serious matters?

Among the interesting cases mentioned by al-Maqrīzī there is one concerning a *majlis* which had met at the request of Sultan Ḥasan. This particular *majlis* gave way to a heated discussion between the qadis and muftis. This debate prompted Sultan Ḥasan to raise the question of the importance of muftis and their *fatwá*s. Indeed, while the qadis were entrenched in their positions and were attacking the opinions of muftis, claiming that they had no basis in the law, the sultan addressed himself to the qadis, saying, ″If the *fatwá*s have no bearing on legal matters, let us abolish both the muftis and their *fatwá*s.″[30]

This *majlis,* which was held at Siryāqūs, had met as a result of an incident which had taken place in the year 760, when the mosque of al-Ḥākim was being restored. The restoration took place under the supervision of Shaykh Quṭb al-Dīn al-Hirmāsī. On the occasion of this restoration the sultan had endowed the mosque with a *waqf* which was to support some of the needs of the foundation and the salaries of its staff. The sultan chose the same occasion to remunerate the supervisor of the work, al-Hirmāsī, by setting aside for this shaykh and his children some part of the agricultural land. It is this particular land which became the object of the controversy a year later. Indeed, in the year 761 Sultan Ḥasan, who had turned against al-Hirmāsī, confiscated his fortune and destroyed his house. The reason

[28]Ibn Ḥajar al-ʻAsqalānī, *Inbāʼ al-Ghumr,* 8:63–64.

[29]Al-Maqrīzī, *Al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1854)*,* 2:208–9.

[30]Ibid., 278–80.

behind this change of heart is in itself quite interesting. According to Ibn Ḥajar al-ʿAsqalānī, the person behind this reversal of fortune was Ibn al-Naqqāsh, who had been known for his unorthodox exegesis. As previously mentioned, this scholar had often been accused of issuing *fatwá*s which were in conflict with the teachings of the Shafiʿi school of law. When Shaykh al-Hirmāsī heard about this, he attacked him in public and spread rumors about him. Ibn al-Naqqāsh tired of this and vowed to retaliate. His goal was reached when he succeeded in turning the sultan against al-Hirmāsī, prompting this ruler to seize the properties of the shaykh, to order the destruction of his house, which was built in front of the Jāmiʿ al-Ḥākim, and to exile him and his children.[31]

The subject of the heated debate between the qadis and muftis was a plot of agricultural land totaling 560 feddans in Ṭandatā.[32] A share of this land had been set aside as *waqf* to benefit the mosque, while the rest of the land had been given to al-Hirmāsī by the sultan at the request the shaykh. After the demise of al-Hirmāsī, the sultan wished to seize the shaykh′s share of this land. However, he was faced with a problem: al-Hirmāsī had turned the agricultural land received from the sultan into a *waqf*. By turning the land into a *waqf,* al-Hirmāsī had invalidated the clause which, in agreement with the Hanafi school of law, would have allowed the sultan to seize it.

Trying to find a loophole in the law, Sultan Ḥasan asked religious scholars to re-examine the validity of the whole *waqf,* claiming that when he had made his declaration *(ishhād)* and sworn in front of the witnesses that he had endowed this land, he had not read the whole document, nor was he aware of the exact share allotted to al-Hirmāsī. The sultan also claimed that he was convinced that the greatest part of the land endowed was to benefit the mosque of al-Ḥākim and that only a negligible plot was to benefit al-Hirmāsī. Upon investigation it appeared that the witnesses of this *waqf* had sworn that they had taken cognizance of the detailed content of the *waqf,* which had apparently been drafted by al-Hirmāsī and clearly favored him. The problem, put before the religious scholars, spurred a heated debate between qadis and muftis. Indeed, muftis such as Ibn ʿAqīl, al-Subkī, al-Bisṭāmī, al-Baghdādī, and others argued for the nullification of the *waqf* since it was contingent upon an invalid declaration. The Hanafis argued that regardless of the faulty acknowledgment and declaration of a witness, this *waqf* could not be nullified since the content of its clauses had been legally approved by the Hanafi qadi and its execution by qadis of other *madhhab*s was sound. So, says al-Maqrīzī,

---

[31]Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah*, 4:71.

[32]Ibrāhīm ibn Muḥammad Ibn Duqmāq, *Kitāb al-Intiṣār li-Wāsiṭat ʿIqd al-Amṣār* (Bulaq, 1893), section 2, 94, mentions Ṭandatā among the towns of the District of Gharbīyah, whose *ʿibrah* was 15,000 dinars, distributed mostly as *iqṭāʿ* for the amirs′ *ṭablkhānah*s.

the sultan summoned muftis and the qadis to Siryāqūs, where he was spending some time, but only Tāj al-Dīn al-Manāwī, the deputy of the Shafiʻi qadi, appeared.[33] The Shafiʻi, Hanafi, and Hanbali qadis claimed they were too sick to attend. Hence, the sultan gathered the religious scholars who were in attendance in one of the palaces located in Maydān Siryāqūs and put the case before them, asking them to decide the matter. All but one scholar concurred that the *waqf* was null. Al-Manāwī, however, said that, according to the school of Abū Ḥanīfah, the ruling was valid even if the declaration of the witness and swearing was faulty. This statement caused an uproar on the part of the muftis, both Shafiʻis and Hanafis. They all argued that this was not the view of his *madhhab* and that since the consensus of scholars did not support al-Manāwī′s views, they declared that the ruling was to be considered invalid. To this al-Manāwī replied, ″Judgements are not rendered by way of *fatwá*s″ *(al-aḥkām mā hiya bi-al-fatāwī)*. The aforementioned qadi had already claimed, in another *majlis* involving a case concerning the Jewish community, that the opinion of muftis was to be disregarded and that *fatwá*s should not be relied upon when issuing a judgement! Hearing this, the audience of scholars retorted that he was wrong and that he showed his great ignorance, since no legal judgement could be rendered without a *fatwá* from God and His messenger. They also added that the status of *fatwá*s was established first by God the Almighty as stated in the Quran. Sirāj al-Dīn al-Hindī and others who were present at the *majlis* declared that the statement of al-Manāwī was blasphemous and that the school of Abū Ḥanīfah held that whoever disdained *fatwá*s and muftis was an infidel *(kāfir)*. Defending himself, the shaykh argued that his objection was only to *fatwá*s which conflicted with the teachings of a school of law. Interestingly, they all answered that he was still wrong in arguing this, since a *fatwá* could contradict a particular *madhhab* and yet be in agreement with truth and justice. Sultan Ḥasan, who was present during this altercation, interjected: ″If you claim that *fatwá*s have no authority, let us therefore dismiss all muftis and abolish *fatwá*s!″ He then paused, confused about what he had heard, and asked: ″How should I act in this situation?″ Referring to this gathering, ʻAlī Mubārak mentions that when Sultan Ḥasan asked the qadis and muftis whether he could invalidate the *waqf* of the plot of land in Ṭandatā they all concurred that he could except for al-Manāwī, who stood firm declaring that it was illegal to do so.[34] Praising the stand taken by this shaykh, al-Maqrīzī mentions that the land remained in the hands of al-Hirmāsī′s children. In a note of dismay he also calls upon the reader to compare the principled stand taken by al-Manāwī to the behavior of scholars of

[33]Al-Maqrīzī, *Khiṭaṭ,* 2:280.

[34]ʻAlī Mubārak Bāshā, *Al-Khiṭaṭ al-Tawfīqīyah al-Jadīdah li-Miṣr al-Qāhirah* (1888; reprint, Cairo,1980), 4:169.

his time who all fail to uphold the rigorous application of the law and issue rulings which favor the ruling class.[35]

This case suggests that up to the mid-fourteenth century qadis were still able to hold their own and did not yield to pressure from the rulers or their amirs.[36] In fact it seems that the qadis′ influence remained strong up till the beginning of the fifteenth century, when they began to temporize in their rulings. This was probably due to the fact that the position of qadi came to be filled by people who, for the most part, had obtained their position by paying bribes and were unqualified. It is precisely then that the opinions of famous religious scholars seemed to matter. In fact, muftis′ legal opinions were carefully considered by qadis, who relied upon them especially when the rulings they had to issue would set a precedent that would initiate a change.[37] Often, the muftis′ opinion stood as a check on the lack of rigorous adherence to the letter of the law shown by qadis, reminding them of the necessity of applying the law without favoritism. One of the cases worth discussing concerns a *fatwá* issued by al-Suyūṭī entitled ″Al-Jahr bi-Man‘ al-Burūz ‘alá Shāṭi’ Nahr.″[38] This particular *fatwá* had led to the spread of false rumors among people, prompting al-Suyūṭī to defend himself, as he mentioned at the beginning of the *fatwá.* Ibn Iyās wrote that in 896 a rumor spread among the people claiming that Shaykh Jalāl al-Dīn al-Suyūṭī had issued a *fatwá* which stated that erecting a building on the shores of al-Rawḍah was not permissible since the consensus of religious scholars recognized that it was illegal to build on the banks of rivers. As for those who claimed that this was permissible according to the Shafi‘i school of law, said al-Suyūṭī, they are wrong since such permission was not found in any of the works of the Shafi‘i scholars.[39] Al-Suyūṭī reports the reasons which led him to issue this *fatwá,* saying that a man who owned a house in al-Rawḍah undertook some renovations which led to additions in the direction of the river. These additions were followed by other construction which brought the total to thirty six *dhirā‘,* all added in the direction of the banks of the river, that is to say, the interdicted area of the ″*ḥarīm al-nahr*.″ Due to these new additions, his building was projecting beyond the row of houses adjacent to it. So, said al-Suyūṭī, he told him that this was illegal according to the four schools of law. The man started spreading rumors claiming that al-Suyūṭī issued a *fatwá*

[35]Al-Maqrīzī, *Khiṭaṭ,* 2:280.

[36]For some other examples see al-Maqrīzī, *Sulūk* , vol. 3 pt. 1, 345–46; Ibn Ḥajar al-‘Asqalānī, *Inbā’ al-Ghumr,* 4:350.

[37]See, for example, what al-Suyūṭī says in *Al-Ḥāwī lil-Fatāwī,* 1:206–10; see also al-Sakhāwī, *Al-Tibr,* 164.

[38]Al-Suyūṭī, *Al-Ḥāwī lil-Fatāwī,* 1:194–97.

[39]Ibn Iyās, *Badā’i‘ al-Zuhūr fī Waqā’i‘ al-Duhūr* (Cairo, 1984), 3:283.

asking for the demolition of all the houses of al-Rawḍah and this, according to the religious scholar, was a lie.

Because the rumor was creating an uproar among the people, al-Suyūṭī decided to defend himself in a work in which he produced the arguments of all four schools of law in support of the prohibition against building on the banks of rivers. Our interest in the *fatwá* lies in its conclusion which provides us with an insight into the procedures leading to the adoption of changes in legal practice. It also allows us to understand the relationship between the *qāḍī al-qudāh* of a *madhhab* and a mufti, since it shows how, at the request of the latter, the qadi confirmed the need for a change. Similarly, it reveals the role played by the sultan in the endorsement and promulgation of new laws.

In his conclusion al-Suyūṭī says: ″I sent the case of this man to the Shafiʿi *qāḍī al-qudāh.* I joined to it the views of the four schools of law. I also informed him that rulings issued in the past by scholars allowing people to construct buildings on the shores of al-Rawḍah were illegal.″ The *qāḍī al-qudāh* accepted the truth and instructed his deputies not to issue permits to build on the shores of al-Rawḍah. As he prepared to summon the individual concerned to his court to sanction him and impose the prohibition on him, al-Suyūṭī sent the qadi a note in which he suggested that, rather than impose the prohibition on a single individual, it would be preferable that the prohibition take the form of a general prohibition. Because the qadi appeared perplexed, says al-Suyūṭī, he explained to him that this course of action was permissible since in an earlier case Shaykh Taqī al-Dīn al-Subkī had ruled in the same way and had even written a book about it. Al-Suyūṭī sent al-Subkī′s work to the *qāḍī al-qudāh,* who then issued a general prohibition against building on the shores of al-Rawḍah. His ruling was confirmed by the Hanbali *qāḍī al-qudāh* and the Maliki *qāḍī al-qudāh.* Following this prohibition, al-Suyūṭī sent the qadi′s ruling and his own work on the subject to the sultan. After taking cognizance of their works, the sultan imposed a general prohibition on encroaching on the shores of al-Rawḍah and threatened to demolish any such illegal buildings.

From the preceding it appears that in issuing his order of prohibition, the sultan was relying on the ruling of the *qāḍī al-qudāh* and not entirely on the *fatwá* of al-Suyūṭī. However, it also appears that the *qāḍī al-qudāh* did not decide on his own to issue a general prohibition but in doing so had taken the *fatwá* of al-Suyūṭī into consideration. Also, the one who initiated the contact with the sultan was not the *qāḍī al-qudāh* himself but the mufti, al-Suyūṭī.

We can therefore speculate that in order to be effective, any change in the law or any general decree had to have the final approval of the sultan who would be the one to issue it. Often, after adopting a decision which was met with great opposition from the population, a ruler would request from the religious scholars

the writing of a *fatwá* or a *risālah* which would justify his action. Amirs would often follow the same pattern. For example, one important *risālah* was written for the amir Yashbak al-Dawādār when his decision to create changes in the urban landscape caused an uproar among the population. The *risālah,* written by Ibn Shiḥnah, provides arguments supporting the action of the amir. At the end of the work, the author writes: ". . . and if you reflect upon the proof that I have provided it will become clear to you that this [action] is in conformance with truth and justice . . . and whoever opposes it in our time relies only on personal interest and whim."[40] Ibn Iyās refers to this incident by saying that in the year 882 Yashbak decided to clean the streets and widen the thoroughfares. So he ordered the demolition of buildings that were blocking traffic in public streets, a matter which caused a lot of harm to the owners of these properties. Apparently he was able to do so thanks to the help of one of the deputies of the Shafiʻi qadi, Fatḥ al-Dīn al-Sūhājī, who, under pressure from the amir, had issued a ruling favoring the demolition.[41]

Examination of the cases discussed above indicates that whenever the rulers were faced with problems involving decisions touching a point of law, they consulted with the qadis.[42] It is difficult, however, to determine whether their behavior was entirely dictated by their eagerness to respect the law or by their attempt to have someone else bear the blame for unpopular decisions. In any case, it seems clear that they would always prefer to clothe their actions in an aura of legality. Accordingly, in cases where the qadis' opinions went against the rulers' will, the latter would first try to exert pressure on them in an attempt force them to validate his decision. If still faced by the opposition of qadis who would not yield to pressure, as was often the case up to the beginning of the fifteenth century, the ruler could still ask a mufti to issue a *fatwá* in his favor. In general, muftis enjoyed greater latitude in their interpretation of the law. By the fifteenth century many were indeed inclined to condone decisions that were unpopular with the masses but favorable to the ruler or the elite.

When it came to introducing changes into the law, it seems that muftis' legal opinions had first to be endorsed by the qadis before being enacted by the sultan. In all cases, whether the sultan listened to the qadis or the muftis, he was the one who had the final word in enacting a law or issuing a decree.

In conclusion, to answer the question, to whom did the Mamluk sultan listen when he was seeking advice? one is tempted to answer that the sultan listened to

---

[40]Ibn Shiḥnah, "Taḥṣīl al-Ṭarīq ilá Tashīl al-Ṭarīq," Arab League MS 1337, fol. 112.

[41]Ibn Iyās, *Badāʼiʻ al-Zuhūr*, 3:127–28.

[42]It should be clear that qadis were often in possession of licenses which allowed them to issue *fatwá*s. However, when they were approached by the ruler seeking their advice in their capacity as *qāḍī al-qudāh,* it seems that they were bound by a stricter interpretation of the law.

whomever was providing him with the opinion he wanted to hear. In other words, the Mamluk sultan listened to himself!

What Ibn Khaldūn Saw: The Judiciary of Mamluk Egypt*

Introduction

The career of Ibn Khaldūn is well known. He was active from the mid-fourteenth century in the political arena of North Africa and Spain, where he wrote his great work, *Al-Muqaddimah*. He then moved to Egypt where he was to become the Malikite chief judge *(qāḍī al-quḍāh)*. He was appointed to the post of chief judge by the Mamluk sultan Barqūq (r. 784–91/1382–89, 792–801/1390–99) twenty months after his move to Egypt, following an unexpected summons on 19 Jumādá II 786/8 August 1384.[1] He resigned the post after about ten months, but twelve years later he was appointed chief judge for a second time. Thereafter followed a succession of resignations and reappointments, so that by the time of his death in 808/1406 he had served six times as chief judge.

Prior to his first appointment, Ibn Khaldūn had had no experience as a working judge *(qāḍī)*. His only experience of working in legal administration had been while resident in Morocco, where he had served as appeal court *(maẓālim)* judge in 762/1361, concurrent with other positions under the Marinid sultan Abū Sālim. He held singular views and ideals about matters of legal administration, however, thanks to his experience in politics and his academic research.

Once appointed chief judge, he was brought into close contact with the affairs of the law courts, and the picture of the Egyptian legal administration which gradually revealed itself to him was not what he had expected. He experienced a

kind of culture shock. The state of affairs he discovered is clearly recorded in his autobiography, *Al-Taʿrīf bi-Ibn Khaldūn wa-Riḥlatihi Gharban wa-Sharqan,* along with an unmitigated account of his response to it.

Ibn Khaldūn′s account of the Mamluk legal administration has been largely ignored by scholars, however. Even the relatively recent specialized work of Escovitz[2] does not mention it. The present paper, therefore, is intended to bridge this gap by giving an account of his observations in his autobiography, and through this account, presenting an aspect of that time which cannot be appreciated by looking only from the perspective of the history of institutions.

IBN KHALDŪN′S INAUGURATION AS CHIEF JUDGE

In Ṣafar 786/March 1384, soon after Ibn Khaldūn had begun his first public appointment in Egypt as professor at the Qamḥīyah College,[3] there was an incident whereby the current Malikite chief judge, Jamāl al-Dīn ʿAbd al-Raḥmān ibn Khīr, was criticized by Malikite jurists for passing an incorrect judgment in court. As a result, Jamāl al-Dīn fell out of favor with Sultan Barqūq and was dismissed on 3 Jumādá II/23 July of the same year. Less than two weeks later, on 19 Jumādá II, Ibn Khaldūn received his summons from the sultan. He went to the Citadel and was ordered to assume the now empty post of Malikite chief judge. He declined, explaining that he did not have the experience for such a job, but the sultan was adamant and Ibn Khaldūn eventually agreed. He was invested by the sultan with the robe of honor and the honorific title of *Walī al-Dīn*, and then, with an escort of dignitaries and guards, he was led northwards up Cairo′s central avenue to the district of Bayn al-Qaṣrayn. This formal procession was superintended by Alṭunbughā al-Jūbānī (d. 792/1390), the amir of the council *(amīr al-majlis).* Alṭunbughā al-Jūbānī was a Turkish general who wielded great power at the palace. He had made Ibn Khaldūn′s acquaintance soon after the latter′s arrival in Cairo, and it was he who had introduced Ibn Khaldūn to Sultan Barqūq. The route of the procession was in accordance with tradition, stopping first at the Nāṣirīyah College,[4] where the proclamation appointing Ibn Khaldūn as Malikite chief judge was read out. The procession then crossed the street and went into the Ṣāliḥīyah College, where Ibn Khaldūn took the seat of the chief judge of the Malikite court.[5]

Since the reforms of Sultan Baybars (r. 658–76/1260–77) in 663/1265, the judicial administration of Mamluk Egypt had been entrusted to the chief judges of the four schools of law.[6] Among these, the chief judge of the Shafi'ite school was accorded the highest rank. This was presumably because, prior to the reforms, chief judges had always come only from the Shafi'ite school. The Shafi'ite chief judge thus had more power than the judges of the other schools, including sole jurisdiction over such matters as the execution of wills and the management of the property of orphans. Such details notwithstanding, while administration itself was in the hands of the four judges, the power to appoint or dismiss the chief judge belonged, by Islamic tradition, to the ruler. The appointment of Ibn Khaldūn by the sultan was thus no exception.

The Ṣāliḥīyah College which housed Ibn Khaldūn's court had been founded by the Ayyubid sultan al-Malik al-Ṣāliḥ Najm al-Dīn (r. 637–46/1240–49), and was the most powerful college in Egypt. It was the educational institute for all of the four schools of law, and it housed each of their courts. Ibn Khaldūn sat in the court of the Malikite school. Court was held in a room known as an *īwān,* which was in the shape of a half-dome, open at the front. The residences of the chief judges were also located in one corner of the college.[7]

One can imagine that, on seeing the court, Ibn Khaldūn must have pondered his readiness for the job. In particular, his thoughts must surely have lit upon what he had written in *Al-Muqaddimah* on "The duties of the judge," seven years earlier in North Africa.[8] In that section, he cites the various basic rules for judges contained in a warning letter which the caliph 'Umar (r. 13–23/634–644) is said to have given to Abū Mūsá al-Ash'arī, the judge of Kūfah (the letter was in fact, apparently, a fake). He also refers to *Al-Aḥkām al-Sulṭānīyah* written by the Buwayhid jurist al-Māwardī (d. 450/1058), explaining how this book elucidates the basic laws and conditions pertaining to the judge's profession, and how it describes judges eventually being responsible for certain out-of-court duties, as well as for knowledge of court matters.

From his writing, it seems that Ibn Khaldūn had experienced no discrepancy between what he had observed of current Islamic law in North Africa and what he

had learnt of legal traditions since the early Islamic period. The images he had in his mind of what the qualifications and duties of an Islamic judge should be, what could be expected of a justice, and so forth, were entirely theoretical, based on what he had studied. As well as this theoretical view, however, he also had his own particular view of the history of civilizations, according to which a society would tend to decay as its civilization developed, the seeds of social disintegration being incorporated within the development of civilization. Although he was still new to Egypt at this time, he must already have sensed the spiritual decay of this highly civilized society, and thus felt as if he were seeing his pet theory exemplified.

Ibn Khaldūn′s image of the ideal judge thus had to remain an ideal in the reality of Egyptian society. Nonetheless, he tried to preside over legal affairs in accordance with this lofty ideal. Such an endeavor, carried out as it was with extreme circumspection, was bound to encounter tremendous problems in the Egyptian society of that time. Ibn Khaldūn was convinced, however, that precisely by undertaking this endeavor, he was fulfilling his responsibilities to the people and to his patron, the sultan, and he applied himself with great zeal to his task. The following is from his autobiography:

> I made the utmost effort to enforce God′s law, as I had been charged to do. I tried to conduct things fairly and in an exemplary manner: I considered the plaintiff and the accused equally, without any concern for their status or power in society; I gave assistance to any weaker party, to level out power inequalities; I refused mediation or petitions on either party′s behalf. I focused on finding the truth only by attending to the evidence. I also kept a watchful eye on the conduct of the official witnesses *(al-naẓar fī ʻadālat al-muntaṣibīn)* responsible for testimonies *(taḥammul al-shahādāt).* There were some among them who were dishonest or lacking in morals. Evidently the superintendents of justice *(al-ḥukkām)* had not fully investigated these people: dazzled by their connections with powerful names, the superintendents had overlooked any character flaws. The majority of the official witnesses were private tutors in the Quran, or prayer-leaders employed by amirs, so the superintendents of justice must have installed them as official witnesses in the belief that they were of impeccable character. The judges were informed that these witnesses were men of integrity *(fī tazikiyatihim ʻinda al-quḍāh wa-al-tawassul lahum).* In reality, moral decay ran deep among the official witnesses, and within such a deceit-ridden, corrupt administration, the decay spread from

> one person to the next. Whenever I found out about wrong-doers, I punished them and gave them a severe warning.[9]

Ibn Khaldūn tried to establish fair court procedure as quickly as he could after his investiture. Inevitably, such an endeavor required him to take a scalpel to the degenerate world of Egypt's judiciary.

Participants in the Mamluk Judicial Administration I

The first point to consider with respect to the passage from *Al-Ta'rīf* cited above is the phrase "the official witnesses responsible for testimonies." The title "official witness" is expressed in Arabic as *'udūl* or *shuhūd,* which often occur in the plural, or by the abstract noun *'adālah*. The presence of witnesses is a requirement of the Islamic court and the official witness system is considered to date back to the early Abbasids at the end of the eighth century, judging from the complexity of the tests *(tazkiyah)* used to measure the fair-mindedness of witnesses.[10] The presence of official witnesses is understood as a system for maintaining the fairness of the court and for ensuring the smooth running of the judicial administration. The fact, as indicated in Ibn Khaldūn's writing above, that the official witnesses are appointed not by a judge but by a specialized superintendent of justice *(ḥākim)* is also noteworthy.

The official witness system is referred to in Ibn Khaldūn's earlier work, *Al-Muqaddimah.* In this work, he begins by describing the content of the work of official witnesses: with permission from the judge they carry out duties such as bearing witness during a trial, and recording the details pertaining to people's rights, properties, debts, and other legal transactions, as required on the certificate of judgment. He goes on to explain the essential qualifications for an official witness: utter honesty and sincerity in accordance with religious law. To check whether official witness candidates are in possession of these qualities, their lifestyles are scrutinized by a judge. A candidate deemed suitable for the position can then serve as official witness for a judge, who can send him out throughout the city to investigate the sincerity of litigants. Judges also employ these professional official witnesses to verify the authenticity of evidence. In addition, official witnesses in every city have their own shops and benches where they customarily sit, so that they can be called upon as a witness by anyone with legal business to conduct.[11]

---

[9]Ibn Khaldūn, *Ta'rīf,* 254–55; Ibn Khaldūn/Cheddadi, *Voyage,* 153–54.

[10]Cf. Aḥmad ibn 'Umar al-Khassāf (d. 261/874), *Kitāb Adab al-Qāḍī*, ed. Farhat Ziadeh (Cairo, 1978), 83–84; Emile Tyan, "'Adl," *The Encyclopaedia of Islam*, 2nd ed., 1:209-10; idem, *Histoire de l'organisation judiciaire en pays d'Islam* (Leiden, 1960), 236–42.

[11]Ibn Khaldūn, *Al-Muqaddimah,* 16:404–5; Ibn Khaldūn/Rosenthal, *The Muqaddimah,* 1:461–62.

This provides a picture of what would have been assumed to be the everyday work of the official witness in the Islamic society of Ibn Khaldūn′s time. The official witnesses referred to in the extract from *Al-Ta'rīf* cited above, however, do not seem to conform to this image. The majority of them were appointed by the powerful amirs and, at least in trials connected with the amirs, the official witnesses could not be expected to provide impartial witness. If corruption was not rooted out by the official witnesses, then fair trials became an impossibility. Ibn Khaldūn recognized this and tried to redress the problem which had developed over the years. It was inevitable, though, that such action would result in his making enemies. He explains some of the problems as follows:

> I put a stop to the witnessing work of those official witnesses whom I knew to have guilty consciences. Among them were a number of scribes *(kuttāb)* belonging to the judges′ offices *(dawāwīn al-quḍāh),* who, among other things, kept the records of public hearings. As well as being versed in the compilation of trial documents *(da'āwá)* and judgment documents *(ḥukūmāt),* these scribes were employed by the amirs to draw up a variety of contracts and certificates. Thus their status was considered higher than that of other official witnesses, and since the judges were also in awe of the power of the amirs, the amirs were able to shield their scribes from any criticism. Some of the scribes would attack even the fairest official document *(al-'uqūd al-muḥkamah),* endeavoring to claim its invalidity because of some legal problem related to a trial or some problem with the style of the document itself. When rewards of status and gifts were offered, the scribes were all too eager to apply themselves to such tasks. A case in point is that of the *waqf*s (*awqāf:* endowments). There are many *waqf*s in Cairo, including several which are hardly known to anyone. These are easy prey for corrupt deals. A corrupt scribe will join forces with someone who wants to buy a *waqf* to turn it into private property, and draw up the validating documents for him. Difficulties are compounded by differences between the legal schools *(ikhtilāf al-madhāhib)* of the superintendents of justice *(al-ḥukkām bi-al-balad)* for the areas concerned. The superintendents′ attempts to prevent such usurping of *waqf*s are simply ignored. Thus the alienation of *waqf*s increases, and at the same time, other contracts *('uqūd)* and private properties *(amlāk)* also become subject to similar risks.

> Trusting in God, and fearing not the hatred and contempt which was poured on me, I took steps to root out such evil.[12]

The above passage shows how, among the official witnesses, there were scribes with responsibilities in the law courts, who, in collusion with amirs, exploited their legal knowledge and their positions so as to become accomplices of crime. In such circumstances, there was no hope of a just court. The official witnesses who were present during court sessions and the scribes of the *dīwān al-qāḍī* who carried out the court′s secretarial work have generally been viewed as different types of functionaries, but Ibn Khaldūn′s writing shows that the scribes who were charged with the court′s secretarial work might also serve as official witnesses; and those who did so were often in the employ of the amirs, which meant that they were accorded superior status among the scribes. The main aim of these scribes was to line their own pockets, and what they preyed upon most heavily was the *waqf* property: *waqf* which, in Islamic law, should not be touched even by those in authority.

VIOLATIONS OF *WAQF* PROPERTY RIGHTS

Even before Ibn Khaldūn′s time, the Mamluk period had seen repeated occurrences of *waqf* property being targeted by people in authority. Conspiring judges would find the *waqf* contracts of the property in question invalid, or they would give evidence to that effect, so that the property would then be confiscated by the state. History books record cases of such actions being perpetrated even by sultans. In 709/1310, for example, Sultan al-Nāṣir Muḥammad (r. 693/1293–94, 698–708/1299–1309, 709–41/1310–41) is said to have summoned the chief judges and had them testify that some estates *(ḍiyāʻ)* and private properties *(amlāk)* which the previous sultan, Baybars II, and the regent, Sallār, had designated as *waqf*, had actually been purchased with money from the state coffers *(bayt al-māl)* and so the claim that they were *waqf* was void. This confirmed, the sultan had Āqūsh, amir and governor *(nāʼib)* of Karak, and Karīm al-Dīn, superintendent of the sultan′s private property, sell off the legacy of Baybars II. The money thus raised was divided between the sultan and Baybars′ daughter, who was the wife of an amir.[13]

In 717/1317, Sultan al-Nāṣir Muḥammad planned to acquire more *waqf* land by exchanging it for other land. The *waqf* land in question was in Birkat al-Fīl in Cairo, and had been bequeathed by Baybars II to his children. In this instance, the chief judge of the Hanafite school, Shams al-Dīn al-Ḥarīrī, opposed the exchange,

---

[12]Ibn Khaldūn, *Taʻrīf,* 255–56; Ibn Khaldūn/Cheddadi, *Voyage,* 154–55.

[13]Al-Maqrīzī, *Sulūk,* 2:82; Escovitz, *Office of qâḍî al-quḍât,* 149.

arguing that *waqf* land could not be exchanged, according to Hanafite law. Hearing of this, Sirāj al-Dīn ʻUmar ibn Maḥmūd, a judge of the same school, saw an opportunity to further his own career. He promised the sultan that, if he were made chief judge, he would pass judgment on the matter in the sultan's favor. He became chief judge and the exchange of the *waqf* land was legitimized. This chief judge fell ill and died just two months later.[14]

Six years later, in 723/1323, the sultan arrested Karīm al-Dīn, the judge who had been made to conspire in illegally acquiring *waqf* land in 709/1310, and who was superintendent of sultanate private properties. The sultan tried to confiscate Karīm al-Dīn's property, but this included *waqf* worth six million dinars. He ordered the chief judges to hand over the *waqf* land, but the Shafiʻite chief judge, Badr al-Dīn Muḥammad ibn Jamāʻah, opposed this, asserting that this land had become *waqf* land by fully legal procedures. At this, the sultan employed witnesses to give false testimony against Karīm al-Dīn, saying that all of the latter's land *(ʻaqar)* and property, be it *waqf* or free property (*ṭalq*; property not subject to any rules), had been acquired with the sultan's money and not with Karīm al-Dīn's own money. As a result, his *waqf* rights became invalid and all of Karīm al-Dīn's property became the sultan's. The Mamluk historian al-Maqrīzī, (d. 845/1442) writes that the sultan designated a part of the confiscated property as *waqf* and renamed it *al-waqf al-Nāṣirī,* but that he did not, in reality, accord the land proper *waqf* treatment.[15]

A further incident occurred some thirty years later, in 754/1353. By this time the sultan had become a mere puppet of his generals. The vizier ʻIlm al-Dīn Ibn Zanbūr had been arrested, and the powerful amir Ṣarghitmish tried to have the *waqf* rights of Ibn Zanbūr's property nullified, then sell the property. He tried to use the above-described events of 723/1323 as the legal precedent for this. Thus he summoned the chief judges of the four schools of law to the Hall of Justice *(dār al-ʻadl)* in the Citadel, and he urged them to nullify Ibn Zanbūr's *waqf* rights. The Shafiʻite chief judge, ʻIzz al-Dīn Ibn Jamāʻah, opposed this, however, and the Hanbalite chief judge, Muwaffaq al-Dīn ʻAbd Allāh, agreed with his opposition. Ṣarghitmish flew into a rage, asking the chief judges, "Do you want to destroy this country through your wickedness?" He argued with them, citing the judgment *(qaḍīyah)* whereby Sultan al-Nāṣir Muḥammad had had the *waqf* of Karīm al-Dīn revoked. Chief Judge ʻIzz al-Dīn Ibn Jamāʻah rebutted this, stating that the decision in the case of Karīm al-Dīn had been based on testimonies that Karīm al-Dīn's property had all been acquired through his managing the sultan's property and hence had been acquired not with his own money but with the sultan's money.

---

[14]Al-Maqrīzī, *Sulūk,* 2:173–74.

[15]Ibid., 243–44, 888; Escovitz, *Office of qâḍî al-quḍât,* 148–49.

The revoking of Karīm al-Dīn′s *waqf* could be acknowledged on this basis as legal. In the case of Ibn Zanbūr, however, even though he had been vizier, his assets had all been acquired through private business dealings. To confiscate any *waqf* or property derived from these assets would be illegal. The validity of ʻIzz al-Dīn Ibn Jamāʻah′s argumentation was upheld, and Ṣarghitmish′s petition rejected.[16]

The opposition that Ṣarghitmish met with from the chief judges, and his failure to have the *waqf* nullified, may have been partly due to the fragility of his power base. He had promised the sultan′s widow that, if he succeeded in having Ibn Zanbūr′s *waqf* revoked, he would give her a portion of it. That this plan had now come to nothing was a great blow to him. He became ill and was forced by the other amirs to give up his position as chief governor *(ra's nawbah)*.[17]

Examples like the one of Ṣarghitmish, where opposition by the chief judges kept *waqf* out of the clutches of those in power, are rather rare in the historical records. Much more frequent are examples of judges collaborating in the plots of the influential. Among these is the case of Amir Qawṣūn. In 730/1330, Qawṣūn was building a magnificent mosque outside the Zuwaylah gate near Birkat al-Fīl in Cairo. He wanted to extend the plot of the mosque so he tried to buy the public bathhouse *(ḥammām)* which neighbored his property. This public bathhouse, however, had been donated as *waqf* by the late amir Jamāl al-Dīn Āqūsh (d. 710/1310), so its sale or purchase was illegal. Qawṣūn discussed the matter with the judges, with the outcome that the Hanbalite chief judge, Taqī al-Dīn Aḥmad ibn ʻUmar, apparently gave his backing to a secret plan. This involved the side-wall of the public bathhouse being unexpectedly broken down—probably on the orders of the amir—at which some public witnesses *(shuhūd),* who were also conspirators in the plot, appeared before Chief Judge Taqī al-Dīn. They testified that, ″This bathhouse is dilapidated and of no use. It is likely to injure someone standing near it or passing by. It would be better to sell a building which is damaged like this.″ Their testimony ensured that a witness′s report *(maḥḍar)* had to be drawn up, and the chief judge then ordained that, in accordance with the law of the Hanbalite school, the premises could be sold. When drafting the witness′s report, one of the official witnesses refused to sign it, saying, ″God knows, I went into that bathhouse this morning and bathed there. There was nothing wrong with it. To testify that by sunset of this same day it has fallen into disrepair is something I cannot do.″ He left without signing, but another person was summoned in his place and the latter signed the document. The witnesses′ report was drawn up in accordance with Hanbalite protocol, and Amir Qawṣūn bought the public bathhouse from the son

[16]Al-Maqrīzī, *Sulūk,* 2:888–89; Escovitz, *Office of qâḍî al-quḍât,* 149–50.

[17]Al-Maqrīzī, *Sulūk,* 2:889.

of Amir Jamāl al-Dīn Āqūsh, who owned the *waqf* rights. According to al-Maqrīzī all of those involved ″used trickery and deception to get rid of a *waqf*.″[18]

A few years later, in 733/1333, Amir Qawṣūn bought the mansion of Amir Shams al-Dīn Baysarī (d. 698/1299) in Cairo, which had been a *waqf*. Baysarī′s *waqf* document had been drawn up with scrupulous attention to legal formalities, and it was signed by 72 witnesses, including members of the Shafiʻite chief judge class such as Taqī al-Dīn Ibn Daqīq al-ʻĪd, Taqī al-Dīn Ibn Razīn and Taqī al-Dīn Ibn Bint al-Aʻazz. Nonetheless, the Hanbalite chief judge, who was eager to conspire with Qawṣūn, allowed a valuation document *(maḥḍar bi-shuhūd al-qīmah)* to be drawn up for the mansion. The value was set at 200,000 dirhams, with the mansion value itself at 190,000 dirhams and a further 10,000 dirhams for the orphaned children of Baysarī; and an official report was drawn up to that effect. Thus the chief judge permitted the sale of the mansion and the sale of its grounds up to the approved value. This mansion was of unparalleled magnificence. Al-Maqrīzī writes that he felt sickened at having to record the incident.[19]

The infringements of *waqf* rights described above were no doubt the more remarkable cases, with less clear-cut infringements probably being plentiful but not significant enough to be recorded in history books. Certainly from the accounts of Ibn Khaldūn, it seems that it was nothing out of the ordinary for not only scribes, but even chief judges, to conspire with amirs in attempts to appropriate *waqf*s or the property of others. It was because of this state of affairs that, at the end of the Bahri Mamluk period, directly before Ibn Khaldūn had come to Egypt, an incident had occurred which had rocked the very existence of the *waqf* system. This was when the great amir *(amīr al-kabīr)* Barqūq, who would later become the first sultan of the Burji Mamluks, had summoned the judges and the ulama elders in 780/1379 and called for the abolition of all *waqf*s in Egypt and Syria, be they *waqf* lands supporting religious institutions such as mosques, colleges, and monasteries, or *waqf* lands constituting the livelihoods of descendants of Mamluks or amirs. The *waqf* certificates of the whole country were presented before the assembled amirs and ulama, and they were informed of how the profits from these *waqf*s amounted each year to an enormous sum. Barqūq then admonished that, ″This state of affairs is causing the weakening of the Muslim armies.″ The Shaykh al-Islam Sirāj al-Dīn al-Bulqīnī spoke out against this, saying that the *waqf*s for religious institutions such as mosques, colleges, and monasteries were supporting the lives of Islamic jurists and prayer-leaders: ″No one can abolish these, and no Muslim has the right to compel such action. If anyone wants so badly to abolish

---

[18]Ibid., 320–21; Escovitz, *Office of qâḍî al-quḍât,* 150.

[19]Al-Maqrīzī, *Sulūk,* 1:880, 2:362; Escovitz, *Office of qâḍî al-quḍât,* 150–51. Escovitz′s record of this event as occurring in 723 must be a mistake for 733.

the *waqf*s, then let a single office *(dīwān)* be established where we can all settle our accounts, as is our right. In this way, Your Excellencies could see how we do not want huge sums of money in preference to the *waqf*s we have received. Those *waqf*s which, on the other hand, have been bought for sycophants by dishonest means using state money, those, if they have not been acquired by the correct and legal means, could be abolished.″ The Shafiʻite chief judge, Badr al-Dīn Ibn Abī al-Baqā', offered blandishments in response to this speech by Sirāj al-Dīn al-Bulqīnī, claiming that all land belonged to the sultan, so His Highness and Their Excellencies, the amirs, may do with it as they pleased. The military judge *(qāḍī al-askar)* Ibn al-Bulqīnī countered that even the sultan was only a man. It was just that His Highness and Their Excellencies were the ones to appoint the judges, so if the judges did not carry out orders, Their Excellencies could dismiss them. Al-Maqrīzī writes that the outcome of this investigative conference was that, although the Mamluk authorities could not abolish all *waqf*s, they did select numerous *waqf*s to be abolished, and they turned them into *iqṭāʻ*. [20]

PARTICIPANTS IN THE MAMLUK JUDICIAL ADMINISTRATION II

The previous section illustrated how, under the Mamluks, *waqf* property had been an object of desire to all figures of authority from the sultan down, even before Ibn Khaldūn came to Egypt. The law in this respect was observed in name only: members of the ruling class who were covetous of the *waqf*s employed the services of judges, scribes, and official witnesses to give the appearance of abiding by Islamic law, and the judges, scribes, and official witnesses for their part had their own self-interested reasons for aiding and abetting the rulers. The following excerpt from Ibn Khaldūn′s *Taʻrīf* shows how deeply rooted such practices were. He evidently felt that Mamluk society had lost the dignity, or sanctity, even of its court. This is clear from what he writes on the muftis, whose job it was to give opinions on points of law.

> I turned my attention next to the Malikite muftis *([ahl] al-futyā).* Among them were arbitrators *(ḥukkām,* plural of *ḥakam)* of some experience, who were notorious for being argumentative, for giving conspiratorial advice to plaintiffs *(khuṣūm)* and for giving out post-judgment opinions on points of law *(futyā)* [counter to the judgments passed at court]. Some of these *ḥukkām* were contemptible people who had no qualifications, yet had passed themselves off as scholars of law or official witnesses *(ʻadālah),* then risen to the ranks of muftis or teachers, and fulfilled these offices with little care. There

[20]Al-Maqrīzī, *Sulūk,* 3:345–47; Escovitz, *Office of qâḍî al-quḍât,* 152–53.

> are great numbers of these men, perhaps because the population of Cairo itself is so huge, and there is no one to reprimand them, evaluate their skills, or give them warnings. They can hand out their rulings freely, in this city [Cairo], without being subject to any regulation. Every plaintiff employs a mufti to help him vie with and win against his opponent, asking the mufti's advice on how to resolve the situation being contested. The muftis then give their clients advice calculated to satisfy, but since the two muftis in a case are each operating from different standpoints, the opinions *(fatāwá)* they offer simply contradict each other. Things are made even worse when muftis offer their contradictory opinions after a judgment has been passed. Such conflict occurs frequently among the four schools of law [since they each have different interpretations of the law], so [when events have come to such a pass] it becomes almost impossible for a fair judgment to be served. The general public *(ʻāmmī)* has no means of properly evaluating the qualifications *(ahlīyah)* of muftis, so this corruption is spreading, and there is little hope of it dying out.[21]

The muftis described in this excerpt from *Al-Taʻrīf* cut a rather different figure than that which is usually expected of a mufti. In the long history of Islam's mufti system, those appointed by the rulers as muftis were competent and decent people selected from among the brightest jurists versed in Islamic law. The opinions they gave on points of law were called *fatwá,* while the act of offering a *fatwá* itself was known as *futyā* or *iftā'*. The earliest reference to the mufti system is a record of the Umayyad governor of Egypt Ayyūb ibn Shuraḥbīl charging three men, Jaʻfar ibn Rabīʻ, Yazīd ibn Abī Ḥabīb, and ʻUbayd Allāh ibn Abī Jaʻfar, with the job of performing Egypt's *futyā,* on the order of Caliph ʻUmar II (r. 99-101/717–20).[22] The system underwent certain changes during the course of history, but by the time of the Mamluks, the muftis involved in the *iftā'* of the Hall of Justice *(dār al-ʻadl)* were the highest-ranking, with a total of four muftis, one from each of the schools of law, being appointed to this rank.[23]

---

[21]Ibn Khaldūn, *Taʻrīf,* 256–57; Ibn Khaldūn/Cheddadi, *Voyage,* 155.

[22]Al-Maqrīzī, *Khiṭaṭ,* 2:332; Ibn Taghrībirdī, *Nujūm*, 1:238; al-Suyūṭī, *Ḥusn al-Muḥāḍarah fī Tārīkh Miṣr wa-al-Qāhirah* (Cairo, 1968), 1:299. Jaʻfar ibn Rabīʻah was selected from among the Arabs, Yazīd ibn Abī Ḥabīb and ʻUbayd Allāh ibn Abī Jaʻfar from the *mawālī*.

[23]Aḥmad ibn ʻAlī al-Qalqashandī, *Ṣubḥ al-Aʻshá fī Ṣināʻat al-Inshā'* (Cairo, 1964), 11:207–8; Tyan, *Histoire de l'organisation judiciaire*, 219–24.

In Ibn Khaldūn′s *Muqaddimah*, the job of mufti is classed among the religious duties presided over by the caliph. It is described as follows:

> As to the office of mufti, the caliph must examine the religious scholars and teachers and entrust this office only to those who are qualified for it. He must help them in their task, and he must prevent those who are not qualified from (becoming muftis). (The office of mufti) is one of the (public)interests of the Muslim religious community (The caliph) has to take care, lest unqualified persons undertake to act as (mufti) and so lead the people astray. Teachers have the task of teaching and spreading religious knowledge and of holding classes for that purpose in the mosques. If the mosque is one of the great mosques under the administration of the ruler, where the ruler looks after the prayer leaders, as mentioned before, teachers must ask the ruler for permission (to teach there). If it is one of the general mosques, no permission is needed. However, teachers and muftis must have some restraining influence in themselves that tells them not to undertake something for which they are not qualified, so that they may not lead astray those who ask for the right way or cause to stumble those who want to be guided. A tradition says: ″Those of you who most boldly approach the task of giving *fatwá*s are most directly heading toward hell.″ The ruler, therefore, has supervision over (muftis and teachers) and can give, or deny, them permission to exercise their functions, as may be required by the public interest.[24]

The picture of the mufti emerging from the above citation is superficially similar to that in *Al-Ta‘rīf*, but in fact the two portraits are different. Perhaps Ibn Khaldūn had come to feel a kind of indignation at the judicial system of Mamluk Egypt, and indeed at the cultural degeneracy of Mamluk society as a whole, compared with the Islamic society of the Maghrib with which he had been familiar formerly. The description in *Al-Ta‘rīf* continues as follows:

> Still, I set about reforming this [habit] by arresting the muftis who were quacks or who lacked learning *(ahl al-hawá wa-al-jahl),* and I punished them firmly. Among them, however, was a number of Maghribis who gathered together *(multaqiṭūn)* and dazzled people by rattling off jargon *(iṣṭilāḥāt),* although they themselves had neither

[24]Ibn Khaldūn/Rosenthal, *The Muqaddimah,* 1:451–52; Ibn Khaldūn, *Al-Muqaddimah,* 16:396–97.

studied under a great master *(shaykh)* nor versed themselves in specialist texts. They trifled with people´s feelings, turning the court *(al-majālis)* into a place where prominent people were slandered and those deserving of respect were insulted. They hated me because of the punishments I meted out, so they joined forces with the inhabitants of those monasteries *(zawāyā)* promoting the same kind of belief as theirs. The appearance of piety that this allegiance lent them brought them a level of prestige, which they then abused in impious ways. Good people *(ahl al-ḥuqūq)* would inevitably choose them as arbitrators, at which they would gabble their chants as if with the voice of Satan, then claim that all was solved. Being unmoved by religion, their ignorance leads them to expose the laws of God *(aḥkām Allāh)* to danger.

I broke up their malevolent circle and chastised their clients, in accordance with the laws of God. Their cronies in the monasteries became powerless, since people stopped going there, so their well [their source of funds] dried up. Having thus lost their clientele these foolish people flew into a rage. They tried to defile my honor, inventing and spreading twisted, false rumors about me. Even the sultan came to hear rumors of my wrongs. The sultan however did not listen to them; the consequences of what I had put in motion were in the hands of God. Thus I paid no heed to the ignorant and walked the path of courage and rigor. I took equality and righteousness as my guides, rebuffed temptations toward injustice, and firmly refused to be influenced by prestige or riches, even when this resulted in my name being slandered. Such a course of action was not adopted by my colleagues: they disavowed my counsel and advised me to follow their example in appeasing the government officials *(akābīr)* and showing consideration toward those with influence. In other words, in clear cut cases I should pass judgments favorable to the dignitaries *(a‘yān),* and when there were difficulties I should reject the case, since when there were other judges *(ḥākim)* [within the same circle of jurisdiction] there was no obligation for one judge to pass judgment. This was their way of helping each other out.[25]

[25]Ibn Khaldūn*, Ta‘rīf,* 257–58; Ibn Khaldūn/Cheddadi, *Voyage,* 155–56.

While not claiming to have examined every piece of historical data on the Mamluk period, the present author believes that the excerpt above must surely be one of the clearest descriptions of what the muftis of Ibn Khaldūn´s time were really like. A recapitulation of Ibn Khaldūn´s main points is as follows:

1. The role of the mufti at that time was to act as a kind of legal advisor to anyone wanting advice regarding lawsuits. Muftis fulfilled this role by helping their clients devise strategic answers which would enable them to win a lawsuit, and sometimes by issuing *fatwá*s against judgments that had been passed, thus throwing the court into confusion.

2. The number of muftis was very large. Among them were many who had no qualifications but had managed to pass themselves off as jurists or official witnesses of adequate ability. Since such ill-qualified muftis were numerous and probably adopted a threatening air, nobody dared to chastise them or question their qualifications.

3. In Cairo, muftis could issue *fatwá*s freely; there were no restrictions. The litigants on both sides would employ muftis to fight their battle, with the result that the *fatwá*s issued would often contradict each other and the court would again be thrown into confusion. Conflicts of this kind were particularly numerous when each of the four law schools had differing laws concerning a certain problem. In such cases there was little hope of a fair judgment being reached.

4. Since the general public had no way of evaluating the validity of the qualifications or the *fatwá*s of the muftis, the corruption spread, and the more it spread, the less there was any chance of wiping it out.

5. Among the quack muftis were a number of men from Ibn Khaldūn´s homeland of the Maghrib. They banded together and spent their time making jargon-filled statements to slander and denounce those who were respected in the courts.

6. Collaborating with the Maghribis whom Ibn Khaldūn punished was a group of monastery affiliates, who should have been fervent in their faith. Like the muftis, they offered consultations for believers and litigants, and they postured as a grandiose oracle. What they received in return they used to line their pockets.

In short, the muftis were crooked lawyers. But that was not all: the issue of the band of Maghribis was significant in a way that deserves further attention. Ibn Khaldūn presided over the court as the Malikite chief judge, and in the Maghrib,

adherents of the Malikite school were numerous, so it can be assumed that, among the litigants at Ibn Khaldūn´s court, there were not only Egyptians but also a lot of Maghribis. The group of muftis from the Maghrib was thus a pressure group which the court had to consider. This phenomenon was no doubt not restricted to the Malikite school, but also existed in the courts of the other schools. In a court full of ill-intentioned muftis, there could have been little hope of maintaining the *manifestation of the law at its sternest.*

The fact that Ibn Khaldūn repeatedly criticized the issuing of post-judgment *fatwá*s should also not be overlooked. It goes without saying that the muftis´ action of issuing *fatwá*s—and thus utterly ignoring the authority of a court judgment—was just what was wanted by all the influential figures hoping to use the court to their advantage. The court must have been frequently forced into retrials, and aspects of judgments must frequently have been overturned.

The court thus ultimately lacked authority; a fact which, as Ibn Khaldūn explained, originated also in the behavior of the judges. The judges frequently used bribes to buy their positions, or they accepted bribes to pass favorable judgments. When there was no way that a favorable judgment could be passed, they would reject the case, making excuses such as not being obliged to pass judgment since there were other judges available. Thus by avoiding the court they could look after their own interest.

HOW EGYPT´S INTELLECTUALS SAW IBN KHALDŪN

Ibn Khaldūn endeavored to reform the corruption which was manifest in all levels of the Mamluk judiciary: among official witnesses and scribes, muftis and judges. Inevitably his actions caused conflict and made him unpopular, and an opposition movement grew up. His *Ta‘rīf* gives his version of how these events reached their conclusion.

According to this version, the Maghribi muftis who had joined forces with the monastery residents and slandered Ibn Khaldūn to the sultan went on to rally others dissatisfied with Ibn Khaldūn, such as official witnesses whom he had barred from practicing. Together they testified that Ibn Khaldūn was not passing judgment according to Islamic law, but was simply acting according to his own ideas, even in cases where a judgment reached by unanimous agreement of the community *(qaḍīyat ijmā‘)* was required. False charges and slander such as this abounded. When men from among these slanderers tried to seek favorable judgment for themselves, Ibn Khaldūn temporarily suspended court business. The litigants, who belonged to the anti-Ibn Khaldūn faction, then lost no time in delivering a petition to Sultan Barqūq saying that Ibn Khaldūn should be investigated. Judges and muftis were summoned to investigate Ibn Khaldūn, probably including the chief judges of the other schools and the muftis of the Hall of Justice *(dār al-‘adl).*

The result of this investigative council *(majlis ḥafl li-al-naẓar)* was not only that Ibn Khaldūn was cleared of the accusation that he had passed illegal judgments, but also that the plots against Ibn Khaldūn reached the ears of the sultan. Ibn Khaldūn was thus free to continue passing judgments according to the law of God, in spite of the claims made against him.

This angered the opposition group intensely, and they set to work on close associates of the sultan and influential amirs who were guilty of acquiring their privileges illegally and now feared they might soon lose them. They used every trick they knew to fan the flames of indignation toward Ibn Khaldūn, saying, for example, that even though Ibn Khaldūn lacked the necessary specialist knowledge, he would ignore the privileged rights of the powerful, or he would reject any mediation on their behalf. As a result, enmity toward Ibn Khaldūn grew in all quarters, and even his relations with those close to the sultan became awkward. In the midst of all this came the sad news that a ship on which Ibn Khaldūn's family was traveling from Tunis to Egypt had met with a storm near Alexandria and sunk. In such circumstances, Ibn Khaldūn felt he could no longer carry out his duties, and he made up his mind to resign the post of chief judge. His friends advised him, however, that to resign would anger the sultan, his protector, so Ibn Khaldūn remained in the post, until finally, on 7 Jumādá I 787/16 June 1385, permission came from the sultan, and Ibn Khaldūn resigned. Jamāl al-Dīn ʻAbd al-Raḥmān ibn Khīr was appointed in his stead.[26]

Thus Ibn Khaldūn's autobiography describes the circumstances of his resigning his first appointment as chief judge. He does not name his antagonists, but according to Ibn Ḥajar al-ʻAsqalānī (773–852/1372–1449), the well-known judge and scholar of hadith, one of his enemies was a man named al-Rakrākī.[27] Al-Maqrīzī identifies this al-Rakrākī as Shams al-Dīn Muḥammad al-Rakrākī al-Maghribī, a Malikite professor at Shaykhū Monastery, *Khānqāh Shaykhū*.[28] Al-Rakrākī had been appointed to his position in Rabīʻ I 781/January or February 1379, but was dismissed in Jumādá II 786/July or August 1384—exactly the time when Ibn Khaldūn was appointed chief judge—and then reappointed two months later. Like Ibn Khaldūn, he was from the Maghrib.[29]

In his description of how the Maghribi muftis, resentful of being punished, banded together with the inhabitants of the monasteries, Ibn Khaldūn does not give detailed information about the monasteries. He simply uses the Arabic word *zawāyā*, (s. *zāwiyah*). There is no doubt, however, that one of the monastery

---

[26]Ibn Khaldūn, *Taʻrīf,* 258–60; al-Maqrīzī, *Sulūk,* 3:533; Ibn Khaldūn/Cheddadi, *Voyage,* 157–58.

[27]Ibn Ḥajar, *Rafʻ al-Iṣr,* 2:345.

[28]Al-Maqrīzī, *Khiṭaṭ,* 2:421.

[29]Al-Maqrīzī, *Sulūk,* 3:334, 357, 517, 518, 522.

inhabitants who conspired with the muftis was al-Rakrākī of the Maghrib. Evidently he felt that Ibn Khaldūn was his rival. When asked about him on one occasion, he replied, ″Ibn Khaldūn knows nothing of Islamic law scholarship; he just has some trifling knowledge of a philosophical sort *(al-'ulūm al-'aqlīyah).* His lectures in that field are designed to attract people, and they′re more amusing than the lectures of [the musician] Shaykh Shams al-Dīn al-'Ammārī.″[30]

According to Ibn Ḥajar, it was the conflict that grew up between Ibn Khaldūn and al-Rakrākī that led to the investigation of Ibn Khaldūn. In Ibn Ḥajar′s version, Ibn Khaldūn presented to the investigation council a written *fatwá,* which he claimed was in the hand of al-Rakrākī and was addressed to the sultan. Al-Rakrākī denied that the *fatwá* had anything to do with him. When the document was examined it was found to be a fake. Hearing of this, Sultan Barqūq dismissed Ibn Khaldūn and replaced him with 'Abd al-Raḥmān ibn Khīr in Jumādá I 787/June or July 1385.

This account differs completely from Ibn Khaldūn′s account of the investigative council. It leads us to be suspicious of Ibn Ḥajar. In Ibn Khaldūn′s *Ta'rīf,* it was after the investigative council that the activities of his detractors led to awkwardness between himself and the sultan′s associates, and it was after he had heard of the misfortune striking the boat carrying his family that he made the decision himself to resign. Only on his friends′ advice did he remain in the job, until finally the sultan gave permission for him to resign. According to Ibn Qāḍī Shuhbah (d. 851/1448), a ship dispatched by the Hafsid sultan was lost with the wife and five daughters of Ibn Khaldūn on board in Ramaḍān 786/October or November 1384.[31] This is a full seven months before Ibn Khaldūn′s leaving his office, so, even taking into account the time required for the news to travel, this casts doubts on the veracity of Ibn Ḥajar′s account. It also makes his objectivity as a historian seem questionable with regard to Ibn Khaldūn.

How, then, did the Mamluk jurists and historians finally judge the legal administration of Chief Judge Ibn Khaldūn, this outsider come the Maghrib? The following historians all refer to Ibn Khaldūn: al-Maqrīzī (ca. 766–845/1364–1442), Muḥammad ibn 'Ammār (769–844/1367–1441), Ibn Ḥajar, Ibn Taghrībirdī (ca. 812–74/1409–70), and al-Sakhāwī (830–902/1427–97). The question of how al-Maqrīzī viewed Ibn Khaldūn′s *Muqaddimah* is the topic of a previous paper by the current author which also discusses al-Maqrīzī′s perspective on history, his writing style, his manner of presentation of the key arguments, and the fact that

[30]Ibn Ḥajar, *Raf' al-Iṣr,* II, 345; al-Sakhāwī, *Al-Ḍaw' al-Lāmi',* 4:147. In each of these, al-'Ammārī appears as al-Ghammārī, but this is an error. Cf. al-Maqrīzī, *Sulūk,* 3:463.

[31]Ibn Qāḍī Shuhbah, *Tārīkh,* 3:138.

his work seems to have been influenced by Ibn Khaldūn.[32] Al-Maqrīzī was indeed a kind of apprentice to Ibn Khaldūn. He had heard Ibn Khaldūn's lectures with his own ears, and he tended to write about him in glowing terms. In *Al-Khiṭaṭ* and *Al-Sulūk li-Mar'ifat Duwal al-Mulūk,* al-Maqrīzī refers to Ibn Khaldūn as "our venerable teacher *(shaykhunā).*"[33] Unfortunately, however, he does not relate anything of Ibn Khaldūn's term as chief judge or of the reactions of the Egyptians toward him at that time.

Muḥammad ibn 'Ammār, a professor of Malikite jurisprudence at the Musallamīyah College in Cairo, was a colleague of al-Maqrīzī. He studied Islamic law and history under Ibn Khaldūn, and he too sang Ibn Khaldūn's praises. Al-Sakhāwī relates of Ibn 'Ammār that "he praised Ibn Khaldūn's *Tārīkh* excessively, saying that *Al-Muqaddimah* comprises all branches of learning, and it achieves its lofty aims with a beauty of style that could not be achieved by any other. Indeed, it is one of those works whose titles are not descriptive of their contents, such as *Al-Aghānī* (Book of Songs), which was named thus [by its author, Abū al-Faraj al-Iṣbahānī]."[34] Like al-Maqrīzī, Ibn 'Ammār did not leave any account of Ibn Khaldūn's judicial administration.

Ibn Ḥajar lived a little later than al-Maqrīzī and Ibn 'Ammār. He grew up in a wealthy household and, on completion of his studies, worked as professor at several colleges, his main topic being study of hadith. When he was 51 he entered the judiciary, where, over a period of 21 years, he served repeatedly as chief judge, among other posts, while at the same time writing his numerous books. During his lifetime and thereafter he was considered to be the person who epitomized Egypt's scholars of religious law.[35] He was probably acquainted with Ibn Khaldūn during his youth, but unlike al-Maqrīzī and Ibn 'Ammār he was not under his tutelage. With regard to Ibn Ḥajar's views on Ibn Khaldūn, al-Sakhāwī writes that, while al-Maqrīzī and Ibn 'Ammār praised Ibn Khaldūn's *Muqaddimah,* Ibn Ḥajar agreed with their praise only partially and claimed that Ibn Khaldūn would

have been unable to verify the accuracy of his historical facts *(akhbār),* particularly those regarding the history of the East.[36]

The content of Ibn Ḥajar′s *Raf‘ al-Iṣr ‘an Quḍāt Miṣr* is based predominantly on the *Kitāb al-Quḍāh* written by Jamāl al-Dīn ‘Abd Allāh al-Bishbīshī (762–820/1361–1417/18), but it also reflects his own views to no inconsiderable extent. Al-Bishbīshī had worked as an assistant to al-Maqrīzī in his post concerning market supervision *(ḥisbah)*.[37] Naturally, Ibn Ḥajar′s *Raf‘ al-Iṣr ‘an Quḍāt Miṣr* also recounts events relating to Ibn Khaldūn, including the details, cited above, of the conflict between Ibn Khaldūn and al- Rakrākī and of the council for investigating Ibn Khaldūn. Ibn Ḥajar′s style of description is not uniform throughout the work, but the following is a representative example of what he wrote regarding Ibn Khaldūn′s judicial administration:

> When Ibn Khaldūn came to the land of Egypt, people went out to meet him and welcome him warmly. He had no end of followers and visitors. . . . [However,] when Sultan Barqūq appointed him Malikite chief judge, he carried out his duties in such a way that he brought difficulties upon himself. He upset everyone, and his method of scolding was to have people rapped on the nape of the neck, through which he earned the nickname ″The Prodder.″ This was because, when he got into a rage, he would demand, ″A prod for that fool!″ at which the miscreant was jabbed on the nape of the neck until the skin turned red. . . . [In addition,] when other chief judges would come in to greet him, he would not even stand up. If accused of bad manners he would apologize. . . . [Even at court] he would not modify his Maghribi costume in the slightest, and he would not wear the garments of an Egyptian judge. In all he did, he seemed to enjoy coming into conflict with others. . . . He treated Egyptians cruelly and was violent toward many prominent personages and official witnesses. It is said that when the Maghribis heard of Ibn Khaldūn′s appointment as chief judge, they were shocked and attributed it to there being a lack of Egyptians knowledgeable about law. Further condemnation came from Ibn ‘Arafah [716–803/1316–1401 (a chief mufti of Tunis)] who stopped in Egypt en route to Mecca on a pilgrimage, and commented, ″We thought that the position of chief judge was the most prestigious

[36]Al-Sakhāwī, *I‘lān,* 313; cf. Rosenthal, *History of Muslim Historiography*, 498.

[37]Al-Sakhāwī, *I‘lān,* 206; idem, *Al-Ḍaw’ al-Lāmi‘,*5:7; cf. Rosenthal, *History of Muslim Historiography*, 428.

> office, but when we heard that Ibn Khaldūn now held the position, we realized that we had been wrong." . . . [Thus, Ibn Khaldūn] was conducting the affairs of chief judge in a manner which the Egyptians were not accustomed to, and this eventually resulted in the outbreak of conflict between Ibn Khaldūn and al-Rakrākī. . . . In 787[/1385] when Ibn Khaldūn was dismissed and the former chief judge, ʿAbd al-Raḥmān ibn Khīr, was reinstated, people rejoiced. This reaction is a measure of their hatred for Ibn Khaldūn.[38]

Thus Ibn Ḥajar portrays Ibn Khaldūn as an ungrateful, coarse, and ill-mannered character who resolutely refused to adapt to Egyptian customs. By contrast, however, he also says, quoting from al-Bishbīshī's *Kitāb al-Quḍāh,* "[Ibn Khaldūn] was a brilliant speaker and his behavior was impeccable. This was all very evident after he stopped working as chief judge, but while appointed chief judge he had not mixed with others, preferring to avoid contact."[39] In addition, Ibn Ḥajar himself writes, "Once Ibn Khaldūn was released from his judge's duties, he attracted numerous followers by virtue of his fine character, he was seen in amiable discussion with people, he was welcomed everywhere with smiles, he paid visits to amirs and he conducted himself with humility."[40] This shows that it was not the case that Ibn Ḥajar did not know Ibn Khaldūn's character. Nonetheless, judging from the descriptions cited above, it seems clear that Ibn Ḥajar had no conception of what Ibn Khaldūn knew of Egypt's judiciary, nor did he know the fundamental reasons behind Ibn Khaldūn's harsh measures at court.

This seems all the more evident when one notes how Ibn Ḥajar believed and passed on the words of Ibn ʿArafah, the chief mufti of Tunis, who was senior in years to Ibn Khaldūn, and who was, for years, the latter's rival.[41] The inclusion of Ibn ʿArafah's words seems to indicate that Ibn Ḥajar stood in the same camp as al-Rakrākī and others who were against Ibn Khaldūn. Such a stance cannot have been unrelated to the fact that Ibn Ḥajar belonged to the upper echelons of society: he was a blood relation of the Kārimī merchants who had built up a fortune through long-distance trade, and he had married one of his daughters into the Mamluks. In marked contrast to Ibn Khaldūn, he had experienced only the favor of the Mamluk system, and had no understanding of its harsher realities. This lack of understanding of society was mirrored in his flawed perception of history,

---

[38]Ibn Ḥajar, *Rafʿ al-Iṣr,* 2:342–43, 344–45.

[39]Ibid., 344.

[40]Ibid., 345.

[41]Ibn Khaldūn*, Taʿrīf,* 232, 244. Muḥammad ibn ʿArafah went to Egypt in either 793/1391 or 796/1394. Cf. al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 9:240–42.

evident from his contributions to the debate on the question of the genealogy of the Fatimids. In light of such views, it is not surprising that he claimed to be unable to understand the high praise of his colleague, al-Maqrīzī, for Ibn Khaldūn.[42]

Ibn Ḥajar also writes about the second time Ibn Khaldūn was appointed as chief judge, in 801/1399. He reports on how Ibn Khaldūn presided over the court with the same attitude as on the first occasion, and how, regrettably, he was drawn into a trial because of dismissing his assistant, Nūr al-Dīn Ibn Khallāl. Ibn Khaldūn's desire to reform Egypt's corrupt judiciary had not abated during those thirteen years, nor would it thereafter.[43] Ibn Khaldūn himself did not write much about his second appointment as chief judge, or about any of the appointments thereafter, but it is clear that he did not change his methods. Judges and other members of the judiciary who were against him, such as Nūr al-Dīn Ibn Khallāl, plagued him by slandering him at the sultan's court, or by bribing people to turn against him, but still, he "continued to try to fulfill his duties properly, as before, avoiding any self-interest, and focusing on seeing the defendants judged fairly."[44] He never made any move to alter his policies. This description clearly tallies with Ibn Ḥajar's account.

The historian Ibn Taghrībirdī was active after Ibn Khaldūn's death. On Ibn Khaldūn as a judge, he writes, "Ibn Khaldūn was extremely strict, and he considered the office of judge to be a position of great honor which he executed with the deepest respect. This attitude won him praise. He turned down the requests of government officials, and he refused to lend his ear to the petitions of the wealthy. As a result of this, such people began to slander Ibn Khaldūn to the sultan, and the sultan eventually dismissed him. . . ."[45] Ibn Taghrībirdī's viewpoint is evidently quite different from that of Ibn Ḥajar.

Coming finally to al-Sakhāwī, he, in contrast to Ibn Taghrībirdī, looked up to Ibn Ḥajar as "our venerable teacher," and greatly revered him. He writes a detailed biography of Ibn Khaldūn, but most of this is based on what Ibn Ḥajar wrote. In other words, al-Sakhāwī's viewpoint was the same as that of Ibn Ḥajar. He does not, however, follow up Ibn Ḥajar's passages addressing the issues of the conflict between Ibn Khaldūn and al-Rakrākī, and the council to investigate Ibn Khaldūn.[46]

CONCLUSION

This article has presented a picture of Mamluk Egypt´s judiciary, based primarily on Ibn Khaldūn´s *Ta'rīf*. Almost all of the people who made up the judiciary, from the judges to the scribes and official witnesses, to the muftis and the teachers at the colleges and monasteries, had some kind of connection to the powerful amirs, with whom they co-operated for profits instead of for the upholding of the law and for governance by law. By fulfilling the wishes of the influential and the wealthy, they could gain status and wealth themselves. To this end, the role of those working in the judiciary came to be one of making use of their knowledge and experience to find loopholes in the law. The practice of fighting court cases with false interpretations of the law obviously led to the destruction of legal order and the decline of respect for the law. By the end of the 14th century, these habits had become so entrenched in Egyptian society that they seemed like traditions of long-standing, provoking not the slightest surprise. Into such a society came Ibn Khaldūn, a foreigner with his own particular view of the history of civilizations. Egyptian intellectuals were divided as to whether they supported his administration of justice or were against it. It is significant that Ibn Khaldūn´s supporters included men like Ibn 'Ammār, who is given special mention in histories for the fact that he never once accepted gifts of money or goods, even though he was a judge.[47] As a judge who did not take bribes, he was an exception to the rule, and those judges who accepted bribes as a matter of course could hardly have passed fair judgment on Ibn Khaldūn. Against such a background, there is no doubt that the goal which Ibn Khaldūn had set himself—the reformation of a judiciary dependent on and ineluctably bound into the Mamluk system of rule—was, try as he might, unattainable.

Aspects of Islamization of Space and Society in Mamluk Jerusalem and its Hinterland*

I

On the eve of the Arab conquest the majority of the population of southern Bilād al-Shām was Christian.[1] The conquest set in motion forces that eventually transformed the area into a predominantly Muslim one. Nevertheless, even as late as the end of the fourth *hijrī* century (tenth century C. E.) the noted chronicler and former Jerusalem citizen al-Muqaddasī lamented that the city was still dominated by Christians.[2] Throughout the Crusader period one may still find significant regions of Christian communities and settlements in Palestine.[3] This demographic state of affairs changed by the beginning of the sixteenth century. At that point the majority of the population was mostly Muslim, as the Ottoman records clearly show.[4] One may thus conclude that the Islamization of Syria was a slow process. It took no less than seven to nine centuries before Islamic communities established themselves as the dominant demographic element in southern Bilād al-Shām. It is

*I gratefully acknowledge the devoted assistance of Mrs. Tamar Sofer and Mrs. Michal Kidron with the maps and charts included in this article. An earlier version was given as a lecture on the occasion of the Gilad Bartur award for outstanding Ph.D. candidates, of which I was a recipient. I wish to dedicate this article to the memory of Gilad Bartur.

See also Nehemia Levtzion, "Conversion to Islam in Syria and Palestine and the Survival of Christian Communities" in Michael Gervers and Ramzi Jibran Bikhazi, eds., *Conversion and Continuity: Indigenous Christian Communities in Islamic Lands Eighth to Eighteenth Centuries* (Toronto, 1990), 289–311.

also implied that the post-Crusader periods (namely Ayyubid and Mamluk) were critical times as far as Islamization and conversion are concerned.

Conversion to Islam, whether of a single person or a community, is characterized by both social and spatial-morphological transformations. Embracing Islam leads to changes in personal habits and daily routine and is followed by changes of the physical surroundings. Conversion of entire communities further enhances and enlarges the magnitude of the changes. Institutions, social structures, public norms, and other characteristics are gradually altered and become modified. That said, the actual process of conversion usually remains obscure, mainly due to lack of precise documentation.[5]

How did this process materialize? Was it a conversion of *dhimmī* communities (mainly Christians) to Islam? Could it be that Muslims became the majority due to the immigration and dwindling of the former population? Was it a conversion of individuals or of entire communities? So far few explanations have been suggested regarding the process. Levtzion is of the opinion that conversion to Islam in Syria was both a short- and a long-term process.[6] The distinction lies between the conversion of individuals and that of entire communities. The long-term process takes place when individual conversion is concerned. Rapid conversion, as Vryonis demonstrated with regard to Asia Minor, should be attributed more then anything else to the sedenterization of new Muslim communities in areas deserted by earlier Christian ones.[7] In the Byzantine-Ottoman case, the Christian communities collapsed prior to the Turkish invasion of the twelfth century and onward, as they were destabilized and deprived of genuine leadership and stability due to the gradual deterioration of the Byzantine empire. The various Turkish tribes thus settled in a region that lacked political, administrative, and religious continuity. The Vryonis model suggests that rapid conversion of an area should be ascribed to sedenterization of nomads and not to mass conversion of an existing population. Levtzion stressed in his work the role of various agents of Islamization in pushing forward the process of conversion, such as sufi saints and merchants, to name only two.[8] Recently, Ellenblum has published the results of a study in which he links together the Vryonis and Levtzion models. He strongly supports the position

---

[8]Levtzion, *Conversion to Islam,* 1–23.

that the two processes, i. e., rapid regional and slower personal Islamization, do not necessarily contradict but rather complement each other.[9]

In this article I argue that Islamization is not only the conversion of people to the Islamic faith. It is also the process through which the cultural landscape is transformed and is filled with Islamic objects and landmarks.[10] The growing dominance of the Muslim population within the Mamluk state led inevitably to transformations of the landscape by creating what might be termed an Islamic ambience. This will be demonstrated by studying the case of the Abū al-Wafā', a family of scholars and sufis that struck roots in the Jerusalem region. The literary and morphological data concerning the family´s activity and influence reveals some of the implications of Islamization. It furnishes us with the opportunity to examine up close some of the changes in the built environment stemming from the hitherto somewhat vague process of Islamization. Members of the family acted as agents of Islamization and through their work a new and transformed cultural landscape was created. The data concerning the family may also draw our attention to the social aspects of the growing dominance of Islamic culture and its spatial outcomes. Methodologically, it offers an opportunity to fill the usual lacunae in the complicated picture of the Islamization of society and space alike. However, the reader may find that even in this case sufficient detail concerning these and other issues is still lacking. Our knowledge concerning the former Christian communities is scarce, as is our understanding of the morphological features of the settlements in question before their takeover by a Muslim population. The source material is lacking if we compare it to what we are accustomed to for Mamluk Egypt. The archeological evidence is not always satisfying, even though the area has been surveyed thoroughly since the last decades of the nineteenth century.

I would also like to draw the reader's attention to the methodology that may allow us to fill in some of the gaps in our knowledge. It is the landscape that

---

[9]Ellenblum, *Frankish Rural Settlement*, 255–56.

[10]For the notion of landscape, or, as I put it here, cultural landscape, the reader is advised to consult Dominique Chevallier, ed., *L´Espace social de la ville arabe* (Paris, 1979). The theme of cultural landscape is a central theme of geographical studies. See, for example, Denis E. Cosgrove, ″Place, Landscape, and the Dialectics of Cultural Geography,″ *Canadian Geographer* 22 (1978): 66–72; idem, ″Problems of Interpreting the Symbolism of Past Landscape″ in Alan R. H. Baker and Mark Billinge, eds., *Period and Place* (Cambridge, 1982), 220–43; idem, *Social Formation and Symbolic Landscape* (London, 1984); Yi-fu Tuan, ″Geography, Phenomenology and the Study of Human Nature,″ *Canadian Geographer* 15 (1971): 181–92; idem, ″Thought and the Landscape, the Eye and the Mind´s Eye″ in D. W. Meinig, ed., *The Interpretation of Ordinary Landscapes* (New York, 1979), 89–102.

comprises the primary source of reference. When combined with information from the literary sources, an awareness of landscape leads us towards a better understanding of the issues of Islamization, conversion, and the transformation of the built environment.

II

In an article that has received less attention than it deserves, Ashtor drew a comprehensive picture of Mamluk Jerusalem.[11] While depicting the scholarly atmosphere of the city he mentions a family of notables by the name of Abū al-Wafā'.[12] The origins of the family are to be found in Iraq. There, in the twelfth century, a member of the family, a certain Tāj al-'Ārifīn Abū al-Wafā' Muḥammad, was considered by fellow-scholars and laymen alike an admired alim.[13] Masterman and Macalister (who collected local tales on Muslim saints) were of the opinion that the family came to Palestine from the Ḥijāz via Persia.[14] Canaan relied on a story related to him by the *khaṭīb* of a village in the Judean Hills (Bayt Ṣafāfah) who located the family's roots in Khurāsān.[15] Neither of them substantiated his speculation with any form of concrete data. Be that as it may, once members of the family are to be found in the area, their role in the events described below was crucial. The various activities ascribed to members of the family had a direct bearing on the process of Islamization and on cultural changes in the region.

As in many cases dealing with the area of Jerusalem during the Mamluk period, most of our information is to be found in Mujīr al-Dīn's late fifteenth century chronicle. According to him, a member of the Abū al-Wafā' family, whose father was a brother of the aforementioned Tāj al-'Arifīn, settled in Palestine during the Ayyubid period.[16] His name was Badr al-Dīn ibn Muḥammad Abū al-Wafā', and he is depicted as a *quṭb,* that is, a sufi leader of the highest level.

[15]Taufik Canaan, "Mohammedan Saints and Sanctuaries in Palestine," *Journal of the Palestine Oriental Society* (1927): 308.

[16]The story as narrated below is based mainly on Mujīr al-Dīn al-Ḥanbalī al-'Ulaymī, *Al-Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl* (Amman, 1973), 146–49.

Badr al-Dīn was highly regarded by the notables of his time and won the approbation of all levels of society. His reputation for holiness and virtue attracted many disciples who came to live with him and his family in a place called Dayr al-Shaykh. He died in 650/1252 and his burial place became a site for *ziyārah* (visitation of a shrine for ritual purposes). Saints and common people, as well as animals, we are told, used to come to pay him tribute. A *zāwiyah* was probably built on the premises while Badr al-Dīn was still alive. Mujīr al-Dīn reports that he often went on a visit *(taraddadtu)* to the place, though true to his usual indifference to topography he is not very specific about its location. He only specifies that it was a third of a *barīd* due west of Jerusalem in a place called Wādī al-Nusur.[17] The location of the *maqām* is of the utmost importance for understanding the family′s mobility within the local society and space, and is also an instance in which local myths and legends may be compared with contemporary literary sources. In view of the crucial importance of Badr al-Dīn′s tomb and *zāwiyah,* I shall deal at length below with its exact location. Another issue that needs to be clarified is what might be termed the time-space channels of Badr al-Dīn in the vicinity of Jerusalem. This will have tremendous bearing on the way we understand the family's past, its progress toward Jerusalem, and its upward social mobility.

Wādī al-Nusur is a tributary of the central stream of the Judean hills, Wādī Ṣurār (today Naḥal Soreq). On a spur rising on the southern shoulder of the Ṣurār one may still find ruins of a small village named Dayr al-Shaykh.[18] Amidst the deserted terraces and dilapidated houses of the village lies a very conspicuous complex, the *maqām* of Sultan Shaykh Badr, as the local people used to call it.[19]

The attachment of the title sultan to Badr al-Dīn′s name need not bother us nor be considered an official one. It is commonly understood as an honorary title often bestowed upon esteemed scholars.[20] Scholars agree that Sultan Badr and

---

[17]*Barīd* as referred to here means the distance between two stations of the *barīd* line. It is in no way an indication of the existence of a *barīd* line to Jerusalem. Consulting the maps of Sauvaget leads to the rough estimate of 30–40 km. as the standard distance between two stations. See Jean Sauvaget, *La Poste aux Chevaux dans l′Empire des Mamlouks* (Paris, 1941), esp. 70. A third of a *barīd* then would be 12–15 km., which is inaccurate in the case of Dayr al-Shaykh, found some 20 km. west of the city.

[18]Information about the village may be found in various surveys: C. R. Conder and H. H. Kitchener, *The Survey of Western Palestine,* vol. 3, *Judæa* (London, 1881), 23–24; Wolf Dieter Hütteroth and Kamal Abdulfattah, *Historical Geography of Palestine, Transjordan and Southern Syria in the Late Sixteenth Century* (Erlangen, 1977), 113; Walid Khalidi, ed., *All That Remains: The Palestinian Villages Occupied and Depopulated by Israel in 1948* (Washington, D.C., 1992), 288.

[19]This is also the name assigned to the place in Conder and Kitchener, *Survey of Western Palestine*, 24–25.

[20]Nevertheless, the local legends ascribe this title to Badr al-Dīn′s past as a king or a ruler in one of several locations.

Badr al-Dīn are the same person.[21] However, I would like to make a distinction between fact and fiction in the history of this distinguished forefather of the Abū al-Wafā' family. Let us begin by quoting Petersen´s description of Badr al-Dīn:

> He originated either from Khurassan or the Hejaz and came to Jerusalem as a Dervish. . . . Badr first lived in Shu'fat[22] in Jerusalem but after his daughter´s death he moved westward to Wadi al-Nusur where he lived in a cave. . . . The exact dates of Badr´s life are not known although it is known that his son Muhammed died in 663 A. H. and that Badr lived at the same time as king Zahir (Baybars) which indicates a date sometime in the thirteenth century.[23]

Petersen relied mostly on local folk tales collected by Masterman and Canaan. These are based on the collective memory of people in the Jerusalem area in the early twentieth century. The common outline of the different narratives is as follows: a most revered man named Sultan Badr, who is descended from a royal family (either in Hijāz or Khurāsān), came to participate in Baybars' alleged siege of Jerusalem, at the time in the hands of the infidels. He stayed in a place called Karafāt, later to be called Sharafāt. After the city was won over into Muslim hands, he went to Hebron and on the way met with a hostile girl, who threw a stone at his head. After performing a miraculous act at that spot, he kept walking until he reached a cave in a place called Dayr al-Shaykh, where he settled. There, the girl´s father caught up with him and begged his forgiveness. Badr al-Dīn accepted his apologies and agreed to marry the girl. The family settled in Dayr al-Shaykh, where the order was established, the *zāwiyah* was built, and eight children were born.

The story has myriad versions and subsumes many anecdotes, which makes it impossible to discern between hypothetical historical truth and total fiction. I will deal briefly with only a few of these. In the popular story, Badr al-Dīn begins his voyage in Palestine at Jerusalem and moves in a westerly direction until he reaches Dayr al-Shaykh. According to this version, Badr al-Dīn arrived in Palestine when Jerusalem was in Christian hands, thus supplying us with a terminus ante quem of

---

[21]See Conder and Kitchener, *Survey of Western Palestine,* 24–25; Masterman and Macalister, ″Occasional Papers,″ 11 ff; Canaan, ″Mohammedan Saints,″ 305–10; Muṣṭafá Murād al-Dabbāgh, *Bilādunā Filasṭīn*, vol. 8 pt. 2/1 (Beirut, n.d.), 175–78; and recently, Andrew Petersen, ″A Preliminary Report on Three Muslim Shrines in Palestine,″ *Levant* 28 (1996): 97–113, especially 99–103.

[22]The proper name of the village is of course Sharafāt, as will be discussed later.

[23]Petersen, ″Shrines,″ 99.

1244.[24] Badr al-Dīn had eight children in Dayr al-Shaykh. The eldest, Muḥammad, died in 675/1263, having already established a family of his own. This makes it practically impossible that he could have been no more than nineteen years old when he died, which would have to be the case if he was born at Dayr al-Shaykh in 1244 or later. Moreover, one should bear in mind that there is no data concerning a siege of Jerusalem by Baybars, nor for that matter that he was anywhere in its vicinity prior to the 1250s. Hence it seems improbable that Baybars and Badr al-Dīn ever met, according to the data at hand. The only possible pertinent Muslim siege of Jerusalem is the famous one of Ṣalāḥ al-Dīn in 1187, which seems to be too early for Badr al-Dīn—that is, of course, if we accept his death date of 650/1253 as recorded by Mujīr al-Dīn. Thus it is safe to assume that Badr al-Dīn's arrival on the scene in Palestine took place during the short period of renewed Crusader dominance of Jerusalem during 1229–44. This is the only feasible setting that gives credibility to his participation in an attempt to win the city back to Muslim hands. That said, Badr al-Dīn could not have settled first in Jerusalem and only later gone out to its hinterland. The first station of the family was, as reported by Mujīr al-Dīn, the site at Dayr al-Shaykh in Wādī al-Nusur. At the time of Badr al-Dīn's son's death in 675/1263, Dayr al-Shaykh was densely crowded with people and houses, the outcome of the activity of Badr al-Dīn and presumably of the people of the order *(ṭarīqah)* following him. This was one of the factors responsible for the second move taken by the grandson of Badr al-Dīn, ʿAbd al-Ḥāfiẓ, in the direction of Jerusalem.

ʿAbd al-Ḥāfiẓ was also an esteemed scholar and an acknowledged religious figure.[25] He headed the order that had been established by his grandfather in Wādī al-Nusur. The first decision on his part was to relocate the *zāwiyah*. The new location was a village named Shafrāt at the outskirts of Jerusalem. By the fifteenth century the place was known as Sharafāt due to the honor *(sharaf)* bestowed on it on account of the family taking up residence there.[26] The change of a place name is one of the most common indications of the settlement of a new cultural or ethnic group and its growing dominance.[27] In the case of Shafrāt/Sharafāt, it marked the transformation of a Christian village into a Muslim one.

---

[24]Regarding the second Crusader occupation of Jerusalem see, e.g., P. M. Holt, *The Age of the Crusades: The Near East from the Eleventh Century to 1517* (London and New York, 1986), 60 ff.

[25]Mujīr al-Dīn, *Al-Uns al-Jalīl,* 2:147.

[26]Ibid.

[27]The demographic, ethnic, and religious changes in a certain area lead eventually to alterations of the toponymic map. In fact, sometimes this will be the only textual evidence of the change. See Ellenblum, *Frankish Rural Settlement*, 179–256, for an exhaustive discussion of cultural and social boundaries based on toponymy as a primary source. This issue will be further elaborated below.

ʿAbd al-Ḥāfiẓ died in 696/1293, to be followed by his son Dāʾūd as head of the order. Dāʾūd was considered a worker of miracles *(min aṣḥāb al-karāmāt)*. One of his miraculous deeds will be dealt with later on, as it contains important information concerning the process of Islamization. While he acted as head of the order, a sufi lodge *(zāwiyah)* and a tomb were built in the village of Shafrāt. Dāʾūd died in 701/1301 and was succeeded by his son Aḥmad, who died in the year 723/1323.[28] He also had eight children, two of whom, ʿAlī and Muḥammad al-Bahāʾ, were considered among the religious leaders *(ʿumdah)* of Palestine and its environs (". . .wa kānā ʿumdat al-arḍ al-muqaddasah wa mā ḥawlahā").[29] When Muḥammad died, ʿAlī assumed responsibility for the upbringing of his children. While Muḥammad was still alive he and ʿAlī received an endowment from the amir Manjak al-Sayfī in the form of the entire village of Sharafāt.[30] The date of the endowment is obscure and uncertain. According to Mujīr al-Dīn, Manjak was at the time of the endowment the governor of al-Shām. If that was the case, there are two plausible dates, the first being 762/1361 and the second between 769/1368 and 775/1374.[31] The fact that ʿAlī had already died in 757/1356 rules out either of these possibilities. The problem is worsened when we consult the *waqfīyah* (endowment deed) as registered in the Ottoman *taḥrīr*. The date of the endowment deed is indicated as 894/1488, which totally disrupts our previous calculation.[32] Manjak had a very colorful and change-filled career. His first position in Syria was as *ḥājib* in Damascus in 748/1347. After a short period in Syria he was summoned again to Cairo, where he played a major part in the complicated internal political turmoil of the early 1350s. Another interlude in Syria took place in 755/1354 during which he was sent in exile *(baṭṭāl)* to Ṣafad. By 760/1358 he was appointed as governor of Tripoli, Aleppo, and finally Damascus, where he served as governor until 762/1361. Either Mujīr al-Dīn was wrong and the endowment was made while Manjak acted as a *ḥājīb* and not as the governor of Damascus, or Manjak could have endowed the village at any date prior to ʿAlī's death in 757/1356 and was only titled governor by Mujīr al-Dīn, without any

---

connection to his actual position at the time. Leaving that aside, the fact remains that a leading figure of the Mamluk elite was acting as patron of the family. It is another indication of their growing importance within local society.

The final move into Jerusalem was taken by Tāj al-Dīn Abū al-Wafā' Muḥammad (the son of that 'Alī who was endowed with the village of Sharafāt). Mujīr al-Dīn relates that Tāj al-Dīn used to visit the city much more than his father and grandfather ever did.[33] After the death of his father he bought a house in Jerusalem and was the first of the family to reside there *(istawṭana)* in 782/1380. He established another branch of the Wafā'īyah order in a compound bordering the Ḥaram al-Sharīf wall.[34] Tāj al-Dīn died in Jerusalem in 803/1401 and was buried in Māmillā cemetery. Two of his sons, Taqī al-Dīn Abū Bakr and 'Alī, are mentioned in Mujīr al-Dīn's description. Soon after the move to Jerusalem, members of the family are to be found in senior positions in the religious and administrative circles of Jerusalem.[35]

Drawing a comprehensive picture of the Abū al-Wafā' activities in Jerusalem is beyond the scope of this article and I shall highlight here only a few examples. Taqī al-Dīn Abū Bakr, the son of Tāj al-Dīn, was born in Jerusalem in 799/1396. At the death of his father he was nominated to succeed him as head of the al-Wafā'īyah order. He was the first member of the family given the *nisbah* al-Ḥusaynī, after al-Ḥusayn ibn 'Alī, by Mujīr al-Dīn. Gradually it became the common name by which the family was known. The al-Ḥusaynīs grew to become one of the leading families of the city, from the Mamluk period until today. For example, the family played a crucial part in the events of the revolt of the *naqīb al-ashrāf* in the early 1700s in Jerusalem.[36] Taqī al-Dīn gained recognition as a leading figure in Jerusalem and his death in 859/1454 was commemorated with a special prayer *(ṣalāt al-mayt)* that was conducted in the al-Aqṣá mosque after the Friday prayers. His funeral became a procession of sufis and others from the city to his burial place in the Māmillā graveyard. He was buried in the compound of

---

[33]Mujīr al-Dīn, *Al-Uns al-Jalīl*, 2:149.

[34]The beginning of the al-Wafā'īyah *zāwiyah* in Jerusalem is not altogether clear. The issue will be dealt with in the section concerned with the Abū al-Wafā' as agents of Islamization.

[35]Mujīr al-Dīn, *Al-Uns al-Jalīl,* vol. 2 passim mentions members of the family as scholars and sufis alike. See also genealogical table (Fig. 1).

[36]'Ādil Mannā', "The Rebellion of the Naqīb al-Ashrāf in Jerusalem, 1703–1705" (in Hebrew), *Cathedra* 53 (1989): 49–74. The supposed lineage of the Ḥusaynīs back to Badr al-Dīn, although often stated by members of the family and scholars, cannot be corroborated. In fact, the family lineage which suggests kinship between the famous al-Ḥusaynīs to al-Ḥusayn ibn 'Alī has recently been refuted. 'Ādil Mannā', "Myth and Anti-Myth of the Ḥusaynī Family," (lecture held at the Harry S. Truman Research Institute for the Advancement of Peace, 2 April 1999).

the amir Ṭūghān al-ʻAlā'ī, adjacent to the al-Qalandarīyah *zāwiyah*.[37] Again this should be regarded as an indication of the family's status and its involvement with prominent figures of the Mamluk elite. Taqī al-Dīn′s son, Shihāb al-Dīn Abū al-ʻAbbās Aḥmad, headed the order after him.[38] He was also considered an outstanding scholar, but unlike the rest of his family was an adherent of the Hanafi school. This is probably why he left Jerusalem in 880/1475 and went to Istanbul seeking answers to religious problems among the predominantly Hanafi Ottoman religious authorities.[39] He even had an audience with the sultan, who offered him a position in his administration. Shihāb al-Dīn died in Istanbul two years after his arrival.

The manner and extent to which the family struck roots in the social elite of Jerusalem is remarkable. Like other families of ulama who immigrated to the city during the Mamluk period, religious and scholarly virtues were the catalyst for a rapidly upward social mobility.[40] The recognition and status won by the family had, among other outcomes, morphological and visible expressions in the rural and urban landscape. Those will be discussed below to demonstrate the connections between the family′s activities and the themes of conversion and Islamization.

III

Conversion, like other cultural changes in human societies, effects change in the built environment. As already mentioned above, in most cases the actual process of conversion is somewhat vague and unsatisfactorily documented. Therefore, a study which examines the morphological outcome of the process may promise to bridge some of the gaps in our knowledge. Changes in the man-made environment in the form of shrines, houses, layout of fields, crops, irrigation systems, etc., are, and should be considered, the physical manifestations of the new cultural process. The method adopted and applied throughout this article is to consider the new morphological icons and transformations in the physical milieu as one considers textual data. Therefore the building activity initiated by family members will be dealt with at length below. The different construction projects of the Abū al-Wafā' will be traced along the chronological sequence of moves already described, from the hinterland of Jerusalem to the core of the city.

---

[37]The compound no longer exists, therefore only a plausible location can be suggested.

[38]Mujīr al-Dīn, *Al-Uns al-Jalīl,* 2:232.

[39]Ibid, 233.

[40]See, for example, Kamal S. Salibi, ″The Bānū Jamāʻa: A Dynasty of Shāfiʻite Jurists,″ *Studia Islamica* 9 (1958): 97–110.

The *zāwiyah* in Dayr al-Shaykh: The village of Dayr al-Shaykh lies some 20 km. west-south-west of the old city of Jerusalem. It is located on a hill rising on the southern shoulder of Wādī al-Ṣurār. The *zāwiyah* complex is the best preserved and most conspicuous building in what is today the ruined village of Dayr al-Shaykh. The place is served by a number of roads of both regional and local importance. Coming from Jerusalem, one could follow two possible roads. The first one follows the main ridge southwest of the city until the village of Malḥah (see map no. 1). From Malḥah the road carries on in a westerly direction until it intersects with Wādī al-Sikkah (today Naḥal Refa'im). From the intersection, the road follows the course of the wadi up until the bottom of the spur at the top of which lies Dayr al-Shaykh, some 7 km. due west. The second possible way would be to begin from near Wādī al-Sikka, which starts some 1.5 km. south of the city wall, and to follow it in the manner already described above. In both cases one reaches a paved road (2 m. in width), today in a state of ruin, that leads from the bottom of the ravine to the summit of the hill, some 800 m. long.[41] Not far from Dayr al-Shaykh, Wādī al-Sikkah joins the central stream of the Judean hills, Wādī al-Ṣurār (today Naḥal Soreq), which flows all the way to the Mediterranean, some 35 km. in a westerly direction. The route of the Ṣurār served as one of the main roads one could take from the coastal plain of Palestine to the central mountain ridge, where cities such as Jerusalem, Bethlehem, and Hebron are located. Numerous local roads linked Dayr al-Shaykh with other settlements in the Judean hills. Thus the *zāwiyah,* although built in a rural and remote environment, was highly accessible both to its immediate and distant surroundings. The accessibility of the site and its proximity to a major route in the area is echoed in a local tale. According to this tale, the first encounter between Badr al-Dīn and Baybars took place as the latter was advancing on the main road to Jerusalem and Badr al-Dīn was waiting for him en route.[42]

The *zāwiyah* complex was surveyed by Andrew Petersen of the British School of Archeology in Jerusalem in 1995.[43] It is a 30 by 20 m. compound, surrounded by a wall of variable height due to the change in the local terrain. Petersen's survey found the complex to comprise four main parts: a courtyard, a prayer hall, a *maqām* (the grave itself), and a crypt. It bears the common characteristics of other local shrines and sanctuaries abundant in the landscape of Palestine: the dome (or several domes) that symbolizes the holy character of the compound, the source of water usually found within the precinct itself or in its immediate

---

[41]Parts of the paved road are still visible along the marked hiking trail leading from Wādī al-Ṣurār to Dayr al-Shaykh.

[42]Masterman and Macalister, "Occasional Papers," 13–14.

[43]Petersen, "Shrines," 99.

surroundings, a few functional rooms, a prayer hall, and a peripheral wall.[44] In establishing the construction date and building sequence, Petersen relates that the date of the *zāwiyah* corresponds to Badr al-Dīn's period. Interestingly enough, it looks as if the Muslim building was built on a former Crusader one. This might explain, as Petersen suggests, the name Dayr as preserving the memory of a monastery that was here prior to the *zāwiyah*. I will return to this characteristic while discussing the process of Islamization later on.

Not far from Badr al-Dīn's *zāwiyah,* about 1 km. east of it, on a mountain called Shaykh Marzūq (today Mt. Giora), one may still find a *maqām* named Burj al-Shaykh Marzūq, that is, the tower of Shaykh Marzūq. Who was this Marzūq and how is he connected to the story of the Abū al-Wafā'? As the local story has it, Marzūq was a servant of Badr al-Dīn. His primary task was to watch over the *zāwiyah* from one of the summits near Dayr al-Shaykh. This was considered part of the holy war (jihad) against the enemies of Islam. When Marzūq was on his deathbed, Badr al-Dīn came to look after him and to assure him that he would come to no harm. Following his death a *maqām* was constructed on the mountain connected with him, known ever since as Burj al-Shaykh Marzūq.

The *zāwiyah* in Sharafāt: The village of Sharafāt stands on a ridge rising above the Wādī al-Sikkah some 8 km. south of Jerusalem. It is to be found in close proximity to the villages of Bayt Ṣafāfah and Malḥah. The village is less than 1 km. away from the central road using Wadī al-Sikkah, and some 4 km. away from the main road that stretches along the central ridge of Palestine. At the highest point of the village lies the complex attributed to the family of Abū al-Wafā'. The complex contains four parts: a prayer hall (today the mosque of Sitt Badrīyah), a courtyard, a *maqām,* and a number of rooms that might have served as cells for sufis.[45] The complex is surrounded by a wall and has only one entrance on its eastern side. The site has undergone several reconstructions over the years, which were responsible for the alteration in its original form. From the first building phase one may discern both the domed cell believed to be the tomb of 'Abd al-Ḥāfiẓ and the prayer hall, converted today to a mosque. The cells in the courtyard were probably used by the people of the *zāwiyah* but lost all their former characteristics due to constant renovations. Adjacent to the complex on its southern side one may find two rows of buildings, mostly warehouses and pens in

---

[44]The most comprehensive survey of holy sites in Palestine is still Canaan, "Mohammedan Saints," in which Canaan brings textual as well as pictorial descriptions of dozens of such sites. For comparison see, for example, the tomb of Phinehas, the shrine of Shaykh al-Ṣamit, and the shrine of Nabī Yūnus at al-Mashhad. Although one may find variations in each of the sites, a basic functional and symbolic plan is repeated in all of them.

[45]While surveying the site I encountered the local muezzin, who is of the opinion that those rooms were part of the *zāwiyah*.

a dilapidated state. I cannot be certain whether they should also be attributed to the *zāwiyah* complex or to a former, i. e. Crusader, phase of the site. North of the *zāwiyah* stands an enormous oak tree that, according to the local legend, guards the grave of Sitt Badrīyah, the daughter of Badr al-Dīn.

Trees are one of the common features usually found in the vicinity of shrines and sanctuaries in Palestine.[46] The reason for this lies in the popular belief that they are protected by the holiness of the saint buried next to them. Any harm inflicted on such a tree will cause grave repercussions for the person involved. Since they were never harmed or exposed to grazing, such holy trees gained an unusual height by local standards. An oddity for which I can offer no explanation is the attribution of the *maqām* (as well as the tree) to Sitt Badrīyah, a daughter of Badr al-Dīn, and not to ʻAbd al-Ḥāfiẓ as one would assume. It seems that the holiness attributed to the male section of the family in the written sources shifted to the female section of the family in the local oral tradition.[47]

The al-Wafā'īyah *zāwiyah* in Jerusalem: The al-Wafā'īyah was thoroughly investigated by Burgoyne in his survey of Mamluk architecture in Jerusalem.[48] The building is to be found on the south side of Ṭarīq Bāb al-Nāẓir, adjacent to the gate itself. This is one of the most prestigious sites possible for a Muslim building in Jerusalem. It is bounded by the wall of the Ḥaram al-Sharīf to the east and surrounded by sumptuous and important sites such as Ribāṭ al-Manṣūrī, Ribāṭ al-Kurt and the al-Manjakīyah madrasah. The building is not homogenous and includes several periods of construction, as one may infer from the description related by Mujīr al-Dīn:

> Al-Zāwiyah al-Wafā'īyah—next to Bāb al-Nāẓir, and above it is a house which is considered part of the complex, which was known as the house of the shaykh Shihāb al-Dīn ibn al-Hā'im, later known as the house of the family of Abū al-Wafā' because they took up residence there. Formerly it was known as the house of Muʻāwiyah.[49]

The various building periods as reported by Mujīr al-Dīn are corroborated by the findings of Burgoyne. He finds that the early stages of construction predate the Mamluk period, probably being Ayyubid. During the Mamluk period the *zāwiyah* included two stories and a house above them. Later on, during the Ottoman period, a third story was built, as can be seen on the street frontage of the building.

[46]See Canaan, "Mohammedan Shrines," 30–31. Regarding the tree in Sharafāt, see ibid., 69.

[47]Ibid., 305 ff.

[48]Burgoyne, *Mamluk Jerusalem,* 456–59.

[49]Mujīr al-Dīn, *Al-Uns al-Jalīl,* 2:37.

It is a structure of fairly large size by local standards (30 by 10 m.). It comprises a hall, a courtyard, and a set of rooms of medium size, on both the first and second floors.

The location of the al-Wafāʼīyah, in such close proximity to the al-Manjakīyah madrasah, can be interpreted as another indication of the relations between the family and this important figure in the Mamluk elite, in the same fashion as the endowment of Sharafāt, referred to above. This may very well explain how a newcomer to the city managed to purchase a parcel of land in one of the most prestigious areas of the city. Could it be that the amir Manjak provided for the Abū al-Wafāʼ family within the city, as well as in its hinterland? The fact that the two compounds stand opposite each other may not be a coincidence. Another *zāwiyah* which is connected to the Wafāʼīyah order within the city is al-Ḥamrah, near the Khānqāh al-Ṣalaḥīyah. Mujīr al-Dīn is silent about its founder as well as the date of its foundation. This explains why the information concerning this building, and its relation with the one next to Bāb al-Nāẓir, is scanty.[50]

IV

The various activities initiated by members of the Abū al-Wafāʼ engendered a visible outcome in the landscape of the region both in and out of Jerusalem. Our attention has been primarily focused on the *zāwiyah* compounds, but it should not be forgotten that those were not isolated or solitary constructions. The *zāwiyah* in Dayr al-Shaykh acted as a focal point and catalyst for other buildings and residences, later to form the entire village. Remember that the reason given by Mujīr al-Dīn for the relocation of Badr al-Dīn′s grandson to Sharafāt was the overpopulation and density of the former place. The arrival of Badr al-Dīn, a sufi leader of the highest rank, in the Judean hills was the catalyst for a chain of events that can not in any way be considered marginal. The activities instigated by him and other members of his family led to visible results, to be followed by demographic and cultural changes. At the time of Badr al-Dīn's arrival, southern Bilād al-Shām was still heavily populated with non-Muslim communities, although it had been within the realm of Dār al-Islām for more then six hundred years. In other words, the process of Islamization was far from being completed when he arrived at Palestine. Followed by his family and adherents, Badr al-Dīn settled in the hinterland of Jerusalem, some 20 km. due southwest of the city. There a center for the order was constructed in a secluded, albeit highly visible and accessible, site, soon to become the heart of a thriving settlement. The village that sprang up from and

---

[50]Burgoyne, *Mamluk Jerusalem,* 456.

around the *zāwiyah* survived until the Israeli occupation of 1948. The formation of this village should not be regarded as just another settlement but rather as a new post won for Islam in the ongoing struggle against Christianity. This is vividly described in the local tales ascribing the role of *mujāhid* to Badr al-Dīn and his servant Marzūq:[51]

> Shaykh Marzūq was a slave whom Sultan Badr used to station upon the summit of a high mountain to the east of Dayr al-Shaykh to keep a lookout for the enemy in the time of war and jihad.[52]

As far as Islamization is concerned, the narration of Mujīr al-Dīn, our prime informant, is unfortunately insufficient. Did an already established Christian settlement exist when Badr al-Dīn arrived on the scene? And if so, what eventually happened to the original community? The existence of a former Christian settlement may be deduced from a construction level in the *zāwiyah* that pre-dates the thirteenth century. It is also implied by the appearance of the word *dayr* (monastery in Arabic) in the village name. This word may be interpreted as indicating the former existence of a Byzantine monastery, later to become a Frankish or Christian Arab settlement.[53] Ellenblum created a sociological and spatial model according to which the Frankish population settled primarily in areas already dominated by indigenous Christian communities. In other words, the rural settlements of the Frankish immigrants followed those of their fellow Christians.[54] He demonstrates this phenomenon by drawing the cultural border of southern Samaria between Muslim and Christian villages. This is aptly depicted in the toponymic map of the area by the abundant use of the word *dayr,* indicating a formerly Christian area. Following the same logic and exploiting Ellenblum's maps of Byzantine churches and Frankish rural settlements in Palestine, one may find a densely populated Christian area in the environs of Dayr al-Shaykh.[55] Map 2 includes all rural Frankish settlements as found and described by Ellenblum, followed by sites that have the word *dayr* in their name.[56] The map depicts an area dominated by Christian

---

[52]Ibid.

[53]See Ellenblum, *Frankish Rural Settlement*, 228–29, where he draws a map depicting the cultural lines between Muslim and Christian communities, based on a toponymic survey of sites which have the word *dayr* in their names.

[54]Ibid, 233.

[55]The map is based on the Frankish rural sites as depicted in ibid., xviii, and Conder and Kitchener, *Survey of Western Palestine,* sheet XVII.

[56]As yet I cannot fully demonstrate the existence of a Frankish layer in all settlements with *dayr* in their name.

settlements, starting from the Jerusalem-Bethlehem line on the east and stretching westward as far as the Dayr Aban-Bayt Jimāl line. In regard to Dayr al-Shaykh, the two sets of indicators exist, in the form of the toponymic sign *dayr* and the existence of a layer that pre-dates Badr al-Dīn's complex.[57] The conclusion is that Badr al-Dīn's arrival on the scene was not to a region devoid of population, but rather to a Christian-dominated area.

The role of sufis and saints as agents of Islamization in different parts of the Muslim world has been established already by various scholars.[58] Vryonis highlights the critical role of the mystic and sufi orders in the Islamization of Anatolia.[59] The simple, sometimes even crude and earthly Islam of the holy man *(baba)* and his followers was far more appealing to the Christian community of Anatolia than the orthodox, rigid one of the ulama. The beginning of the process was humble and incidental. Hand in hand with the expansion of the Seljuks went the arrival of the lonely saint, dwelling in as yet un-Islamized regions of Anatolia and slowly gaining respect and influence over the gradually waning local Christian communities. The role played by Badr al-Dīn was in many ways identical. He arrived at an area that was under Islamic rule, though apparently Muslims were not the majority. Badr al-Dīn's taking up residence in Dayr al-Shaykh led to the Islamization of the place. The fate of the former population and the precise phases of Islamization cannot be fully established. The events that took place at Sharafāt bring to light a much more detailed picture.

In order better to understand what transpired in Sharafāt one needs to consult Mujīr al-Dīn′s description again.[60] The *zāwiyah* in Sharafāt was built during the period when Dā'ūd (d. 701/1301) was head of the order. At that time, we are told, the village was Christian, except for Dā'ūd′s family and adherents. Some of the Christians, who owned vineyards, were also involved in the production of wine. The wine was sold to, among others, sinful Muslims *(lil-fassāq min al-muslimīn)*. This state of affairs vexed Dā'ūd and he called upon God to stop this from occurring. Indeed, we are told by Mujīr al-Dīn, the Christians stopped the wine

[58]See Levtzion, *Conversion to Islam*, 16–20, where he summarizes research on various locations and periods demonstrating the role of sufis in the process of Islamization. But see recently Reuven Amitai, ″Sufis and Shamans: Some Remarks on the Islamization of the Mongols in the Ilkhanate,″ *Journal of the Economic and Social History of the Orient* 42 (1999): 27–45. In this article, Amitai claims that Islamization via sufi agents in the Mongol region was primarily of institutional sufis close to Mongol ruling circles. The connection between members of the Abū al-Wafā' family and Manjak al-Sayfī may indicate the same closeness between sufis as agents of Islamization and ruling circles of the Mamluk elite.

[59]Vryonis, *The Decline of Medieval Hellenism,* esp. 351–402.

[60]Mujīr al-Dīn, *Al-Uns al-Jalīl,* 2:147–48.

production because each time the grapes were pressed, they would turn out to be vinegar. As the story has it, this was the wrath of God inflicted on the infidels. Once the Christian inhabitants were deprived of their livelihood, they had no alternative but to leave the village. As Mujīr al-Dīn puts it, they realized that they were facing a man of enormous power (namely Dā'ūd), a wizard *(sākhir),* so they abandoned their fields and left the village altogether. The expulsion of the Christian farmers caused the *iqṭā'* owner *(muqṭa')* grave losses. Thereupon Dā'ūd leased the lands of the village from him and built a *zāwiyah* and a tomb where he and his descendants were to be buried later. The construction of Muslim institutions and landmarks was the morphological materialization of the demographic and cultural changes that took place in the village of Sharafāt. The changing of the village name from Shafrāt to Sharafāt is yet another sign of this dramatic change.

The crucial role of the Abū al-Wafā' family as agents of Islamization is fully attested in the village of Sharafāt. It appears that they acted as a Muslim vanguard which eventually transformed a Christian settlement into a Muslim one. A similar case is to be found during the early Ottoman period in the north of Palestine. The person concerned, Shaykh al-Asadī, settled in the heart of what was then a Christian village.[61] Later on a *zāwiyah* was constructed and eventually the total Islamization of the village took place. The former Christian population emigrated (or rather was forced to emigrate) to an alternative site. Layish investigated the case of Dayr al-Asad (the village of Shaykh al-Asadī) fully and found it to be a typical case of the Islamization policy of the Ottoman empire as implemented throughout its territories.[62] As it happens, the shaykh was endowed with the village lands by none other then the Ottoman sultan Selim I.

The events that led to the Islamization of Sharafāt have a lot in common with those that led to that of Dayr al-Asad. To begin with, it was the settlement of a sufi order or person in the heart of a Christian village that started the process. Gradually the sufis strengthened their hold on the place, as can be seen in the shape of visible Islamic symbols and institutions. At some point in the process governmental help was granted. As Layish depicts it, the initiative for the penetration of the sufi shaykh into Dayr al-Asad was taken by the sultan. This was started by the granting of an endowment, comprising the entire village lands, to the shaykh. As reported by Mujīr al-Dīn, Sharafāt was also given as an endowment to the head of the Wafā'īyah order. The endower was a prominent figure in the Mamluk

[62]Ibid., 75, n. 57, where he relies primarily on Ömer Lûtfi Barkan, ″Les fondation pieuses comme méthode de peuplement et de colonisation: Les derviches colonisateurs de l′époque des invasions et les couvents (saviyé),″ *Vakıflar Dergisi* 2 (1942) (partie française).

elite, i. e., the amir Manjak al-Sayfī. The act of endowment took place sometime during the middle of the fourteenth century, some fifty odd years after the Abū al-Wafā' were already well rooted in the new location.[63] Nevertheless, the patron-sufi relation was one of the conditions that helped the process materialize.

The cases of Dayr al-Shaykh and Sharafāt bring to light the role of the Abū al-Wafā' as agents of Islamization in the Judean hills. It appears that the area was still dominated by Christian-Frankish settlements in the thirteenth century. This situation gradually altered after the arrival of Badr al-Dīn's family and order on the scene. The process was not of Islamization of the indigenous communities but rather Islamization brought about by creating such conditions as would force those communities to leave. The growing movement of immigrants from the Bayt Jālah-Bethlehem region (i. e., the region where the Abū al-Wafā' settled) to the Galilee during the late Mamluk and early Ottoman periods was described by Cohen and Lewis.[64] Apparently Ottoman documents show a substantial migration of Christians from the area lying south of Jerusalem. It is my suggestion here that this process started already in the thirteenth century and continued at least until the sixteenth century. One should realize that unlike the rural settlements of the area in question, the urban part of it (i.e., Bayt Jālah and Bethlehem) is still heavily populated with Christian communities.

V

The case of the Abū al-Wafā' has enabled us to take a closer look at what usually remains obscure and unreachable in the sources regarding the stages of Islamization in a region prior to the relatively richly documented Ottoman period. The story of Badr al-Dīn and his followers contains many of the characteristics of other sufi leaders, as described by Trimingham:

> In the development of organized Sufism *zāwiyas* were more important than most of those just described [i. e., *ribāṭ* and *khānqāh*], but here the institution was a man. They were small modest establishments, centred around one shaikh; at first impermanent, especially since such men were frequently migrants themselves. It was through these men, migrant or settled, that self-perpetuating *ṭarīqas* came into being. They were not endowed like *khānaqāhs*

---

[63]See again the discussion regarding the problem of establishing the accurate date of the endowment, above.

[64]Cohen and Lewis, *Population and Revenue,* 32–33.

> and *ribāṭs,* though in time when they became family residences they tended to accumulate *awqāf.*[65]

Badr al-Dīn was indeed a stranger when he immigrated and settled in Dayr al-Shaykh. Trimingham asserts that this was in itself a quality that helped sufis to win over the hearts of the local population.[66] Whether this was part of a Mamluk plan or policy one can only surmise, and hopefully future research will establish this. Be that as it may, the fact remains that along the way the family received crucial help from the Mamluk authorities. This occurred in the form of the patronage granted by Amir Manjak al-Sayfī on several occasions.

Members of the Abū al-Wafā' acted as agents of Islamization. Through their various activities they were responsible for changes in the cultural landscape of the region. It seems that changing social and religious forces were met by a change in economic demands, as in the case of the wine at Sharafāt. The pendulum was working in favor of the growing Islamic communities and against the former Christian settlers. But still we are left with many parts missing from the puzzle. Where did the displaced Christian communities go? Did they migrate elsewhere or did some of them embrace Islam? Why was no trace to be found of the former religious buildings, namely churches? The crucial issues of migration, demographic changes, and the changing of the cultural landscape following them await further research. Nevertheless, the methodology established here and the detailed case study break new ground in the complicated research into the Islamization of the region.

Perception of Architecture in Mamluk Sources

Mamluk architecture is one of the most extensively though unevenly studied categories in the field of Islamic architectural history today. Several surveys, varying in scope, numerous articles and monographs on individual monuments, and a few comparative studies of regional variations in architectural style exist. Many more are being published at an unprecedented rate as the field of Mamluk studies gains more students and researchers, and now has a journal of its own, *Mamlūk Studies Review*.[1] Even a few preliminary theoretical discussions have been held on some of the formal, symbolic, and sociocultural attributes of this architectural tradition, and a number of historiographic essays have attempted to understand it in the context of Mamluk and Islamic cultural and social history, something that is generally lacking for other medieval Islamic architectural traditions.[2] This scholarly attention should not be surprising to anyone familiar with the sheer number and variety of Mamluk buildings still standing in Egyptian, Palestinian, Lebanese, and Syrian cities—and they constitute only a fraction of the total that can be computed from the sources. For two hundred and sixty-seven years, scores of projects of all types: small and large, private and public, pious and commercial, pompous and poised, purposeful and frivolous, were sponsored by sultans, amirs, and members of the local elite in practically every corner of the

[1]For a recent review of the publications on Mamluk art and architecture, see Jonathan Bloom, ″Mamluk Art and Architectural History: A Review Article,″ *Mamlūk Studies Review* 3 (1999): 31–58.

[2]See R. Stephen Humphreys, ″The Expressive Intent of the Mamluk Architecture in Cairo: A Preliminary Essay,″ *Studia Islamica* 35 (1972): 69–119; Oleg Grabar, ″Reflections on Mamluk Art,″ *Muqarnas* 2 (1984): 1–12; Michael Meinecke, ″Mamluk Architecture, Regional Architectural Tradition: Evolutions and Interrelations,″ *Damaszener Mitteilungen* 2 (1985): 163–75; idem, *Patterns of Stylistic Change in Islamic Architecture: Local Traditions versus Migrating Artists* (New York, 1995); Nasser Rabbat, *The Citadel of Cairo: A New Interpretation of Royal Mamluk Architecture* (Leiden, 1995); Bernard O′Kane, ″Monumentality in Mamluk and Mongol Art and Architecture,″ *Art History* 19 (1996): 499–522. Some of the still unpublished recent Ph.D. dissertations proclaim the new, more interpretive directions that the field in general is following; see, for example, Lobna Abdel Azim Sherif, ″Layers of Meaning: An Interpretive Analysis of Three Early Mamluk Buildings,″ Ph.D. diss., University of Michigan, 1988; Howyda N. al-Harithy, ″Urban Form and Meaning in Bahri Mamluk Architecture,″ Ph.D. diss., Harvard University, 1992; Jane Jakeman, ″Abstract Art and Communication in ′Mamluk′ Architecture,″ Ph.D. thesis, Oxford University, 1993.

sultanate, particularly in Cairo, Damascus, Aleppo, Tripoli, and Jerusalem, but also in smaller towns and villages.[3]

The Mamluk written sources, chronicles and biographical dictionaries, but especially encyclopedic manuals, geographical treatises *(masālik),* and topographical tracts *(khiṭaṭ),* in their capacity as records of their time reflect both the profusion of buildings and the interest in architecture that Mamluk culture manifested. They all pay more than passing attention to buildings and land reclamation projects sponsored by sultans, amirs, and lesser notables. Some, like Ibn Shaddād, al-Maqrīzī, and Abū Ḥāmid al-Qudsī, show a genuine interest in buildings and cities and, sometimes, even an expert and appreciative handling of their particular qualities in the descriptions they provide of them. In fact, each of them makes buildings the backbone of one key book in his historical oeuvre. Many biographers, especially those directly commissioned by a sultan or grandee, even wax lyrical on the projects sponsored by their patrons. Sometimes they exaggerate their numbers, costs, and sizes. At other times, they emphasize their grandeur and rhetorically compare them with paradigmatic monuments known from literature or from the past. The veracity, intensity, and enthusiasm of their coverage, or lack thereof, however, were neither constant nor uniform. They fluctuated over time, following both the shifting investment in architecture among the Mamluk patrons, sometimes from one reign to the next, and the inclination of the individual reporters to notice and discuss it, which may or may not have been affected by the importance placed on building by the Mamluk patrons.

Yet, over the entire Mamluk period, there is a marked progression in the reports towards a more informed and involved discussion of buildings and projects, and even a growing interest in their architectural, historical, and sociocultural qualities. This evolving attitude seems to have transcended the individual inclination of a particular author. It affects every genre of historical writing, even annals and biographies, aside from its more concrete consequence of animating special types with architectural focus such as the *masālik* and the *khiṭaṭ*. It is discernible in the texts of the most architecturally reticent among the late-Mamluk authors, such as al-Suyūṭī and al-Sakhāwī, who could not help but reflect the more sophisticated handling of architecture achieved by their literary peers.[4]

---

[3]Michael Meinecke, *Die Mamlukische Architektur in Ägypten und Syrien (648/1250 bis 923/1517),* part 2, *Chronologische Liste der Mamlukischen Baumassnahmen* (Glückstadt, 1992), vii–ix, provides thorough estimates of the number of Mamluk monuments in all the major Syrian and Egyptian cities.

[4]This is apparent in al-Sakhāwī, *Kitāb al-Tibr al-Masbūk fī Dhayl al-Sulūk,* which is a chronicle continuing al-Maqrīzī's *Sulūk,* and in his little article *Al-Tuḥfah al-Laṭīfah fī Tārīkh al-Madīnah al-Sharīfah.* It comes across more distinctly in al-Suyūṭī, *Ḥusn al-Muḥāḍarah fī Tārīkh Miṣr wa-al-Qāhirah,* which is his modest attempt at producing a *khiṭaṭ* book.

The trend appears to have peaked in the late fourteenth/early fifteenth century, at a time when the culture in general was coming to terms with the magnificent architectural endowments of the previous Bahri period which changed the face of many Mamluk cities, especially Cairo. This is the moment when Ibn Khaldūn came to Cairo and declared it to be the center of Islam and the epitome of *ʿimrān,* a concept encompassing both civilization and urbanization, which he was busy theorizing about at the same time.[5] He was soon followed by his brilliant student, Aḥmad ibn ʿAlī al-Maqrīzī, who devoted a tremendous amount of time and effort to producing the first encyclopedic work on the history, development, and architectural monuments of a city in Islam, *Al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār,* which is essentially a paean to Cairo. Other contemporary scholars like Ibn Duqmāq, Ibn al-Furāt, al-Qalqashandī, Badr al-Dīn al-ʿAynī, Ibn Ḥajar al-ʿAsqalānī, Ibn ʿArab Shāh, and Ibn Taghrībirdī, though not as architecturally articulate as al-Maqrīzī was or as theoretically astute as Ibn Khaldūn, still show in their different ways a maturing sensitivity to the role of architecture in the life of the city and the reputation of patrons.

But this cultural interest in buildings and urban projects was not without its immediate political agenda: Mamluk authors for a variety of reasons disapproved of the Burji sultans, comparing them unfavorably to the great sultans of the late thirteenth and early fourteenth century. One of the main arguments they used to disparage their contemporary sultans was that they could not maintain the urban and architectural momentum generated by their illustrious predecessors, and they thus lacked their drive, commitment, good management, and generosity. Many Mamluk authors harp on this point, even including some who belonged to the Mamluk ruling class, such as Ibn Taghrībirdī.[6] This vocal criticism, however, may indicate not so much a general and popular disapproval of the Mamluks' performance as rulers as it did a growing divergence between the ruling Mamluks and the educated classes who controlled all historical writing and represented themselves and others through their own views, prejudices, and frameworks of interpretation.[7]

Historicizing the Mamluk interest in buildings, identifying its various proponents among the historians and analyzing their different approaches and textual techniques, and elucidating its conceptual ramifications for the study of Mamluk architecture

and culture form the subject of this article. My approach and interpretations have been greatly influenced by the ideas of the late Ulrich Haarmann on the writing of Mamluk history, especially as he began to articulate them in his latest contributions before his enormously regretted and untimely death. This article is but a small token of appreciation for his brilliant and original scholarship.

The Philological and Literary Context of Writing on Architecture

By its complex nature and exigencies, architecture can be neither a solitary nor modest activity. As Ibn Khaldūn noted, architectural projects, whether monuments or entire cities, required huge outlays of time, money, and manpower that can only be supplied by strong, stable, wealthy, and—most important—urban patrons.[8] Architectural projects fulfilled social and pietistic functions and went a long way toward enhancing the reputation of their founders and patrons, propagating their claims and embellishing their images. This made architecture, especially when it came to monumental buildings, primarily a royal or elite pursuit, and, as such, grist for the mill of chroniclers and biographers who wrote on the lives and deeds of the ruling class. The interest shown in architecture by the chroniclers of the Mamluk period, however, is not new in Islamic historiography. Biographers from earlier times recorded royal architectural projects and noted some of their peculiarities when they summarized the deeds of their founders. But Mamluk authors paid considerably more attention to architecture than their predecessors had done both in scope and depth. Their references were more numerous, comprehensive, and detailed than those of earlier historians, although like their predecessors and their successors until the nineteenth century, they never used graphic illustration to convey their impressions of the buildings they described. They, however, made a great effort to emphasize urban, political, social, economic, and cultural contexts, though rarely to consider formal, artistic, or symbolic significance. Aside from mentioning how large or tall or strange a building was, or listing particularly expensive materials in its construction, or indicating that a certain surface was ornamented using a certain complicated technique, formal or spatial qualities of the buildings were passed over in silence.

This unaesthetic tendency is apparent in the language used by Mamluk authors as well. When they write about architecture, they use primarily mundane and functional terms and rarely treat any spatial, artistic, or conceptual point. Buildings are hardly ever qualified as beautiful *(ḥasan, jamīl),* proportionate or harmonious *(mutanāsib, mu'talif, muntaẓam),* or pleasing *(bāhij),*[9] all terms associated with

[8]Ibn Khaldūn, *Muqaddimah,* 3: 832–36; abridged English text, *Muqaddimah*, 265–67.

[9]Except for some odd and not immediately explainable cases, such as the Madrasah al-Mu'izzīyah of al-Mu'izz Aybak (1250–57), in Miṣr al-Fusṭāṭ. Ibn Kathīr, *Al-Bidāyah wa-al-Nihāyah fi al-Tārīkh*

aesthetic concepts that had a venerable history in philosophical and *adab* treatises of an earlier period. Although they appear most frequently in literary and abstract discussions, they may initially have been introduced to express formal or visual appreciation of human types, of objects, or of engineering projects.[10] But they do not seem to have made their way into architectural description. On the other hand, they had been absorbed into literary criticism and were frequently used to express aesthetic judgment of prose or poetic style. Many of the Mamluk authors who write about architecture in fact show a certain ease with the denotative intricacies of these aesthetic terms when applied to literary analysis, which they all practiced and proudly displayed in their soberer books, though they seem not to have been able, or perhaps had no interest in, making the leap from literature to architecture.

Formal and architectural investigations seem to have been outside the intellectual curiosity or scholarly training of Mamluk authors.[11] Because of that handicap, they do not seem to have developed the techniques and terminology to carry out such examinations, and it shows in their texts. They apparently never attempted to transpose familiar aesthetic concepts from the literary domains, with which they were thoroughly familiar, or the less practiced disciplines of philosophy, geometry,

---

(Cairo, 1932–39), 13:196, comments that ″although the madrasah′s span from the outside is of the best construction, its interior space is not so impressive″; al-Yunīnī, *Dhayl Mir'āt al-Zamān* (Hyderabad, 1954–61), 1:60, and Ibn Taghrībirdī, *Nujūm,* 7:14, say that ″its *dihlīz* is very wide and very long, while the structure itself is proportionally small.″ See also Badr al-Dīn Maḥmūd ibn Aḥmad al-ʻAyni, *ʻIqd al-Jumān fī Tārīkh Ahl al-Zamān,* ed. Muḥammad Muḥammad Amīn, (Cairo: 1987–92), 1:44; Ibrāhīm ibn Muḥammad Ibn Duqmāq, *Al-Intiṣār li-Wāsiṭat ʻIqd al-Amṣar,* ed. K. Vollers (Cairo, 1893), 4:35, 53–54, 92–93.

[10]A. I. Sabra in his edition of Ibn al-Haytham, *The Optics of Ibn al-Haytham: Books I-III, On Direct Vision* (London, 1989), 2: 99, discusses the example of the famous essayist al-Jāḥiẓ (767–869) in his *Risālat al-Qiyān* (The Essay on Singer-Slaves), ed. ʻAbd al-Salām Muḥammad Hārūn in his *Rasā'il al-Jāḥiẓ* (Cairo, 1965), 2:162–63. Al-Jāḥiẓ explains physical beauty in terms of two aesthetic principles: *tamām* (fullness) and *iʻtidāl* (moderation); both are dependent on *wazin* (measure, balance, rhythm) which varies according to every case under consideration. Al-Jāḥiẓ goes on to say that *wazin* also governs the beauty of vessels, furnishings, embroidered textiles, and water channels, all of which have to achieve balance in form and composition *(al-istiwā' fī al-kharṭ wa-al-tarkīb).* (Sabra considered *tamām, iʻtidāl,* and *wazin* to be three separate principles, although it seems that al-Jāḥiẓ suggests that *tamām* and *iʻtidāl* both derive from *wazin.*)

[11]This area of research is not well covered. One notable pioneer is George Makdisi. His *Rise of Humanism in Classical Islam and the Christian West* (Edinburgh, 1990), passim, presents one of the most thorough discussions of the types of knowledge and kinds of settings available to medieval Islamic ″humanists″ (to use Makdisi′s term). Makdisi (Appendix A, 355–61) provides a summary of Ḍiyā' al-Dīn ibn al-Athīr′s (1163–1239) eight scholarly requisites for poets and *kuttāb* from his *Al-Mathal al-Sā'ir fī Adab al-Kātib wa-al-Shāʻir* (Riyadh, 1983–84), which shows clearly that no visual concerns belonged in those lists.

music, and the like to the unfamiliar field of architecture.[12] Nor does it seem to have occurred to them to adapt the professional vocabulary that might have been used by the builders to describe the buildings because of the sharp social division that separated them from these craftsmen and artisans and that consequently hindered communication between the two social groups.[13] Philosophical ideas, however truncated or distracted, sometimes did seep into Mamluk texts, but virtually no professional architectural or constructional terms at all found their way into them.[14] The very few and significant exceptions, such as Ibn Shaddād, al-Maqrīzī, and Abū Ḥāmid al-Qudsī, who at times reveal a certain affinity with professional terminology, may have developed their interest in the building crafts after having been exposed to them in some official capacity, such as serving as *muḥtasib* (city inspector) as in the case of al-Maqrīzī, or *shādd* (building supervisor), or some other similar function. It should be stressed, however, that the predisposition of these three to buildings and to the ways they are apprehended by craftsmen was peculiar to them: not all who wrote and also served at some point as building supervisors show either interest or a comparable mastery of professional terminology and modes of description.[15]

When buildings are at all noticed in the Mamluk sources for their visual qualities, they are generally described as unusual or marvelous *(*'*ajīb* and *gharīb)* and never further elaborated on, or mentioned for their monumentality and display of wealth, usually expressed in terms such as *kabīr, 'azīm,* or *fākhir.* Although monumentality is primarily considered an aesthetic and spatial quality in today's architectural discourse, the few references to monumentality in Mamluk sources

---

[12]A single exception, to my knowledge, can be found in the memoirs of the Iraqi physician 'Abd al-Laṭīf al-Baghdādī (1162–1231), a very sharp and perceptive resident of Cairo in the later part of the Ayyubid period (he wrote his text in 1204), *Al-Ifāḍah wa-al-I'tibār fī al-Umūr al-Mushāhadah wa-al-Ḥawādith al-Mu'āyanah bi-Arḍ Miṣr* (Cairo, 1869), where he uses aesthetic notions to analyze the naturalness and proportionality achieved in the ancient Egyptian statues. This exceptional short treatise deserves a study on its own.

[13]For a discussion of the status of the building professions in the Mamluk society, see my "Architects and Artists in Mamluk Society: The Perspective of the Sources," *Journal of Architectural Education* 52 (1998): 30–37; Doris Behrens-Abouseif, "Muhandis, Shād, Mu'allim—Note on the Building Craft in the Mamluk Period," *Der Islam* 72 (1995): 293–309; and the pioneering Leo Mayer, *Islamic Architects and Their Works* (Geneva, 1956), 20–27.

[14]An interesting example of a philosophical framework is al-Qalqashandī's chapter on *nafs al-khaṭṭ* ("the writing itself," used here in the sense of the nature of penmanship) in his voluminous *Ṣubḥ al-A'shá fī Ṣinā'at al-Inshā'* (Cairo, 1913-18), 3: 1–149, esp. 41–43, a well structured and competent, if platitudinous, discussion that relies heavily on older texts and poetic quotations.

[15]Badr al-Dīn al-'Aynī, al-Maqrīzī's rival, who served seven time as *muḥtasib,* is a case in point. For their dates of service as *muḥtasib*, see Aḥmad 'Abd ar-Rāziq, "La ḥisba et le muḥtasib en Égypte au temps des Mamluks," *Annales Islamologiques* 13 (1977): 115–78, 148–53.

seem to have been less aesthetically construed and more politically, or at least ideologically, driven. They often bore a competitive edge: the authors mention buildings as comparable in massiveness to those of their patrons that had been built in the realm of the Ilkhanids, the Mamluks' main Islamic rivals, or other less important Islamic powers such as the North African Marinids or the smaller Anatolian principalities.[16] Praising the monumentality of their patrons' buildings was at times coupled with downplaying the monumentality of those of other sovereigns. That buildings served this propagandistic purpose may have been induced by the patrons themselves, especially during the early Mamluk period, when the Mongol Ilkhanid threat was real and the propaganda war between the two sides fierce and multifaceted.[17]

But the emphasis on monumentality may also have reflected a heightened historical awareness among the Mamluk authors, which was expressed in the comparisons encountered in the sources between the Mamluk buildings and famous monuments of both the mythical and historical past including the pre-Islamic period. This too is a pre-Mamluk phenomenon. But it found formal expression in the Mamluk period with the development of a more or less fixed list of venerated ancient monuments that constituted a monumental category in medieval Arabic literature and are often mentioned when the achievements of past nations, a favorite topic in *adab,* are discussed.[18] Many descriptions of contemporary Mamluk monuments refer the reader to one or another of these structures, most frequently to the Īwān-i Kisrā in al-Madā'in (Ctesiphon) in Iraq, the epitome of monumentality which is sometimes brazenly claimed to have been matched or surpassed by the building under discussion.[19]

This practice is more than a literary trope despite its poetic and literary origins and its frequent usage in the sources. The veracity of the comparison itself is much less important to both authors and readers than the historic connection and the contest across time implied in it. The monumental category is a way of reclaiming the golden age inscribed in the Mamluk collective memory at a time

[19]O'Kane, "Monumentality in Mamuk Art," 510 and nn., discusses comparisons made in two Mamluk and Ilkhanid sources between two major monuments—the mosque of 'Alī Shāh in Tabriz and the madrasah of Sultan Ḥasan in Cairo—on the one hand, and the Īwān-i Kisrā on the other.

when the Mamluk state was showing signs of its ability to recoup some of the glories of that golden age. It had very swiftly defeated the Crusaders and Mongols, asserted its rule over all the Syro-Egyptian territories, and devised a new caliphal legitimacy with the installation of an Abbasid caliph in Cairo after the annihilation of the Baghdadi caliphate by the Mongols in 1258. The culture reacted to these Mamluk victories with renewed hope of recapturing the glorious past and reviving the true caliphate after two centuries of uncertainty, a feeling which lasted well into the fifteenth century. It was reflected in the reorientation of Mamluk historical writing towards a pan-Islamic outlook reminiscent of the writing of the eighth- and ninth-century historians who lived under an at least nominally unified Islamic world.[20] Thus, an entire generation of Mamluk historians—including al-ʻUmarī and al-Nuwayrī in Cairo and Ibn Kathīr and al-Dhahabī in Damascus—adopted a universal and upbeat approach and covered the entire Islamic world in their writing. A similar historic emphasis is expressed in visual references to the venerated monuments of the early Islamic period which dot the early Mamluk architecture built in the time of Baybars and Qalāwūn and his sons.[21] Both references to the monuments of the past in the sources and to the past in early Mamluk architecture embody and reinforce the rekindled Mamluk sense of historical continuity and represent a conscious effort to give it shape: one in space, the other in words.

If Mamluk sources lacked a developed aesthetic or architectural language, they did have another specialized language at their disposal, and that was the legal language of the w*aqf* (endowment) documents with which they seem to have been thoroughly familiar. The institution of the *waqf,* an old and venerable Islamic legal-fiscal system for organizing charity, social services, and the management and inheritance of real-estate and agricultural land, had by the Mamluk period developed a language and a procedure for documenting buildings that satisfied contractual and legal requirements and reflected both an interest in the purely functional and socioeconomic dimensions of architecture and a specific vision of

the role of buildings in social and urban space.[22] The description of a building in a *waqf* usually begins with recording its surroundings—the other buildings, streets, and urban artifacts facing or abutting it in all directions. This sets the boundaries of the building and frames it within its urban context. Then comes the sequential description of every individual space in the building as it is seen by a person walking through it. The description ordinarily starts at the entrance and then moves in a set direction, enumerating the various aspects and features of each space in the building. In most cases, the description covers an entire level before moving up to the next. The individual descriptions pay more attention to circulation, especially location of doors, and to the specific functions of parts of the spaces than they do to their appearance. Yet they brought the verbal description of architecture to a sophisticated level where even formulaic expressions carried specific connotations that captured what was culturally important in the structure being described which could affect its monetary value and desirability.

These codified expressions found their way into the descriptions of buildings in the sources. Like the *waqf*s, the historical texts placed very little emphasis on the status of buildings as aesthetic objects to be looked at. They often even ignored it. They cared more about the buildings' contextual effects, experiential qualities, or functional capacity. A building, moreover, was never seen as a separate, stand-alone object: it could only make sense as a component in an urban context or in the landscape, probably a reflection of the prevalent forms of dense layout in the city and scattered pavilion arrangement in the garden. The only exceptions were citadels and isolated caravanserais or *khānqāh*s in the countryside which usually elicited brief comments on their exterior walls and mass and mainly on

---

[22]Methods for the use of *waqf*s as historical documents in analyzing architecture have been developed by many authors in the recent past. The pioneering scholar was ʻAbd al-Laṭīf Ibrāhīm ʻAlī, "Wathīqat al-Amīr Ākhūr Kabīr Qarāqujā al-Ḥasanī," *Majallat Kullīyat al-Ādāb* 18 (1956): 183–251; idem, "Al-Wathā'iq fī Khidmat al-Āthār," in *Al-Mu'tamar al-Thānī li-al-Āthār fī al-Bilād al-ʻArabīyah* (Cairo, 1958), 205–88. See also Michael Rogers, "Waqfiyyas and Waqf-Registers: New Primary Sources for Islamic Architecture," *Kunst des Orients* 11 (1976–77): 182–96; Muḥammad Muḥammad Amīn, *Al-Awqāf wa-al-Ḥayāh al-Ijtimāʻīyah fī Miṣr (684–923 A.H./1250–1517 A.D.)* (Cairo, 1980); Mona Zakarya, *Deux palais du Caire médiéval: Waqfs et architecture* (Marseilles, 1983); Donald P. Little, "The Haram Documents as Sources for the Arts and Architecture of the Mamluk Period," *Muqarnas* 2 (1984): 61–72; Leonor Fernandes, "Notes on a New Source for the Study of Religious Architecture during the Mamluk Period: the Waqfiya," *Al-Abḥāth* 33 (1985): 3–12. One of the best studies of the architectural particularities of *waqf* formulae and terminology is Hazem Sayed, "The Rabʻ in Cairo: A Window on Mamluk Architecture and Urbanism," Ph.D. diss., MIT, 1987; it is unfortunately still unpublished. For a summary of his research, see his "Development of the Cairene Qāʻa: Some Considerations," *Annales Islamologiques* 23 (1987): 31–53.

their strength and solidity, as would be expected.[23] Otherwise, hardly any description of an urban façade can be found in Mamluk sources or in *waqf* documents. Only the location of entrances and position of minarets were noted, emphasizing the link between the public space of the street and the building proper. Even interior spaces were seen in the context of their connectivity and functionality and never in an abstracted way as arranged spaces or volumes. Their architectural characteristics were never noticed except to indicate how they were accessed and whether or not they had built-in usable spaces, such as recesses, niches, and alcoves.

Mamluk historical sources and *waqf* documents alike were most concerned with what can be termed the socioeconomic aspects of buildings. They spent most of their energy on discussing patrons, cost, intended functions, capacity for services, and the abundance or inadequacy of the *waqf*s attached to buildings for their upkeep and to support their designated users, and very little on anything else. The form and structure of the source descriptions resembled those found in the *waqf* documents themselves, not only because the two types stemmed from similar literary and legal traditions, but also because many of their authors were also legal experts and may have been personally involved in the redaction of *waqf* documents. The language of one form flowed into the other as authors themselves moved between the two. Many authors even incorporated parts of the *waqf* documents that they had access to, thanks to their position in the administration or the judicial system, in their historical texts describing major buildings, probably because the *waqf* texts already contained in an authoritative style the information they wished to present. This practice in fact has preserved some of the *waqf* texts that otherwise would have disappeared from the record.[24]

Yet there is a small, though structurally and formally significant, difference between the two forms. The chronicles obviously did not have to carry the legal responsibility the *waqf* texts did. They thus were able to adopt a less rigid and formulaic structure and to allow literary tropes and storytelling techniques to permeate their *waqf*-inspired texts and imbue them with informative and entertaining anecdotal, historical, and comparative details.[25] The use of the ″monumental

---

[23]See my *Citadel of Cairo,* 9–14, 59–60, for an analysis of the texts describing the fortifications of the Cairo citadel.

[24]See, for instance, Ibn ʻAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir,* ed. A. A. al-Khuwayṭir (Riyadh, 1976), 278–79, who copied the section on al-Azhar from an original *waqf* document redacted for the Fatimid caliph al-Ḥākim. Al-Maqrīzī, *Khiṭaṭ,* 2: 273–74, reproduces what appears to be a more complete text from the same *waqf.*

[25]A recent discussion of the purposes and techniques of historical writing in the Mamluk period is Ulrich Haarmann, ″Al-Maqrīzī, the Master, and Abū Ḥāmid al-Qudsī, the Disciple—Whose Historical Writing Can Claim More Topicality and Modernity?,″ in *The Historiography of Islamic*

category″ mentioned earlier is one of these techniques. So are the abundant poetic quotations, which may have been part literary bravado, part expressive tool. The same applies to historical references, mythically based comparisons, and reported conversations which seem often to have been totally fabricated.[26]

This historical reporting laced with *adab* techniques and tropes would have to be seen within the larger framework of the profusion of ″literarized″ history with a popular bent, observed by some contemporary students of Mamluk history and recently problematized by Ulrich Haarmann as a testing ground for the post-structuralist challenge to the conventional historiographical binary opposition of ″narrativity versus facticity.″[27] ″Narrativity,″ Haarmann observed, had always enlivened Arabic history writing with its close ties to *adab,* but its treatment by historians varied even during the same time period. Some, like Abū Ḥāmid al-Qudsī, may have intentionally ornamented their accounts to make them more novelistic and enticing, whereas others, like al-Maqrīzī, preferred a more serious, solemn, and learned outlook. The ″literarized″ modes seem to have expanded in the fourteenth and fifteenth century, when history was apparently a popular subject with a wide readership, judging from the large number of compilations and abridgments of earlier works and of new compositions produced during that period.[28]

The Social and Political Context of Writing on Architecture

The language of the sources dealing with buildings can be summed up as financially concerned, conservatively driven, legally and literarily based, and visually inexperienced, qualities that distinguished the groups to which most of the Mamluk authors belonged. These groups comprised the ulama and the *kuttāb* (the two greatly overlapped in the Mamluk period) and the *awlād al-nās,* or the literarily-inclined sons of Mamluk amirs and soldiers who should be intellectually, socially, and ideologically classified with the ulama and *kuttāb* despite their Mamluk lineage,

Mamluk privileges, and knowledge of the Turkish language.[29] Members of these groups, who can loosely be termed the literati, also formed the reading public for the same sources, which reinforced the development of a closed discourse and facilitated the formation of an endogenous and insular school of history, in which every member was linked in more than one way to the others, and every member′s work was inevitably and immediately measured against the works of others, who practically covered the same terrain.[30] The literati also shared the same general ethos. Their sense of themselves was grounded primarily in educational background, scholarly or chancery specialization, or jurisprudential affiliation *(madhhab)*. But they had little practical notion of group solidarity aside from superficial signs, ranging from dress codes to mannerisms of speech and conduct or their means of memorializing themselves. They nonetheless dominated the production and transmission of knowledge, with the ulama in particular maintaining their hold on the traditional religious functions, which kept them in touch with the people and in a position to affect public opinion. Members of the three groups of literati also controlled the judicial, administrative, educational, and *waqf* services through which they wielded tremendous influence as agents of mediation and arbitration, but hardly ever as agents of social change.[31]

These social groups depended on the Mamluk military elite for their livelihood; the Mamluks patronized and employed them to administer the religious, social, and fiscal systems of the sultanate, because they were the most educated groups. They were, however, excluded from any political decision-making and kept under constant check enforced with the threat of confiscation, arrest, and sometimes exceedingly brutal punishment. This paradoxical situation affected how they expressed their relationship with the Mamluk ruling elite to whom they were financially and socially indebted. A mixture of fear, servility, jealousy, affected flattery, and the occasional diatribe found their way into historical and biographical texts dealing with the Mamluk elite and their achievements and shortcomings. It

T. Philipp and U. Haarmann (Cambridge, 1998), 55–84.

[30]Donald Little, *An Introduction to Mamlūk Historiography: An Analysis of Arabic Annalistic and Biographical Sources for the Reign of al-Malik an-Nāṣir Muḥammad ibn Qalā'ūn* (Wiesbaden, 1970), 73–99, offers a comparative examination of specific years in the annals of six historians which shows their complicated patterns of interdependence.

[31]For a discussion of these social practices in Damascus in particular, see Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (New York, 1994), 37–54, 108–51.

colored the ways chroniclers and biographers structured and narrated their prose, and explained its nuances and innuendos.[32]

The Mamluk sources treat architecture, therefore, in a way that reflects not only the personal inclination of an author or the collective social and intellectual structures or even the expectations, tastes, and preferences of the readership. Authors were powerfully beholden to the wishes and interests of their Mamluk patrons and their desire to have their work documented, celebrated, and memorialized. There were certainly sultans, such as Baybars, al-Nāṣir Muḥammad, and Qāytbāy, whose interest in building was pronounced to the point that it affected their rule and how their amirs and notables handled their wealth and expressed their positions in society.[33] Each in his own way and for his own particular set of reasons and preferences endowed the cities of the realm with large numbers of religious, charitable, commercial, military, and palatial monuments. Each also is reported to have been directly involved in the projects he commissioned, sometimes interfering in the planning stages, sometimes dictating the design and decoration of a specific building, and at other times even working on the construction. Commentators on their reigns did not fail to notice this prodigious production and personal involvement and to be impressed by both.[34] Whole sections of the biographies they dedicated to these sultans read like building rolls, recording every project they sponsored in every city of the sultanate. This practice, routine and trivial as it may seem to us, was a historical novelty in the early Mamluk period. This was the first time that an effort was made to list all the building projects and systematically register them in a separate section that could be inserted into what had become an established set of subjects considered essential to the biography of a grandee, especially a sultan: his personal qualities and

---

[32]For a discussion of the textual techniques these groups used to assert themselves, see my "Representing the Mamluks in Mamluk Historical Writing," 59–75.

[33]David Ayalon went so far as to assert that al-Nāṣir Muḥammad's predilection for grand building projects drained the Mamluk economy so much that it never recovered; see his "Muslim City and the Mamluk Military Aristocracy," *Proceedings of the Israel Academy of Sciences and Humanities* 2 (1968): 311–29; idem, "The Expansion and Decline of Cairo under the Mamluks and Its Background," in *Itineraires d'Orient: hommages à Claude Cahen,* ed. Raoul Curiel and Rika Gyselen (Paris, 1994), 14–16. The decline of Cairo, which was congruent with the downfall of the Egyptian economy in the second half of the Mamluk period, is complicated and cannot be blamed solely on internal political factors; it still needs a thorough study. Janet Abu-Lughod, *Before European Hegemony: The World System A.D. 1250–1350* (New York, 1989), 224–47, presents a well-balanced synthesis of Egypt's economic plight in the fourteenth and fifteenth centuries.

[34]Behrens-Abouseif, "Muhandis," 293–95, lists a number of instances in which Mamluk patrons, most notably al-Nāṣir Muḥammad, played a direct role in the design of the buildings they sponsored; see also my *Citadel of Cairo,* 186–90, 277–80, for a discussion of al-Nāṣir Muḥammad's involvement in the remodeling of the citadel and its surroundings.

virtues, his military campaigns, his embassies, his main associates and functionaries, and his buildings and other projects.

This arrangement seems first to have been introduced into the annals of the reign of Baybars I, an indefatigable builder and the first true organizer of the Mamluk state and system. The individual who can be credited with this biographical innovation is ʻIzz al-Dīn Muḥammad ibn ʻAlī Ibn Shaddād (1217–85), an Aleppine scholar and *kātib* who began his career in his native city in the administration of its last Ayyubid ruler, al-Nāṣir Ṣalāḥ al-Dīn Yūsuf. After the Mongol invasion of Syria in 1260–61, he fled to Cairo and as a distinguished refugee was soon serving in Baybars′ administration, in the entourage of the famous vizier Bahā' al-Dīn Ibn Ḥinnā.[35] Ibn Shaddād′s annals of Baybars′ reign, of which only the last third survive, were recently published. Though probably not officially commissioned, they appear nonetheless to have been approved by the sultan and perhaps even compiled from conversations with him. They were, however, completed after Baybars′ death, during the reign of his son Barakah Khān (1276–79) as is clear from the last section. At the end of the annals, Ibn Shaddād affixes an extended and eulogistic biography of Baybars. In it, he provides an exhaustive list of the numerous structures Baybars built all over his sultanate, structure by structure, and city by city beginning with Cairo and moving on to all the Syro-Palestinian cities in which Baybars sponsored building projects.[36] For the royal structures in or around the Citadel of Cairo—that is, where Ibn Shaddād lived and worked—he sometimes even goes a step further and provides measurements or supplies superlatives to convey the quality of particular structures. He also enumerates the architectural components of every palace and *qāʻah* Baybars built for himself, his son Barakah Khān, and his favorite amirs.[37]

In itself, Ibn Shaddād′s list is unusual, but more remarkable is the attention he devotes to space organization and architectural terminology, certainly rare among medieval historians (the only comparable historians are al-Maqrīzī and Abū Ḥāmid al-Qudsī, both of whom lived more than a century later). Two possible explanations can be advanced for this special treatment. First, the list could simply have resulted from the importance Baybars placed on architecture; he might have ordered these detailed descriptions of his most important projects to be included in his inventory of achievements. But this explanation is weakened by the fact that Ibn ʻAbd

[35]On Ibn Shaddād, see Yoel Koch, ″ʻIzz al-Dīn ibn Shaddād and His Biography of Baybars,″ *Annali: Istituto Universitario Orientale, Sezione Slava* 43 (1983): 249–87; P. M. Holt, ″Three Biographies of al-Ẓāhir Baybars,″ in *Medieval Historical Writing in the Christian and Islamic Worlds*, ed. D. O. Morgan (London, 1982), 19–29.

[36]Muḥammad ibn ʻAlī Ibn Shaddād, *Tārīkh al-Malik al-Ẓāhir,* ed. Aḥmad Ḥuṭayṭ (Wiesbaden, 1983), 339–61.

[37]The buildings are analyzed in my *Citadel of Cairo,* 100–31.

al-Ẓāhir, Baybars′ official biographer, does not include anything comparable in his otherwise extensive encomium, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir*. Alternatively, Ibn Shaddād′s list could have been inspired by his own expertise and interest in architecture, inducing him to dedicate a disproportionate amount of space to the reporting of building projects. His expertise is apparent from the precise and assured language, attention to detail, and professional terminology displayed in describing his patron's structures. Nor was this interest new: it is already discernible in his important compendium on the history and topography of Syria and the Jazīrah, *Al-A'lāq al-Khaṭīrah fī Dhikr Umarā' al-Shām wa-al-Jazīrah,* commissioned by Baybars and written during his reign, probably in recognition of Ibn Shaddād′s knowledge of the various principalities in those two regions and in preparation for their ultimate annexation to the Mamluk sultanate. *Al-A'lāq,* a pioneering work that anticipated al-Maqrīzī's *Khiṭaṭ* in its orientation, structure, and appreciation of architecture, is divided into sections on Aleppo and its environs, Damascus and its surrounding regions (including Lebanon and Palestine), and the Jaziran cities. It includes a systematic list of the major buildings—citadel, main mosque, madrasahs, *khānqāh*s, and caravanserais—for each city and, in the case of the major cities such as Damascus and Aleppo, the history of each structure in detail as well.[38]

The main difference between *Al-A'lāq* and Ibn Shaddād′s biography of Baybars is that the list of buildings in the latter is presented as the final category of Baybars′ achievements and qualities and is meant to complement and perhaps to illustrate or concretize them. It is an innovative modification to the usual structure of eulogistic biographies where the list of architectural projects undertaken by the subject, in addition to providing a record of the patron′s architectural accomplishments, is invested with propagandistic and political import. Ibn Shaddād′s biography inaugurated a new convention in Mamluk royal and princely biographies: it aimed at comprehensiveness and avoided the usual exaggerated and lyrical invocation of key monuments. His successors all begin to record all the building projects of their subjects, not just the highlights, although no one reaches the same degree of detail that Ibn Shaddād achieved. Later chroniclers, such as Ibn Shākir al-Kutubī (1282–1363) in his biographical dictionary *Fawāt al-Wafīyāt* and Ibn Taghrībirdī (1410–70), the fifteenth-century chronicler and son of a Mamluk amir, in his *Nujūm,* give shorter lists of Baybars′ structures with slight differences from Ibn Shaddād′s, but they both eliminate the description of the citadel′s palaces and *qā'ah*s.[39] The details of the buildings that Ibn Shaddād so

relished adding to his essential list thus seem to have been a personal quirk, perhaps a sign of some architectural expertise that was not recorded in his biography. They did not reappear in any later account of building projects by Mamluk patrons.

The Architecturally-Conscious Genres

By the end of the fourteenth century, a significant development can be detected in all the sources dealing with architecture, including the usual annals, biographies, and encyclopedias: they begin to show more interest in the sociocultural, symbolic, and expressive import of buildings. No comprehensive explanation of this shift has ever been offered, but several modern historians, notably Oleg Grabar and R. Stephen Humphreys, have tried to connect it to the sheer number of art objects that were being produced for both the upper and middle classes, including the wealthier *kuttāb* and ulama, and the monuments that were crowding urban space and influencing how people viewed and experienced their cities or used their public areas.[40]

Humphreys and Grabar each used this observation to move in a direction that serves his aims. Humphreys, in a thirty-year-old study that is still quoted today by Islamic architectural historians, used architecture in the city to propose an interpretation of the social dynamics that developed between the Mamluk military elite and their indigenous subjects. He ascribed to the Mamluks, especially in Cairo, a heightened awareness of the role buildings can play in enhancing the reputation of their patrons and in assuring their position in the public eye. He saw in the endless rows of monuments whose façades competed along the streets of Cairo ample proof of that understanding, which he called ″the expressive intent″ of Mamluk architecture. He also detected a ″tension″ between the ostentation and striving for visibility of these monuments and their ostensibly pious and charitable functions, and read it as signifying the merger of the political agenda of the Mamluk military elite and the religious expectations and needs of its Muslim population, at least as it was articulated by the literati whose writing constitute our main source of information. Humphreys singled out other sociopolitical measures effected by the Mamluks, such as the reorganization of the court system under Baybars and the tightening of state control over the ulama class, as other manifestations of the same tension he saw in the architecture between the political and the social and religious forces in the Mamluk society.

Grabar′s purpose was very different. He was seeking to classify and understand Mamluk art and architecture and to highlight the sources useful for their study. In an earlier essay, he had noted a correlation between the level of artistic and

architectural production all over the Islamic world in the fourteenth century, but especially in the Mamluk sultanate, and the appearance in historical treatises of interpretations that linked the degree of cultural sophistication to sponsorship of art and architecture and interest in city life.[41] He identified Ibn Khaldūn and his distinguished student al-Maqrīzī as the two most prominent protagonists of this correlation, and hailed their two famous works, the *Muqaddimah* of the former and the *Khiṭaṭ* of the latter, as its main illustrations.

This new awareness of the sociological significance of architecture makes its impact felt mostly in the language and orientation of the *masālik wa-al-mamālik* and *khiṭaṭ* books, two interrelated literary genres whose resurgence in the fourteenth century is tied in more than one way to the concurrent interest in architecture and urban development.[42] Traditionally, however, neither *masālik* nor *khiṭaṭ* was primarily concerned with the buildings themselves, their forms and functions, and their intended or perceived messages. *Al-masālik wa-al-mamālik* was essentially a loosely defined *adab* type that was developed out of the combination of several scholarly, literary, and administrative genres including *futūḥ* (chronicles of the conquests), travel and *ziyārāt* (pilgrimage) literature, chancery and *kharāj* (taxation) manuals, and *ṣurat al-arḍ* (cartography).[43] Its framework was geographic, bordering on the cosmographic, with a universalistic Islamic scope that rarely ventured outside the frontiers of the Islamic world. Its heyday was the ninth and tenth centuries when a number of outstanding geographer travelers crisscrossed the Islamic world, compiling their depictions of one Islamic world, after its political unity held together by the Abbasid caliphate had passed. Buildings figured in it primarily as unusual and distinguishing features of a region or city. They would be noted in passing in a fashion akin to the way the natural and supernatural *ʿajāʾib* of a place, including unusual or ancient monuments, were often mentioned.

The startling early victories of the Mamluks against the Crusaders and the Mongols in the thirteenth century reinvigorated the literati and renewed their trust in Islamic political and territorial unity. The *masālik*'s orientation moved toward the geopolitical, a shift exemplified by the seminal work of Ibn Faḍl-Allāh al-ʿUmarī

---

[41]Oleg Grabar, "Reflections on the Study of Islamic Art," *Muqarnas* 1 (1983): 1–14, esp.10–11.

[42]This new awareness seems to have affected even the traditional form of *adab* collections. A fascinating example is ʿAlī ibn ʿAbd Allāh al-Bahāʾī al-Ghazūlī (d. 1412), *Maṭāliʿ al-Budūr fī Manāzil al-Surūr* (Cairo, 1882), which integrates in an unprecedented way a number of architectural elements, such as fountains, tanks, and wind catchers, in the list of topics that an *adīb* needs to be able to discuss and to summon literary quotations about in his function as a literary companion.

[43]André Miquel, *La géographie humaine du monde musulman jusqu'au milieu du 11e siècle* (Paris, 1967–80), 1:267–330; Ulrich Haarmann, "Auflösung und Bewahrung der klassischen Formen," 46–60; idem, review of *Weltgeschichte und Weltbeschreibung im mittelalterlichen Islam,* by Bernd Radtke, *Journal of the American Oriental Society* 115 (1995): 133–35.

(1301–49), *Masālik al-Abṣār fi Mamālik al-Amṣār,*[44] compiled in the late 1330s when the author was serving as a high administrator at the court of al-Nāṣir Muḥammad, including a stint as the sultan′s private secretary *(kātib al-sirr)* between 1329 and 1332. In addition to geographical surveys of the countries of Islam and their immediate neighbors, al-ʻUmarī provides topographic descriptions of important Islamic cities and holy sites and firsthand information on the ceremonies and duties of their rulers and lists of the ranks, functions, and protocols of their officials and caretakers. Buildings in his text are presented in their sociopolitical context as expressions of dynastic and royal pride and splendor and as positive architectural achievements functionally and spatially distinguishing their urban setting. In other words, they are seen as cultural artifacts.

The *khiṭaṭ* form is an almost exclusively Egyptian and significantly more localized genre than the *masālik wa-al-mamālik*. Its cosmocentric focus is often linked to a deep-rooted affinity with Egypt as a homeland which persists in the writing of Egyptian historians from the early Islamic period on.[45] These feelings intensified in medieval times, especially after the establishment of the Fatimid caliphate, which created in Egypt a new and vigorous authority independent of Baghdad.[46] In the *khiṭaṭ* books, they are thought to have found expression in careful and meticulous descriptions of Egypt′s topography, history, and monuments, and particularly Cairo as Egypt's capital and major political, economic, and cultural center. Within this framework, buildings most often appear as urban landmarks examined in the context of their streets and neighborhoods. Their patrons, costs, and circumstances are also noted and their historical significance weighed.

The *khiṭaṭ* genre reached its apogee around the middle of the fifteenth century with Taqī al-Dīn Aḥmad al-Maqrīzī′s *Al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār*. Composed between 1417 and 1439/40, this magisterial compendium offers the most elaborate and spirited testimony we have of Islamic Egypt's urban history.[47] In his introduction, al-Maqrīzī describes his book as a ″summary of the

[44]Dorothea Krawulsky, introduction to al-ʻUmarī, *Masālik,* 15–37.

[45]The idea that Egypt had a specific character and was a clearly defined entity is the theme of many Egyptian historical and analytical studies. See especially Jamāl Ḥamdān, *Shakhṣīyat Miṣr: Dirāsah fī ʻAbqarīyat al-Makān* (Cairo, 1980–84), passim. More recent studies include Milād Ḥannā, *The Seven Pillars of the Egyptian Identity* (Cairo, 1994); ʻIzzah ʻAlī ʻIzzat, *Al-Shakhṣīyah al-Miṣrīyah fī al-Amthāl al-Shaʻbīyah* (Cairo, 1997); Muḥammad Nuʻmān Jalāl and Majdī Mutawallī, *Hāwiyat Miṣr* (Cairo, 1997); Ṭalʻat Raḍwān and Fatḥī Raḍwān, *Abʻad al-Shakhṣīyah al-Miṣrīyah: Bayna al-Māḍī wa-al-Ḥāḍir* (Cairo, 1999).

[46]Claude Cahen, ″Khiṭaṭ,″ *The Encyclopaedia of Islam,* 2nd ed., 5:22; Jack A. Crabbs, Jr., *The Writing of History in Nineteenth-Century Egypt* (Detroit, 1984), 115–19.

[47]Muḥammad ʻAbd Allāh ʻInān, *Miṣr al-Islāmīyah wa-Tārīkh al-Khiṭaṭ al-Miṣrīyah* (Cairo, 1969), 52–54.

history of the monuments of Egypt from the earliest times, and of the surviving structures in Fusṭāṭ, and the palaces, buildings, and quarters of al-Qāhirah with short biographies of their patrons and sponsors."[48] This is the most straightforward definition of a *khiṭaṭ* book we have and a rather truthful and precise description of the scope of the book, which briefly covers Egyptian cities other than the two capitals, expands its range when it deals with Fusṭāṭ, but reserves the most detailed treatment for Fatimid al-Qāhirah and its Ayyubid and Mamluk extensions. Al-Maqrīzī also presents a concise statement of the reasons behind the writing of the book, the most prominent of which is his filial affection toward his country, his city, and even his *ḥārah* (neighborhood), Ḥārat al-Burjūwān in the heart of Fatimid al-Qāhirah, which had prompted him since his youth to collect every bit of information on its history he came across. Miṣr (in this context probably meaning both the country and the city) was, according to him, "place of my birth, playground of my mates, nexus of my society and clan, home to my family and public, the bosom where I acquired my wings, and the niche I seek and yearn for."[49]

Al-Maqrīzī's method was influenced by the sociohistorical theories of his revered teacher, the great Ibn Khaldūn, with whom he studied for a long time.[50] The overarching cycle of the rise and fall of dynasties that formed the basis of Ibn Khaldūn's hermeneutical framework in explaining historical process seems also to have informed al-Maqrīzī's thinking and structuring of his *Khiṭaṭ,* albeit indirectly.[51] Al-Maqrīzī seems to have subsumed the Khaldunian structure in his text as a way of classifying and understanding the vast amount of historical, topographic, and architectural material he had collected over the years. He seems to have devised an analogous cycle of prosperity and urban expansion followed by decay and urban contraction to frame his exposition of the fate of Cairo under the successive dynasties that governed Egypt in the Islamic era: the Tulunids, Ikhshidids, Fatimids, Ayyubids, and Qalawunid and Circassian Mamluks. The political fortune of each of these dynasties or families is plotted against the fluctuations of the urban and

[48]Al-Maqrīzī, *Khiṭaṭ,* 1:2–3.

[49]Ibid., 1:2.

[50]Al-Maqrīzī, *Durar al-'Uqūd al-Farīdah fī Tarājim al-A'yān al-Mufīdah,* ed. A. Darwīsh and M. al-Maṣrī (Damascus, 1995), 2:63, 193; idem, *Khiṭaṭ,* 1:50, 2:76, for the passages directly copied from Ibn Khaldūn's dictation, and bearing dates spanning more than ten years.

[51]The influence of Ibn Khaldūn's interpretive framework is evident in a number of short thematic books by al-Maqrīzī, such as his treatise on the calamity of the early fifteenth century, *Ighāthat al-Ummah bi-Kashf al-Ghummah,* and his analysis of the rivalry between the Umayyads and the Abbasids, *Al-Nizā' wa-al-Takhāṣum fīmā bayna Banī Ummayah wa-Banī Hāshim.* See M. Muṣṭafá Ziyādah, "Tārīkh Ḥayāt al-Maqrīzī," in *Dirāsāt 'an al-Maqrīzī: Majmū'at Abḥāth,* ed. M. Ziyādah et al. (Cairo, 1971), 13–22; see also Adel Allouche, *Mamluk Economics: A Study and Translation of al-Maqrīzī's Ighāthah* (Salt Lake City, 1994).

architectural prosperity of Cairo in a way that echoes the Khaldunian cyclical view of human history.[52]

In this recursive scheme, architecture constituted the visual, palpable, and measurable signifier of every stage in the historical cycle of the rise and fall of Cairo. Buildings, streets, the entire city, and the whole country were analyzed and meticulously described by al-Maqrīzī, not only because they embodied the obviously idealized past but also because they narrated through their particular architectural and urban forms the history of Egypt under its various rulers. Al-Maqrīzī's work, under the combined impact of his passionate attachment to his city and the theoretical framework he absorbed from his teacher, is an idiosyncratically melancholy and culturally-oriented architectural and urban history which introduces a new role for architecture as the agency of both personal memories and collective aspirations. Such a powerful evocation of the meaning of architecture will not again be articulated as purposefully as al-Maqrīzī did until Victor Hugo wrote the celebrated chapter "Ceçi Tuera Cela" for his medieval novel, *Notre Dâme de Paris,* published in 1832, to convey the role of architecture as the carrier of meaning for historical cultures.[53]

With al-Maqrīzī's *Khiṭaṭ,* we reach the most elaborate exploration into history writing through the chronicling of buildings and topography that remains an exception in Mamluk historiography. Although the book was copied and abridged numerous times by later Mamluk and Ottoman historians, as evidenced by its more than 185 extant manuscripts, no later Mamluk historian seems to have managed to absorb the method adopted by al-Maqrīzī from Ibn Khaldūn or to capture the mood and intensity displayed in al-Maqrīzī's text. Mamluk historians continued to produce books on urban and architectural history, such as al-Suyūṭī's *Ḥusn al-Muḥāḍarah fī Tārīkh Miṣr wa-al-Qāhirah,* or Abū Ḥāmid al-Qudsī's (and not Ibn Ẓāhirah as the published book asserts)[54] *Al-Faḍā'il al-Bāhirah fī Maḥāsin Miṣr wa-al-Qāhirah,* or Ibn Shāhīn al-Ẓāhirī's *Zubdat Kashf al-Mamālik wa-Bayān al-Ṭuruq wa-al-Masālik*. But although they all show an understanding of the sociocultural significance of architecture, they all revert to older methods or frameworks, such as that of *faḍā'il,* or the *masālik* format, or the classificatory listings of early *khiṭaṭ* books with no underlying historical or cultural interpretations.

---

[52]The most clearly structured cycles are those of Tulunid al-Qaṭā'i' and Fatimid Cairo, al-Maqrīzī, *Khiṭaṭ,* 1:313–26 and 360–65 respectively.

[53]Victor Hugo, "Ceçi Tuera Cela," Livre Cinquième, pt. 2., *Notre Dâme de Paris* (Paris, 1830–32).

[54]As convincingly argued by Haarmann, "Al-Maqrīzī, the Master, and Abū Ḥāmid al-Qudsī, the Disciple," 154–55. Abū Ḥāmid al-Qudsī's predilection for architecture and urbanism characterizes most of his work. See, for instance, his short treatise, *Al-Fawā'id al-Nafīsah al-Bāhirah fī Bayān Ḥukm Shawāri' al-Qāhirah fī Madhāhib al-A'immah al-Arba'ah al-Ẓāhirah,* ed. Amāl al-'Umarī (Cairo, 1988).

Conclusion

This essay has attempted to articulate and contextualize the perception of architecture as gleaned from the Mamluk historical sources. For modern historians and architectural historians dealing with these sources, the findings presented here raise a number of methodological and historiographical questions.[55] The formidable architectural production of the Mamluk period suggests that architecture played a substantial role in the display, articulation, assertion, transfer, and symbolizing of wealth, social status, and perhaps other values as well. Most historians and architectural historians normally begin their analysis with this observation and ″read″ the architecture itself—and more readily its inscriptions—for clues about its significance to its society. They then scout the sources to confirm or further their formulations, glossing over the elementary fact that these sources do not necessarily represent common attitudes toward architecture in the Mamluk society at large. This oversight has led to a variety of sometimes conflicting, sometimes impressionistic interpretations, many of which rest on thin historical conjecture, which has prompted some observers to question the validity of the entire exercise of searching for architectural meaning.[56]

Before using the sources for interpreting the meaning of architecture for Mamluk society, one must first understand their peculiarities and commonalities. For, aside from individual quirks, these sources essentially reflect the collective background, education, and social manipulations of their authors and, to a lesser extent, their readers, both of whom were almost certainly restricted to members of the educated classes. What they really and clearly tell us is that, for this influential and vocal group in Mamluk society, architecture was mainly thought of as a tool of political and personal propaganda and of legal and financial gain, as a source of complaint and employment, and perhaps of entertaining anecdotes. But it was puzzling aesthetically and almost meaningless symbolically. The few exceptional observers—ʻAbd al-Laṭīf al-Baghdādī, Ibn Shaddād, Ibn Faḍl Allāh al-ʻUmarī, al-Maqrīzī, and Abū Ḥāmid al-Qudsī—added primarily sociocultural and historical dimensions to the meaning of architecture, but their dealing with it remained

[55]Some, of course, reject the whole historical method and emphasize the particularity of Islam as a religion in endowing all of its art and architecture with somewhat suprahistorical, spiritual, and esoteric qualities. For a discussion of this demarche with an emphasis on the Mamluk period see Aly Gabr, ″The Traditional Process of the Production of Medieval Muslim Art and Architecture: With Special Reference to the Mamluk Period,″ *Edinburgh Architectural Research* 20 (1993): 133–59.

[56]Bloom, ″Mamluk Art and Architectural History,″ 40, dropped the whole issue by exclaiming, ″It remains to be proven that Mamluk builders gave a hoot about symbolic meaning.″ I am not sure whether he meant ″builders″ specifically or was referring to the entire Mamluk society.

essentially textual, literal, and unarchitectural. Al-Maqrīzī is obviously a special case. Although he too did not proffer an ″architectural″ understanding of architecture as we conceive of it today, his ingenious induction of the elements of the built environment as historical indices in the service of his overall interpretation of the history of Egypt put him in a class by himself. But this methodological innovation is not why he is usually consulted by modern historians. The exceptional historians otherwise did not really break rank with their social support group, the literati, either intellectually or politically, and therefore cannot be seen as representing a fundamentally different take on the meaning of architecture as seen from their vantage point.

This condition colors all modern explanations of Mamluk architecture which perforce have had to go through the prism of the sources before reaching their conclusions. Thus, we know practically nothing about the views of the architects (or master builders), or the general population for that matter, simply because their voices are never heard in the sources.[57] Conversely, the patrons—either members of the ruling Mamluk class or, to a lesser degree, wealthy merchants and ulama—appear to have played a major or defining role in the conception of architecture and its eventual signification and appreciation. They are not only said to have contributed to the design and decoration of the buildings they commissioned,[58] but they are also presented as the ones whose tastes, attitudes, and preferences habitually gave architecture its extra-artistic and extra-functional significance. Therefore, one could argue that the widespread and accepted scholarly assumption of today that Mamluk architecture should be understood primarily through the roles, aspirations, and circumstances of its patrons is predicated on the peculiar structures and limitations of the sources, as well as on the complex relationships that their authors, as individuals but primarily as social groups, had with the Mamluk elite. Elementary as it might seem, this conclusion helps us keep in mind that, although our views on the signification of Mamluk architecture are tilted toward a large role for the Mamluk ruling class, this bias is intrinsically sustained and probably exaggerated by none other than their sometime satisfied, sometime disgruntled interpreters, the Mamluk historians.[59]

---

[57]See my interpretation in ″Architects and Artists in Mamluk Society: The Perspective of the Sources,″ 30–37.

[58]Behrens-Abouseif, ″Muhandis,″ 293–95, reminds us that many early Mamluk patrons, most notably al-Nāṣir Muḥammad, played a direct role in the design of the buildings they sponsored.

[59]I am here obviously pushing Ulrich Haarmann's salient observation about the presumed objectivity of the sources to locate their subjectivity in their collective mindset and their complicated relationships to the Mamluk elite. See Haarmann, ″Al-Maqrīzī, the Master, and Abū Ḥāmid al-Qudsī, the Disciple,″ 150. See my full argument on the problem of representation in Mamluk sources in general in ″Representing the Mamluks in Mamluk Historical Writing.″

HAMPDEN-SYDNEY COLLEGE

Qāytbāy´s Diplomatic Dilemma Concerning the Flight of Cem Sultan (1481–82)

In the spring of 1482, for the second time in as many years, the forces mustered in Anatolia by the Ottoman prince Cem Sultan proved inadequate to wrest the throne from his brother Bayezid. The defeated prince took to flight, eventually finding refuge with the Knights of St. John at Rhodes. His subsequent career as a pawn of European diplomacy, a cudgel with which various Christian potentates could threaten Bayezid into good behavior, is of course of great interest to those studying the dynamics of Ottoman-Latin relations and, indirectly, to the historian of the Mamluks. In the increasingly complex world of Eastern Mediterranean diplomacy, few events were of purely bilateral interest.

It is not Cem´s European career, however, that we shall concern ourselves with in this article, but rather the events of the preceding year. For in the events of fall 1481 through spring 1482 lay what may well have been the final, crowning insult in the steady deterioration of relations between Istanbul and Cairo—the refuge given by the Mamluk sultan Qāytbāy to Cem Sultan after his first defeat.

Contrary to the interpretation of historians such as Gaston Wiet,[1] relations had hardly been cordial in the immediately preceding years. Propinquity always seemed to strain relations, and as far back as the reign of Yıldırım Bayezid I (1389–1402), whose conquests in Anatolia brought the frontiers of the two states ever closer, Cairo had looked with some concern at the activities of their parvenu neighbor. The westward shift of the Ottoman frontier following Tamerlane´s invasion had contributed to a renewal of a distant cordiality, but in the third quarter of the fifteenth century relations were again showing signs of tension. Long gone was the fraternal good feeling that prevailed in the days of Murad II (1421–1451) and Jaqmaq. Although Sultan Īnāl sent a message of pious congratulation to Fâtih Mehmed II (1451–81) on the conquest of Constantinople, that very event can be seen as having marked the beginning of the renewed deterioration; the old power watched warily as Mehmed enjoyed continuing success, and the frontiers of the two states again drifted closer. Their mutual suspicion was played out in a struggle to establish influence over the Dulgadır, one of the last of the semi-independent

[1]See, for example, his ˝Deux princes ottomans à la cour d´Égypte,˝ *Bulletin de l´Institute égyptien* 20 (1938): 138–39.

buffer states. They did for some time cooperate on the matter of the Karamanids, whom each seemed to regard as a nuisance, but even this cooperation had evaporated, and the last Karamanid prince, Kasım Bey, was living in exile in İçel, on the western fringe of Mamluk-controlled Cilicia.[2]

We shall never be able to know with certainty the ultimate target of Mehmed′s final campaign as he headed east into Anatolia in the spring of 1481. Perhaps he was renewing his assault on the Hospitallers at Rhodes, but his biographer Tursun Bey asserts that he had decided finally to deal with the Mamluks, and at least one modern biographer agrees.[3] On May 3, after a short illness, the Conqueror died at Gebze.

The lack of any clear guidance for political succession, let alone a principle of primogeniture in Islamic law, had contributed to chaos and civil war in Islamic polities since the murder of the caliph ʿUthmān in 656, and the similar lack of these principles in the Turkic tradition, combined with the practice of distributing territories to family members as appanage, only served to exacerbate the problem in Turco-Islamic lands. The Ottomans had, of course, established a practice of fratricide, by which the son who, upon the death of his father, first reached the capital and secured the support of key elements in the ruling elite would have all his brothers put to death without delay. The practice can be traced to Bayezid I, who had his brother Yakup murdered following his father′s death at Kossovo; it was, however, Mehmed II who had it codified, making it not only permissible but praiseworthy or even obligatory as a means to avoid political unrest.[4]

The key to survival, then, if you were a royal prince, was to secure the support of the high military and administrative officers, preferably even before the old sultan died, and to bolster that position by being on the spot as quickly as possible after his death. Complicating the matter was that royal princes were routinely sent

---

[2]The exact administrative status of the towns of the western end of Cilicia (Cilicia Trachea or Turk. İçel) at this time is ambiguous, but Ghars al-Dīn Khalīl ibn Sulṭān al-Ẓāhirī (*Zubdat Kashf al-Mamālik wa-Bayān al-Ṭuruq wa-al-Masālik,* ed. P. Ravisse [1893; reprint, Cairo, 1988], 50) states clearly that Mersin and Tarsus at least were dependencies of Aleppo; Popper, however, seems to place Mersin outside Mamluk territory (see *Egypt and Syria under the Circassian Sultans, 1382–1468 A.D.: Systematic Notes to Ibn Taghrî Birdî′s Chronicles of Egypt*, University of California Publications in Semitic Philology, vols. 15–16 [Berkeley, 1955–57], 15:11, 17, 51, map 2, 18).

[3]*The History of Mehmed the Conqueror,* edited and translated by Halil İnalcık and Rhoads Murphey, American Research Institute in Turkey Monograph Series, no. 1 (Minneapolis and Chicago, 1978), 156b; Franz Babinger, *Mehmed the Conqueror and His Time,* translated by Ralph Manheim (Princeton, 1978), 402–3.

[4]See Babinger, *Mehmed the Conqueror*, 65–66, and A. D. Alderson, *The Structure of the Ottoman Dynasty* (Oxford, 1956), 25–26, who says that Mehmed′s ″Law of Fratricide″ was ″supported by references to the Koran and the authority of the ulema.″

out, from adolescence on, to learn the business of government by serving as provincial governors. It was, in consequence, advantageous to have a gubernatorial assignment fairly close to the capital.

Mehmed's death, as we have seen, was rather sudden. Barely fifty, he was apparently well enough to set out on campaign, only to fall ill and die soon after his departure. His two surviving sons, Bayezid and Cem, had been assigned to Amasya and Karaman respectively. Upon the sultan's death, a revolt at Istanbul among the janissaries was capped by the murder of the grand vizier Karamanî Mehmed, a partisan of Cem; the janissaries, who were mostly supporters of Bayezid, clamored for calling their favorite in from Amasya. The acting grand vizier, no doubt eager to avoid the fate of his predecessor, did everything to expedite Bayezid's return; in the meantime, Bayezid's son Korkud was temporarily placed on the throne. With this support, Bayezid arrived and took the throne, probably around 27 Rabīʻ I/26 May; his brother Cem, who had considerable support among the old Turkish element, was still well out of the way, in Karaman.

If Cem's posting had made it impossible to secure his position at Istanbul upon Mehmed's death, it also afforded him a natural base of power from which to contend with his brother for the throne. He had apparently proposed to Bayezid that they divide the empire between them.[5] This proposal Bayezid not unexpectedly rejected, and Cem must have known what to expect, for his father's "fratricide" decree was quite explicit. He was clearly not prepared to calmly await the summons to the capital and the inevitable bowstring, and he seems to have had the support of both Ottoman and Karamanid elements. What happened next has been the subject of much embellishment and controversy. One early account, short on detail but also relatively free of later accretion, is that of the historian Oruç:

> After [Mehmed's death and the rioting of the janissaries], Bayezid took the throne on Saturday, 19 Rabīʻ I 886 [18 May 1481]. He sat for a few days and then sent the Beylerbeg of Rumelia to Sofia.
>
> On his side, Cem Sultan, having seated himself on the throne of Karaman and having listened to the advice of some political intriguers *(bir kaç müfsidler sözüne uyup),* set out with his army. He reached Bursa, seized the treasury there, and settled in. Bayezid heard this news, ordered Gedik Ahmed Paşa in from Apulia [where he had been campaigning], and gathered the army. With the janissaries and the *kapıkulları* he set out from Istanbul, and [the two armies] met at Yenişehir. There was a battle and many men died. In the end Cem Sultan's army fled to Bursa, and Cem himself

---

[5]Halil İnalcık, "Djem," *Encyclopaedia of Islam*, 2nd ed., 2:529.

> went back to Karaman. Sultan Bayezid came after him. Cem abandoned Karaman and fled to Egypt. From there he went to the Hejaz.
>
> Sultan Bayezid brought the army back to Gedik Ahmed, and sent him to Karaman. . . . Gedik Ahmed conquered the section of Karaman of the Dış Varsak.
>
> For his part, Cem Sultan, returning from the Hejaz, again arrived in Karaman. With the agreement of the Varsak and Turgut tribes, and [some] tribal chieftains, he again fought with Sultan Bayezid. Cem was unable to stand up to Bayezid and was defeated. He fled, taking to the sea. He reached the land of the Franks.[6]

While there are the usual slight discrepancies concerning the chronology, the battle of Yenişehir took place on or about 22 Rabīʻ II/20 June.[7] After the battle the victorious Bayezid returned to Istanbul to reassume the throne, which had temporarily been assigned to Korkud as regent until a clear victor should emerge.[8]

Cem, for his part, fled first to Konya, where he gathered up his family, and then fled south. (Indeed, Cem brought his mother with him; she remained at Cairo when he embarked on his further adventures, and died there in 1498, surviving her son by some four years.)[9] Most sources that mention his route at all speak of him going from Konya to Tarsus, which would involve passing either by way of Gülek or Mut-Silifke. The former seems to be suggested by the *Vaki′at-i Sultan Cem*, which speaks of him crossing the Bolkar Range of the Taurus.[10] At Tarsus he was greeted by Kasım Bey, and thence proceeded to Adana and Antioch.

The fugitive prince and the Mamluk sultan now entered into negotiations, probably with the atabeg of Aleppo, Özbeg, acting as an intermediary. Again, establishing a chronology is a bit difficult. The date given by Wiet, April 1481,[11] is obviously wrong. The Damascene Ibn Ṭūlūn reports that by 22 Jumādá I/19 July Cem had received permission the cross the frontier and was already at

Damascus.[12] Ibn Iyās, on the other hand, tells us that only in Jumādá II, that is to say 28 July at the earliest, did word of the battle of Yenişehir and of Cem′s arrival at the frontier even reach Cairo.[13] While this might at first seem an improbably long delay, it is in part corroborated by what we learn from the *Vaki′at,* which reports that Cem reached Aleppo on 22 Jumādá I (19 July), where he met with Özbeg.[14] The latter, we may gather from Ibn Iyās, then reported to Cairo.

It would have been interesting to be privy to the deliberations that summer among Qāytbāy and his amirs, for the situation was delicate, and called for the nicest sort of political judgment. To admit Cem would almost certainly offend Bayezid and provide him, if he wanted one, with a *casus belli.* There had been trouble before over fugitives, and Cem was no paltry rebellious governor or amir, but rather a pretender who was a direct threat to Bayezid′s throne and life. How should such a fugitive, or any fugitive, be treated?

Within the context of contemporary political theory there is some guidance on the matter. In his short treatise on geography and administration, al-Ẓāhirī devotes some space to how the Muslim sovereign should deal with fugitives:

> The sovereign should not allow a fugitive from a neighboring monarch to become an intimate, and should not disclose confidential matters to him, but rather should honor him and keep him at a distance.
>
> If the fugitive comes from a monarch in a state of enmity with the sovereign, one of two possibilities is true: either the fugitive is lacking in loyalty, having not perceived the loyalty he owed to his master; or there is some deception, so that he might obtain information about the kingdom, and communicate it to the monarch he supposedly fled; perhaps, indeed, he will sow dissatisfaction among the troops.
>
> If the fugitive comes from a monarch friendly with the sovereign, he should be kept at a distance out of concern for the sensibilities of the monarch from whom he has fled. If the fugitive has a death sentence hanging over him when he seeks refuge, the words of the commander of the faithful come forward: ″Beware that you not obstruct the punishments of God.″ And if he has committed some [other, lesser] crime, and has asked forgiveness for it, it is fitting

[14] *Vaki′at-i Sultan Cem,* 4.

> that the sovereign should intercede and seek to return him to his master.[15]

The gist of this curious and paradoxical advice is that while it is a mistake for the sovereign to associate too closely with any fugitive, it is the fugitive from a friendly neighbor who perhaps merits favor. Cem certainly had a death sentence hanging over him, but one that derived not from any rigid principle of Holy Law, but from a peculiarity of Ottoman dynastic tradition, codified by Mehmed (and confirmed by *fatwá* from the Ottoman ulama, whose authority the Mamluk sultan was hardly obliged to accept). In such a case, Qāytbāy was under some obligation to intercede on the fugitive′s behalf, to attempt to effect some sort of reconciliation.

In the end it was decided to allow Cem to cross the frontier (which technically he had already done) and to be brought to Cairo ″with a few of his men″ *(fī qalīl min ʻaskarih),*[16] although these ″few″ may have amounted to about one hundred men.[17] Qāytbāy clearly did not want to be seen giving refuge within his frontiers to a whole rebel army, merely, as was fitting, to an Ottoman prince. Meanwhile, preparations were begun at Cairo for Cem′s arrival.

The pace of Cem′s entourage south through Syria was a leisurely one; either Cem himself felt no urgent need to get to his audience with Qāytbāy, or Cairo had arranged that his trip be a slow one to allow time to prepare his reception and, no doubt, to define their policies further. Between his arrival at Aleppo and his arrival at Damascus a full month had elapsed, although in part this delay may be owing to the fact that he and many of his entourage had fallen ill. Arriving in Damascus 25 Jumādá II/21 August, he tarried there at least a week, but probably more. Everywhere he went the local officials greeted him warmly and honored him in various ceremonies. He left Damascus around 3 Rajab/28 August, reaching Jerusalem 13 Rajab/7 September.[18] Traveling thence via Gaza, he finally arrived at Cairo in Shaʻbān (i.e., the last week of September at the earliest).[19]

Even upon his arrival at Cairo Cem did not immediately meet with the sultan. First came more receptions and feasts with the various Mamluk amirs. Finally, in a lavish procession he was led up to the citadel. There in the courtyard he finally met with Qāytbāy. The sultan greeted his guest warmly, and showered him with a variety of gifts, including a lavish robe, but pointedly did not stand when receiving

him. This was a marked breach of protocol, but Qāytbāy clearly had no intention of further antagonizing Bayezid by treating his wayward brother as he would a fellow sovereign.[20] At least at this juncture Qāytbāy seems not to have decided to back Cem′s claims to the Ottoman throne.

Cem was lodged at the house of Ibn Julūd, the *kātib al-mamālīk* (a civilian official, not one of the Mamluk military aristocracy). In the following two months he attended a round of social functions (he was an honored guest when the *kātib al-sirr*—the ″confidential secretary,″ another civilian official—celebrated the circumcision of his sons), culminating with the *ʻīd* celebration marking the end of the Ramaḍān fast (23 November 1481), which he observed with Qāytbāy at the citadel in the company of the great amirs.[21]

Shortly thereafter Cem asked for the sultan′s leave to go on pilgrimage to the Holy Cities. Not only did Qāytbāy give his permission for the trip, but he gave Cem and his entourage a lavish send-off as well, and provided him with funds for his pious journey.[22] Cem′s departure for the Hejaz must actually have been a bit of a relief for Qāytbāy. It gave him and his amirs more time to consider the situation and what needed to be done next with their awkward guest.[23] Now no decision had to be made immediately: Cem was, after all, not a fugitive at all, but rather a Muslim prince whom they received as he passed through their lands in fulfillment of a religious duty. Who was Qāytbāy to interfere with such a mission? The hard decisions could be put off until later.

---

[20]Ibn Iyās, *Badāʼiʻ al-Zuhūr,* 3:185. Ibn Iyās′s account is not quite consistant with that of the *Vaki′at-i Sultan Cem,* where we are told that there was ″handshaking and embracing″ between the two (musafaha ve mu′anaka idüb); but Qāytbāy does seem to stop short of recognizing Cem as a fellow sovereign, referring to him as ″my son″ *(oğlum)* rather than ″my brother.″

[21] Ibn Iyās, *Badāʼiʻ al-Zuhūr,* 3:185–87, 189; *Vaki′at-i Sultan Cem*, 4. On the status of the *kātib al-mamālīk* and the *kātib al-sirr*, see Popper, *Notes to Ibn Taghrî Birdî′s Chronicles*, 15:97, 100.

[22]Ibn Iyās, *Badāʼiʻ al-Zuhūr,* 3:190.

[23]Although Ibn Iyās says somewhat enigmatically that Qāytbāy had ″made up his mind about Cem″ (ʻazima al-sulṭān ʻalá al-Jumjumah). *Badāʼiʻ al-Zuhūr,* 3:187.

Up to this point, there is little disagreement among our sources about what happened, although many of the major Ottoman sources gloss over or fail entirely to mention Cem′s initial stay in Egypt.[24] While in the Hejaz he seems to have devoted himself to the usual activities of a pilgrim.

Shortly after his return from the hajj in Muḥarram 887/February-March 1482 Cem began to make it clear that he was determined to return to Anatolia to make another bid for the throne. This decision he discussed at a meeting, or several meetings, with Qāytbāy and his inner circle.[25] Ibn Iyās is vague about what had brought about this new resolve; he merely tells us that ″Cem grew restless with his stay at Cairo and sought to return to his country to make war on his brother.″[26] On this point the Ottoman sources, with the exception of Oruç and the Anonymous *Tevarih*, tell us more, and both the *Vaki′at* and the broader chronicles are in agreement. The entreaties of some Anatolian beys, especially of Karamanoğlu Kasım Bey from his own place of exile in İçel, seem to have convinced Cem that he had sufficient support for such a gamble.[27]

These audiences were to affect in the most serious fashion Mamluk relations with Bayezid and his successor, and it is, naturally, over the question of what happened as Cem pleaded his case before Qāytbāy that our sources diverge wildly and significantly. The Mamluk sultan had several possible courses of action:

> *a*. he could have Cem seized and returned to Istanbul, where the bowstring almost certainly awaited him. Such an action would surely please Bayezid, and probably would have resulted in a temporary improvement in relations; perhaps it would have forestalled the war that was to come. The long-term effects are

---

[24]Of the two manuscripts of Neşri reproduced in facsimile by Taeschner, one, the cod. Manzel, merely says that Cem went to Egypt and thence towards Mecca; the other, the cod. Manisa, omits mention of an initial visit to Egypt at all (*Ğihannümā, die altosmanische Chronik des Mevlana Meḥemmed Neschri,* ed. Franz Taeschner [Leipzig, 1951], 1:221, 2:312), as does Aşıkpaşazade (*Die altosmanische Chronik des Ašıkpašazade,* ed. Friedrich Giese [Leipzig, 1929], 184). The anonymous Ottoman chronicle (*Die altosmanischen anonymen Chroniken ″Tevārīḫ-i Āl-i ʻOs̱mān,″* ed. and trans. Friedrich Giese [Breslau and Leipzig, 1922–25], 1:116–17, translation 2:154–55) makes no mention at all of what Cem did between being driven off in 1481 and the renewal of his campaign in 1482, while Oruç merely says that Cem ″left Karaman and went to Egypt. From there he reached the Hejaz.″ A detailed account of Cem′s pilgrimage does appear in *Vaki′at-i Sultan Cem*, 4–5.

[25]Ibn Iyās, *Badāʼiʻ al-Zuhūr,* 3:187.

[26]″Wa-fīhi [Muḥarram 887] taqallaqa Jumjumah ibn ʻUthmān min iqāmatihi bi-Miṣr, wa-ṭalaba al-tawajjuh ilá bilādihi li-yuḥāriba akhīhi [*sic*].″ *Badāʼiʻ al-Zuhūr,* 3:192.

[27]*Vaki′at-i Sultan Cem,* 5; Aşıkpaşazade, *Chronik*, 185; Neşri, *Ğihannümā,* 1:121, 2:313. Also see Fisher, *Foreign Relations,* 25–26.

harder to surmise: in the ″what have you done for us lately?″ atmosphere of international politics, favors (though not offenses) are often soon forgotten.

b. he could keep Cem as his more or less permanent guest, under house arrest. This would have given Qāytbāy a tool in future dealings with the Ottomans. The implicit threat of unleashing Cem at the head of an army might have allowed Qāytbāy to get Bayezid to do Cairo′s bidding in affairs of common concern, and later Latin Christendom would, quite effectively, use Cem in such a fashion when he subsequently became their prisoner. But again the short-term benefits are few, and are offset by the potential of bitter retribution once assassination or natural causes deprived them of their pawn.

c. he could step back and let Cem do as he pleased. Such a course would perhaps have been most in keeping with a policy of neutrality. Neutrality, however, is seldom appreciated by either antagonist.

d. he could, as Cem was certainly urging him to do, send back the fugitive with material support to help him claim the throne. This would be the riskiest policy with a very substantial possible reward: an Ottoman sovereign who owed them his throne. But again, as with the first option, the life-expectancy of the memory of such favors is notoriously short.

In short, Cem had placed Qāytbāy in a quandary. No course of action promised long-term rewards, and some presented definite immediate and long-term hazards.

Some modern scholarship tends towards the belief that Qāytbāy threw his backing behind Cem. Qāytbāy, we are told, not only gave Cem 40,000 ducats for expenses, but furnished him as well with several thousand soldiers. He further sent orders to the governors of Aleppo and Damascus that they should offer Cem similar assistance.[28] The modern source of this story would seem to be Louis Thuasne′s biography of Cem.[29]

---

[28]Fisher, *Foreign Relations*, 26; Halil Edhem, ″Hersekoğlu Ahmed Paşa′nın esaretine dair Kahire′de bir kitabe,″ *Tarih-i osmani encümen-i mecmuası* 5 (1914): 204.

[29]″. . . il y fut encouragé par Qaitbay qui voyait avec plaisir les dissensions intestines affaiblir un puissant Etat voisin du sien; aussi engagea-t-il le prétendant à marcher ′où la gloire l′appelait,′ et lui fournait de l′argent et des troupes. Il lui donna quarante mille ducats, deux mille esclaves et quelques places fortes sur les confins du pays de Karamanie. Suivant l′example de leur maître, les gouverneurs de Damas et d′Alep lui remirent chacun dix mille ducats, ainsi qu′une solde à tous ceux qui s′engageaient à servir sous lui.″ *Djem-Sultan: Étude sur la question d′Orient à la fin du XV^e siècle* (Paris, 1892), 51–52.

Such an interpretation seems in part to be corroborated by contemporary Mamluk historians. Qāytbāy, we are told by the Damascene Ibn Ṭūlūn, equipped Cem and gave him material support against his brother, so that he might wrest the throne from him. He later amends this, however, to say that while Qāytbāy bestowed gifts on Cem and gave him what was appropriate for monarchs, it was said that he was actually trying to act as an intermediary of peace between Cem and Bayezid.[30]

While there is little doubt that Thuasne was true to his sources, it is curious that contemporary Ottoman sources—those written in the time of and for Bayezid, sources with little incentive to gloss over the transgressions and provocations of the Mamluks—make no mention of either the meeting or of the supposed aid offered by Qāytbāy. Both Neşri and Aşıkpaşazade merely tell us that, leaving his mother at Cairo, Cem went north to Adana.[31] Oruç, as mentioned above, again makes no mention of Qāytbāy′s attitudes or actions, and simply says that Cem ″came back from Egypt and went again to Karaman.″[32] Those who believe in Qāytbāy′s complicity might argue that the brevity of these works would dictate omission of such detail. But the complicity of the most powerful ruler in the Islamic Eastern Mediterranean could hardly be viewed as trivial and unworthy of comment, especially by those who, as I have said, had every reason to point out outrageous conduct by the Mamluk sultan. There is even an alternate tradition, passed on in some manuscripts of Aşıkpaşazade, which says that when Cem went to Egypt the Mamluk sultan ″showed him no regard,″ and that Bayezid later complained ″How strange that the Egyptian showed no friendship with my father, has begun to show hostility towards me, and above all because of them my brother has become prisoner of the infidel!″[33]

Those who would claim some sort of complicity on Qāytbāy′s part need furthermore to get around the account of Ibn Iyās, the one chronicler who doubtless had first-hand knowledge of the events at court.[34] Not only is Qāytbāy′s conduct blameless in his account, it seems quite laudable:

[30]Ibn Ṭūlūn, *Mufākahat al-Khillān,* 1:47, 53.

[31]Neşri, *Ğihannümā,* 1:222, 2:313; Aşıkpaşazade, *Chronik*, 185.

[32]Oruç, *Jahrbücher*, 130–31; *Oruç Beg tarihi*, 129–30.

[33]″Ol vakıt sultan al-mücahidîn Sultan Mehmed Khan Gazi Allah rahmetine kostu oğlu Bayezid Khan padişah oldu karındaşı Cem Sultan kaçtı Mısır′a vardı Mısır sultanı itibar etmedi Mekke′ye gitti Mısırlı Ka′ba′da oturmağa komadı Mısır′a getirdi Mısır′da dahi komadılar Cem dahi başını aldı kâfir vilayetine girdi. Sultan Bayezid eder: Ne aceb bu Mısırlı babamla dostluk etmediler benimle dahi adavete başladılar hususa ki onların sebebinden karındaşım kâfire esir oldu dedi.″ Aşıkpaşazade, *Chronik*, 225.

[34]Ibn Iyās was in his mid-thirties at the time, and was very close to many high-ranking amirs. See W. Brinner, ″Ibn Iyās,″ in *EI*^{2}, 3:812–13. Even if he was not an eyewitness to the meeting, his sources of information concerning the proceedings should have been very good indeed.

> In [Muḥarram 887/February-March 1482] Cem grew restless of his stay in Cairo, and sought permission [to return] to his own country to war against his brother. Qāytbāy gathered the amirs to consult them on the matter; then he had Cem brought in to speak at length with the amirs. The atabeg Özbeg verbally abused Cem, but Cem would not abandon his wish to return home. After the matter was discussed at great length between Cem and the amirs, Qāytbāy adjourned the meeting, having only grudgingly *(ʿalá karh minhā)* given Cem permission to depart.[35]

From Ibn Iyās's account, not only had Qāytbāy not decided to throw his support behind Cem's bid to claim the Ottoman throne, but he had in fact tried to dissuade him from this course. Nor do his commanders and his advisers show any approval. The only one Ibn Iyās mentions specifically, Özbeg (who would, ironically, play a major role in the coming war against the Ottomans), speaks to the Ottoman pretender with rude impertinence. If the sultan or his advisers had any sympathy with Cem's plans or saw any future advantage in them, Ibn Iyās makes no mention of it.

But is this account credible? Certainly Ibn Iyās was in Cairo and the closest of all our sources to the deliberations that winter. Such proximity, however, might also lead him to fabricate an account favorable to his patrons and associates at court. Such is indeed the habit of medieval chroniclers, and caution must rule our judgments. Ibn Iyās was, at the same time, no more to be suspected of such fiddling than his contemporaries among Ottoman historians. They, in fact, were recording not merely the political history of a state, but rather of a dynasty, and hence not just about their patrons' predecessors, but of the ancestors, and hence had greater incentive to protect the reputations of earlier sultans of the house. The biological discontinuity of the Mamluk regime, particularly in its later years,[36] made it less hazardous for the chronicler to criticize the dead. Far from ignoring or excusing the faults of previous sultans, Ibn Iyās often points to them with relish.[37]

---

[35] *Badāʾiʿ al-Zuhūr,* 3:192.

[36] During the earlier phase of the Mamluk state many of the more prominent sultans were themselves the offspring of sultans; by the fifteenth century, however, this was more the exception than the rule. Since Barqūq, the only sultan of note who was the biological offspring of a sultan was Barqūq's own son Faraj.

[37] It should be noted, however, that Ibn Iyās was writing this section during the reign of Qānṣawh al-Ghawrī (see *Badāʾiʿ al-Zuhūr,* 3:207), who was one of Qāytbāy's mamluks and, one would presume, loyal to the memory of his master. Even so, in a later section Ibn Iyās is highly critical of

Furthermore, the account given in the *Vaki′at-i Sultan Cem,* the author of which was no mere chronicler but a close companion of Cem throughout his life,[38] in large part corroborates that of Ibn Iyās. It relates that at a contentious meeting at which permission was at first refused, Qāytbāy ultimately and grudgingly relents, in effect washing his hands of the matter with the words, ″Someone wishes to come of his own volition, perform the pilgrimage and depart again; how should we prevent him from doing so?″[39]

Setting aside for the moment the question of the reliability of our various sources, we can approach the question of what is likely, knowing what we do of the people involved. Qāytbāy would certainly have liked to see a friend, or at least a debtor, on the Ottoman throne, but such a goal could as easily have been effected by returning the rebel prince to his brother′s justice. None of the sources that claim he helped Cem attribute any credible motive for the preference, although Thuasne speculates that he wished to provoke continued chaos among the Ottomans. The only reason why Cem would be friendlier than Bayezid towards the Mamluks was the strictly after-the-fact one that Qāytbāy had helped him. To assume otherwise would be to propose some sort of trans-Taurine conspiracy between Cem acting as his father′s governor at Karaman and the Mamluks. Such a conspiracy is not wholly out of the question, especially with the mischievous Kasım Bey acting as intermediary, but was it likely? Since no evidence for such a conspiracy exists, we are forced back on the notion that the sole connection between Cem and Qāytbāy would be that Qāytbāy had given Cem help.

Qāytbāy was a skillful politician; he would know that gratitude was a poor basis for international friendship. Nor would he be likely to overestimate Cem′s chances of success, with or without Mamluk support. All in all, the gains to be had if Cem succeeded hardly seem worth the risk of the consequences if he failed—the certain enmity of Bayezid. It would not have been a wise move, and Qāytbāy, as I have pointed out, was no fool.

Qāytbāy would, of course, have given Cem certain provisions. It was only natural to bestow gifts on so august a person, or to provide an impoverished prince with sustenance while he was a guest; and certainly, once Cem had resolved to return to Anatolia, it was not at all inappropriate to give him provisions and an escort for his trip through Syria. But is there any evidence that Qāytbāy, as we are told, furnished Cem with forty thousand ducats and several thousand soldiers, and ordered the governors of Damascus and Aleppo to add to the levy? Such a

al-Ghawrī himself. See Brinner, ″Ibn Iyās,″ 813.

[38]See İnalcık, ″Djem,″ 530.

[39]″Bir kişi kendü ihtiyariyle gelüb hac idüb gine gitmek ister biz ne vechiyle men eyleyelim?″ *Vaki′at-i Sultan Cem*, 5.

commitment to direct involvement would have been a bald act of war. The money, of course, might leave no trail, but if several thousand Mamluks accompanied Cem into Ottoman territory, what became of them? There is no mention, anywhere, of Mamluk survivors from Cem′s subsequent defeat straggling back to Syria, nor mention in any Ottoman sources of Mamluk prisoners in Ottoman hands.[40]

But even if Qāytbāy′s culpability rested only in washing his hands of the affair and allowing Cem to do as he would, this was bad enough. Ibn Iyās says that Qāytbāy, when he heard of the failure of Cem′s second expedition, regretted having let him go in the first place, and the same author later adds that Cem′s departure was ″a capital mistake.″[41] Letting Cem loose, and perhaps even not preventing him, on his way north to Anatolia, from recruiting disaffected Turcomans to his cause, was bound to offend the Ottoman sultan. The matter was made all the more serious when Cem reached Adana. There, we are told by our Ottoman sources, he met with Karamanoğlu Kasım Bey and, shortly later, they were joined by Mehmed Bey, the rebellious *sancakbey* of Ankara.[42] Adana, although nominally the realm of the Ramazanoğulları, was clearly considered Mamluk territory: al-Ẓāhirī lists it as a dependency of Aleppo.[43] There is no evidence that Qāytbāy, or his governor of Aleppo, did anything to stop the conspirators from using Mamluk territory as a staging ground for their campaign against Bayezid. Even if Qāytbāy′s actions can be portrayed as having conformed to some standard of accepted practice, they were, by omission if not by commission, not well-considered. No partisan of any cause appreciates neutrality.

Such was Cem′s subsequent career, moreover, that Bayezid would hardly have been well-disposed towards anyone that had facilitated his brother′s return. Not that Cem had much of a chance of winning on the field: he had little support at court, and his combined army of Turcomans had little chance against his brother′s forces. Having crossed back into Anatolia in the spring of 1482, he was again beaten. He fled now, not back to Egypt, but to the Knights of St. John of the Hospital at Rhodes.

We can only imagine the delight of the Grand Master of the Order when Bayezid arrived. Only two years earlier the Hospitallers had been beleaguered in their island fortress by Mehmed′s troops. Here now was a tool which, if used properly, would ensure their security, and few scruples about offending Bayezid

---

[40]Ibn Iyās regularly reports the return of survivors of military disasters. See, for example, *Badā'i' al-Zuhūr,* 2:241–43, 341, 3:34–36.

[41]Ibid., 3:195–96.

[42]Aşıkpaşazade, *Chronik*, 185; Neşri, *Ğihannümā,* 1:122, 2:313. The *Vaki′at* makes the offense even more serious—Mehmed Bey and Cem met initially not at Adana, but at Aleppo, and thence proceeded to Adana and their meeting with Kasım Bey.

[43]Al-Ẓāhirī, *Zubdah,* 50–51.

restrained them. They did allow themselves to be convinced—for a price—by Bayezid′s envoys to remove Cem to Europe. There he was passed among European princes, the carefully-watched house guest of several courts, until his death in 1495. For Christendom, he was a guarantee of Bayezid′s good behavior; as long as the threat existed that he could be put at the head of an army and sent east to claim his throne, Bayezid dared not raise his hand against the West. For the next twelve years the Ottoman advance against Christendom was halted.[44] With any serious campaigning in Europe precluded, Bayezid had not only the time but now the predisposition to direct his attention against the Mamluks.

---

[44]It is in fact the contention of many historians, most notably Fisher (*Foreign Relations*, 27–35), that Cem′s European exile was the primary factor in determining Bayezid′s relations with Western Christendom. Bayezid was, certainly, accommodating until after 1495.

Book Reviews

FĀRIS AḤMAD AL-'ALĀWĪ, *'Ā'ishah al-Bā'ūnīyah al-Dimashqīyah* (Damascus: Dār Mu'add lil-Ṭibā'ah wa-al-Nashr wa-al-Tawzī', 1994). Pp. 230.

REVIEWED BY TH. EMIL HOMERIN, University of Rochester

'Ā'ishah al-Bā'ūnīyah is one of the best kept secrets in the history of Arabic literature. Born into a leading Damascene family of judges, Sufis, and litterateurs during the Mamluk era, 'Ā'ishah received an excellent education, specializing in Sufism and poetry. During her lifetime she exchanged poems with members of the scholarly and political elite, and even had an audience with the Mamluk sultan al-Ghawrī shortly before her death in 922/1516. More amazing still is the fact that 'Ā'ishah al-Bā'ūnīyah is one of the few women in pre-modern Islamic history to have written a substantial amount of Arabic poetry and prose. Among her surviving works in manuscript are a Sufi manual, a poetic rendition of a work praising the Prophet by al-Suyūṭī, and two collections of her own poems, including a *takhmīs* of al-Būsīrī's *Al-Burdah*. This latter work probably inspired her two most famous works in praise of the Prophet, her *Al-Mawrid al-Ahná fī al-Mawlid al-Asná,* and her *badī'īyah,* popularly known as *Al-Fatḥ al-Mubīn fī Madḥ al-Amīn,* both of which were published in the late nineteenth and early twentieth centuries.

Since that time, however, 'Ā'ishah al-Bā'ūnīyah has received little scholarly attention. A few references have been made to her in works of Arab bibliography, while W. A. S. Khalidi gave her a concise entry in the second edition of the *Encyclopaedia of Islam* (1:1109–10). A short notice, with a few of her poems, may also be found in 'Umar Farūkh's *Tārīkh al-Adab al-'Arabī* (1984; 3:926–30), though she is absent from the recently published *Encyclopedia of Arabic Literature* (1998). Nevertheless, over the years, scholars working in Damascus, especially 'Abd Allāh Mukhliṣ (1941), and Mājid al-Dhahabī and Ṣalāḥ al-Khiyamī (1981), have published a handful of articles calling for renewed attention to her life and writings. Based in large part on their work, Fāris Aḥmad al-'Alāwī has published a new study of the poet, together with editions of her *Al-Mawrid al-Ahná fī al-Mawlid al-Asná* (with the editorial assistance of Lu'ī 'Abd al-Ḥakīm Ghannām) and her *Al-Fatḥ al-Mubīn fī Madḥ al-Amīn.*

Al-'Alāwī's study of the life 'Ā'ishah al-Bā'ūnīyah and her immediate ancestors (11–68) consists largely of quotations and paraphrases of Mamluk chroniclers and biographers, including al-Sakhāwī, Ibn al-Ḥanbalī al-Ḥalabī, and al-Ghazzī. He cites some of her poems found in these sources, pointing out their musical qualities

and ʻĀʼishah′s obvious tendencies toward Sufism and love of the Prophet. Al-ʻAlāwī also notes ʻĀʼishah′s admiration of al-Būsīrī′s *Al-Burdah*, but he fails to notice Ibn al-Fāriḍ′s influence which looms large in much of her verse. While this material may serve as a basis for further more detailed research, al-ʻAlāwī′s review of ʻĀʼishah al-Bāʼūnīyah′s writings is incomplete and, at times, inaccurate and misleading. For instance, he is unaware of the existence of her Sufi manual or the location of her work *Durar al-Ghāʼiṣ,* based on al-Suyūṭī, though both may be found in Cairo′s Dār al-Kutub. Worse still, al-ʻAlāwī has confused ʻĀʼishah al-Bāʼūnīyah′s two separate *dīwān*s as one work. In 1981, Mājid al-Dhahabī and Ṣalāḥ al-Khiyamī described an autographed copy of her *dīwān* in Damascus dating from 921/1515, and containing six poems in praise of Muḥammad, including a *takhmīs* of al-Būsīrī′s *Al-Burdah,* and her famous *badīʻīyah* with her commentary on it. Al-ʻAlāwī calls the work *Fayḍ al-Faḍl,* and adds that there are two additional manuscripts of the work in Cairo′s Dār al-Kutub. However, the Damascus manuscript does not bear this title, and had al-ʻAlāwī actually seen the Cairo manuscripts he would have learned that they are a totally separate and earlier collection of ʻĀʼishah′s Sufi verse.

Turning to al-ʻAlāwī′s editions of her two poems, one finds a useful introduction to the history of celebrating the Prophet′s birthday, an overview of the *mawlid al-nabī* genre of prose and poetry publicly recited on that occasion, and a long list of those who composed on the subject. This is followed by a short discussion and outline of the contents of the *Al-Mawrid al-Ahná* (65–113). Al-ʻAlāwī notes that he has added sections and sub-headings to the work, and then concludes with the shocking revelation that, because of the difficulty of acquiring a copy of the Cairo manuscript autographed by the author, he has chosen to re-publish the 1301/1883 Damascus edition (115–79)! The situation is the same for his edition of her *Al-Fatḥ al-Mubīn*, for which al-ʻAlāwī used a 1304/1914 Cairo edition published on the margins of Ibn Ḥijjah′s *Khizānat al-Adab,* instead of the autographed Damascus manuscript (197–212). Al-ʻAlāwī does provide a useful review of the *badīʻīyah* genre and its major practitioners (183–95), and his notes to both texts are generally helpful, though typographical errors are frequent throughout the book (but causing more irritation than confusion).

In short, al-ʻAlāwī′s *ʻĀʼishah al-Bāʼūnīyah al-Dimashqīyah* may serve as a basic introduction to the life and work of this extraordinary woman and litterateur of the Mamluk period, while making two of her works more accessible. Yet, had al-ʻAlāwī actually read and accurately edited some of the valuable manuscript sources, he could have made a far more significant and lasting contribution to the study of Arabic literature.

Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras, II: Proceedings of the 4th and 5th International Colloquium organized at the Katholieke Universiteit Leuven in May 1995 and 1996. Edited by U. Vermeulen and D. De Smet (Leuven, Uitgeverij Peeters, 1998). Pp. 311.

REVIEWED BY PAUL E. WALKER, The University of Chicago

Similar to the earlier volume, *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras: Proceeding of the 1st, 2nd and 3rd International Colloquium organized at the Katholieke Univeriteit Leuven in May 1992, 1993 and 1994* (Leuven, 1995), issued by the same two editors (and reviewed by Stephen Humphreys in *MSR* II [1998]: 245–48), this is a collection of papers from later meetings of the International Colloquium centered at the Catholic University of Leuven (Louvain). Those assembled in this instance, sixteen in all (ten in French, three each in English and German), again cover a wide variety of, for the most part, unrelated topics in the history of Egypt and Syria for the Fatimid, Ayyubid, and Mamluk periods. By far the greatest portion deal with the Fatimids (eight out of sixteen). A few that ostensibly cover later periods have material on the Fatimids, although at the same time several from the Fatimid section carry some importance beyond that era alone.

One prime example is Heinz Halm's study of all the data about the Nubian *baqṭ* (the pact according to which Nubia was allowed, though continuing to be Christian, to enter into a kind of treaty relationship with the Muslims). Halm's purpose is to trace carefully the exact chronology of the provisions, set by various sources at different periods, which comprise this highly unusual treaty of mutual obligation. Thus, much of what he discusses concerns events prior to the Fatimids and concludes after them, with the eventual termination of Nubian independence and its Islamization under the Mamluks, the *baqṭ* thus rendered obsolete and meaningless.

Still, Mamluk scholarship is poorly represented overall, with only four short papers: two by Vermeulen (one on the caliphal *bay'ah* as given by al-Qalqashandī and another on correspondence of the Mamluk Faraj and the Marinid Abū Sa'īd during the brief stay of Tamerlane in Syria); one by J. Dobrowolski (on the funerary complex of Amir Kabīr Qurqumas in Cairo); and one by M. Van Raemdonck (on a Mamluk helmet now in the Musées royaux d'Art et d'Histoire in Brussels). The Mamluk section of the volume occupies only 46 pages as compared to 73 for the Ayyubids and 176 for the Fatimids. And it seems necessary to admit that the papers dealing with the earlier rather than later periods have greater special interest and value.

For Fatimid history all the papers are quite useful, including among them M. Brett on the long-term implications of the powerful vizier al-Yāzūrī's fall from grace and execution, which led to sixteen consecutive years of chaos and decline; D. De Smet on the transfer of the head of Ḥusayn from Palestine to Cairo, as well as a second article on the evidence for the possibility of a Druze cult of the Golden Calf; Halm's discovery of important new information about the death of Hamzah, the founder of the Druze religion; J. Richard on Fatimid maritime bases; P. Smoor on Fatimid court poetry; and J. Van Reeth's reexamination of the problem of the reputed fraud practiced in the Holy Sepulchre and that church′s destruction by al-Ḥākim.

There are four papers in the Ayyubid section, again each of interest: A.-M. Eddé on the geographical and ethnic origin of the populace of Aleppo in the thirteenth century (information made somewhat less essential by the subsequent publication of her 1999 book *La Principauté ayyoubide d'Alep*); L. Korn on the possible political implication of Saladin's building programs in Cairo, Damascus, and Jerusalem respectively; J. Thiry on the decline of North Africa over the eleventh and twelfth centuries and its causes (many aspects of the issue discussed here concern the Fatimids more than the Ayyubids), and Van Reeth on the evidence surrounding, and the meaning of, the bark kept in the mausoleum of al-Shāfiʻī.

For the most part these are papers of high quality. Each offers a serious contribution and individually they will have to be consulted by anyone working in the specific area covered.

The Mamluks in Egyptian Politics and Society, edited by Thomas Philipp and Ulrich Haarmann (Cambridge: Cambridge University Press, 1998). Pp. xiv, 306.

Reviewed by W. W. Clifford, The University of Chicago

The eighteen articles contained herein began as symposium papers delivered at the Werner Reimers Foundation in Bad Homburg in December of 1994. Though characterized by its organizers, Thomas Philipp and Ulrich Haarmann, as a ″small conference,″ the congressional achievement was nevertheless big, presenting a wide range of insights into two principal avenues of current scholarship on *mamlūkīyah:* the structure of elite politics and the cultural divide between ruler and ruled in both Classical (1250–1517) and Neo-Mamluk (1517–1811) Syro-Egypt. While the work is a self-described attempt at forming generally ″an impression of

the ′state of the art′ of Mamluk studies,″ its primary mission seems to be to account for the ″surprisingly durable″ nature of the Mamluk social system itself.

Were the foundations of this durability principally materialistic or ideological? Amalia Levanoni, in a very serviceable summary [″Rank-and-file Mamluks versus amirs: new norms in the Mamluk military institution″] of her earlier monograph, suggests that changes in the economic circumstances of the ″rank-and-file″ resulted in a proletarianization of Mamluk military culture. She finds the cause of this systemic revolution in the social pathology principally of one individual, Sultan al-Nāṣir Muḥammad, who during his third reign introduced ″rapid advancement and easy access to material plenty.″ The proliferation of these ex-officio paramilitary pressure groups accelerated the anarchy of the fifteenth century.

Ulrich Haarmann′s contribution [″Joseph′s law—the careers and activities of Mamluk descendants before the Ottoman conquest of Egypt″], which represents the third and final revision of a signal paper originally delivered by him at the Seventh Oxford-Pennsylvania History Symposium in Oxford in 1977, argues against such cultural materialism, doubting that the perpetuation of ″the system of Joseph″—inducting aliens into military servitude in Egypt—produced a corresponding cultural apartheid between the ″foreign ruling nobility″ and their ″native subjects.″ Mamluk society was too permeable and dynamic, culturally integrated in part by its own hybridized social spin-offs, the non-Mamluk descendants of the Mamluks—the *awlād al-nās*—who mediated the social process in late medieval Syro-Egypt through their intercultural intellectual, paramilitary, and economic activity. Haarmann delivers a significant collateral blow to David Ayalon′s notion of Mamluk rule by a ″one-generation aristocracy,″ characterizing it as ″a social *absurdum*″ (p. 84). He finds in the fourteenth century many of the *awlād al-nās* in the upper echelons not just of the *ḥalqah* reserve but the regular army as well. So many, in fact, that Haarmann suggests they actually formed for a time their own ″subsidiary . . . military aristocracy″ (p. 66).

Donald S. Richards attempts to split the difference, proposing in his piece [″Mamluk amirs and their families and households″] that the Mamluk/*mamlūk* system was laced together by the group solidarity embedded in the various types of personal relationships, those of a ″contractual nature,″ those that were ″consanguineal″ and ″affinitive,″ as well as mimetic ones like the non-biological ″brotherhood″ of *ukhūwah.* All relational types were ultimately affected, however, by the material circumstance of land-holding. Whether in rural *iqṭāʻāt* or urban development property, these families and households relied on rents drawn from agricultural plots, houses, shops, and markets. The conversion of public holdings into private estates and then, if possible, into charitable trusts *(awqāf)* proved a lucrative strategy in the fourteenth century for ensuring familial integrity. This materialist high tide was ″interrupted″ by upheavals in the fifteenth century that

led to the decay, confiscation, and dissolution of property, particularly family *awqāf*. Richards gives the impression that these various *mamlūk* relational types were coextensive during the Classical period. But what about the balance of social power among them? Richards suggests that it was amidst the upheavals of the fifteenth century that the passing of ″power and status″ visibly altered. The ″collective ethos of the *mamlūks*″ declined and ″the recognition of kinship ties . . . intensified″ (p. 33).

Richards′ focus on the role of the household in the Classical period is reproduced in the several contributions to Neo-Mamluk history, though they disagree to what extent this similarity of form represented an actual cultural revival of Mamluk usages. Like Richards, Thomas Philipp ponders in his article [″Personal loyalty and political power of the Mamluks in the eighteenth century″] the cultural implications of different forms of social solidarity among the politicking post-Classical Mamluks. Multiple, horizontal bonds among *khushdāsh*s were not as strong as vertical, affective ones between sons and Mamluks of one common, immediate master. The indecisiveness of horizontal loyalties in the Neo-Mamluk period may help to explain the rash of *khusdāsh*-related assassinations in the eighteenth century, which became under ʻAlī Bey al-Kabīr an ″acceptable political ploy.″ The Mamluk system, which should perhaps have ended in 1786, remained perversely durable despite such practices. Daniel Crecelius in his article [″The Mamluk beylicate of Egypt in the last decades before its destruction by Muḥammad ʻAlī Pasha in 1811″] sees new recruitment patterns aimed at rebuilding Neo-Mamluk factions as similarly costly. In an argument reminiscent of Levanoni′s about the breakdown of Mamluk political order, Crecelius points out that the beys ″advanced their Mamluks more quickly than normal, took shortcuts in their training.″ Whereas Levanoni sees the Mamluk system falling prey to ambitious ″rank-and-file″ Mamluks in the fourteenth century, Crecelius argues that the Neo-Mamluk beylicate, ″which opened their households to recruits from new territories and new ethnic backgrounds,″ fell prey in its turn to restive ″mercenaries″ in the eighteenth century.

Michael Winter argues in his piece [″The re-emergence of the Mamluks following the Ottoman conquest″] in favor of a kind of cultural re-emergence in the post-Classical Mamluk period through the military household, though he characterizes it as the merging of separate traditions among Circassian Mamluk amirs and Ottoman beys by the eighteenth century into a common ″neo-Mamluk culture.″

Jane Hathaway in her contribution [″′Mamluk households′ and ′Mamluk factions′ in Ottoman Egypt: a reconsideration″] recognizes, too, the importance of the military household as a source of social solidarity in Ottoman Egypt but, unlike Philipp and Winters, is unsure to what extent it reproduced culturally ″comparable structures in the Mamluk sultanate.″ Like Richards, Hathaway sees diversity in

household forms, everything ″from relatively informal barracks coalitions to highly articulated residence-based conglomerates.″ While these households were perhaps ″neither wholly Ottoman nor wholly Mamluk,″ she feels they represented the ″multifaceted political culture unique to the Ottoman period.″ It is interesting to see that this social solidarity apparently also had legs. While Mamluk households and families had directly controlled the countryside in their own right, efflorescent neo-Mamluk military households, as they drifted from the political center to the provincial periphery, also served directly as ″prototypes″ for local *aʻyān* households, allowing them to better dominate their own regions in the eighteenth and nineteenth centuries. In this way, ″the household served as a nexus between centre and province″ to a degree possibly it hadn′t in the Classical Mamluk period.

Some cultural continuation from the Classical to the Neo-Mamluk periods can be detected. According to Nelly Hanna [″Cultural life in Mamluk households (late Ottoman period)″], inventories of the private library holdings in military households reveal that Neo-Mamluk beys, like Classical Mamluk amirs, ″were not completely ignorant of their cultural environment,″ that they, indeed, attained a level of intellectual and cultural sophistication not often associated with men engaged constantly in political violence. Hanna observes cultural continuities in terms of the numbers of books in Turkish, of orthodox religious titles as well as less orthodox Sufi literature, and of scientific titles (medical/veterinary, astronomical, alchemical). These beys, while not involved in ″intellectual production,″ did preserve the ″classical traditions. ″ More than that, they became a veritable source, like the ulama, for ″cultural transmission″ of those traditions by opening their private libraries to the public.

Contributors generally agree that both Mamluk and Neo-Mamluk military elites expressed social solidarity through segmentation into discrete and independent military households. They vary, however, on the degree to which the continuation of this Mamluk social form into the Neo-Mamluk period represented revival of Classical Mamluk cultural usage. The articles on military household/familial dynamics, which compose about half the volume, are clearly its core. But one can note approvingly the excellence of other related scholarship contained herein. Both Jonathan Berkey [″The Mamluks as Muslims: the military elite and the construction of Islam in medieval Egypt″] and Ulrich Haarmann [″The late triumph of the Persian bow: critical voices on the Mamluk monopoly on weaponry″], for instance, offer up thought-provoking discussion of the problems surrounding Mamluk cultural innovation in the Classical period. For the Neo-Mamluk period, Doris Behrens-Abouseif [″Patterns of urban patronage in Cairo: a comparison between the Mamluk and the Ottoman periods″] and André Raymond [″The residential districts of Cairo′s elite in the Mamluk and Ottoman periods (fourteenth to eighteenth centuries″] reveal many continuities in the urban cultural landscape

of Cairo. Behrens-Abouseif has determined, for instance, that many of the commercial and *waqf*-designated properties in the Ottoman period were "already in existence during Mamluk times and often even belonged to Mamluk *waqfs*." Both ages supported religious construction, though Mamluk educational institutions gave way to neighborhood mosques and *sabīl-maktab*s in the Ottoman period. It was principally the lack of "imperial vision" in the Ottoman period that ensured that "the Mamluk heritage was maintained and preserved until modern times." Raymond for his part finds "a striking continuity" from the thirteenth through seventeenth centuries in the urban distribution of elite residential areas, especially their continued domination of terrain from al-Qāhirah into the southern suburbs.

While Raymond's article showcases sophisticated technical analysis of residential patterns in Cairo, the volume as a whole reveals no new critical method in the interpretation of Mamluk social history akin, say, to Michael Chamberlain's social theoretical interpretation of Mamluk Damascus as a knowledge-based society. The collection is a superb glance back at the traditional social analysis that has brought the field of Mamluk Studies to the forefront of Islamic history but fails to anticipate the interpretive method of the "new" social history beginning to poke its nose under the tent.

Dīwān al-Muwashshaḥāt al-Mamlūkīyah fī Miṣr wa-al-Shām. al-Dawlah al-Ūlá (648–784 H./1250–1382 M.). Edited by Aḥmad Muḥammad ʻAṭā (Cairo: Maktabat al-Adab, 1999). Pp. 440.

Reviewed by Mustapha Kamal, The University of Chicago

Initially the *muwashshaḥāt* (or strophic poetry) was unique to the poetry cultivated by Andalusian poets. Because of its form and meters, the *muwashshaḥāt* has caused many debates among scholars; until now, there is no agreement as to whether the genre is derived from classical Arabic poetry (especially Abbasid poetry) or adapted from a native Iberian tradition preserved continuously since Roman times.[1] Whether or not one can scan the *muwashshaḥāt* by applying the canonical meters discovered by al-Khalīl ibn Aḥmad al-Farāhīdī (d. 174/791) is disputed by scholars, and the way in which the *muwashshaḥah* genre made its way into Egypt and the Levant has yet to be fully explained. But we do know that *muwashshaḥāt* were widely cultivated under the Ayyubids.

[1]Otto Zwartjes, *Love Songs From al-Andalus* (Leiden, 1997), 5–171.

One of the most important theorists of the genre in pre-modern times was Ibn Sanā' al-Mulk (d. 609/1212) and, as his *Dār al-Ṭirāz fī 'Amal al-Muwashshaḥāt* proves, he studied both their meter and form extensively. For Ibn Sanā' al-Mulk, a *muwashshaḥah* is a series of words strung together in order to fit a special meter. If a *muwashshaḥah* is composed of six *aqfāl* and five *ajzā',* i.e., if it begins with a refrain, it is considered complete; but if it contains only five *aqfāl* and five *ajzā',* i.e., if it does not begin with a refrain, it is called acephalous or bald.

While the writings of Ibn Sanā' al-Mulk and others did much to foster an appreciation of this poetry, there has remained a gap in our knowledge of its later development under the Mamluks as well as a persistent prejudice against Mamluk literati and their contributions to Arabic literature in general. 'Aṭā's book is therefore a welcome addition to the scholarly literature. In spite of the author's announced intention to collect the Mamluk *muwashshaḥāt* in two volumes, only a single volume has appeared to date. It consists of three parts: the first records the output of Egyptian poets, the second that of Syrian poets, and the third of poets who visited Egypt between 648/1250 and 784/1382.

This book goes a long way toward addressing the prejudices about Mamluk literary culture which are still widespread among historians of Arabic literature, even among Arab scholars, in spite of the efforts of Muḥammad Kāmil al-Fiqī, Shawqī Dayf, 'Umar Mūsá Bāshā, Muḥammad Zaghlūl Sallām, Bakrī Shaykh Amīn, 'Abduh 'Abd al-'Azīz Qulqaylah, and others.[2] Mainstream historians of Arabic literature still describe Mamluk poetry as "decadent, pallid, worn out, and lacking authenticity."[3]

In this compilation, one is struck by the overwhelming number of vernacular *kharjah*s (pp. 73, 76, 106, 161, 172, 230, 236, 255, 290, 340, and 350), and the absence of non-Arabic ones, except for the following (p. 350):

Halakī   in qāla: yuq
Yā insān ṭurkhān sinī   yughmā sakam sanī.
[What if he said: "No"?
O you, magnificent one, as you're my booty, I'll sodomize you
time and again.]

The way in which these *kharjah*s are located in the *muwashshaḥāt* contradicts al-Ḥillī's theory equating *kharjah* and *qufl*.

[2]See Th. Emil Homerin's important article "Reflections on Arabic Poetry in the Mamluk Age" in *Mamluk Studies Review* 1 (1997): 63–85.

[3]Ibid., 71.

Reading this collection of *muwashshaḥāt*, we can only admire the skill and poetic versatility of two towering figures: al-Maḥḥār (d. 711/1311) and al-Ṣafadī (696–764/1297–1363). Al-Ṣafadī excels when he composes two *muwashshaḥāt.* In the first one, the hemistichs of every *bayt* (strophe) rhyme with one another (pp. 329–30); then to every line in this *muwashshaḥah,* al-Ṣafadī adds another hemistich. The new rhyme-words rhyme with one another. Thus, the rhyme-words in the first *bayt* of the first *muwashshaḥah* read as follows: *mālī, ḥālī, qāli*, and *thānī.* In the corresponding strophe of the second *muwashshaḥah,* the last two hemistichs of the first *bayt* read as follows: *mālī/bilā manāmi*, *ḥālī/bi-al-ibtisāmi*, *qāli/khawfa al-ti'āmi*, and *thānī/ba'da al-anāmi.*

With al-Ṣafadī, we see a tendency that will become a major trend in the poetic renaissance that al-Bārūdī (d. 1322/1904) and Shawqī (d. 1350/1932) spearheaded in the last decades of the nineteenth century, i.e., the poetic emulation of great texts. Al-Ṣafadī emulates al-Maḥḥār's *muwashshaḥah* (p. 237) whose opening line is:

> Mā nāḥat al-wurqu fī-al-ghūṣūnī illā   hājat 'alá taghrīdihā law'atu al-ḥazīni
> [The turtledoves cooed on the branches causing the sorrows of the lovelorn one to flare up]

in his own *muwashshaḥah* (p. 275) which opens as follows:

> Mā tanqaḍī law'atu al-ḥazīnī aṣlan   wa-law salā illā li-ḍarbin min al-junūni
> [The passion of the lovelorn one cannot come to an end, even though he forgets his sorrow, unless he has lost his mind].

Al-Maḥḥār himself had emulated Aydamur al-Maḥyawī's *muwashshaḥah* (p. 238 n.):

> Bāta wa-summāruhu al-nujūmu sāhir   fa-man turá 'allamaki al-sahar yā jufūn
> [The stars were his only companions,
> who then taught you sleeplessness, O my eyes?]

This emulation is manifest especially in *muwashshaḥāt* whose rhyme scheme is particularly complex. An instance is given by al-Maḥḥār (p. 186):

Ariqtu li-barqin lāḥa min dūni ḥājirī fa-ajrá dumū'ī min shu'ūni maḥājirī
[I lost sleep over lightning that flashed between my (distant])beloved and me, causing my tears to flow)]

Another tour de force is al-Ṣafadī's use of paronomasia (Ar. *jinās*). For example, the following *bayt* (p. 276):

Fī rīqihi ladhdhatu al-sulāfi lā fī ka'si al-mudām
Ra'aytu lī minhu fī irtishāfi shāfī min al-saqām
Aqūlu wa-al-ṣamtu fī i'tikāfi kāfī 'inda al-malām:
[His lips taste better than real wine
In them, I found cure to my disease.
And I say, when silence is the best answer to reproaches:]

In these three lines, the poet makes the three hemistichs rhyme with each other both horizontally and vertically. First he makes the first and middle hemistichs of each line rhyme with each other horizontally: *al-sulāfi* and *lā fī; irtishāfi* and *shāfī; i'tikāfi* and *kāfī*. Then he makes the first hemistichs of the lines rhyme vertically: *al-sulāfi, irtishāfi* and *i'tikāfi;* then the middle hemistichs rhyme: *lā fī,* s*hāfī,* and *kāfī*. Then, he makes the last hemistichs rhyme: a*l-mudām, al-saqām,* and *al-malām*. This in itself would be considered a tour de force, but al-Ṣafadī takes the challenge a little further. In each line he creates a paronomasia between the rhyme-word of the first hemistich and the only word composing the second hemistich, e.g., *al-sulāfi* and *lā fī; irtishāfi* and *shāfī;* and *i'tikāfi* and *kāfī*—as if the second word were coined by amputating a part of its predecessor.

In spite of its undeniable contribution to Mamluk literary studies, 'Aṭā's book suffers from a few imperfections. In his very short preface, he mentions the Khalilian meter of each *muwashhaḥah*. The truth is that al-Khalīl's system does not apply to most of the *muwashshaḥāt* recorded in this collection. It suffices to look at the *muwashshaḥāt* on pages 195 and 198. 'Aṭā has a moralistic approach to *kharjah*s. Most of the time, he comments on the wanton meaning of the closing line(s) with the following sentence: "Kharjah kāshifah mājinah fāḥishah fāḍihah" [revealing, brazen, obscene, and infamous *kharjah*]. 'Aṭā considers that al-Ṣafadī's sixth *muwashshaḥah* (p. 288) is homoerotic, whereas the ending strophe clearly mentions an adulterous woman complaining about her jealous husband. The book is full of typographical errors and incorrect vowelling. Sometimes the mistake is due to an incorrect reading of the line. For example, 'Aṭā reads the following line (#33, p. 348):

Wa-ghadatin qad sabāhā   man ḥusnuhu al-badra ḍāhá
[A young woman was conquered by him whose beauty outshines the moon]

as

Wa-ghadatin qad sabāhā   min ḥusnihi al-badru ḍāhī.

This reading does not make sense and breaks the rhyme between *sabāhā* and *ḍāhá*.

The present book has partially filled a serious gap in Mamluk literary studies. It complements Sayyid Muṣṭafá Ghāzī´s *Dīwān al-Muwashshaḥāt al-Andalūsīyah* (1979).

AḤMAD ṢUBḤĪ MANṢŪR, *Muqaddimat Ibn Khaldūn: Dirāsah Uṣūlīyah Tārīkhīyah* (Cairo, 1998). Pp. 508.

REVIEWED BY OTFRIED WEINTRITT, Cologne University

This rather lengthy book comprises several parts that together form an intellectual and social biography of Ibn Khaldūn. It begins with a detailed account of his scholarly and political life and follows with an explication of the *Muqaddimah* and the various ways it has been read critically, detailing primarily Ibn Khaldūn´s discussion of the notion of *ʿumrān* (civilization). But the author´s chief interest is in asking a question as yet unposed by scholars: Why was the last period of Ibn Khaldūn´s life marked by so little intellectual activity?

During his time in Egypt (1382–1406) Ibn Khaldūn´s experiences were clearly not reflected in his scholastic output, which diminished substantially. His historiographic-literary interests had of course already found meaningful expression in the *Kitāb al-ʿIbar*, including the famous *Muqaddimah*. When he arrived in Cairo, then, Ibn Khaldūn had essentially finished much of his life´s work, leaving really only a subsequent autobiography to compose. In this autobiography he certainly referred to Egypt, but only in passing. One might have reasonably expected that Ibn Khaldūn would have at least revised the *Muqaddimah,* if not penned an entirely new piece, to reflect the fundamental differences he observed between the geopolitics of Egypt, the *umm al-ʿumrān,* and those regions further west upon which his famous cycle of the rise-and-decline of tribal, kin-based dynasties was originally based.

The reasons, Manṣūr presumes, are embedded in Ibn Khaldūn's fundamental acceptance of the Sufi belief in the unity of the creator *(ʻaqīdat waḥdat al-fāʻil).* This doctrine, that God as the originator of all human actions, good or bad, negates man's free will, actually explains not only Ibn Khaldūn's intellectual abstinence but increasing social seclusion during his Egyptian phase. Put simply, Ibn Khaldūn was reluctant to revise works—the *Muqaddimah* and the *Tārīkh* particularly—that formed a resume of his own frustrated ambitions in establishing political power for himself. They memorialized not his, but God's decision not to bring him to high office (p. 496). Ibn Khaldūn's ancestors had proven unable to found a dynasty themselves; his own efforts were equally devoid of success, despite his outstanding mental abilities *(ʻabqarīyah).* Influenced already by his own view that the state can only be established and maintained through a tribal sense of solidarity *(ʻaṣabīyah),* Ibn Khaldūn now embraced with Sufic conviction the notion that he had failed because God had neither chosen him as His divine instrument nor provided him any *ʻaṣabīyah* with which to sustain his own extraordinary intellectual skills.

The issue of *ʻaṣabīyah* itself in any case complicated any real hope of meaningfully revising a work like the *Muqaddimah*. Egypt was a long-settled agrarian society, enjoying both centralized power and a stable population—an *arḍ-shaʻb-dawlah*—which exuded a sense of place *(waṭan)* unknown to the nomadic societies with which Ibn Khaldūn was familiar. Indeed, as a place where tribes were few and politically powerless, Egypt must have appeared to Ibn Khaldūn the antithesis of the *ʻaṣabīyah*-driven tribal societies he had previously analyzed. In evaluating the Egyptian case, therefore, Ibn Khaldūn would have had to acknowledge that the model of Islamic civilization upon which he had built his intellectual reputation had only limited heuristic value after all.

Manṣūr also speculates that Ibn Khaldūn's abiding enthusiasm *(taʻaṣṣub)* for his Maghrib homeland may have further inhibited his revision of the *Muqaddimah*. This is suggested by his inclusion in the *Kitāb al-ʻIbar* of Berbers, along with Arabs and Persians, as people significant in the historical formation of Islamic civilization. Yet of the seven chapters of the *ʻIbar* the Berbers appear only in the final two, a possible reflection of Ibn Khaldūn's overwrought pride in his Maghribi origins.

Manṣūr further argues that Ibn Khaldūn may also have been alienated by his inability to achieve judicial reform while he was Malikite chief judge in Egypt. His principal aims were to abolish both bribes and the indiscriminate charge and counter-charge of unbelief within the Egyptian scholastic community. In this, Ibn Khaldūn was doomed yet again to failure. The judicial system of contemporary Egypt was replete with corruption, justice a virtually unknown quantity. The variety of schools of law in Egypt, unlike in the univocal Malikite Maghrib,

encouraged a corrupt trade in *fatwá*s that resulted in a welter of contradictory legal scholarship. As a chief judge, Ibn Khaldūn could neither work under these conditions nor alleviate their irregularities. This was to prove his undoing.

These frustrations, according to Manṣūr, led Ibn Khaldūn to choose a conspicuously secluded life in Egypt marked by misanthropy, his colleagues apparently reciprocating his social distancing. He was viewed by them as unscrupulous, the product no doubt of his practice of *'aqīdat waḥdat al-fā'il*. He was seen, too, as a master of hypocrisy, a skill employed notably to win the favor of Sultan Barqūq in spite of having penned a *fatwá*—at the behest of Barqūq's rival, Mintash—charging him with unbelief.

Manṣūr feels that Ibn Khaldūn's general reticence in his autobiography about the country and people of Egypt reflected ultimately his feelings of superiority over his Egyptian colleagues and his refusal to become Egyptianized like other newcomers (e.g., Ibn al-Ḥājj al-Maghribī). Even the continued wearing of his native clothing can be interpreted as emblematic of Ibn Khaldūn's allegiance to his original Maghribi identity. Despite his alienation from the Egyptian intelligentsia, many of whom he did not even appear to have known, Manṣūr believes that Ibn Khaldūn's intellectual marginalization in Egypt, including his failure to generate disciples, can be lain at his own feet. He simply did not want to use his talents any further after having finished the *Kitāb al-'Ibar*. Manṣūr is inclined to see in Ibn Khaldūn's intellectual stagnation a reflection of his Sufic belief in the unity of the creator, which he illustrates with the common saying "rabbunā 'āyiz kidā." In this regard, the author mentions a report from the historian al-Sakhāwī that Ibn Khaldūn spent his final years on the banks of the Nile in the company of female singers and young men *(al-shudhūdh al-jinsī)* (p. 499).

The author's portrait of Ibn Khaldūn possesses one final thrilling, perhaps criminal stroke. While one cannot rule out natural causes in his apparent sudden death, Ibn Khaldūn may in fact have been the victim of foul play. The author notes that five other high-ranking scholars died during the political turmoil between 1387 and 1402, all possibly murdered. The chief culprit, Manṣūr believes, was a confidant of Sultan al-Nāṣir Faraj, Ibn Ghurāb, whose own death followed shortly that of the curmudgeonly Ibn Khaldūn.

QĀSIM ʻABDUH QĀSIM, *ʻAṣr Salāṭīn al-Mamālīk: al-Tārīkh al-Siyāsī wa-al-Ijtimāʻī* (Cairo: ʻAyn lil-Dirāsāt wa-al-Buḥūth al-Insānīyah, 1998). Pp. 390.

REVIEWED BY THOMAS HERZOG, University of Halle

The book under review, written by Qāsim ʻAbduh Qāsim, head of the Department of History at the University of Zaqāzīq (Egypt), is part of a series of the author′s recent works devoted to Ayyubid and Mamluk history and covers at least partly some of the subjects already discussed in his early publications: *Māhīyat al-Ḥurūb al-Ṣalībīyah* (Cairo, 1993); *Dirāsāt fī Tārīkh Miṣr al-Ijtimāʻī* (Cairo, 1994); *Al-Ayyūbīyūn wa-al-Mamālīk: al-Tārīkh al-Siyāsī wa-al-ʻAskarī* (together with ʻAlī al-Sayyid ʻAlī) (Cairo, 1995); *Al-Sulṭān al-Muẓaffar Sayf al-Dīn Quṭuz, Baṭal Maʻrakat ʻAyn Jālūt* (Damascus, 1998); *Al-Khalfīyah al-Aydiyūlūjīyah lil-Ḥurūb al-Ṣalībīyah: Dirāsah ʻan al-Ḥamlah al-Ūlá, 1095–1099M* (Cairo, 1999); *Taṭawwur Manhaj al-Baḥth fī al-Dirāsāt al-Tārīkhīyah* (Cairo, 2000).

In general, Qāsim′s study seems to have been conceived as an introduction to Mamluk history for students and educated laymen. The author uses a gripping narrative style writing history with a strong focus on the personal careers of some of the most important Mamluk sultans. Unfortunately, Qāsim slips at times into metaphysical interpretations of history, as, for example, when he speaks of the ″historical mission″ of the sultan Quṭuz, or into melodramatic utterances in the style of Jirjī Zaydān when he deplores the murder of the same sultan with the words: ″Hākadhā jā'at nihāyat baṭal min abṭāl tārīkh al-muslimīn, kāna mil' al-ʻayn wa-al-qalb, aḥabbahu al-nās . . .″ (p. 111).

In contrast to his promise to cover the history of the Mamluk Empire, Qāsim′s book is a history of Egypt and of Egyptian society during the Mamluk period. Especially in the second part of the book nearly all examples focus on Egypt and Cairo; the Bilād al-Shām is practically absent from the study. As the title notes, the author′s work is subdivided into two parts: political and social history. The first part of his study is divided into nine chapters: (1) The historical conditions of the rise of the Mamluk sultanate; (2) The political basis of the Mamluk sultanate; (3) Quṭuz: from mamluk to sultan; (4) The Mongol threat; (5) The battle of ʻAyn Jālūt; (6) The end of a hero; (7) Baybars and the constitution of the Mamluk state; (8) The reign of the Qalawunids and the end of the Crusaders′ presence; (9) The state of the Circassian Mamluks. The second part of the book is divided into eight unnumbered chapters (Introduction; Andalusian travellers in Cairo; Egypt in the *Riḥlah* of Ibn Batuta; Markets and everyday life; Religious minorities and Egyptian society; Religious festivals and public feasts; Everyday professions; Famines, epidemics, and economic crises).

As indicated by these titles, Qāsim's work presents some peculiar features. First, in his presentation of the political history of the Mamluk sultanate, it is astonishing to see that he focuses on the first eighty years of Mamluk rule. Whereas the author narrates the history of the Bahri sultanate over about a hundred pages, he sums up the history of the Burji sultanate as a period of utter decline in less than twenty pages. Second, Qāsim's special interest in Quṭuz (nearly fifty of the one hundred and fifty pages of the book's first part deal with Quṭuz's approximately two-year reign) is due to the fact that chapters 1–6 of his study are an exact reproduction of a large part of his monograph on this sultan, published in Damascus in the same year as the book under review (he doesn't mention his own publication). The author's concentration on the founders of the Mamluk sultanate is certainly exaggerated, especially with regard to his strongly negative description of the Circassian sultanate.

Whereas the first part of Qāsim's study owes its structure to its chronological organization, the second part of his book appears to be somewhat unorganized. There is no obvious logical link between the different chapters of the second part. This part of his work resembles a collection of essays clumsily glued together rather than part of an integrated scholarly study. After a somewhat repetitive introduction to Mamluk society, the author inserts two chapters dealing with the reports of Andalusian travellers to Egypt and Cairo. These accounts inform us about the concept of *riḥlah* in the Islamic Middle Ages, but do not contribute much to our understanding of Mamluk society. After these two generally informative, but not very well integrated chapters, Qāsim presents the social history of Egypt and Cairo throughout the 267 years of Mamluk rule through the prism of market life. Here his descriptive method gives valuable, detailed information, usually supported with precise citations from Mamluk Arabic sources. The author introduces the theme of the religious minorities in Mamluk society in the following chapter, which is generally informative but again poorly linked to the preceding chapters. Similarly in the following chapters the reader is provided rich information about secular and religious feasts as well as on the different professions of everyday life but is deprived of an analytic approach based in modern historical methodology.

The author introduces his main thesis in his introduction and repeats it often throughout his study: the historical role of the Mamluks was the defense of the Arab and Muslim World against the Mongol threat and the colonialist ambitions of Europe which, according to Qāsim, began with the Crusades (p. 5). But "once the external threats—the Frankish crusader entity *(al-kiyān al-franjī al-ṣalībī)* and the heathen Mongols—had disappeared, the Mamluk sultanate became a political and economic burden . . . and transformed itself into a monster that did not deserve to be saved" (p. 6). According to the author, the intrinsic problem of Mamluk rule was the way in which Mamluk sultans ascended to power: Qāsim

underlines in every chapter of his work that a political system whose leaders acquired power only by force following the principle of ″the rule to the victor *(al-ḥukm li-man ghalab)*″ was destined to internal disorder and political, economic, and cultural decay. To his mind it was the merely formal legitimation of Mamluk rule by the Abbasid puppet caliphs of Cairo ″that brought about hypocrisy in the political life of the Arab World, a phenomenon under whose consequences we suffer to the present day″ (p. 6).

The didactical repetitiveness with which the author reproduces every twenty pages his principal thesis cannot conceal that the reasons for the decay of Mamluk rule—the beginning of which Qāsim dates quite arbitrarily to the beginning of the Burji sultanate—are much more complex than he would have us believe. For instance, it is regrettable that he introduces one important cause for the decay of Mamluk society—the natural catastrophes and the plague at the end of the fourteenth century—only in the last chapter of the second part of his study. Finally the author does not explain how the Mamluk sultanate managed to remain in power for more than two and a half centuries while it was plagued by anarchy and corruption.

Qāsim′s book is very much source-based and leaves the impression that the author ignores most of the contributions of recent Western and Oriental scholarship (the most recent reference to a Western work dates from 1979; the Arabic secondary literature cited dates, except for the author′s own works, almost exclusively from the 1960s and 1970s). Although Qāsim′s book is largely descriptive and often quite repetitive, it may be of some interest for Western scholars not always at ease with Arabic sources because of his extensive use of printed and manuscript source materials, even if, just as Western scholarship did for a long time, he refers much too often to al-Maqrīzī (to whom he dedicated his *Taṭawwur Manhaj al-Baḥth fi al-Dirāsāt al-Tārīkhīyah*). But again, Qāsim seems to accept the sources at face value instead of critically contextualizing and evaluating them, just as, unfortunately, still too many Western scholars do.

Despite all criticism Qāsim′s book may be a useful introduction to the Mamluk era. His gripping narrative style and his extensive use of source materials render his book valuable reading for a wide circle of readers, especially when used in combination with other historical studies.

MUḤAMMAD AL-SHUSHTĀWĪ, *Mutanazzahāt al-Qāhirah fī al-'Aṣrayn al-Mamlūkī wa-al-'Uthmānī* (Cairo: Dār al-Āfāq al-'Arabīyah, 1999). Pp. 355.

REVIEWED BY LEONOR FERNANDES, American University in Cairo

The title of this book on places of promenade or recreation during the Mamluk and Ottoman periods raises the expectations of the reader eager to learn more about the social life of the inhabitants of Cairo during these periods. From the very first chapter, however, it becomes clear that al-Shushtāwī is not really interested in the social life of the inhabitants of Cairo but rather in urban development. Indeed, the author chooses to focus primarily on the development of urban centers which, as he mentions, became favorite places of residence and promenade during the periods under discussion. Al-Shushtāwī's painstaking effort to compile information from primary and secondary sources is remarkable. The reader is taken on a tour of the most important loci of entertainment such as the river Nile, ponds, islands, canals, and belvederes, but is left to ponder why people chose to go to such places and what type of social activity went on there. The reader has to wait for the last chapter where an attempt is made to put these places in a social context. However, no real analysis is provided and the reader is left with questions about places classified as "*mutanazzahāt*." For instance, visiting a religious foundation as a place of promenade in order to have "a good time" may not mean much to the reader and certainly requires an explanation (pp. 33, 39).

Al-Shushtāwī 's descriptions of the urban development of the islands of al-Rawḍah, al-Jazīrah al-Wusṭá, Jazīrat al-Dhahab, and al-Warrāq are quite interesting to follow. The island of al-Rawḍah is given particular attention (pp. 52–84) since it had become the favorite place for recreation and entertainment during the Mamluk period. It is there, we are told, that people used to go to celebrate weddings, seasonal festivals, and other unspecified festivities. There is a great deal of literature about this island. For instance, medieval scholars often wrote poetry describing the beauty of al-Rawḍah with its gardens and palaces. Passages from this literature are included in the last chapter . Al-Shushtāwī also mentions that al-Suyūṭī himself had been inspired by the beauty of al-Rawḍah and that he had issued a *fatwá* in 896/1491 stating that it was illegal for people to build on the shores of al-Rawḍah. Al-Shushtāwī claims that al-Suyūṭī's concern was to preserve the beauty of the island so it would remain a pleasure for the viewer, and a place of promenade (p. 52). However, the *fatwá,* whose title was "Al-Jahr bi-Man' al-Burūz 'alá Shāṭi' Nahr," was actually concerned with a point of law and not esthetics.

Urban space on the islands and areas around ponds and canals had become favorite places of residence for the elite who built their palaces and mansions there. Such places were often visited by people from all walks of life. Often, says

al-Shushtāwī, people would visit at the invitation of the elite, who would open their doors for the masses to enjoy their gardens in an attempt to enhance their public image.

The last chapter of the book deals with what should have constituted the core of the study, that is, the social aspect of the *mutanazzahāt*. Here, the author decided to provide the reader with his definition of the word *mutanazzahāt,* which he refers to as being places where people could go to relax and enjoy a good time during special occasions such as seasonal festivals and religious feasts. This long chapter (pp. 269–353) is divided into four sections, each dealing with one sort of entertainment. The author focuses on the activities associated with places such as the Nile, ponds, belvederes, canals, and islands, where people would congregate. He also discusses what he refers to as the aberrant behavior *(al-amrāḍ)* associated with or resulting from celebrations taking place in such locations. Among the celebrations resulting in the gathering of large crowds he mentions religious occasions such as the birth of the Prophet and the procession of the *maḥmal*. Other festivities were associated with the Nile flood and had a national character, such as Wafā' al-Nīl. One of the sections deals with Coptic festivals which had assumed a national character and were celebrated by both Christians and Muslims, for example 'Īd al-Shahīd, Īd al-Nawrūz, and Īd al-Ghiṭās. The author mentions that the celebrations of Nawrūz and Ghiṭās had been discontinued by the middle of the Mamluk period, while those associated with the Nile survived even after the Ottoman conquest of Egypt. Due to the symbolism attached to some of these festivals, the author should have examined them in their changing cultural context. Reference to Huda Lutfi's article "Coptic festivals of the Nile: aberrations of the past?"[1] would have been useful.

This book is easy to read despite its numerous typographical errors and repetitions. The author should be given credit for attempting to take us back to this distant past and offering us a glimpse of the social life of Mamluk society. On the whole this is an interesting contribution to the field of Mamluk studies. A bibliography and an index would have been helpful.

MUḤAMMAD FATḤĪ AL-SHĀʻIR, *Al-Sharqīyah fī ʻAṣray Salāṭīn al-Ayyūbīyīn wa-al-Mamālīk* (Manūfīyah: Dār al-Maʻārif, 1997). Pp. 208.

REVIEWED BY NIALL CHRISTIE, University of Toronto

This book presents a survey of the Egyptian province of al-Sharqīyah during the Ayyubid and Mamluk eras (564/1169–923/1517). The medieval Egyptian province of al-Sharqīyah lay, as the name implies, on the eastern side of the Nile delta, to the south of the province of al-Daqahlīyah. It originally occupied the entire area east of the Damietta branch of the Nile from the southern border of al-Daqahlīyah all the way to Cairo, but in 715/1315 the southern portion of the province was separated from it, becoming the province of al-Qalyūbīyah. Throughout the period the capital of Sharqīyah was Bilbays.[1]

Muḥammad Fatḥī al-Shāʻir opens his study with an examination of the development and geography of the province, from ancient times up to the end of the Mamluk sultanate. He then discusses the administration of the province and its role as a channel for communications (particularly by pigeon post) and the transport of snow and ice between Syria and Egypt.

The second part of al-Shāʻir's study concerns itself with the political and military role of the province, examining in particular Crusader activity in the area, its role in the rise of the Ayyubid and Mamluk sultanates, and the relations of these sultanates with the Bedouin of the area, both peaceful and otherwise. Some consideration is also given to the activities of brigands and instances of internal strife during the period.

The third part of the book focuses on the economic history of al-Sharqīyah. The author gives an overview of the *iqṭāʻ* (feudal estate) system under the Ayyubids and Mamluks, before proceeding with a description of how this system was administered in al-Sharqīyah. He then considers a number of other important features of the economic life of the province. He lists the canals and dams which were the responsibilities of the sultan, describes the most important crops grown in the area and also considers mines, local industries, and trade. The last part of this section discusses the economic effects of plague and famine on the province.

The next part of al-Shāʻir's work considers the social life of the province. He examines the major social groups living in the area, giving attention in turn to the Mamluk elite, the Bedouin tribes, the religious and scribal classes, the merchants, craftspersons, *dhimmī*s (tolerated non-Muslim communities under Muslim rule), and the peasantry. He then discusses the role of the province as a hunting retreat for the Ayyubid and Mamluk elites.

[1]G. Wiet and H. Halm, "Al-Sharḳiyya," *The Encyclopaedia of Islam*, 2nd ed., 9:356–57.

The last major part of al-Shā'ir's work focuses on the religious and intellectual life of the province. He considers the role of various institutions, including *madāris* (legal schools), *makātib* (Quran schools), and *masājid* (mosques) before describing the religious and intellectual elite. He gives examples of noted individuals of the area, including teachers, poets, and judges. He then considers the sufis of the area, noting particularly famous groups and individuals.

Al-Shā'ir concludes that much of the importance al-Sharqīyah enjoyed during the period derived from its geographical position, forming as it did a gateway between Egypt and the other countries of the Middle East. This importance manifested in a number of ways, most notably in its becoming a center both of political significance for the Bedouin, and of commercial and intellectual activity.

The book has a large bibliography, which includes some works by European scholars. There is also a useful appendix containing tables describing the *iqṭā'āt* and *awqāf* (religious endowments) of the province, including their areas and incomes. A contents list is also included at the back.

Al-Shā'ir uses an extremely wide range of medieval Arabic sources in his study. His selection of sources includes works by historians, geographers, biographers, and writers of secretarial manuals. He also supports his primary material with a number of works by Middle Eastern and European scholars. As implied above, the number of European works used is small, but given that al-Shā'ir's emphasis is on information contained in the primary sources, this is not a major problem. However, use of a wider range of secondary material might have resulted in a more well-rounded study.

Al-Shā'ir's work is a valuable contribution to the scholarship of Ayyubid and Mamluk Egypt. It is a wide-ranging survey of a number of different topics in the history and development of the province, and as such it provides a useful framework for further study of the area.

MUḤAMMAD AL-TŪNJĪ, *Bilād al-Shām ibbāna al-Ghazw al-Maghūlī* (Beirut: Dār al-Fikr al-'Arabī, 1419/1998). Pp. 200.

REVIEWED BY JOHANNES PAHLITZSCH, Freie Universität Berlin

While appearing to promise a study of the thirteenth century Mongol campaigns against Syria, this short book really serves only to invoke for modern Muslims the struggles of that age in order to reawaken their patriotic spirit and rouse them to a defense of their modern Arab homeland. For now, as then, maintains the author,

Muḥammad al-Tūnjī, the covetous eyes of its enemies continue to be directed at al-Shām (pp. 5–6). Only the last third of the book actually embraces the subject matter of its own title. In reality, al-Tūnjī has produced little more than a nebulous overview of the Mongol conquests of the Islamic world.

The author begins with the foundation of the Mongol Empire under Chingiz Khān (pp. 10–46), describing the society and culture in its heyday. Al-Tūnjī's verdict ultimately is that the Mongols have always been a primitive people lacking much cultural development—in contrast to the bedouin and Arab hill tribes who, following Ibn Khaldūn, remained generally superior to sedentary populations (p. 19). The cruelty manifested by the Mongols in their conquests is prime evidence, the author believes, of their primitive nature.

In discussing Chingiz Khān himself, al-Tūnjī has evidently not consulted a single one of his more recent biographies.[1] In particular his evaluation of the "Great *Yāsa*" is accomplished without specifying any primary source or even reflecting the doubts raised by David Morgan some years ago about the actual existence of a written legal code in Chingiz Khān's day.[2] Furthermore, the author gives only short shrift to the turbulent history of the post-Chingizid division of the Mongol Empire into vast territorial appanages among his sons.

While attempting to explore the contours of Mongol religion (pp. 49–62) al-Tūnjī manages only to produce a general catalog of their shamanistic beliefs and contacts with other religions such as Buddhism and Christianity. Yet again, the authors fails to avail himself of any of the available secondary scholarship, such as Jean Richard's study of papal missionary efforts among the Mongols.[3] The author can seem to find nothing more important to say about the subsequent conversion and advance of Islam under the Mongols except that history will not easily forgive them for the overall destruction they have wrought on Islamic civilization (p. 59).

The middle part of the book takes up Hülagü's conquest of the Middle East (pp. 65–126). Al-Tūnjī believes that the Mongol prince was tasked originally by the Grand Khān Möngke to vanquish the Assassins, conquer Iran, conquer the Abbasid heartland, and then subjugate Syria and Egypt. He fails, however, to address the signal issue of whether Möngke intended these conquests to constitute

an empire proper for Hülagü.[4] The author argues principally that the ″Arab *ummah*″ was subjected in this period not only to a Mongol threat but to an equivalent Crusader one as well. Each conquest effort, he claims, relied primarily on Arab disunity for its success and aimed not only to occupy and exploit the region but exterminate its inhabitants as well. Al-Tūnjī′s effort at equating these two threats is merely another attempt at invoking for the modern Muslim reader the image of the Arab world under threat of foreign domination, especially from its old nemesis—the West. The Crusaders were after all of much less importance for Syria in this period than the Mongols and, unlike them, did not generally massacre Muslim populations (if one excepts the conquest of Jerusalem).

Al-Tūnjī is particularly interested in tracing the unequivocally pro-Mongol posture of indigenous Christians to the successful Mongol strategy of using *dhimmī*s as regional catspaws. Despite Hülagü′s actions at Baghdad and Damascus, only the slaying of the Christian population during the reduction of Aleppo exposed true Mongol intentions towards these *dhimmī* communities. While al-Tūnjī fails to consider the potential role of Christians in facilitating the fall of Abbasid Iraq, he does comment on the situation of the *dhimmī* population in neighboring Ayyubid Syro-Egypt. Because these Christian groups developed excellent relations with the Ayyubids, they were never tempted to cooperate with the Crusaders. What Christian transgressions transpired in Damascus are represented by al-Tūnjī as merely spontaneous, isolated attacks by a handful of individuals (p. 142). In short, he completely denies any tension between the Damascene Muslim and Christian communities. This is not entirely accurate. For instance, Hibat Allāh ibn Yūnis ibn Abī al-Fatḥ, a Christian treasurer in Ayyubid employ and no doubt a leader in the Melkite community of Damascus, used his wealth and influence to advance rather brazenly the interests of his co-religionists, most notably in renovating and expanding St. Mary′s Church. His zealotry proved his undoing, however. According to the historian Abū Shāmah, he was suspended from office and chained publicly to the portal of St. Mary′s, charged with misusing his office to subjugate Muslim interests to Christian ones.[5]

Al-Tūnjī has little to say, however, about the relationship of such *dhimmī* communities with subsequent Mamluk regimes. On the whole, he seems to think their interests were not greatly harmed despite his rather surprising claim that the

Mamluks were less tolerant of other religions than the Ayyubids (p. 144).[6] His interest in the Mamluks themselves centers more around their crucial victory at the battle of ʻAyn Jālūt. Al-Tūnjī argues chiefly that, unlike the Abbasid caliph al-Mustaʻṣim, al-Malik al-Ẓāhir Baybars played a savior-like role in Islam by both unifying the region and demonstrating that the Mongols could be vanquished through decisive action. The author is offended by traditional historical works that denigrate this crucial Mamluk victory by minimizing the number of Mongol troops involved. To that end, al-Tūnjī wildly estimates the force left behind by Hülagü in Syria at 100,000 men (p. 161). More recent studies that have shown the Mongol occupation force to have been quite small—12,000 to 20,000 men—are ignored.[7] The author displays similar carelessness in treating the scholarship surrounding other issues. His coverage of the installation of the Abbasid caliphs in Aleppo and Cairo, for instance, overlooks Stefan Heidemann′s important work.[8] Also, his treatment of the long Mamluk-Ilkhanid struggle for Syria after ʻAyn Jālūt (pp. 173–90) manages to ignore Reuven Amitai-Preiss′s important work on this period.[9] The last Mamluk victory over the Mongols in 1303 provides al-Tūnjī one final opportunity to celebrate the unity of Arab arms over foreign aggression.

All in all, al-Tūnjī′s book, though based on older, standard works on Mongol history such as Saunder′s *History of the Mongol Conquests,* provides a generally reliable presentation of facts.[10] Its chief shortcoming lies in its failure to incorporate the research of more recent publications, even David Morgan′s general history.[11] Moreover, al-Tūnjī presents no new findings himself. Presumably, this was not his objective in the first place, given his prior background in literary history (p. 6). The author seems to have intended this book to rise above simple narration to consider social and religious developments, but even as a general introductory text it fails to achieve what any good handbook might—enabling students to delve more deeply into selected matters. Moreover, in spite of the seemingly non-partisan

depiction of events, the underlying intention of the author is readily discernible. Al-Tūnjī consciously presents Saladin and Baybars as role models able to vanquish foreign threats through their geopolitical unification of Syria. Only through such unity and decisiveness, the author insists, will modern-day, would-be conquerors of al-Shām be forestalled. It is perhaps for this reason that al-Tūnjī tries to minimize *dhimmī* pro-Mongol partisanship so as not to be seen as critical of the current Christian-Muslim condominium.

REVIEWED BY JOSEF W. MERI, University of California, Berkeley

Arabic studies that sensitively treat the history of the Jewish communities of the Near East are rare. Indeed, the history of Near Eastern Jewry has only recently become a legitimate topic of inquiry in the Arab and Islamic Middle East outside the bounds of traditional scholarship, which ordinarily focuses on Jewish and Arab nationalist ideologies in the modern context. Before the advent of political ideologies and nation states, Oriental Jews were integrated into the social, economic, and political life of their societies. The pre-modern context offers many fine illustrations of the complex social and economic relations and the professional and informal religious and spiritual associations that characterized inter-faith relations. During the Mamluk era in particular (648/1250–923/1517), scholars, theologians, historians, and travelers produced a cornucopia of historical, legal, and literary writings, which shed light on the economic, social, and political conditions under which Egyptian Jewry lived. This was also the most significant period for the development of the Jewish faith in the post-Talmudic period, when Islamic rituals and customs influenced Jewish prayer and other rituals and some Jews, including the descendants of the great Jewish physician and theologian Maimonides (1135-1204), were attracted to various forms of mysticism.

One noteworthy critical examination of the history of Jewish life in the Islamic world, which fortunately does not succumb to ideology, is Maḥāsin Muḥammad al-Waqqād's *Al-Yahūd fī Miṣr al-Mamlūkīyah fī Ḍaw' Wathā'iq al-Jinīzah* (The Jews in Mamluk Egypt in light of the Cairo Geniza documents). This is the first serious historical study to make effective use of the Arabic sources by presenting a thorough and balanced discussion of Egyptian Jewry and their participation in

Egyptian society during the Mamluk era. By contrast, traditional studies do not, for instance, adequately consider the relatively uncommon occurrences of violence perpetrated against Jews. Waqqād sensitively grounds her discussion of such instances in her sources. Her work is an admirable achievement, exemplified by her meticulous and effective use of Arabic historical, literary, and legal sources as well as the Jewish sources upon which the works of Mann, Goitein, Cohen, and others rely. She has also made effective use of Jewish sources, including Judeo-Arabic and Arabic texts, though for Hebrew she generally relies on secondary sources or translated collections such as of Geniza documents and travel accounts.

This study is divided into four primary chapters in addition to an introduction, conclusion, table of contents, and appendices. The introduction provides a historiographical overview of the types of sources concerning the Jews of Egypt and a brief discussion of their status from early Islamic times in pre-Mamluk Egypt. As Waqqād observes in her introduction, the most notable authors writing on the history of Near Eastern Jewry are Jewish. However, the publication of this study underscores the need for international collaborative projects focusing on the history of the Jewish communities of the Near East. Chapter 1 explores the status of the Jews in the Mamluk state and the positions they held. Chapter 2 turns to their economic status, their professions, and trade activities. Chapter 3 looks at the internal organization of the various Jewish communities (Rabbanites, Karaites, and Samaritans) and their religious leadership and judiciary. Chapter 4 provides an overview of the Jewish family, holy days, and religious festivals.

While this study is methodical and logically ordered and the research meticulous, the footnotes and citation of western publications are inconsistent and sometimes works are poorly cited, as has come to be expected of much historical scholarship in the Middle East. Moreover, the editors could have been much more diligent in preventing typos and spelling mistakes, particularly in the citation of western sources.

Occasionally Waqqād displays uncritical moments, when for instance she interjects without proper attribution the mythical statement, which is grounded only in European Christian polemical sources against Judaism, that Jews employed Christian and Muslim blood during the preparation of Passover matzo (p. 378). Moreover, Waqqād takes for granted the twelfth-century Jewish sage and physician Moses Maimonides′ conversion to Islam (p. 59) without mentioning that his conversion was coerced. (Cf. Ibn al-Qifṭī′s (d. 1248) biographical account).

One of the most interesting sections of this book, which gives an intimate sense of the involvement of Egyptian Jewry in their society, is the section on *ziyārah* (pilgrimage) (pp. 393-95). Waqqād′s discussion of Jewish pilgrimage to Jerusalem *(aliyah)* seems rather inadequate. *Aliyah* is the religious commandment of pilgrimage to Jerusalem, which Jewish men observed during the Holy Days of

Passover, the Festival of Weeks (Shavuot) and the Feast of the Tabernacles (Succoth). After the destruction of the Second Temple in 70 C.E., *aliyah* ceased to be incumbent upon Jews. Apart from the residents of Palestine, pilgrimage to Jerusalem was largely the province of wealthy merchants, theologians, and communal leaders and proved to be impossible for the vast majority of Near Eastern and European Jews, who hardly possessed the resources. It was only after the expulsion of the Jews from Iberia in 1492 and the Ottoman conquests of the early sixteenth century that Jewish immigration and pilgrimage significantly increased. When pilgrimage proved impractical for Oriental Jews, they found it necessary to develop alternate pilgrimage centers, which, although in terms of religious significance never surpassing Jerusalem, served to socially integrate them within their places of residence, as did the adoption of customs and rituals also practiced by Muslims. Although Holy Days were the most important occasions for the performance of *ziyārah,* it was performed regularly. Few recorded accounts of Egyptian Jews making pilgrimage to Jerusalem exist. Surviving Geniza accounts mention that Dammūh was one such place of pilgrimage for the Jews of Egypt. Such places as Dammūh served as alternative places of pilgrimage (p. 396). Here, Waqqād might have referred to Goitein's discussion of Dammūh in *Mediterranean Society*.

Noteworthy is the appendix, which contains a number of Arabic and Judeo-Arabic documents, the latter translated into Arabic by the author.

Waqqād effectively and quite convincingly demonstrates that the Arabic sources reveal Jews enjoyed a relatively peaceful and stable state of coexistence with their Muslim neighbors and were integrated into many aspects of social and economic life. Overall, this study represents a significant and successful attempt to represent the history and society of the Jews of Mamluk Egypt and should be a welcome addition to the library of scholars of the medieval Near East and those interested in interfaith issues.

BAYBARS AL-MANṢŪR AL-DAWĀDĀR, *Zubdat al-Fikrah fī Tārīkh al-Hijrah: History of the Early Mamluk Period.* Edited by D. S. Richards (Beirut: United Distributing Co., 1998). Pp. 488.

REVIEWED BY LI GUO, University of Notre Dame

The work published here is Baybars al-Manṣūrī's (d. 725/1325) account of the first sixty years of the Mamluk sultanate, from its formative years (650/1251) to the year 709/1310, which marks the beginning of Sultan al-Nāṣir Muḥammad ibn

Qalāwūn's third reign. It constitutes the most important and original portion of the author's famous *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* a history of Islam in the tradition of al-Ṭabari and Ibn al-Athīr. This edition is, as the editor points out, "a long overdue contribution to the study of the Mamluk state and . . . one more building block to be put in its place in the whole edifice of Mamluk historiography" (p. xiii); and it is most welcome indeed.

The English introduction provides the reader with sketches of the author's biography and a survey of his works, as well as a discussion of the importance of the *Zubdat al-Fikrah* and the author's place in early Mamluk historiography. Richards stresses the particular difficulty in establishing Baybars al-Manṣūrī's relationships with other contemporary historians because of the peculiar, if not unique, nature of his writing, "which is consciously literary and poetic and therefore not immediately easy to compare with some of the more sober Mamluk historians" (p. xxiii). This coming from a member of the Mamluk elite, whose mother tongue was not Arabic but who managed, nevertheless, to acquire "to a notable degree the literary and religious culture" (p. xv) of the Arabs, is truly fascinating. The fact that the *Zubdah* also contains a considerable amount of autobiographical material also helps to distinguish Baybars al-Manṣūrī from many of his fellow Mamluk historians. Modern scholars have long noted that Baybars al-Manṣūrī's accounts of the events are unique in many ways. Donald P. Little, in his ground-breaking study of early Mamluk historiography,[1] has verified that Baybars al-Manṣūrī's *Zubdah* offers many accounts of the events in which he had participated or which he had witnessed. Shah Morad Elham's study, prepared under the tutelage of the late Ulrich Haarmann and remaining to date the only monograph in a Western language that is dedicated to Baybars al-Manṣūrī,[2] further reveals that the *Zubdah* is very different from the work of the more famous and mainstream historian al-Nuwayrī. My spot check of the present edition further confirms that a substantial number of Baybars al-Manṣūrī's accounts are drastically different from those of other contemporary authors such as al-Jazarī, al-Yunīnī, and Ibn al-Dawādārī. In addition, Richards also observes that Baybars al-Manṣūrī gives a "relatively large amount of space to events in Spain and North Africa" (p. xxiv), the source of which remains unidentified. Surely we have here, in Baybars al-Manṣūrī, a historian with his own experience, his own sources, and his own voice.

The edition is based on the only two extant manuscripts (British Library Ms. Add. 23325 and Yale Ms. n. 1277 [Landberg 758]). Collation was made against

[2]*Kitbuġa und Lāǧīn: Studien zur Mamluken-Geschichte nach Baibars al-Manṣūrī und an-Nuwairī* (Freiburg, 1977).

Badr al-Dīn al-ʻAynī′s *ʻIqd al-Jumān fī Tārīkh Ahl al-Zamān,* a fifteenth-century chronicle that is known to have borrowed heavily from Baybars al-Manṣūrī. Some passages not found in the two manuscripts, but preserved in the *ʻIqd,* are provided here as supplements (pp. 419–31). The edition is of the highest quality. It is diligently executed, with a generous textual apparatus, such as variant readings from the manuscripts, clarification of difficult passages, meters of the verses, etc. Very useful indexes include personal names, place names, and technical terms.

MAḤMŪD SĀLIM MUḤAMMAD, *Ibn Nubātah: Shāʻir al-ʻAṣr al-Mamlūkī* (Damascus, Beirut: Dār Ibn Kathīr, 1999). Pp. 243.

REVIEWED BY THOMAS BAUER, Universität Münster

Good news first. In a series called *Silsilat al-Aʻlām* comprising monographs on the life and work of great poets, writers, and scholars of the Arab world, a volume has been dedicated to Ibn Nubātah al-Miṣrī (686–768/1287–1366), the only poet of this age who has been granted this honor so far. But whoever might have hoped that this would be a sign of a new, less prejudiced, and less ideologically distorted appreciation of Mamluk poetry will be disappointed. Even those who at least expected some new factual insights will hardly be satisfied. Maḥmūd Muḥammad′s book adds little if anything to ʻUmar Mūsá Bāshā′s groundbreaking study *Ibn Nubātah al-Miṣrī: Amīr Shuʻarāʼ al-Mashriq* (Cairo: Dār al-Maʻārif, 1963, 1992). Two monographs about a man whom I would reckon without hesitation among the greatest pre-modern Arabic poets are certainly not too much, since even many basic facts about his work and biography remain to be elucidated. Let me only mention Ibn Nubātah′s difficult but stimulating relation to al-Ṣafadī, his role as a writer of *inshā*ʼ, and his achievements as an anthologist. But all these subjects are either only mentioned in passing or are not even touched upon in Muḥammad′s book. Instead, the author limits himself to retelling the well-known facts about ″the poet and his age″ (pp. 7–23), ″the content of his poetry″ (pp. 24–130), and ″his poetical style″ (pp. 131–211). One can determine that everything that is found in Muḥammad′s book has already been said (and often much better) by ʻUmar Mūsá Bāshā, and everything that cannot be found in Bāshā′s study is equally absent in Muḥammad′s.

There would hardly remain any reason for saying more about this book were it not for the fact that, due to its author′s distorted conception of literature and his complete ignorance of literary theory, this book turns out to be not a work *about*

Ibn Nubātah but rather a lampoon *against* him. Since Muḥammad's view of literature in general, and of the literature of the Mamluk period in particular, is still widespread (cf. Th. Emil Homerin in MSR 1 (1997): 71), some more detailed notes may be appropriate.

In his preface, the author apparently criticizes the notion of Mamluk literature as a phenomenon of "decline consisting only of ornament and play with words" (p. 5). But instead of refuting this attitude, Muḥammad does his best to corroborate it. 'Umar Mūsá Bāshā, in his unsurpassed study, succeeded in recognising Ibn Nubātah's *tawriyah*-saturated style as an exciting innovation that considerably added to the referential potential of Arabic poetry, and by comparing this sort of style to symbolism managed to demonstrate the modernity of Ibn Nubātah and to foster a better understanding of Mamluk poetry in general. Though Muḥammad mentions Bāshā's study in his bibliography, his book gives the impression that Bāshā's monograph was never written. Instead, Muḥammad's book is a sad relapse into the belief that the only aim of literature is the "natural expression of true emotions." This attitude is a trivialised and deformed version of the aesthetics of Western romanticism and was used by "orientalists" to disparage (and to protect themselves from the fascination of) an imagined "Orient" of irrationalism, ornament, and secret promises. In a process of self-colonialisation these notions have been adopted by some Arab intellectuals and directed against their own cultural heritage. It is surprising and disappointing that these things are still discussed. But exactly these ideas form the core and very essence of Muḥammad's book. With every line of Ibn Nubātah's poetry the author asks the question if it can be read as the "natural expression of genuine feelings," or, to put it somewhat provocatively, if it is *kitsch* (which is obviously the author's real literary ideal). To test the authenticity of the feelings behind a line he uses a well-known scheme. Since rhetorical devices such as *jinās* and *tawriyah,* according to his conviction, cannot arise from "authentic feelings," one has only to look for such devices in order to find out if an elegy springs from real grief or constitutes merely professional craftsmanship (what great damage has been caused by considering both as incompatible!). By applying this method Muḥammad tries to show that there is more "true feeling" behind Ibn Nubātah's famous (and really astounding) elegies on the death of his own children than behind his elegies on several princes, but I am afraid that this conclusion is reached mainly by overlooking the quite reasonable amount of *tawriyah*s even in Ibn Nubātah's poems dealing with personal affairs. Whatever the case may be, I guess that Muḥammad must feel rather uncomfortable with his position as associate professor of Mamluk and Ottoman poetry. The poetry of these (and not only these) periods needs a different aesthetic approach and cannot be reasonably evaluated with an unreflective longing for *kitsch*.

In order to present an example that shows how terribly Ibn Nubātah is misunderstood in this book, but also to give an idea about what could be done with his poetry, I would like to take a closer look at four lines that Muḥammad particularly dislikes and ruthlessly criticises. According to him, they are ″far away from truth . . . without apparent impression of a specific emotional experience″ (p. 163). These lines form the introduction to the *nasīb* of a poem in praise of al-Malik al-Mu'ayyad Abū l-Fidā' (*Dīwān Ibn Nubātah*, p. 4):

qāma yarnū bi-muqlatin kaḥlā'ī / 'allamatnī al-junūna bi-al-sawdā'ī//
rasha'un dabba fī sawālifihī al-nam-/-lu fa-hāmat khawāṭiru al-shu'arā'ī//
rawḍu ḥusnin ghannā lanā fawqahu al-ḥal-/-yu fa-ahlan bi-al-rawḍati al-ghannā'ī//
jā'iru al-ḥukmi qalbuhū liya ṣakhrun / wa-bukā'ī lahū bukā al-khansā'ī//

Though a highly complex text like this is even more untranslatable than poetry normally is, I shall venture the following try:

(1) Gazing with dark eyes that taught me madness in consequence of *black (eyes)* / melancholia, there came
(2) a young gazelle on the cheeks of whom ants are crawling so that the poets′ minds are seized by the raptures of love.
(3) A garden of beauty is his face, above which jewelry sings for us—welcome to the lush garden full of rustling / *garden of the singer*!
(4) He treats me with harshness, his heart is (hard as) stone / *ṣakhr* for me, and my weeping for him is like the weeping of al-Khansā'!

Taken at face value these four lines form a quite ordinary, conventional but well formed *ghazal* depicting the fascination of the beautiful beloved and the pains of the lover. But what seems so conventional at first sight is in fact a very complex piece of art. Each line contains a *tawriyah,* the form of *double entendre* that was so popular in Ayyubid and Mamluk times that Ibn Ḥijjah even called the whole period the ″age of the *tawriyah,*″ and Ibn Nubātah was unanimously considered the era′s chief master of the technique. The *tawriyah* makes use of the fact that many words have more than one meaning, and it must be constructed in a way that although only one of its meanings is primarily intended, the hearer/reader is made aware of the other, non-intended meaning of the word. In the case of these four lines, we have no less than three different kinds of *tawriyah*. In the first line, the lyrical I is obviously going mad because of the black eyes of the beloved.

However, *sawdā'* means also ″black bile, melancholia″ which enables a medical interpretation of the line. Since the context points to the primarily intended meaning, we are confronted with a *tawriyah mubayyanah*. The situation in the next line is more complex, obviously too complex for Muḥammad, whose knowledge of the poetic tradition does not prove sufficient to understand it. Again dominated by Western standards of the nineteenth century, in this case in the field of sexual morals that have even forcefully been changed by the colonial powers, Muḥammad does not recognize that the beloved is of the male sex and that the ″ants″ that are creeping up his cheek are not a simile for ″crumbs of her perfume″ but for ″his downy beard,″ one of the main subjects of Arabic love poetry from the time of Abū Tammām until the middle of the nineteenth century (cf. my *Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts* [Wiesbaden 1998], 225–80; see 264 f. for many references to further comparisons between the beard and ants in the love poetry of the ninth and tenth centuries). The comparison is not new at all, but Ibn Nubātah adds a *tawriyah* by stating that the downy beard ″seizes the minds of the poets.″ By mentioning the word *shu'arā'* the hearer becomes aware of the fact that *al-naml* is, just as *al-shu'arā'*, the name of a surah of the Holy Quran. This form of *tawriyah*, which becomes only conspicuous by means of another *tawriyah*, is called *tawriyah muhayya'ah*. Muḥammad cannot see any relation between the names of the surahs and a *ghazal*; it is only ″mannerism″ (p. 163) to seek relations between things that have nothing to do with each other. Well, ants are, as I said, a very common image in love poetry, and I can think of one or another relations that could possibly be found between poetry and poets. And we will see later how the Quran comes in.

The third line adds the acoustic dimension to the optic one. The beloved′s face is a garden (a common image), but a garden is only perfect when birds sing in it. Instead of birds, the beloved′s garden here is filled with the rustling of his adornment (perhaps his earring); therefore it is a *rawḍah ghannā'* which one can interpret as ″a garden, a singer.″ That is how far Muḥammad came, stating that the whimsical poet ″describes the garden as one of singing that comes from singing″ (p. 163). This note, intended to mock Ibn Nubātah, falls back on its author by proving his lack of the linguistic competence to understand Ibn Nubātah′s poems. The intended meaning of *ghannā'* is not that derived from the root *gh-n-y*, but that from the root *gh-n-n. Ghannā'* can also be the feminine of *aghann* and means as an epithet to a garden ″abounding with herbs in which the winds murmure by reason of the denseness of its herbage″ (cf. Lane, s.v., adapted). It is an old Arabic expression for a *locus amoenus* and therefore makes excellent sense in this line. The *tawriyah* in this case is a *tawriyah murashshaḥah* in which the context (″singing″) points to the not intended meaning (″singer″). It is no shame to fall into the trap of a

tawriyah murashshaḥah, as Muḥammad did here, as long as one does not blame the poet for one´s own misunderstanding.

The fourth line complains about the reluctance and harshness of the beloved whose ˝heart is of stone (*ṣakhr*),˝ a very common theme of love poetry. As a result, the lover must weep, and the poet compares his weeping to that of the pre-Islamic poetess al-Khansā' who spent many years composing elegies on the death of her beloved brother whose name was Ṣakhr. Since the brother´s name is clearly not intended by the word *ṣakhr* in the first hemistich, this is a *tawriyah murashshaḥah* again.

It is not true that these lines are really ˝mannered.˝ They contain only a single *jinās* (*ghanná–ghannā'*) and are, provided an average acquaintance with poetic language, not particularly difficult to understand if one disregards the *tawriyrah*s. And this is quite possible, since the lines yield perfect sense even without thinking about melancholia, the Quran, and al-Khansā's brother. But of course the *raison d´être* of these verses lies in their *tawriyah*s, much to the dislike of Muḥammad who holds that it is the task of the poets to produce a straightforward expression of emotions (for which purpose, by the way, no poets are needed at all). But what if emotions are not a straightforward thing? Feelings do not exist independently from the culture of which their bearer forms a part. Emotions have their social and situational context, find their cultural interpretation, have their own history, and carry in themselves their own ambiguities. This was, in some way or another, already known to the Arab love poets of the preceding centuries. Never, however, could this factual complexity be transformed into poetry with such literary complexity as it was by the use of the *tawriyah* in the Mamluk period. In these four lines, Ibn Nubātah succeeds in an unprecedented way in providing a broader context for the feelings of love and to put them in the frame of other emotions and of the factors that constitute the condition of human emotionality. From line one we can infer that there is a biological basis to feelings. In line two we are referred to the Quran, which not only talks about emotions evoked or pretended by poets (Q. 26:225: ˝al-shu'arā' . . . fī kulli wādin yahīmūn˝—this *āyah* is clearly alluded to in Ibn Nubātah´s line), but is in itself a text that has always been experienced as loaded with extreme emotionality that eventually even led to the death of its readers (in the case of the *qatlá al-Qur'ān*). From religious emotions we are taken to emotions caused by nature as reflected in garden and flower poetry, alluded to in line three. And finally, and probably as a sort of climax, the emotions of love are paralleled with those of grief caused by the death of a close relative in line four. Perhaps it is not only the well-known parallel between love and death that is suggested here, but also the historical depth of feelings by alluding to the names of two historical figures. The reader is thus referred to the biological, religious, natural, and historic dimension of emotions. It is a stupid criticism to say that the

elements hinted at in the form of the *tawriyah* have nothing to do with the ″authentic″ feelings of love. Instead, it is quite obvious that the subject of love is consciously avoided in the images which are hinted at by the secondary meanings of the *tawriyah*s, or rather the theme of love is accompanied by a subtext in a way similar to the technique of the *leitmotiv* in Wagner′s *Ring,* where the music provides for a second textual layer that interprets, comments, and often counteracts the layer of discursive language. What is achieved in the *Ring* by music is achieved in Ibn Nubātah′s poetry by the ambiguity of the *tawriyah* that enables the poet to create a second textual thread that accompanies, reflects, and adds to the primary text. Ibn Nubātah may not always be so successful with his *tawriyahs* as in the quoted example, but his poems are always interesting and mark an achievement that clearly opens a new and fascinating chapter in Arabic literary history, and, since I do not recall any obvious parallels in other literatures, even in the history of world literature.

In any case, there remains a lot to be said about Ibn Nubātah, but not much about Muḥammad′s superficial and prejudiced text. Instead of wasting one′s time with this book it should be spent much more profitably by reading Ibn Nubātah′s poetry itself. And anyone who wants to read a book about this poet can be advised to read ʻUmar Mūsá Bāshā′s outstanding study, which still remains one of the best books on Mamluk poetry.

AḤMAD QADRĪ AL-KĪLĀNĪ, *Al-Malik al-ʻĀlim Abū al-Fidā', Malik Ḥamāh.* Introduction and Notes by ʻAbd al-Razzāq Kīlānī (Damascus: Al-Maṭbaʻah al-ʻIlmīyah, 1998). Pp. 112.

REVIEWED BY NIALL CHRISTIE, University of Toronto

This book is an edition of a biography of Abū al-Fidā', one of a number of biographies of notables of Ḥamāh written by the scholar Aḥmad Qadrī al-Kīlānī (1886–1980), who was himself a native of the city. An introduction and notes are supplied by the editor, ʻAbd al-Razzāq Kīlānī, who knew the author personally. This is the first printed edition of the work itself, which up until this time existed only in manuscript.

Abū al-Fidā' was an Ayyubid amir, historian ,and geographer. Born in Damascus in 672/1273, he was a cousin to Maḥmūd II, the prince of Ḥamāh. He witnessed the siege of Marqab (Margat) in 684/1285 and took part in a number of later campaigns against the Crusaders. His account of the fall of Acre to al-Ashraf

Khalīl in 690/1291 is particularly well known. When the Ayyubid principality of Ḥamāh was suppressed in 698/1299 he remained in service to its Mamluk governors, and eventually managed to secure the governorate for himself in 710/1310. He was appointed sultan of Ḥamāh by al-Nāṣir Muḥammad in 720/1320, continuing to rule until his death in 732/1331. His best known works are a universal history covering the pre-Islamic period and Islamic history to 729/1329, *Mukhtaṣar Tārīkh al-Bashar,* and a geography, *Taqwīm al-Buldān.*[1]

'Abd al-Razzāq Kīlānī's introduction occupies the first quarter of his edition of Aḥmad Qadrī al-Kīlānī's work. He gives a description of the origins and history of the Ayyubid sultanate up to and including the sultanate of Abū al-Fidā' at Ḥamāh. 'Abd al-Razzāq Kīlānī's choice of sources is fairly narrow, relying primarily on Abū al-Fidā's *Mukhtaṣar Tārīkh al-Bashar* and the chronicle *Al-Bidāyah wa-al-Nihāyah* by Ibn Kathīr (d. 774/1373), as well as the modern *Mawsū'at al-Tārīkh al-Islāmī* by Aḥmad Shalabī. The introduction then proceeds with a description of the life and works of Aḥmad Qadrī al-Kīlānī himself, written from the perspective of a man who knew him personally, and including a number of personal anecdotes. Several of Aḥmad Qadrī al-Kīlānī's associates are also described in footnotes to this part. The information presented in the introduction is primarily descriptive, with little discussion of the material.

The major part of the rest of the work consists of Aḥmad Qadrī al-Kīlānī's biography of Abū al-Fidā'. The first part of this is a chronological account, describing his birth, upbringing, education, character, military experiences, and career in Damascus, before giving an account of his gradual achievement of the governorate and then sultanate of Ḥamāh. Al-Kīlānī then presents a number of panegyric poems written for Abū al-Fidā', before describing other actions he performed during his life, most particularly his pilgrimages and visits to Jerusalem. The works of Abū al-Fidā' are also discussed, including sources, content, translations, and publication details. Finally, he describes Abū al-Fidā's death, elegies written to his memory, and the architectural remains from the construction he conducted during his life. The narrative is almost entirely descriptive, with al-Kīlānī making little attempt to analyze the material. However, this is not his purpose. He presents a biography of Abū al-Fidā', seeking merely to describe his activities and achievements, not to carry out a detailed examination of his motives or any other deeper topics. Footnotes by 'Abd al-Razzāq Kīlānī explain individual points in the narrative, providing useful supplemental information, but the editor has not made any further attempt to update al-Kīlānī's work to take account of more modern scholarship.

---

[1]H. A. R. Gibb, "Abū 'l-Fidā'," *The Encyclopaedia of Islam*, 2nd ed., 1:118–19.

Al-Kīlānī makes use of a number of Arabic sources in his account of Abū al-Fidā's life. His major source is Abū al-Fidā's *Tārīkh,* but he also makes considerable use of the biographical dictionary *Durar al-Kāminah* by Ibn Ḥajar al-ʻAsqalānī (d. 852/1449) and takes some information from other sources. However, although he cites page and volume numbers, he does not cite which editions of works he is using, nor is there a bibliography given in the book, something which might create difficulties for future research on the passages cited. Al-Kīlānī generally allows the sources to speak for themselves, quoting large sections of text and often allowing them to form a significant part of the narrative. His particular reliance on Abū al-Fidā's own account makes his biography seem somewhat one-sided. On the other hand, it also gives the reader an insight into Abū al-Fidā's major preoccupation, the achievement of the sultanate over Ḥamāh. However, the work might have benefited from more balanced use of the sources.

The book concludes with an afterword by ʻAbd al-Razzāq Kīlānī, in which he assesses Abū al-Fidā's achievements, most particularly his ability to preserve the Ayyubid sultanate at Ḥamāh despite the fact that the Ayyubid dominance of Egypt and Syria had been extinguished by the Mamluks considerably earlier. The afterword also concludes the historical survey of the Ayyubid sultanate begun in the introduction.

Al-Malik al-ʻĀlim Abū al-Fidā: Malik Ḥamāh is a useful book, for two reasons. Firstly, it provides a basic, clear, thematic account of the life of the sultan. Abū al-Fidā' has been given relatively little attention by modern scholarship.[2] Hence this book draws welcome attention to this important figure which has been mostly lacking up to this point. Secondly, the book is useful as a collection of Arabic texts related to the life and works of Abū al-Fidā', making it worthy of examination by scholars wishing to conduct further research on the sultan.

[2]The most notable exception to this is a partial translation of the *Tārīkh* by P. M. Holt, entitled *The Memoirs of a Syrian Prince: Abu'l-Fidā', Sultan of Ḥamāh (672–732/1273–1331),* Freiburger Islamstudien, vol. 9 (Wiesbaden, 1983).

The Cairo Heritage: Essays in Honor of Laila Ali Ibrahim. Edited by Doris Behrens-Abouseif (Cairo and New York: American University in Cairo Press, 2000). Pp. 341.

REVIEWED BY BETHANY J. WALKER, Oklahoma State University

This high-quality festschrift offers a fitting tribute to one of the most influential figures in Cairene studies. As a social historian, art historian, educator, and conservationist, Laila Ali Ibrahim has impacted scholarship on the ″Mother of the World″ on many levels. Her commitment to and love for Cairo are evident in several key articles and monographs on the historic city, in her many years of activism to save its monuments and neighborhoods, and in her generosity towards resident and visiting scholars, among whom are the contributors to this volume.

The essays in this festschrift represent a good mix of Egyptian and non-Egyptian scholarship on the city. The authors regularly cite one another, and the overlap of themes and references makes for a coherent, well-structured text. The volume is organized into four sections, all of which illustrate Laila Ali Ibrahim′s intellectual interests and scholarly contributions. Each examines Cairo from a different vantage point, beginning with a bird′s eye view of the city as a whole, going then to its monuments and the furnishings of those monuments, and concluding with the dilapidated state of the modern neighborhoods collectively known as ″Islamic Cairo.″ The sections are tied together by the common theme of *waqf* and its impact, for good or bad, on the medieval and modern city.

Part One, entitled ″History,″ examines the historiography of Cairo, in which al-Maqrīzī plays a particularly visible role. Jean-Claude Garcin′s article ″Outsiders in the City″ appropriately opens the volume with a discussion of the character of the Mamluk city, whether it was a foreign and colonial creation forced on Egyptians or, rather, a natural stage in the development of the larger Egyptian state. To this end he considers the integral roles played by the outsider/newcomer in Islamic history and argues that the Mamluks were ″acceptable strangers″ whose monumental urban creations were reflections of indigenous state development. His ″inner outsider″ is, thus, a useful model for art history and should be introduced to the debates on the character of Mamluk art, which emphasize its ″renaissance″ of classical Islamic styles.

Because of his centrality to Cairene historiography and to Mamluk studies as a whole, al-Maqrīzī is the subject of two articles by Nasser Rabbat and Sabri Jarrar. Rabbat assesses al-Maqrīzī′s *Kitāb al-Mawāʻiẓ wa-al-Iʻtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* as a product of *khiṭaṭ* writing (descriptions of the planned urban quarter) and traces the evolution of this genre from *faḍāʼil* (merits of cities) and *tarājim* (biographies of urban notables) literature to *masālik* (historical topography)

treatises. He suggests that what distinguishes al-Maqrīzī from other *khiṭaṭ* writers is his overarching theory of history, heavily influenced by Ibn Khaldūn, and his concern, like that of Ibrahim, for recording Cairo's monuments before they disappear. Although the heavy and at times awkward prose makes Jarrar's article difficult to read, his suggestion that al-Maqrīzī's unique contribution was in his "alternative, architectural approach to history" (p. 32) is thought-provoking. Jarrar argues that the Mamluk historian uses the concepts of *khiṭaṭ* (in this case "streets") and *āthār* (structures on those streets) to construct a hierarchical system of describing Cairo's urban space. Al-Maqrīzī's *Khiṭaṭ*, however, is not nearly as systematic in its descriptions of streets and monuments as Jarrar would have us believe. The amount of detail and the extent of storytelling (poetry, various asides, and "gossip") in al-Maqrīzī's accounts depended on the sources that were at his disposal. Moreover, an explanation for al-Maqrīzī's interest in "urban realism," to use Jarrar's phrase, is missing from this essay.

The volume's editor, Doris Behrens-Abouseif, rounds out Part One with an essay on the Mamluk sultans' use of family *waqf* to supplement amiral incomes. Not only does the author's new data challenge the traditional understanding of the economic position of the *awlād al-nās*, but I believe it will be useful for explaining the financial mechanisms behind the urban patterns achieved in Cairo in the early Mamluk period.

Part Two, "Architecture and Urban History," focuses on Cairo's monuments and the institutions that created them, and what impact they had on urban design. Most of the articles in this section relied on *waqfīyāt* as primary sources, *waqf* being the primary institution through which the urban fabric was transformed. As with Part One, this section opens with a theoretical essay. In his trademark oratorial style, Oleg Grabar presents a model for explaining the architectural inscriptions that punctuate the old city's landscape, suggesting that people write on buildings primarily to explain the building's purpose. He claims that the most significant contribution of Islamic architecture was the semantic function of architectural inscriptions, in which writing was part of the building's fabric. If so, we should extend Grabar's argument to the level of the city: such inscriptions were also an integral part of the urban fabric. Thus, they should be read as a source of information on what patrons valued in their city, what they found beautiful in it, and how they hoped to transform it.

The five following articles address specific architectural problems and are concerned with identifying or dating particular monuments. In his essay on the Ibn Ṭūlūn minaret, Tarek Swelim revives the controversy over the date of the extant minaret, suggesting that the base is Ayyubid and the *mabkharah* early Mamluk. Finbarr Flood, in his study of al-Nāṣir Muḥammad's Bāb al-Sa'āt on the Citadel, illustrates another way in which Umayyad architecture, and specifically

the Great Mosque of Damascus, influenced the monuments of Qalawunid Cairo. On the basis of written sources, Flood argues that the Cairene gate served the same purpose as the gate of the same name in Damascus: to provide access from the congregational mosque to the palace. In an act of historical and literary wizardry, Howayda al-Harithy identifies the Turbat al-Sitt described by al-Maqrīzī with the Qubbat wa-Īwān al-Manūfī of the Southern Qarāfah. According to al-Harithy, what stands today are the remains of a *qubbah-zāwiyah* complex and the earliest identified domed *zāwiyah* of the Mamluk period. In keeping with the volume′s theme of recording disappearing monuments, Chahinda Karim tries to reconstruct the original appearance of the mosque of Ulmās al-Ḥājib, which the author claims is the earliest surviving congregational funerary mosque in Egypt. The debate over the origins of the Mamluk *qāʻah* reappears in Bernard O′Kane′s analysis of the influence of domestic on religious architecture. This well-argued essay, which traces the evolution of Cairo′s sacred architecture to the fifteenth century through the adoption and adaptation of such spatial and decorative devices as the widened *qiblah īwān* and the *kurdī,* could have benefited from the inclusion of floor plans.

Waqf is the focus of the next four essays in this volume. These essays as a group are methodologically the strongest part of the volume. The authors suggest ways in which the Mamluks and Ottomans rezoned, revived, and otherwise transformed the city through creative manipulation of the *waqf* system. In recreating the history of a fifteenth-century *qaysarīyah* that no longer exists, Husam Ismail makes a strong case for the extensive use of *istibdāl* in the Mamluk and Ottoman periods and demonstrates ways it which it transformed *waqf*-″protected″ properties on the *qaṣabah*. Mamluk success in re-urbanizing Cairo through the manipulation of the *waqf* institution is the subject of Sylvie Denoix′s article. She argues that *waqf* made possible the rejuvenation of the *qaṣabah* by putting a variety of income-producing properties in the neighborhood, thereby diversifying the local economy. In a similar vein, Leonor Fernandes presents several fifteenth-century examples of the ways that *istibdāl,* the semi-legal exchange of *waqf* properties, not only transformed entire urban quarters but made *awqāf* themselves possible. She demonstrates how *istibdāl* worked as a legal process and suggests that it was well suited to the Mamluk′s urban policies of the period, when ″downtown″ land was scarce and the economy was troubled. In André Raymond′s study of a seventeenth-century *sabīl* near Bāb Zuwaylah, it was outright sale of an endowed property that allowed it to exchange hands, making possible its financial survival.

The second section of the volume closes as it began, with a theoretical essay on architectural esthetics. In this case the author, Khaled Asfour, considers the relevance of Mamluk architecture to contemporary Arab architectural design, bringing attention to the ways in which the medieval architects personalized their edifices. It was the tension between innovation and tradition in the façade, decorative

program, and articulation of internal space, Asfour contends, that made Mamluk monuments an integral part of the urban fabric. His emphasis on the relationship of building façades to the thoroughfares is particularly relevant to programs for the old city's revival, as presented later in the book.

Part Three of the Ibrahim festschrift, "Decorative Arts," deals with the production structure of ceramics and glassware. With the publication of wasters of Ayyubid and Mamluk lusterwares from Fusṭāṭ, Abd al-Ra'uf Ali Yusuf is able to demonstrate that Cairo, as well as Damascus, was a center of production for luster-painted pottery. Moreover, on the basis of stylistic analysis, he suggests that a variety of wares produced in the Mamluk period were fired together in the same kilns. While such kiln debris as wasters is critical new data, neither of these theories on Mamluk ceramics is new. Yusuf's bibliography is a bit out-of-date, particularly in light of laboratory techniques that are now widely used. Petrographic analysis, in particular, has discredited the old argument that migration of potters accounts for the wide distribution and decentralized production of the more expensive glazed wares, such as lusterware.[1]

J. M. Rogers' study of Mamluk glass surveys the archaeological evidence for its distribution and export. He suggests, on the basis of decorative and materials analysis, that there were workshops that specialized in enameling, using ready-made glass blown elsewhere. The poor quality of the generic dedicatory inscriptions in Arabic that decorate many vessels leads Rogers to believe there was no central control for the production of "secular" glass. A comparison with identical inscriptions from other media, however, suggests that changes in the market, rather than the structure of production, may account for variation in inscriptional content and calligraphic quality.[2] To better illustrate his arguments, photographs of the glass vessels in question would have been welcome.

In the final section of the volume, "Preservation of the Urban and Architectural Heritage," representatives from the World Bank, Harvard University's Department of Urban Planning and Design, and the American University in Cairo suggest ways in which to arrest and repair the decay of "Islamic Cairo." Ismail Serageldin's economic analysis of urban renewal reminds the reader that saving the historic core of Cairo is possible only through city-wide renewal projects. He calls for a revitalization of the economic base of the old city by using cultural heritage

Mason, "Medieval Egyptian Lustre-painted and Associated Wares: Typology in a Multidisciplinary Study," *Journal of the American Research Center in Egypt* 34 (1997): 201–42.

[2]For this alternative interpretation based on an analysis of contemporary sgraffito ware, see Bethany Walker, "The Ceramic Correlates of Decline in the Mamluk Sultanate: An Analysis of Late Medieval Sgraffito Wares," Ph.D. diss., University of Toronto, 1998, 199–277.

methods. Given the current move towards eco-tourism, the development of archaeological heritage sites, and the participation of academics in NGOs, his models for report-writing and fund-raising are appropriate and timely. Based on a graduate seminar offered at Harvard University, François Vigier strongly urges that project directors maintain the concept of *ḥārah*, which is the most important unit of the medieval city, when planning improvements in circulation (streets) and parking in Islamic Cairo. His emphasis on the integrity of the medieval quarter echoes statements made by Denoix and Asfour earlier in the volume.

The concluding essay in the volume is a bittersweet tribute to Islamic Cairo by John Rodenbeck. Like Vigier, Rodenbeck strongly supports area conservation, with an emphasis on streets and neighborhoods, over the restoration of individual monuments. He is critical of recent restoration designs that do not take into account entire neighborhoods, such as the USAID-funded project administered by the American Research Center in Egypt. The author overlooks, however, the very successful restoration of Bayt Suhaymī, an ARCE collaboration, that has included the cleaning and repavement of Darb al-ʻAṣfūr (just off of the *qaṣabah*), as well as the economic revival of the block of shops facing the house.

Rodenbeck emphasizes that in spite of the many conferences convened and organizations formed since the 1980s to address the decline of the old city, few of their initiatives have been put into action, and the medieval quarters of Cairo may be gone by the next generation. His sobering message has resonated with this scholar, who recently took a dozen Oklahoma State University students for their first visit to Islamic Cairo: "those of us will disappear who were once able to recognize that neither memory nor legend can ever take the place of the real thing" (p. 338).

Although occasional grammar mistakes and missing words, the result of poor editing, detract from the book, this festschrift is a well-balanced, multi-disciplinary contribution to scholarship on Cairo. Mamluk specialists will find it a valuable addition to their libraries.

War and Society in the Eastern Mediterranean, 7th–15th Centuries. Edited by Yaacov Lev (Leiden, New York and Cologne: E. J. Brill, 1997). Pp. 410.

REVIEWED BY W. W. CLIFFORD, The University of Chicago

This assembly of fourteen variegated inquiries into the characteristics of the medieval Middle Eastern military institution is taken, the editor readily concedes, "from a

broad perspective″ and with an ″arrangement″ that might appear ″arbitrary.″ The consequence of such broadness and randomness is predictable. Lev′s volume, like other collections of its kind, suffers a good deal from topical fragmentation, particularly among the first half dozen so-called ″early Muslim period″ offerings—a highly diverse mix of technological, literary, and administrative perspectives that, whatever their individual merits, seem collectively to add or clarify little about the institutional structure or process of the medieval Syro-Egyptian military. Only Lev′s contribution, ″Regime, Army and Society in Medieval Egypt, 9th–12th Centuries,″ really brings us anywhere near this goal. He considers principally the troubled emergence of the institution of military slavery in the Tulunid-Ikhshidid period. Despite uncertainty about the long-term macroeconomic impact of military slavery, particularly on urban development, Lev is otherwise unequivocal in his conclusion: ″In fact, the destructive nature of the institution of military slavery was manifested already during the Tulunid-Ikhshidid period″ (p. 150). The article affords him a natural opportunity to reiterate his long-standing complaint about the consequences of such a system on the later Fatimid state. Indeed, Lev′s chief purpose in this article seems to be to rediscover in the Tulunid-Ikhshidid ninth–tenth centuries his earlier prejudice against a system he believed ultimately responsible for the Fatimid twelfth-century collapse.

Lev achieves much better results with a more coherent cache of Mamluk-related offerings. Both Anne-Marie Eddé and Reuven Amitai-Preiss consider the composition and dynamic of the military class in thirteenth–fourteenth century Syro-Egypt, providing collaterally a welcome critique of David Ayalon′s long-enshrined reconstruction of the early Mamluk military institution. Eddé revives in her article ″Kurdes et Turcs dans l′armee ayyoubide de Syrie du Nord″ one of the key issues Ayalon no doubt believed he had settled—the significance of Kurds in the late Ayyubid military structure. She suggests that ethnic antagonisms not just between Kurds and Turks but among Turkish and non-Turkish (e.g., Armenian) *mamālīk* effected ties of loyalty among the Syrian soldiery. Moreover, while the Syrian army on the brink of the Mamluk period could still be considered dominated by Turks, an important role continued to be played by Kurds, whose influence actually increased after 1250–51/648 as a result of a concatenation of socio-political circumstances: loss of power by the free-born Turkish families associated with the Zangids, adherence of Syrian Turks to the new Mamluk regime in Cairo, and the continued loyalty of Kurdish families like the Qaymarīyah to the Syrian Ayyubids.

Eddé is moved at the end of her piece to temporize her conclusions, claiming her remarks represent only a ″slight nuancing of D. Ayalon′s perspective on the Ayyubids″ (p. 236). Perhaps. But no such disclaimer can be applied to Amitai-Preiss′s head-on confrontation with yet another aspect of the Ayalon legacy, at the beginning of his article ″The Mamluk Officer Class During the Reign of Sultan Baybars.″

Grappling with an issue left conspicuously unaddressed in his earlier book,[1] Amitai-Preiss reveals here finally his unreserved support for the position long espoused by R. S. Humphreys *contra* David Ayalon concerning the institutional origins of the Mamluk army.[2] In what constitutes perhaps the most important, certainly controversial, statement in the whole of the Lev volume, Amitai-Preiss observes candidly: ″Even taking into consideration . . . the reservations of Ayalon, it appears that Humphreys is correct on a number of important points: the early Mamluk army (at least after A.D. 1260) was bigger, better organized and more centralized than its Ayyubid precursor. Humphreys is right in attributing these ′reforms′ to a large degree to Baybars′s need to create a military machine capable of dealing with the ongoing [Ilkhanid] menace. . . .″ (p. 269).

In fact, Amitai-Preiss takes his cue in this article from a topic raised initially by Humphreys and later reconsidered by Robert Irwin—the composition and underwriting of the senior officer corps under Baybars. He affirms that while the Mamluk military establishment was not exclusively of slave origin, many of the officer class were *mamālīk*, the Ṣāliḥī and Ẓāhirī amirs particularly enjoying the lion′s share of Baybars′s munificence. Amitai-Preiss′s extrapolation about the foundation of Baybars′s power rightly stresses his attempts at making stakeholders in his regime of all officer grades, even amirs whom he characterizes as ″unaffiliated . . . nobodies.″ In re-evaluating Baybars′s consolidation of power over his Mamluk colleagues it is perhaps time to recognize finally his true political skills, not as a despotic leg-breaker but rather as a consummate deal-maker.

Yehoshua Frenkel′s contribution, ″The Impact of the Crusades on Rural Society and Religious Endowments: The Case of Medieval Syria (Bilad al-Sham),″ dovetails neatly with Amitai-Preiss′s, demonstrating just how Baybars underwrote economically this consolidation of power. Just as Ayyubid and early Mamluk regimes continued the Crusader practice of allocating assets and properties to fund religious establishments in Syria so, too, they embraced the Latin Kingdom′s policy of enserfment, continuing to convert local cultivators *(fallāḥūn)* into sharecroppers *(muzāri‘ūn)* in order to guarantee better their system of military land assignment. Though clearly controverting shari‘ah this practice, Frenkel opines, proved ″a powerful device to forge bonds of loyalty between the *sultan*s and the *amir*s″—just as suggested by Amitai-Preiss.

[1]Reuven-Amitai Preiss, *Mongols and Mamluks: The Mamluk-Īlkhānid war, 1260–1281*. Cambridge Studies in Islamic Civilization (Cambridge, England, 1995).

[2]See, R.S. Humphreys, ″The Emergence of the Mamluk Army,″ *Studia Islamica*, 45 (1977),:67–99; 46 (1977): 147–82; David Ayalon, ″From Ayyūbids to Mamlūks,″*Revue des Etudes Islamiques* 49 (1981): 43–57; reprinted in *Islam and the Abode of War: Military slaves and Islamic adversaries* (Aldershot, 1994): 43–57.

The contributions by John Masson Smith, Jr., and Bernadette Martel-Thoumian shift focus away from the military institution itself to consideration of its operational art. Smith's contribution "Mongol Society and Military in the Middle East: Antecedents and Adaptations" is actually a strategic consideration of Mongol logistical and tactical shortcomings in their thirteenth–early fourteenth-century Syrian campaigns, but can be considered a kind of rejoinder to Amitai-Preiss's prior observations in his book, *Mongols and Mamluks,* about the relative merits of the two opposing forces in Syria. Most interestingly Smith, who did not have access to *Mongols and Mamluks* at the writing of his article for this volume, attempts to argue for the very Mamluk military superiority that Amitai-Preiss attempted to deny in his book. Whereas Smith believes that in light of their larger horses, armor, swords, and high-speed archery, "[m]an for man, and horse for horse, the Mamluks were better than the Mongols" (p. 255), Amitai-Preiss earlier wrote: "Taken as a whole, the Mongols were not significantly inferior soldiers to their Mamluk enemies, in spite of certain differences in arms, horses and tactics."[3]

Smith and Amitai-Preiss are even more diametrically opposed on the issue of the logistical limitations of Syria itself to Mongol military operations. Smith stresses the "ecological constraints" of climate and geography on the availability of water and fodder sufficient for "a short campaigning season for a [Mongol] force big enough to meet strategic requirements" (pp. 254–55). Amitai-Preiss, however, minimized these considerations, insisting that "[l]ogistical problems did not prevent the Mongols from invading Syria with large forces, nor do they fully explain [their] withdrawal . . . when the Mongols did succeed in occupying the country."[4]

The compact excellence of Smith's article contrasts with the slower-paced artisanship of Bernadette Martel-Thoumian's piece "Les dernières Battailles du grand émir Yašbak min Mahdī." While Smith vigorously diagrams the operational problems confronting the Mongol army in Syria, Martel-Thoumian attempts a more subtle sketch of the operational competence displayed by the late Mamluk military institution on the Syro-Mesopotamian frontier. While not fruitless, her long and elaborate narration of events threatens at times to overwhelm the reader, nearly camouflaging her principal insight, that while possessing superior numbers and probably comparable equipment, the Mamluks somehow proved militarily incompetent in dealing with Dhū al-Qadr and Aqquyunlu challenges between 1468/872 and 1481/885. Why? Martel-Thoumian is ultimately better at raising the question than answering it. Her general conclusion, that the manpower costs and

[3]Amitai-Preiss, *Mongols and Mamluks*, 229.
[4]Ibid, 229.

political humiliation attendant on these defeats opened the province of Aleppo to the possibility of future (i.e., Ottoman) invasion, seems rather patented as well.

In sum, Mamlukists are undoubtedly the victors in this volume, which in spite of its cost is worth obtaining for both its historical and historiographic insights into the institutional problems of war-making in late medieval Syro-Egypt.

QĀSIM ʿABDUH QĀSIM, *Al-Sulṭān al-Muẓaffar Sayf al-Dīn Quṭuz, Baṭal Maʿrakat ʿAyn Jālūt* (Damascus: Dār al-Qalam, 1998). Pp. 176.

REVIEWED BY AMALIA LEVANONI, University of Haifa

This book is the seventy-first volume in the series *Aʿlām al-Muslimīn* (Celebrated Muslims) and is dedicated to the figure of Sultan al-Muẓaffar Quṭuz (1259–60), the fifth sultan of the Mamluk state (1250–1517). It has six chapters, a preface and a summary.

The author places at the center of the discussion of Sultan al-Muẓaffar Quṭuz's curriculum vitae the principal issue with which historians and historical philosophers have been occupied for years: Man's desires as a reason for deeds in history. In other words, have "history's heroes," by their intended actions, been the cause of historical events or was it the forces and processes embodied in history that have brought about its movement in a direction over which "the heroes" had little control? However, it is clear also that celebrated men in history reflect in their actions the values of the society in which they live and therefore their deeds all move towards a historical consequence compatible with the desire of society. Based on these arguments, the author feels that Sultan Quṭuz, too, was a product of contemporary Muslim society and that despite his short period of rule, the course of history moved in only one direction, that of his decision to protect Islam and the Arab region *(al-minṭaqah al-Arabīyah)* from the enemies of Islam. Quṭuz took the stage of history to fulfill the role designated for him, that is, to lead the Muslims to victory over the Mongols at the battle of ʿAyn Jālūt. These are the main arguments developed by Qāsim in the six chapters of the book.

The first chapter is a review of the political situation in the Muslim states on the eve of the battle of ʿAyn Jālūt in the face of the Mongol threat from the east and the Crusader threat from the west. Adopting the traditional perception of leadership in Islam that one of the principal roles of political leaders is to protect Islam from threats from without by means of jihad, the author maintains that the Ayyubids and the Mamluks after them played an identical historical role. The

moment the Ayyubids stopped playing this role, adopting a policy of coexistence with the Crusaders, their purpose ended and some new factor was supposed to take their part on the stage of history (pp. 20–22). Evidence of this is that the Mamluks succeeded in vanquishing the Crusaders, who had invaded Egypt in the Seventh Crusade led by Louis IX (648/1249), while the Ayyubids were otherwise engaged in internal political conflicts.

The second chapter sets out in detail the Mamluk system and the management of the military, political, and religious administration in the Mamluk state in order to explain the background against which Quṭuz progressed from mamluk to sultan.

The third chapter focuses on Quṭuz's rise through the Mamluk ranks until, as sultan, he led the Mamluk army into battle against the Mongols, who had just laid waste the Islamic countries in the east.

While Chapter Four deals with the Mongols, from the beginning of the conquest of Bukhara in 1220 up to the battle of ʻAyn Jālūt, the fifth chapter describes the battle of ʻAyn Jālūt itself and attempts to determine its historical importance for Islam. Qāsim's assessment is that the victory over the Mongols did nothing to change the destiny of Islam, as held by scholars, especially the Europeans, because the sheer size of the Muslim population in the east was such that it prevented the Mongols from destroying it! In contrast, a real threat was posed to Islam by the Crusaders in the Arab region because their objective was to settle the region with European immigrants (pp. 17, 120–22).

The sixth chapter describes the circumstances of Quṭuz's death, and more precisely, his murder by Mamluk amirs from a rival faction, al-Baḥrīyah. Apart from violence and bloodshed in the power struggles that were characteristic of the mamluk factional system, the author notes that since Quṭuz had mounted the stage of history to play a definite historical role, its completion necessitated his departure (p. 158).

This study is problematic for a number of reasons. First, it leans heavily on a meta-historical theory which assumes that Islam is the only true faith and thus is destined for universal dominion. This hypothesis is the basis of traditional Islamic historiography and has been perceived as driving the course of Islamic history. Accordingly, the rise and fall of dynasties, like the Ayyubids and their replacement by the Mamluks, did not change the course of history. Dynasties appear on the stage of history and disappear from it to serve the purpose of this basic assumption. This perception has prevented the author from dealing analytically and critically with the primary sources he relies on. Thus the author has not discussed effectively contradictions in the primary sources regarding the events of the battle of ʻAyn Jālūt and has not dealt with the issue of the inclusion of folkloristic myths and legends in historical narrative. Moreover, he has not referred to the vast body of modern research conducted over recent decades on the Mamluks' relations with

the Crusaders and Mongols, and more specifically, on the battle of ʿAyn Jālūt. The important studies by P. M. Holt, D. Ayalon, D. O. Morgan, P. Jackson, R. Amitai-Preiss, and others have not been deemed worthy of mention.

This book is therefore a narrative reflecting what is written in the primary sources on the subject in question and is loyal to the value perceptions expressed in them (see pp. 14, 15, 22, 33, 83, 84, 89, 101, 104, and elsewhere). These failures apart, a number of instances were noted in this book of citations from primary sources and of references to modern studies without the author making mention of them (pp. 25, 32, 33).

The principal contribution of this book is, therefore, that it is likely to serve as a primary source for research on myths in contemporary societies that are built around historical figures, figures from the Middle Ages for example, in order to foster present-day ideologies and values.

MASʿŪD AL-RAḤMĀN KHĀN AL-NADWĪ, *Al-Imām Ibn Kathīr: Sīratuhu wa-Muʾallafātuhu wa-Manhajuhu fī Kitābat al-Tārīkh* (Damascus and Beirut: Dār Ibn Kathīr, 1999). Pp. 353.

REVIEWED BY AMINA ELBENDARY, The American University in Cairo

In the very first volume of this journal Li Guo lamented the lack of adequate biographies of even the major Mamluk historians. Such studies, he argued, would help "frame Mamluk history not only in political, social, military and institutional, but also personal and intellectual terms."[1] And indeed a biography of Ibn Kathīr promises to be not only the story of such an influential man's life, but also a glimpse into a whole school of Mamluk intellectuals and their relationships with each other and with the powers of the time. This latest biography of Ibn Kathīr by Masʿūd al-Raḥmān Khān al-Nadwī falls short of such expectations.

The book is divided into two sections, the first dealing with Ibn Kathīr's biography and his writings and the second dealing with his methodology in *Al-Bidāyah wa-al-Nihāyah*.

The author has diligently extracted all references to Ibn Kathīr's life and work from the historian's own writings, mainly from his *Al-Bidāyah wa-al-Nihāyah*. He has also studied almost all of what the medieval biographical dictionaries have to say about Ibn Kathīr. Thus the first sections of this present volume read as a

[1]Li Guo, "Mamluk Historiographic Studies: The State of the Art," *Mamluk Studies Review,* 1:43.

remarkable and detailed *curriculum vitae* of the Mamluk historian. Hence we know many of the books Ibn Kathīr studied, the ulama he studied with, and the students who eventually studied under his tutelage. We get a glimpse of the social and political ties that bound various schools and generations of ulama together. The author details all the works Ibn Kathīr is said to have authored, including those which are mentioned in medieval sources but have not survived. The picture that emerges of Ibn Kathīr is of a man whose intellect spanned a wide array of disciplines and genres: from Quranic studies to hadith, and from history to poetry.

Yet while the author hints at various squabbles between ulama, some of which had their effects on Ibn Kathīr's career, he does not proceed from there to contemplate the political power plays that informed a Mamluk historian's career. Especially frustrating is the lack of analysis of Ibn Kathīr's relationship with Ibn Taymīyah and its implications for their scholarship. The same is true of references to Ibn Kathīr's relationship with ruling authorities, which is not treated in depth by the present author. The historian's views on *al-isrā'īlīyāt* and his scathing criticism of scholars of "the people of the book," while repeatedly referred to in the present volume, are not at all analyzed with reference to the historical context in which they occurred.

Though al-Nadwī proposed to offer a "*sīrah*" of Ibn Kathīr, the reader is left knowing rather little about the man and his personality. And as the author's own meticulous footnotes attest, this is not simply a question of the availability of primary sources and their inherent biases. There is a lot that could have been read between the lines to offer a more lively portrait of this scholar who continues to influence the way historians read Mamluk history.

The second part of the book deals with Ibn Kathīr's methodology in writing *Al-Bidāyah wa-al-Nihāyah*. This section stands well on its own as a historiographic study of Ibn Kathīr's *magnum opus*. And indeed it appears to have been previously published by the author in 1980.[2]

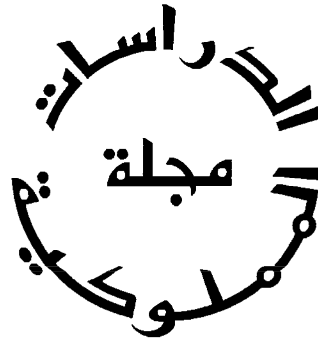
Here al-Nadwī offers a useful summary of the various chapters of *Al-Bidāyah* as well as a thorough analysis of the different sources on which Ibn Kathīr relied in writing each of them. He also points out how Ibn Kathīr proceeded to critique these sources while composing the book so that the text is not simply a compilation of previous writings on Islamic history. Al-Nadwī discusses which sources Ibn Kathīr relied on, and how, and which sources he avoided and why. Al-Nadwī argues that Ibn Kathīr preferred to rely on sources whose authors were, like him, well-versed in religious studies (p. 319).

---

[2]*Ibn Kathīr al-Mu'arrikh: Dirāsah Taḥlīlīyah li-Kitābihi al-Bidāyah wa-al-Nihāyah* (Aligarh, 1980).

Ibn Kathīr′s rich scholarly background made his *Al-Bidāyah wa-al-Nihāyah* a hybrid text between history and hadith. Al-Nadwī points out, as is evident upon a careful study of the text, how Ibn Kathīr′s scholarly background in religious studies and particularly in hadith and *tafsīr* influenced his historiography. This is especially evident in the chapters dealing with early Islam and the Prophet Muḥammad′s *sīrah* (pp. 166, 319–320). From al-Nadwī′s analysis we get the impression that Ibn Kathīr was first and foremost an alim before being a historian.

In *Al-Bidāyah* Ibn Kathīr often digresses from the topic he has been discussing to the extent of adding anecdotes and fables that in al-Nadwī′s view do not belong in a general history book. But luckily for the modern historian he took after Ibn al-Jawzī in recording weird and unusual events including natural disasters, plagues, and price increases—that in addition to events of high politics as well as social and cultural developments (pp. 279–280).



Despite al-Nadwī′s references to many of Ibn Kathīr′s sources he did not compare *Al-Bidāyah wa-al-Nihāyah* to other works in this genre of universal history which could have highlighted the historian′s originality as well as served to place him in an intellectual and historical context.

In both sections of the book al-Nadwī′s pursuit seems to have been carried out in almost total isolation from the contemporary disciplines of history and Arabic studies; the author does not refer to any modern secondary sources of Mamluk history. Similarly, he does not engage in any debate with modern schools of historiography. Indeed in his preface to the second section of the present book, dated March 1979, al-Nadwī complains of the lack of sources available to scholars of Islamic and Arabic studies in Indian libraries.

Mas‘ūd al-Nadwī has produced an interesting if rather traditional account of Ibn Kathīr′s life and career. In general, the book—especially in its first sections —is infinitely more descriptive than analytical. The author does not push any of his findings further to their logical conclusions. The book does, however, with its careful record of Ibn Kathīr′s writing and the sources he relied on, pave the way for a more modern (perhaps even postmodern) biography of Ibn Kathīr.

MAMLŪK STUDIES
REVIEW

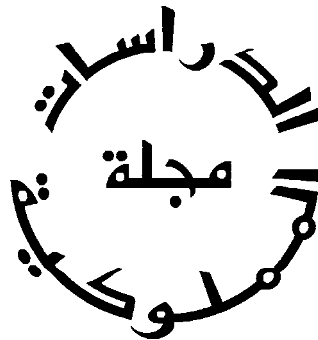
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is an annual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648-922/1250-1517). The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal will include both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk together with a printed copy. The print copy should have full and proper diacritics, but the disk copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page http://www.lib.uchicago.edu/e/su/mideast/medoc.html. This site provides a link to the searchable Mamluk bibliography maintained by MEDOC and has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review*.

The Mamluk System of Rule in the Eyes of Western Travelers*

THE LENS OF OCCIDENTAL TRAVEL REPORTS

The reports of late medieval European travelers to Egypt and Palestine have been discovered recently by experts in the history of mentalities as a first-rate source for the reconstruction of contemporary European modes of thought, perception, and experience during the critical transition from the medieval to the modern. Among this body of works, pilgrims' reports have been especially fruitful, and in particular, those sections dealing with Egypt. Despite the significance that this land had in the Old and New Testaments, in Egypt—unlike the Holy Land—it was not yet the case that every stone and every ford was imbued with sacral historical significance. Vast horizons were open to the imagination and curiosity of the traveler in Egypt, horizons which had long since been blocked in Jerusalem, Bethlehem, or Nazareth. The holy sites of Palestine so preoccupied the attention of authors and readers that they paid very little attention to the landscape and everyday life around them.[1]

Reports on Egypt are not so unidimensional; they show a thematic multiplicity. The wonders of nature, that is the exotic animal and plant world of the Nile oasis, as well as the disconcerting customs and habits of the natives,[2] are placed on an equal footing with the locales and monuments associated with Biblical reminiscences. Among the more prominent such sites are the fruitful land of

Goshen,[3] the pyramids as the granary of Joseph,[4] and the fig tree in the grove of Maṭarīyah[5] under which the holy family found shelter during their flight from the henchmen of Herod.

The perspectives of western travelers to the Orient were naturally subject to European schemes of interpretation, which they had to justify neither to themselves nor to their audience. Not only the educational horizon and religious engagement, but also the cultural and geographic background of the individual author were limited by the traditional and conventional statements and assessments of the Holy Scripture. In those days there was no space for personal experience outside of this frame of reference.

Despite this, we witness a long-term and highly significant transformation, at least in the case of the later travelers at the end of the fifteenth century and beginning of the sixteenth. Recently rediscovered classical texts, namely those of Herodotus, Pliny, and Strabo, emerged as sources of incontestable reliability on the country, edifices, and history of Egypt, rivalling the authoritative tradition of the Holy Scriptures. The contradictions between the Bible and the historians and geographers of antiquity strengthened the inclination to rely on one´s own observation, that is, living, empirical examination. Hannes Kästner has made this clear with the example of the reporting on the pyramids and the crocodile.[6] We find that Arnold von Harff, for example, a knight from the lower Rhine who traveled throughout Egypt from 1496-98, relies entirely on Holy Scripture in his traveler´s report. On the other hand, the humanistically educated Dominican monk Felix Fabri (d. 1502), who left by far the most informative and also most literarily distinguished pilgrim´s report, struggles to reconcile knowledge newly won from the works of the classical authors with the apodictic statements of the Bible. He must frequently resign himself to apposing contradictory interpretations of the things that he encounters in the Sinai or in Egypt about which the Scripture and the old masters give differing accounts.[7]

Travelers to Egypt were spared the necessity of this balancing act when they encountered not the ″familiar strangers″ (the pyramids or the Nile, for example) of

the authoritative texts, to use Kästner´s phrase, but rather ″true strangers.″ These include the banana plant,[8] rivers upon one of whose banks poisonous snakes thrive while on the other bank they expire,[9] incubators for chicks,[10] giraffes, the Nilometer,[11] the carrier pigeon post,[12] or even a ruling elite that recruited itself in the slave market. This had to be conveyed to the European reader in all of its immediate wonder and strangeness. This subjective striving for realism may not always have been successful. Naive observations were often tied again to general statements from the Bible or classical authors, which led inevitably to the ″harmony of deceptions″ described by Ludwig Fleck.[13] Thus in Pero we read of mules, heavily laden with grain, crossing tirelessly over visible ramps and entering into the pyramids, that is, into Joseph´s granary.[14] The classical, Christian, and even Muslim wonders of the land are depicted together by Fabri, himself inspired by a visit to the pyramids,[15] but are blended, according to the level of knowledge the author brings to each, into a kaleidoscope of commentary, theological report, and direct description.[16]

Also subject to the rules of the time were the illustrations, through which *mirabilia* unknown in Europe were to be brought nearer, quickly reaching the reader thanks to printing. The prelate of Mainz, Bernhard von Breydenbach, who visited Egypt in 1483 at the same time as Fabri, had his artistically-talented Dutch traveling companion depict the then-unknown giraffe, the crocodile (frequently described by classical authors), and the mythical unicorn,[17] all peacefully occupying a single woodcut. Arnold von Harff, on the other hand, showed himself to be more sober. He contented himself with the giraffe and the crocodile, which he incidentally drew separately. In the encounter with the unknown and unbelievable, there was plenty of room for both its fantastic and its relatively objective representation.

This forms the basis of the particular value of travelers´ reports for the Islamic historian. The geographic and cultural distance from which the western visitors to the Nile, the Sinai, or to Palestine came again and again permitted a conscious awareness of, and reflection on, structural differences in the everyday world that they found there. The inhabitants of this world, on the other hand, were not capable of this, at least not without conscious effort. For the Egyptians themselves, the milieu in which, and according to whose rules, they lived was close, intimate, and taken for granted. The self-evident does not require examination, which is valid here as well. It cannot be approached from outside, for the inner distance necessary for objective analysis is lacking. The European visitors were able to grasp the differences and otherness of the Near Eastern world more clearly than were its own natives.

In this way, insights into the social structure and ruling system were also achieved, insights for which we search in vain in the Arabic sources, including political and administrative tracts. The occidental pilgrims deal extensively not only with the Mamluk system of ruling and recruiting[18] but also with the relationship between Mamluks and their sons, the focus of this paper, and sometimes even their relations with the native Egyptian (and Syrian) population. They also speculate about the reasons for this peculiar regime. Whenever possible, a link is of course also sought between observations and commentary on the Mamluk ruling system and Biblical or Biblical-classical traditions whose truth is unquestioned.

The Slave Status of the Mamluks

The primary reaction of the contemporary western commentary on Mamluk rule was astonishment over the fact that slaves could become rulers of the land. The Castillian Pero Tafur, who visited Egypt in the time of Sultan Barsbāy (1422-38), relates how the Mamluks were sold for cash in the Black Sea region by Christian merchants, brought to Egypt, Islamized there (″made into Moors″), and instructed in Islamic law and the arts of mounted warfare. At this point they were equipped and received a salary. Only from their ranks could one become sultan or admiral. Only one of their number could occupy the offices of the empire.[19] Emmanuel ″Mannoli″[20] Piloti (b. 1371), an enterprising Venetian of Cretan origin[21] and many-year resident of Egypt in the early fifteenth century, emphasizes this absurdity when he says that the Mamluks, bought as slaves, pretend that God had invested

them with the sword and the power to rule and govern this land.[22] According to the Bedouin with whom Piloti had contact,[23] it was preposterous that the Mamluks, the ″nation vitupé reuse″ who had been bought with the money of the Egyptian peasants, should be the rulers of the land and not the Bedouin. It was these who had been called to this position since time immemorial and from whose numbers, after all, the Prophet Muḥammad came.[24] In another passage, however, Piloti adds his voice to the chorus of those who say that, without these purchased slaves, Cairo would be in a hopeless situation.

Hans Schiltberger also comments on this unusual phenomenon. A native of Munich, Schiltberger visited Egypt and several other regions of the Islamic Near East at the same time as Piloti, that is, during the reign of Sultan Faraj (1405-12) and his successors in the first third of the fifteenth century. He closes his chaotically structured chapter 38, entitled ″The Neighboring Lands of the Great Tartardom, a Description of Cairo,″[25] with the strikingly nuanced observation ″that hardly anyone becomes the Egyptian sultan who has not come out of the Mamluk bodyguard, of which many had been sold there as slaves.″ His formulation is doubly qualified: there would certainly also be sultans who are not themselves Mamluks; and not every Mamluk enters this elite as a purchased slave. There is no talk here of exclusivity.

The absurdity of slave rule was easily harmonized by our European travelers with the image associated with Egypt since Herodotus[26] that everything on the Nile stands on its head. In his fictional dialogue with a nun, the Franciscan abbot Francesco Suriano, zealous for learning, lists all of the ways in which Egypt is the opposite of the Western, read natural, order. He counts thirty-six contrasts. Among them are some objective and accurate observations. These include, for example, the fact that in Egypt, one writes from right to left,[27] and begins a letter with the address whereas ″we″ close with it. Other observations are of interest concerning legal praxis. For example, ″we″ repudiate women, but there it is the women who repudiate the men (!)[28] and there, poultry is sold by size and fruit and vegetables

by weight whereas in Europe it is the opposite.[29] The pair of opposites that concerns us here is number 27 regarding Mamluk rule: for us, slaves are servants, but there they are lords.[30]

″All Mamluks are Christian Apostates″

It is not easy to clarify the claim made by most of the European travelers that the Mamluks are *all* Christian renegades. It is known from the Arabic sources that the majority of the Mamluks were *awlād al-kafarah,* ″sons of true unbelievers.″[31] This was indeed held against them at the court of the Ottoman sultan Bayezid. Initially they were predominantly Kipchak Turks. From the end of the fourteenth century they were of Circassian-Abkhazian origin. Certainly there were some Christians who became Mamluks, as per the prevailing misconception, after being captured (no doubt willingly, on occasion) or through the slave market. After the Ottomans defeated the western alliance led by Emperor Sigismund at Nicopolis in 1396, two hundred Christian prisoners of war, French and Italian, were sold en masse as Mamluks to the Cairene sultan by the victorious Turks, and ″All were made to be pagans,″[32] that is, they had to accept Islam. This is reported by Piloti, the Cretan merchant and Venetian subject,[33] who spoke with them in Cairo. As prominent as this Mamluk contingent may have remained in the consciousness of West Europeans, converted Christians were in fact still only a comparatively small minority.

In 1498, Arnold von Harff mentions as the regions of origin Slavonia, Greece, Albania, Circassia, Hungary, Italy, and, in rare cases, also Germany,[34] in short, the Caucasus and the Balkans with its adjoining regions. A few years earlier, in 1483, Bernhard von Breydenbach lists ″Slavonia, Albania, Hungary, and the Romance countries.″[35] Greeks and Christian Caucasians, especially Georgians, would have represented the largest ″Christian″ contingent of the Mamluks. After all, historians of the fifteenth century provide lists not only of the Circassians, but also of the Greeks (*arwām*) who attained the sultan′s throne. In comparison with the Mamluks

of pagan-shamanistic origin who came to Islam without a detour through Christianity (and in some cases, those already born as Muslims),[36] converted Christians, and in particular the central and southern European "Foreign Legion" among them, did not constitute an important presence on the Nile.

But for our pilgrims from the West, it was precisely these few Mamluks from the Christian realms who were important. Moreover, the catastrophe of Nicopolis was everywhere present: imperceptibly, the few became many, a noteworthy and typical but proportionally insignificant, marginal group became the whole. And one carried this exaggerated claim to the next without anyone seeing the necessity of determining its accuracy while in the region. For by having supposedly all quit the path of salvation, the Mamluks became more enigmatic and interesting to the audience of these travel reports back home. Piloti speaks with admiration of the fact that the Mamluks who were captured at Nicopolis were "young, handsome, and stood at the beginning of illustrious careers."[37] The decision of these Europeans to reject Christianity demonstrated in fascinating and menacing ways the attraction of Islam and also of the Mamluk institution in which a slave, bought like a cow or a horse,[38] could rise to become the ruler of a powerful kingdom. In Burgundy in the fifteenth century, the term *mammelu,* "Mamluk," became a regular synonym for "apostate."[39]

A few of the European renegades are actually quite well known to us from the western travelers' reports. Piloti's encounter with "two hundred" Latins who had become Mamluks has already been mentioned. Konrad the Mamluk from Basel was met by Arnold von Harff, a knight from Cologne, in 1496, and also by Felix Fabri of Ulm[40] thirteen years before that in Cairo, the Rome of the pagans.[41] Fabri takes him to be "at that time, the only German at the court of the sultan."[42] In another passage, he speaks at length of some Catalan and Sicilian Mamluks, "that is, Christian renegades," whom he encountered in Gaza directly before the exciting and arduous trip across the Sinai. Thenaud mentions a Mamluk from Languedoc.[43] Arnold von Harff sat together over forbidden wine not only with Konrad, but also

with a German subject of the Danish king. His countrymen clearly enjoyed the exchange and the opportunity to speak German again. They showed him the city, even arranged a visit to the Citadel and, above all, instructed him in the strange Mamluk universe. They had attached themselves to this universe of their own free will but remained conscious of its peculiarities, all the more so in the company of an interlocutor from the world of their own past. If Felix Fabri is to be believed (though in fact, in this case it may well have been a matter of wishful thinking), the Islam of these opportunistic converts, as he portrays them, was not especially firm. For one thing, they give themselves to forbidden pleasures such as wine drinking. Already in the middle of the fourteenth century, this passion is reported by Ludolf von Sachsen, who spent the years 1336-41, the last years of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn′s sultanate, in Egypt and Palestine. He writes, ″these mercenaries (i.e., Mamluks) have an especial delight in Germans whom they straightaway recognize by their appearance and walk, and drink wine deeply with them, albeit it is forbidden by their law.″[44] Beyond this, ″all Mamluks are bad pagans [i.e., Muslims] and all have the intention to return to Christianity. The Mamluk from Basel also promised us that he wanted to return, and the dragoman Tamgwardin often tells us that he does not want to stay long.″[45]

European converts to Islam played a key role as courtiers and officials in exactly that sphere in which western visitors encountered the indigenous people. Pero Tafur, Piloti,[46] Felix Fabri, and Thenaud, thirty years later, all report southern European dragomen who smoothed the way for European visitors and who, though not without sentimental memories of their own Christian youth, had no desire to turn their backs on Islam. One of them, the Spanish born Taghrībirdī, was sent by Sultan Qānṣūh al-Ghawrī as an ambassador to Venice at the rank of *amīr tablkhānah*.[47] In these reports, the spontaneous familiarity with these intermediaries is counterbalanced by the total incomprehension of how easily these countrymen had become accustomed to the mores and vices of the Islamic milieu. The claim, coming from Christian mouths, that they were all waiting for an opportunity to return to the Christian fold can be rejected as an exaggeration and a case of wishful thinking, even if there were occasionally such confessions made by disillusioned, aging Mamluks to their countrymen. Ludolf von Sachsen tells of three impoverished ″renegades″ from the diocese of Minden, whom he met in

Hebron, longing to return home.[48] They had hoped for fame and fortune, surely in the service of an amir, through their Mamlukdom and conversion to Islam, but now toiled, despite their status as Mamluks, as a water carrier, a manual laborer, and a porter.[49] Ludolf also speaks of a German Mamluk who had guarded the balsam garden of the sultan before the gates of Cairo, prominently mentioned by nearly every European traveler to Egypt, who did in fact return to Christianity. Piloti personally obtained the release, in 1402 from Sultan Faraj ibn Barqūq, of Christians (Mamluks?) who were forced against their will to convert to Islam.[50] This came after his diplomatic success in purchasing the freedom of 150 Saracen captives from the grasp of the Duke of Naxos.[51]

The testimonies of the exclusively Christian origin of the Mamluks by travelers to Egypt of the fourteenth and fifteenth centuries vary according to the emphasis given to this theme. They also vary, in cases in which the text is longer and allows for such conclusions, according to the socially and regionally determined perspective of the reporter as well as his level of education. One finds both brief qualifications attached to the term ″Mamluk″ as well as lengthy interpretations that reach into other areas.

In the fourteenth century, Niccolò da Poggibonsi summarily mentions the ″number of Christian renegades,″ that is, of Mamluks, in the heading of chapter 176 of his pilgrim′s report.[52] His contemporary, Ludolf von Sachsen, even holds all Turks, ″the most zealous Saracens [i.e., Muslims], but not of the Saracen race [i.e., Arabs],″ (!) to be apostates from Christianity.[53] A few generations later, we have the report of Bertrando de Mignanelli, the intimate observer of the rise, fall, and rise of Sultan Barqūq, in his *Ascensus Barcoch*. He tells us that Nuʻayr, the Bedouin ally of Mintāsh and adversary of Barqūq, held it against Barqūq that he had been a Christian and was then sold into slavery.[54]

Both of the Florentine travelers Leonardo di Frescobaldi[55] and Simone Sigoli[56] directly address the Christian origin of Sultan Barqūq, who ruled Egypt during their stay. On the other hand, Bertrandon de la Brocquière, who visited the Near East in 1432-33, is not entirely certain about the Christian past of this ″ancestor″ of the Circassian sultans ruling during the fifteenth century.[57] With regard to Barqūq, Frescobaldi adheres to an entirely personalized treatment of his subject.[58] He reports that Barqūq had his father brought to Egypt from the pagan Circassian lands, then forced him to renounce Christianity and be circumcised. This operation led to the death of the old man in a short time. This depiction is known to be accurate and greatly preoccupied the Arab historians.[59]

The travel report of the Castillian globetrotter Pero Tafur stems from the first half of the fifteenth century. He speaks of the Mamluks as ″apostate barbarians.″[60] ″No one other than these renegades can become sultan or admiral, nor hold office or prebend. Neither can any Moor [i.e., native Muslim Egyptian] under pain of death ride a horse. These Mamluks possess all the knightly privileges.″[61] Tafur, and this I mention only in passing, exaggerates when he claims that every non-Mamluk who mounts a horse is immediately killed. However, we do learn from numerous oriental sources that horses were fundamentally reserved for the Mamluks, who were addicted to *furūsīyah*.

Perhaps the most important witness is again Piloti, who spent many years in Egypt during the final phase of Sultan Barqūq′s reign, under Faraj, and then again under Barsbāy.[62] He emphasizes not only the Mamluks′ monopoly of power, as does Tafur, but also their Christian origin. In his schema of the three ″pagan″ (i.e.,

[62]Piloti, *L′Égypte,* 11.

Muslim) Egyptian nations or ″generations″ (Egyptians; Arabs [i.e., Bedouins]; Mamluks), he equates Mamluks with purchased slaves of *Christian* origin:

> The third nation, they are bought slaves, from all Christian nations, of whom are made Mamluks and admirals, and from these the sultan is made. And in this nation they made themselves lords and governors and they command the state and the lordship over the people of the country and over the generation of the Arabs and over the inhabitants of the country. . . .[63]

Piloti had great difficulty in reconciling the cliché that all Mamluks were of Christian origin with the much more complex evidence that was available to him. As an expert in long-distance trade, he was better informed than any of the other European reporters of the late middle ages. He provides a more realistic picture in his chapter on the procurement of Mamluks[64] and the Genoese entrepôt of Caffa in the Crimea.[65] He writes that the Tatar (and other) slaves purchased by the sultan′s ″facteurs et serviteurs″ in the ″pagan″ *(payen/poyen)* (i.e., truly pagan or Muslim, certainly not Christian) lands of the Tartars, Circassians, Russians (!), etc., passed through Caffa.[66] There, they are said to have been asked by the Genoese authorities (whom the author, as a Venetian, deeply mistrusts) whether they would rather be Christians or pagans (in this case, Muslims).[67] If they choose to be Christians, the Genoese keep them. Only if they choose to be Muslims do they travel with the Muslim slave traders in Muslim[68] or disreputable Christian ships[69] through Gallipoli[70] to Alexandria, Damascus, and Cairo (if they are not first seized by Christian corsairs).[71] There, they are delivered in triumph to Islam.[72] Whenever the slave traders have again brought a couple of hundred future Mamluks of the sultan to

Cairo, and have been led to the Citadel with highest honor and the blare of trumpets, the heralds of the sultan, of the ″chief de la foy payene,″[73] loudly cry:

> These honorable traders have brought and rendered three hundred or more, whatever the number may have been, souls of the Christian nation and Christian faith to the sultan. These will now live and die in the faith of Muḥammad so that the faith of Muḥammad may multiply and grow and that of the Christians may dwindle.[74]

Also, the fact that Piloti takes pains to present two of the Mamluk conspirators against Sultan Faraj as Christian renegades[75] (one came from Salonica, the other from the southern Slavic lands) implies that there must also have been Mamluks who did *not* arrive in the country as Christians. Piloti′s own evidence cannot, therefore, easily be harmonized with his claim that all Mamluks had fallen away from Christianity.

The travel reports from the last quarter of the fifteenth century are numerous and often closely interwoven.[76] Travelers such as Tucher, among others, will not be considered here. One of the most original authors in this respect is again Francesco Suriano, abbot of the Franciscan monastery on Mount Zion in Jerusalem and favorite of Sultan Qāytbāy and the famous/infamous chief *dawādār* Yashbak al-Ẓāhirī. He had spoiled both of them during their exile in Jerusalem with monasterial hospitality and, above all, fine cuisine. In one passage, Suriano qualifies the term ″Mamluk″ as ″that is, Christian renegade soldiers.″[77] In another passage, he formulates the rule equally concisely: ″all of these soldiers must be Christian renegades.″ But he goes another step and substantiates this rule in a ″historical″ way:[78]

> Their first sultan was bought and sold five times and for this reason, to the present day, only he who has been bought and sold five times can ascend to this position. And if one of them does not meet this prerequisite and nonetheless wishes to ascend to this position,

[78]Ibid., 207.

> then he is bought and sold as many times as is necessary. Only a Christian renegade can rule this land.[79]

In 1496-98, in his etiology of the unique foundational law of the Mamluk system, Arnold von Harff goes back, impeded neither by humanistic knowledge nor doubt, to the Old Testament. For him, it was Joseph who set the precedent to which contemporary Egyptians still conformed:[80]

> For it was never questioned since the time of Joseph, who was sold by his brothers into Egypt, that a Sultan should be a heathen born, and always an elected renegade Christian . . .[81]

Later he carries this idea further:

> . . . as Joseph was sold by his brothers and came to Egypt to Cairo to King Pharaoh (as the Bible tells us plainly in the thirty-seventh chapter of Genesis), and this Joseph was such a wise man that after Pharaoh´s death he was chosen King or Sultan and ruled the land with great wisdom and in peace, so they keep him in everlasting remembrance. They will have no Sultan who has not first been sold, and they observe this until today, choosing Sultans from the bartered Christians known as Mamelukes. . . .[82]

When Harff and his two German companions encounter over one thousand young, dark-skinned Mamluks after his visit to the Citadel, and he asks his two friends and drinking-partners about these people, he discovers that the sultan presently

---

[79]Quoted in Pietro Casola, *Canon Pietro Casola´s Pilgrimage to Jerusalem in the Year 1494,* trans. M(ary) Margaret Newett, Publications of the University of Manchester 26 (Manchester, 1907), 392 n. 88.

[81]Note that pagan here means Muslim. Pagan can therefore also metonymically mean ″Arabic,″ the language of the pagans. See Jan Hasištejnský z Lobkovic (1450-1517) in his pilgrim´s report *Putování k Svatému Hrobu,* quoted by Svatopluk Souček, ″A Czech Nobleman´s Pilgrimage to the Holy Land: 1493,″ *Journal of Turkish Studies* 8 (1984) (special issue entitled *Turks, Hungarians and Kipchaks: A Festschrift in Honor of Tibor Halasi-kun*), 233-40; here, 235, ″pohansky.″

[82]Harff, *Pilgrimage,* 120; idem, *Pelerinage,* 98.

possessed 15,000 Mamluks ″who are renegade Christians,″[83] from which that year alone one thousand had been killed. There is no talk of Joseph in this passage, nor is there any in Harff′s vivid report of how these Christian warriors become Muslim Mamluks:

> When these Mamelukes are first captured in Christian lands they are sold to the heathen. They are then forced to say: ″Holla, hylla lalla Mahemmet reschur holla:″ that is in German: ″God is God and shall be so forever, Mahomet is the true prophet sent from God.″ Then they circumcise him and give him a heathen [Muslim] name.[84]

The learned Felix Fabri, who had stayed in Cairo in 1480 and 1483, reports in a manner that is similarly colorful and direct. He discriminatingly registers and comments on what occurs around him in a different way. He speaks of the renegade status of the Mamluks in several passages both in the long and in the short version of his *Evagatorium*, for example, on the occasion of the visit of some Mamluks to the house of the Christian pilgrims in Cairo on October 11, 1483,[85] or in a report about the three ″mighty ones″ of the empire:[86] ″Cathube [Qāytbāy], a Catalan renegade, the father of the sultan and governor of all the kingdom, and the admiral, head of the armies. These three men do everything. . .″ This quote corresponds in the German summary to the following striking text: ″And all three are Mamluks, apostate Christians, and all office holders in all the lands of the king sultan are Mamluks and greatly oppress the Saracens and allow them no power, nor do they let them become rich.″[87]

Fabri sees the causes for these unusual political conditions in demography and in the social structure. He explains them in a manner that approximates the conclusions of modern research: by utilizing an inexhaustible reservoir of soldiers from the outside (Christians, Fabri believes), one is no longer dependent on native Muslims. Rather, these are discriminated against in favor of the Mamluks:

> All Mamluks are Christian renegades. . . . They neither let the Saracens serve as soldiers nor permit them to bear weapons. Things have gone so far that, thanks to the growth of the band of Christian renegades and apostates, only such are considered as sultan or king

> of Egypt. This custom is not very old and does not have the force of law among them. But the immense flood of renegades has brought about this situation, which is the greatest of all humiliations for the Saracens and for the Christians a powerful and repulsive scandal and simultaneously the ruin of our faith. They have decreed that no one can become sultan who has not before been a Christian and who has not been sold twice since his fall from faith [Suriano spoke of five times].[88]

A reference to Joseph and Genesis 37 and 39 follows. Then Fabri repeats the last point once again: ″They thus say that no one may be sultan who has not renounced his Christian brothers and been sold twice.″[89] This is surely a reflection of the fact that Mamluks, especially in the later period, might have a number of masters (sing. *ustādh)* in short succession:

> Furthermore, these apostates have decreed that all important offices in the kingdom can only be entrusted to Mamluks. The governors, legal officials (!), princes, army commanders, and emissaries within the realm of the sultan are all Mamluks. The [prospect of] emancipation and freedom and these hopes of attaining the highest offices attract numerous Christians. There are also the payments and daily stipends, the security, but also the weakness of the flesh and the prospect of possessing several women. All of this leads a great number of them to abandon their [Christian] faith. As soon as one has disowned his faith, he immediately receives an office, a salary, and is placed above others.

From the perspective of contemporary research, what is interesting in this quote is Fabri′s view that the imported military slaves′ monopoly of power is not a *law,* but rather a custom resulting from the *embarras des richesse* of Mamluk importers, which does not stem from a previous age. This impressively commensurate analysis admittedly does not prevent our Dominican, in his search for biblical *loci probantes,* from also calling upon the biblical Joseph as the godfather of this unusual custom. Harff, who traveled thirteen years later, could have been inspired by Fabri′s Joseph argument in his own portrayal.

[89]Fabri, *Voyage,* 552-53.

In another passage in Fabri´s travel report, we encounter the tensions between the Mamluk elite and the native Egyptians,[90] which culminated in the ban on weapons for the latter, linked with the supposed exclusively Christian past of the Mamluks. In the passage depicting the pilgrims´ stay in Gaza, two Saracen (that is, native Arab-Muslim) guides of a Christian pilgrim caravan with the names Sabat(h?)ihanco and Elphahallo accuse the Europeans entrusted to their care of cultivating displeasingly friendly relations with Mamluks. And this despite the fact that the Mamluks (whose offensive hubris vis-a-vis the Muslims of the land has already been mentioned) should be especially repugnant to Christians.[91] Sabat(h?)ihanco says, ″You are true Christians! How can you dare to eat and drink with these people who have sworn off the faith of the Christians with abominable oaths?″ His companion Elphahallo raises the pressure for self-justification for the pilgrims still more: ″You are among those Christians who will doubtless be saved through their faith. It is just as certain that these Mamluks will be damned for having rejected your faith. How can there be relations between you?″ The pilgrims responded, according to Fabri ″as best they could,″[92] astounded at the belief that one could achieve salvation only in the faith in which he was born and in no other.[93]

SULTANS AND POPES: THE DESCENDENTS OF THE MAMLUKS

If it is indeed the case that the Mamluk ruling elite replenishes itself entirely from the outside (for demographic or whatever other reasons), irrespective of whether they are Christians or pagans, then all natives must be *ipso facto* barred from participation in these highest privileges, no matter how much this runs contrary to human psychology, which yearns to pass riches and instruments of power on to its own progeny in as undiminished a form as possible.

The extent to which the limitation of membership in the elite to first-generation Mamluks can be demonstrated to be a historical reality over the course of decades is a major concern of this study. What do the European travel reports have to say on this matter? As we have said, Schiltberger speaks, as far as the circumstances that he experienced in the early fifteenth century are concerned, very reservedly of the fact that there is hardly a sultan who is not a Mamluk.[94] This commentary implies that there are exceptions to be expected. After all, the time which he

[94]Schiltberger, *Reise,* 87.

describes and partially experienced first hand saw the enthronements of several sons of sultans (Faraj ibn Barqūq; but also the sons of al-Mu'ayyad Shaykh and Ṭaṭar).

Pero Tafur, who also visited Egypt at this time, namely during the sultanate of al-Ashraf Barsbāy, speaks not about the princes specifically but rather about the sons of the Mamluks generally, which makes this testimony especially valuable. He has the impression that the Mamluk privileges diminish continually from the first to the second and third generation: ″Their [i.e., the Mamluks′] sons have a somewhat reduced status [from that of the father] and the grandchildren less still. After this, they are considered as native born Moors.″[95] Piloti′s commentary, stemming from the same period, is much less precise. In his chapter on the training of the Mamluks in the barracks under the supervision of the *ṭawāshīyah,* indispensable as a supplement to Maqrīzī′s *Khiṭaṭ* and Abū Ḥāmid al-Maqdisī′s *Duwal al-Islām*,[96] he adds, following the description of the emancipation ceremony of the Mamluks before the sultan and the transfer of the corresponding privileges, that this favor is to continue to be held after the death of the beneficiary by his children or other relatives.[97] He may have been thinking here of payments to survivors *(rizqah mabrūrah)* or perhaps only of non-material support for the relatives of the deceased Mamluks. We cannot infer anything more precise from this succinct quote.[98]

The next voices are half a century younger. At this point, the chances of the descendents of Mamluks having a share in the power and wealth of the state are judged much more cautiously.

Let us begin with a fifth ″renegade″ quote from Arnold von Harff, which has heretofore escaped consideration. It concerns the constitutional consequences of the decree that the ruler must come from outside, and thus by implication also the lot of the sons of Mamluks born in the land: ″no heathen [Muslim] born in the Sultan′s country can be a ruler; only the captured renegade Christians, there called Mamluks, rule the Sultan′s country.″[99]

Harff was present in Egypt at just the right time to watch how effective this rule he posited actually was, or at least to see how power politics were carried out with reference to it. Qāytbāy, close to death, had abdicated in favor of his fourteen-

[99]Harff, *Pilgrimage,* 121; idem, *Pelerinage,* 99. The French translation is incorrect in exactly this spot. Instead of ″Dans le pays du Soultan aucun païen de naissance n′a le droit de régner″ it should read ″aucun païen qi est né dans le pays du Sultan, n′a le droit de régner.″

year-old son al-Malik al-Nāṣir Muḥammad. In my opinion, this bold youth has been badly handled in the historiography to date. Not only did he show farsightedness as an energetic proponent of the increased outfitting of the army with firearms, he also learned to write Turkish and Arabic poetry in the cultivated ambiance that his father had created in the Citadel. It is true that Sultan Jaqmaq had already done this before him, in January 1453.[100] However, for contemporaries, this abdication and transfer of rule to a son born in the country (one, furthermore, with an Arabic surname) was a provocation and transgression of valid law. With this argument, that the sultan had acted illegally, the powerful General Qānṣūh Khamsmi'ah promptly claimed the sultanate for himself, ″since he was of the opinion that no one heathen born [i.e., Muslim] should be Sultan.″[101] Power befitted only ″genuine″ Mamluks.

We can also infer from western sources, if only indirectly, how widespread was the conviction that Qāytbāy′s abdication in favor of his son was in fact a coup d′état. Under the date May 26, 1496, shortly before Qāytbāy′s death and Muḥammad′s succession, otherwise unknown Alexandrian sources informed the Venetian diplomat Sanuto that the generals and the Mamluks opposed the appointment of Qāytbāy′s son as the new sultan because the youth was a ″son of the people.″[102] Their laws, on the contrary, stipulated that power could be conferred only to a purchased slave. A good eight weeks later, on the 22nd of July of that year, Sanuto′s diary states that the son had in fact been made sultan, but that his reign would not last long because he was a ″son of the people.″[103] ″Son of the People,″ *fiol di la zent,*″ is naturally nothing other than the Italian translation for the well-known *ibn al-nās* (pl. *awlād al-nās*). This term, used only sparingly in the Arabic sources as a categorical label, was therefore clearly in circulation, otherwise it would not, as in this case, have been taken up by foreigners.[104]

It can be inferred from a further observation of Arnold von Harff that the purely Mamluk, that is, oligarchic, election principle had prevailed, even after two hundred years, over the competing dynastic principle in this final phase of the Mamluk sultanate, not only at the pinnacle of the state but also in all of the

subordinate benefices reserved for Mamluks: ″when a Mameluke dies, the Sultan takes his goods and all that he has left behind, and if he has ten children they inherit nothing, for they are heathen born [i.e., Muslims]. But, if the Sultan is pleased, out of his grace, to give them something, that they may keep.″[105] Machiavelli′s commentary in 1513 on the Mamluk system of succession is also relevant here. He compares it to the election of a pope, inasmuch as both forms of rule can be described neither as inherited nor as acquired, ″for it is not the sons of the old rulers who are heirs and who remain lords. Rather, the sultan is raised to this rank by those who have the power to do so. Because this is an ancient, traditional structure, one cannot speak of an acquired position, for many of the difficulties that one has with new leadership are not present in it. Even if the ruler is new, the organization of the state is nonetheless old and arranged as if the new lord had inherited the throne.″[106] The College of Cardinals and the council of Mamluk oligarchs are in essence equated.

A valuable confirmation that Arnold von Harff′s verdict on the career opportunities of the sons of Mamluks at the end of the fifteenth century was current in European circles is given by the canon Pietro Casola, who traveled to Jerusalem two years before Harff.[107] His commentary in this respect is connected to his complaint about the rule of the cursed Mamluks, who had repudiated Christianity, over the Holy Land. He places the responsibility for this tragedy with the quarrelsome Christians themselves, who fragment their powers, then speaks to our theme: ″Only a Christian apostate can rule over the Moors. And when one of these apostates takes a wife and has sons, these sons cannot succeed the father in his office. Such sons are called ″sons of the people,″ although they are sons of the sultan.″

The expertise of the theological scholar Felix Fabri is especially enlightening in this matter. Here again, he tries at all costs to systematize that which is incomprehensible to him, and to make it plausible to his readers at home through references to his own culture, no matter how speculative. In both versions of his travel report, the German abridgement,[108] and in the full Latin edition of the *Evagatorium*,[109] he imaginatively addresses the obvious problem of how the sons of Mamluks can share in the privileges of their fathers despite their exclusion:

> It is estimated that there are more than 30,000 Mamluks in Cairo in the service of the sultan. The sultan is the heir of all of them, for it is not permissible that the son of a Mamluk inherits his father´s fortune. He is not even seen as a Mamluk, because he has never been a Christian and has not fallen away [from Christianity]. Therefore, the Mamluks intentionally allow their children to be baptized as Christians. As long as they are growing up, they have them instructed in the faith of Christ. However, when they have reached the age in which they can judge for themselves, somebody leads them to renounce their faith in full public view. Now the son can follow in his father´s footsteps and become a Mamluk. The young people know this and yearn for the day of their apostasy to come as soon as possible, because they may then ride a horse and carry weapons. And for this reason, the number of Mamluks grows from day to day.[110]

In the German edition of Fabri´s 1483 pilgrim´s report, abridged from the complete Latin version, it is stated briefly that:

> The Mamluks also allow all their children and women to be baptized. But not all do so for the sake of God; rather they seek to deceive through this. At the court of the king sultan, no one can be or become powerful but Christian apostates. For no heathen [i.e., Muslim] can become a Mamluk and therefore the Mamluks have their sons baptized and instructed in the Christian faith until they reach the age, then they too apostatize, become Mamluks, and inherit their father´s fortune. All this could not be had they not been Christians before. And this is a lamentably great deception in which there is no good, for in this manner the name of Christ remains among the heathens.[111]

The following paragraph is incomplete in the available German abridgement of Fabri´s pilgrim´s report. Therefore I have inserted the missing passages (in italics) from an available French translation of the complete German text:

---

[110]Fabri, *Voyage,* 553.

[111]Fabri, *Pilgerfahrt,* 122; idem, *Voyage,* 915.

> There are innumerably many Mamluks at the court. The sultan, *the amir, and the dyodar* [i.e., *dawādār*] have nearly 30,000 Mamluks, all of whom are given a salary. *Their inheritance goes to the sultan. Their children retain only that which it pleases him to leave them.* We saw young boys as Mamluks at the court, many with costly ornament. The entire land, as far at the sultan rules, is ruled through Mamluks and the Saracens have no power there.

Fabri´s peculiar idea, irreconcilable with the reality known to us, that descendents of Mamluks could, by means of a limited term conversion, attain the privileges of their fathers so to speak through the back door surely has an ideological background on the Christian side. Garcin, for example, sees this as an effort by the author to make the impressive power of the Mamluks and their many victories over the Christians bearable to himself.[112] By declaring them to be former or crypto-Christians, one could claim them for one´s own cause, sharing in their success in a deeper sense. This must surely be the most complex but also the most unequivocal expression of the West´s respect for this powerful monarchy and its rulers. The alleged eagerness of the Mamluks in general to return to Christianity, their native religion, has been discussed above. This claim too strengthened the feeling that, on the deepest level, one was dealing not with opponents but with allies. To be defeated by them was less humiliating than if one had been dealing with true foreigners. We should also not forget that the Mamluks were the masters of the holy places of Palestine, the land which the Crusades had sought in vain to win back for Christendom. Arnold von Harff has one of his German Mamluks argue simply but fully in the context of this deep-set Christian disquiet over the Mamluks´ power: Jerusalem is a holy place for all three great religions, for Jews, Christians, and Muslims. Whoever rules this city must then be the most powerful king on earth.[113]

Ibn Zunbul, who wrote his history of the conquest of Egypt by Sultan Selim at the beginning of Ottoman rule, renders historical processes (as well as the inheritance of privileges), as he is fond of doing, in a (fictional) dialogue. In the following case he deals with the competing principles of succession. If, according to Selim, a sultan must be descended from a sultan,[114] something that disqualified a Mamluk from becoming ruler, these were quick to reply: ″Who was Abraham´s or

Muḥammad´s father?″[115] Even in a time when the Mamluk sultanate had long since become history, this basic law of the late Mamluk period was still deeply anchored in the consciousness of the Egyptian people. The French Franciscan André Thevet visited the country in 1550 and encountered again and again sentimental memories of the courageous sultans, especially the last of them, Ṭūmān Bāy, whom the Ottoman conqueror Selim had executed in a most bestial manner. He puts it this way: ″The sons of the Mamluks could not become soldiers and therefore the sultan was not able to bring about the succession of his sons.″[116]

THE HISTORICAL VALUE OF THE EUROPEAN TRAVEL REPORTS

In the course of the history of the Mamluk sultanate from 1250 to 1517, the most important institutions of the empire were gradually, and sometimes also abruptly, ″Mamlukized.″ Reverses in this process, such as the well-known intermezzo during Sultan Ḥasan´s reign, were without lasting consequence. Occidental pilgrims and emissaries inform us about these social and political developments, initially sporadically and later with greater and greater frequency. Through their distance they saw, as emphasized above, the essential institutional changes at the pinnacle of the state more clearly and impartially than many of the officials of the chancery or court historians of the time.

The most important stages in this long process of the erosion of the non-Mamluk elites´ power to the benefit of the sultan and the royal Mamluks who underpinned the system can be briefly summarized. Under Qalāwūn began the displacement of the ″turban wearers″ from offices traditionally accorded to civilians, such as the vizierate, by true Mamluks *(mukalwatūn).* The next decisive event was the reform, finally successful after many failed attempts, of the army and fiefs by al-Malik al-Nāṣir Muḥammad in the year 1315. As a result of this, the rulers and sultan´s Mamluks were able to secure a greater share of the rural wealth of Egypt at the expense of non-Mamluk groups (such as the *ajnād al-ḥalqah*). Nevertheless, the assumption of power by the oligarchy of generals after the death of al-Nāṣir Muḥammad still did not mean the end of dynastic continuity at the pinnacle of the

---

[115] Doris Behrens-Abouseif, *Egypt´s Adjustment to Ottoman Rule: Institutions, Waqf and Architecture in Cairo, 16th and 17th Centuries,* Islamic History and Civilization Studies and Texts 7 (Leiden, 1994), 197; al-Ḥusaynī, *Kitāb Nafā'is Majālis al-Sulṭānīyah*, 133 f. In the early fourteenth century, in the struggle between the son of the sultan, al-Malik al-Nāṣir Muḥammad, and his ″purely″ Mamluk opponent, Baybars, the formula ″*al-mulk ʻaqīm*″ epitomized the ideal of personal effort over inherited position.

[116] André Thevet and Jean Chesneau, *Voyages en Égypte 1549-1552,* ed. Frank Lestringant, Collection des voyageurs occidentaux en Égypte 24 (Cairo, 1984), 178: ″. . . voire les enfans sortis d´un Mamelu, ne pouvoient estre honorez du tiltre d´hommes d´armes: qui estoit cause, que le Soldan ne pouvoit faire que ses enfans luy succedassent.″

state itself. Sultans from the reigning house—Qalāwūn´s sons and grandchildren—ruled over Egypt longer than the Ayyubids, although they were born in the land and should have been excluded from power according to stricter Mamluk rules. The longevity of his house was favored by the fact that the Egyptian-born al-Nāṣir was able, with iron self-discipline and determined politicking, to shake the stigma of non-Mamlukdom and was seen by contemporaries as a true and even exemplary Mamluk.

From the end of the fourteenth century, European travel reports are available as a source for these important events. Simone Sigoli cites the reservations, for example, of the caliph to the usurpation of the throne by Barqūq at the expense of the Qalawunids:[117] as an illegitimate ruler, he must first buy the loyalty of the amirs.[118] Also de Mignanelli, in his report made possible by his intimate proximity to the ruler, Barqūq, emphasizes the at that time still uncontested validity of the dynastic principle. He writes in *Ascensus Barcoch* how it was held against Barqūq that he was a slave, that is, in contrast to all of his predecessors since al-Manṣūr Lājīn, he had come to the throne as a real Mamluk. It is further noted that, in deposing his rival Barakah, he nevertheless had himself sanctioned by the Qalawunid shadow caliph as custom dictated. It required fine maneuvering, according to the author of *Ascensus Barcoch*, well versed in events at the court and in the provinces, but in the end, the rebel Barqūq was able, after two attempts, to ascend to the sultan´s throne and depose the last Qalawunids, allies of his opponents.

The next break in this development, the diversion of funds originally earmarked for Barqūq´s son to the *dīwān al-mufrad,* was not registered by a single western traveler. Nonetheless, we do hear from Piloti about what was perhaps the most important turning point, in terms of institutional history, in the history of the office of the sultan.[119] I am thinking of the execution of Sultan Faraj, the son of Barqūq, in the year 1412. This was done with the blessing of the shadow Caliph al-Mustaʿīn,[120] at the behest of al-Mu'ayyad Shaykh, who was so conscious of his own Mamlukdom. The farce that immediately after this event the previously mentioned Abbasid shadow Caliph al-Mustaʿīn held the throne for a short time, only to be removed soon afterwards once the new strong man had rid himself of

[117]Sigoli, ˝Pilgrimage,˝ 175.

[118]Ibid., 174.

[119]Piloti, *L´Égypte,* 12-13.

[120]With appeal to supposed violations of the law: ˝that he has treated infinite pagans [i.e., Muslims] unjustly *[il avait fait infinis payens contre justice]* and that he has eaten pork and drunk wine on Friday . . .˝ Ibid., 13.

his internal opponents, also found its way into Piloti, though naturally he does not really grasp the institutional impotence of the office of the caliphate.[121]

At that time, in 1412, cracks began to appear in the law of the succession of father by son, which had been recognized without question as valid from within and without. This was a relic of the Seljuks and Ayyubids, as whose heirs the Mamluks saw themselves. It becomes predictable that the sons, whose succession was regularly pushed through the election councils composed of the most powerful oligarchs by their fathers before death, will only be left in office as sultan until the victor in the power struggle among full Mamluk competitors is determined. The observations of Schiltberger and Tafur (the latter comments on the career chances of Mamluk sons generally, not only of the princes, or *sīdī*s) reveal a clear hierarchy between the Mamluks of the first generation and their immediate descendents. For the Mamluk descendents of the fourth generation, according to Tafur, the blue blood of their forefathers carries no weight whatsoever.

After a further thirty years, the glut of travel reports begins and we near the end of the sultanate. At this point the hopes of the sons of Mamluks are finished, that is the hope to slip into their father′s shoes despite having been born in the wrong place. All of the European reporters corroborate this, as brief, muddled, and biased as their portrayal of the fact may be. The last attempt is made by Qāytbāy. He has his half-grown son Muḥammad appointed as sultan in his stead while he is still alive and thereby provokes the opposition of the entire Mamluk establishment. In the hundred years from Mignanelli′s Barqūq biography to Arnold von Harff′s colorful portrayal of the civil war between al-Nāṣir Muḥammad ibn Qāytbāy and his ″full Mamluk″ challengers, the opinion of the foreigners on what is legitimate has turned 180 degrees. The son of the ruler is at this point no longer destined to succeed as on the basis of his lineage but rather, quite on the contrary, disqualified through his relationship.

Mamluk Egyptian Copper Coinage Before 759/1357-1358: A Preliminary Inquiry

I

Paul Balog′s *The Coinage of the Mamluk Sultans of Egypt and Syria* was published in 1964.[1] Contrary to a frequently-encountered belief among Mamlukists, the study of Mamluk money did not end with its appearance. While the *CMSES* (as it will henceforth be referred to) has proved a solid foundation for the subsequent study of Mamluk numismatics and monetary history, it did not solve every problem nor answer every question. There are still several outstanding gaps in our knowledge of Mamluk money. This article sketches out the parameters of one such gap: developments in the copper coinage minted in Cairo for the first century of Mamluk rule.

In the year 759/1357-58, apparently at the instigation of the Amir Sarghitmish, the Mamluk Sultan al-Nāṣir Ḥasan issued new copper coins (often referred to as *al-fulūs al-judud* in the sources) of different appearance and minted to a heavier, fixed weight—the *mithqāl* standard—than those that had circulated previously.[2] Coins similar to these were minted during the remaining decades of the eighth/fourteenth century, and apparently were struck in such quantities that they circulated well into the next.[3] But what was going on before these developments? What is the state of our knowledge about Mamluk *fulūs* before the ″new ones?″ The obvious starting point in the search for answers is the *CMSES*, where we read:

> The weight-unit of the copper coinage since the beginning of the Baḥri rule until 759 H, during the second reign of al-Nāṣir Ḥasan, was the *dirhem*. At this time the *mithqāl* was officially proclaimed as the unit of weight. Whereas before 759 H. the copper could pass

[1]New York, 1964.

[2]The coin type is *CMSES* type 369.

[3]See Warren C. Schultz, ″Mahmûd ibn ‘Alî and the ′New Fulûs′: Late Fourteenth Century Egyptian Fulûs Reconsidered,″ *American Journal of Numismatics,* 2nd ser.*,* 10 (1998): 127-48.

> by tale [i.e., by count], even though for modest transactions only, after that time it had to be weighed for any business deal.[4]

In light of the research presented below, several modifications must be made to Balog's assessment. First of all, the situation is quite different depending on whether one is discussing *fulūs* struck in Cairo or in the major Syrian mint cities of Damascus, Ḥamāh, Aleppo and Tripoli.[5] For reasons explored in the next section, this discussion will be limited to those coins struck in Cairo. Secondly, the numismatic record for Cairene *fulūs* itself is scanty to say the least, and fraught with problems. Thirdly, the surviving literary records reveal a more complex situation for the period "since the beginning of Baḥri rule." And finally, the question why the Mamluk Sultanate would have specified a weight standard for low value copper coinage must be asked.

II

It is useful to preface this discussion with some comments about copper coinages in the medieval Islamic world. Unlike gold and silver coins of a high alloy, copper (and other base metal) coinages have a low intrinsic value, reflecting the lower worth of copper vis-à-vis the precious metals. Copper coins are thus usually described as a fiduciary money, with a higher percentage of their circulating (extrinsic) value determined by factors other than their metallic content. The only ways in which an issuing authority could maintain this higher extrinsic value would be by limiting the number of copper coins it issued and by accepting them in turn as payment for taxes and other transactions.[6] Failure to do so could result in the coins plummeting in value to a floor provided only by the market value of the metal itself.

---

[4]*CMSES,* 49. Balog based his analysis here on the compilation of textual citations found in William Popper's *Egypt and Syria under the Circassian Sultans, Systematic Notes to Ibn Taghribirdi's Chronicles of Egypt,* University of California Publications in Semitic Philology, vol. 16 (Berkeley, 1957).

[5]The occasional Mamluk mints of al-Lādhiqīyah, Malaṭya, and al-Marqab seem to have minted only silver. Copper coins were not struck in Alexandria until 770/1368-69, and thus fall outside of the time period of this study. Aḥmad ibn ʻAlī al-Maqrīzī, *Ighāthat al-Ummah bi-Kashf al-Ghummah,* ed. Muḥammad Muṣṭafá Ziyādah and Jamāl al-Dīn Shayyāl (Cairo, 1940), 69.

[6]See Carlo Cipolla, "The Big Problem of the Petty Coins," in *Money, Prices, and Civilization in the Mediterranean World, Fifth to Seventeenth Centuries* (Princeton, 1956), 27-37. Cipolla discusses coins of extremely low silver content in this article, but his analysis holds true for copper-only coins as well. It is worth repeating that despite what is frequently asserted, it is highly unlikely that any pre-modern state could guarantee or enforce exchange rates after a coin entered circulation.

Copper coins are also said to have fulfilled a different role in the marketplace than their precious metal counterparts. Copper coins are often dismissed as merely local coins, good for petty purchases only, and not given the status of legal currency. The reality is more complex, both for questions of legal standing and circulation. For the former, while it is true that gold and silver coins are discussed more frequently than copper coins in the works of major Muslim jurists,[7] by the Mamluk period it is clear that the role and status of copper coins was of concern to religious scholars.[8] This is a topic that needs further attention.

In terms of circulation, it must be acknowledged that both textual and archeological evidence suggest that Mamluk copper coins could circulate far from the city of their origin. *Fulūs* from Cairo, for example, circulated as far afield as Jerusalem and its environs,[9] and possibly in Quṣayr on the Red Sea as well.[10] Nevertheless, it is probably safe to assume that the norm was for these coins to circulate close to their mint of origin. That said, there are immediate differences between the copper issues of Cairo and the Syrian mints for the first century of Mamluk rule. The copper issues of the Syrian mint cities (Damascus, Ḥamāh, Aleppo, Tripoli) are far better known than those from Cairo. Many more Syrian types and actual specimens are known to us, although few studies of these coins have been published.[11] These Syrian *fulūs* vary tremendously in their appearance,

[7]See Robert Brunschvig, "Conceptions monétaires chez les juristes musulmans (VIIIe-XIIIe siècles)," *Arabica* 14 (1967): 113-43; and A. L. Udovitch, *Partnership and Profit in Medieval Islam* (Princeton, 1970).

[8]As is well known, al-Maqrīzī's screeds against copper coinage pepper his *Ighāthah* and *Shudhūr al-Nuqūd fī Dhikr al-Nuqūd.* Al-Suyūṭī also discusses copper coinage in a *fatwá,* "Qaṭ' al-Mujādalah 'inda Taghyīr al-Mu'āmalah," cited by Christopher Toll, "Minting Technique according to Arabic Literary Sources," *Oriental Suecana* 19-20 (1970-71): 125-37. An as yet unexploited resource are the Mamluk-era *fiqh* manuals. Rafaat El Nabarawy has drawn attention to one such manuscript, Ibn Hayyim's "Nuzhat al-Nufūs fī Bayān Ḥukm al-Ta'āmul bi-al-Fulūs" preserved in the Dār al-Kutub al-Miṣrīyah MS 1073 *fiqh shāfi'ī.* See his "Maskūkāt al-Mamālīk al-Jirākisah fī Miṣr," Ph.D. diss., University of Cairo, 1981, p. *yā'*.

[9]Ibn Hayyim, "Nuzhat al-Nufūs," mentioned Cairene coppers circulating in Jerusalem (cited by El Nabarawy, "Maskūkāt al-Mamālīk," p. *yā'*). This observation is also supported by many small hoards of copper coins preserved at the Israel Antiquities Authority, wherein Cairene coppers are found mixed with *fulūs* from the Syrian mints. The author gratefully acknowledges the permission of Ruth Peled and the assistance of D. T. Ariel in examining these coins. While it is true that archeological finds alone do not prove zones of circulation, in this case the correlation of both literary and archeological evidence supports the assertion that Cairene coppers did indeed circulate in Jerusalem.

[10]This is clear from the archeological excavations done at the site, which revealed copper coins from Cairo and other Mamluk cities. Permission to examine the coins found at Quṣayr and preserved at the Oriental Institute of the University of Chicago was granted by Donald Whitcomb.

[11]The important study by Lutz Ilisch, "The emission of copper coins in 8th century H. Mamluk

and make frequent use of heraldic-type designs and decorations. The situation is made more complex by the fact that many coppers of clear Syrian provenance lack a mint name. They also exhibit extreme metrological variance from type to type and across mint. The issues of each of these Syrian mints is deserving of their own study. For these reasons, I will limit my discussion to Cairene *fulūs* only.

Finally, as was the case for gold and silver, there were no functioning mines for copper in the Mamluk domains.[12] Metal for minting *fulūs* had to come from either existing stocks of copper (in the form of older coins or in other goods such as plate, etc.) or was purchased from external sources.

III

The numismatic and the literary records are clear that the Ayyubid rulers of Egypt minted copper coins.[13] The Mamluks thus inherited a monetary market place in which coins of gold, silver, and copper circulated. Unfortunately, while copper coins are mentioned in the sources with some frequency, actual copper coins from the first century of Mamluk rule are rather rare. There are only 16 types that have thus far been linked to Cairo by the *CMSES* and subsequent scholarship. These types, along with two other possible Cairene types, are listed in Figure 1. Obviously, there are significant gaps in this record. Coins have been definitively linked to only four sultans out of a possible 21 rulers from Shajar al-Durr to the second reign of al-Nāṣir Ḥasan.[14] Clearly there is much numismatic spade work to be done. Three problems seem especially important to me as illustrative of the difficulties faced in studying the copper coinage of this period.

The first concerns the *fulūs* of al-Ẓāhir Baybars.[15] The only mint name found on his surviving coins thus far is Damascus. Most of his copper coins are without

Syria," delivered at the Balog Memorial Symposium in 1988, is unpublished.

[12]ʻĀfiyah, Muḥammad Sāmiḥ, *Taʻdīn fī Miṣr Qadīman wa-Ḥadīthan* (Cairo:,1985), vol. 1, *Al-Taʻdīn al-Qadīm fī Miṣr,* 215. Cf. Adel Allouche, *Mamluk Economics* (Salt Lake City, 1994), 18.

[13]After several centuries in which copper coins were apparently not minted in Egypt, the Ayyubid al-Mālik al-Kāmil (615-35/1218-38) ordered the striking of *fulūs*. For a discussion of this event, see Hassanein Rabie, *The Financial System of Egypt, AH 564-741/1169-1341* (London, 1972), 182-83; the story of the woman and the water seller is surely apocryphal. This episode is also discussed by Claude Cahen, "Monetary Circulation in Egypt at the time of the Crusades and the Reform of al-Kāmil," in *The Islamic Middle East, 700-1900,* ed. A. L. Udovitch (Princeton, 1982), 315-33.

[14]This ignores the Syrian-based "revolts" and claims of Sinjār and Sunqur. For the Syrian *fulūs* struck by Sunqur, see Balog, "Un fals d'al-Kāmil Shams al-Dīn Sunqur, sultan mamelouk rebelle de Damas," *Revue numismatique,* ser. 6, vol. 15 (1973): 177-79.

[15]See *CMSES* types 94-103.

mint name. For good reason, many of these mint-less coins have been linked to other Syrian cities, notably Ḥamāh.[16] However, it is of course possible that some of the coin-types lacking a mint name were struck in Cairo. That this is so is one probable repercussion of the fact that mint-less coins of Baybars were found in the digs at Fusṭāṭ.[17]

A second problem lies in the copper coins of al-Nāṣir Muḥammad.[18] The entire coinage of this sultan awaits an in-depth analysis. His *fulūs*, in particular, are little understood. Many are mint-less and most types lack dates. The few that have dates are from his third reign only. More seem to be from Syria than Cairo. When faced with the difficulties of sorting and attributing this coinage, Balog placed it all in his discussion of al-Nāṣir Muḥammad's third reign (709-41/1309-40) for "practical purposes."[19] A perusal of this section of the *CMSES*, however, reveals that some of the copper coins attributed to al-Nāṣir Muḥammad by Balog bear only the regnal title *al-Malik al-Nāṣir* or even just *al-Nāṣir*. Note that it is possible that coins featuring only the regnal title *al-Nāṣir* and without personal name could also be al-Nāṣir Ḥasan, or for that matter any of the other Mamluk sultans who adopted this sobriquet. Balog argued against this, stating that the copper coins of al-Nāṣir Ḥasan have a "different style of design" than those of al-Nāṣir Muḥammad.[20] He was doubtless referring to the "new *fulūs*" minted in 759 and after; these coins are clearly different from what is known to have preceded them, and are immediately recognizable. However, it must be emphasized that these "different" coins appeared only in 759, towards the end of the second of two reigns of al-Nāṣir Ḥasan (748-52/1347-51 and 755-62/1354-61). The question remains: did al-Nāṣir Ḥasan order the minting of copper coins in the years before 759? As of yet, no coins of Cairo for Ḥasan before 759 have been found, possibly because no one has been looking for them. It is possible that some of them are mixed in with the issues of al-Nāṣir Muḥammad. The lucky appearance of an overstrike or odd die link would be most helpful in this matter.

Furthermore, many of these coins are thus far only known in a few specimens. I have been able to locate and study only four examples of Quṭuz's type #26, for

[20]Ibid., 163.

example, and only six of Qalāwūn's type #140. The exceptions to this issue of scarcity are the later types of al-Nāṣir Muḥammad and al-Ṣāliḥ Ismā'īl. Thanks to two hoards, both published by Balog, several hundred of these coins are known and available for study.[21] Nevertheless, given the paucity of surviving specimens, the publication of more specimens of already known rare types would not be mere duplication but significant contributions to our knowledge, making possible more comprehensive studies of the *fulūs* of the first Mamluk century.

IV

In contrast to the scanty numismatic record, the Mamluk literary sources contain many remarks about the Cairene *fulūs* in the first decades of Mamluk rule. Copper coins are mentioned in various contexts, ranging from lists of prices to exchange rates to the description of innovations in the way in which *fulūs* were valued. The earliest mention of this last sort of comment refers to events of the year 695/1295-96, during the reign of the sultan Kitbughā.[22] It is found in al-Maqrīzī's *Ighāthah*, and is worth quoting in its entirety.

> When al-'Ādil Kitbughā became sultan, . . . the injustices of the vizir Fakhr al-Dīn 'Umar ibn 'Abd al-'Azīz al-Khalīlī became more frequent, and the members of the sultan's entourage and his mamluks oppressed the population. Because all were greedy in [accumulating] wealth and receiving bribes and protection money, new *fulūs* were minted. These were *so light* that people avoided them. Hence it was proclaimed in 695/1295-96 that *they would be valued by weight and that one* fals *would be the weight of one dirham* [of minted copper]. Then it was announced that the exchange rate of one *raṭl* of *fulūs* would be two [silver] *dirham*s. *This was*

[21]Balog, "Trésor de monnaies en cuivre Mamelouks Bahrides," *Annali d'Instituto Italiano di Numismatica* 23-24 (1976-77): 199-215; idem, "Three Hoards of Mamluk Coins," *American Numismatic Society Museum Notes* 16 (1970): 173-78. The "Annali" hoard of 668 pieces is particularly important. These coins are recognizable by their "chocolate-brown" patina. The bulk of this hoard remained in Balog's personal collection. This important collection is now preserved at the Israel Museum, where I was able to weigh these coins, many of them for the first time. I would like to thank Yaakov Meshorer and Haim Gitler for their assistance in studying the Balog collection.

[22]A supposed development in Mamluk *fulūs* said to have occurred in 650/1252-53 did not in fact occur. It is the result of an editing error in the text of al-Maqrīzī's *Ighāthah,* 70. The actual events described in that passage took place "after 750" and not "after 650" as the editors put it. See W. Schultz, "Mamluk Money from Baybars to Barquq," Ph.D. diss., University of Chicago, 1995, 190-92.

> *the first time in Egypt that [the value of] the* fulūs *was determined by weight and not by tale*.[23] (emphasis added)

Several items in this passage require further comment. There are two "firsts" mentioned in this passage, one explicitly and the other implicitly. The "explicit" first is al-Maqrīzī's last sentence; that this event marked the first time that the value of Egyptian copper coins was determined by their weight and not count. This is problematic, in light of evidence discussed below. The "implicit" first in the passage is al-Maqrīzī's assertion that the weight of a single copper coin was set at one *dirham*.[24] This is the earliest known (to us) citation that pegs Mamluk *fulūs* to a specific weight standard. If true, it places the establishment of a weight standard for the copper coins not at the beginning of the Bahri period, but more than four decades into the sultanate. More importantly, if true, it inserts a new factor in the determination of value of these coins.

Prior to this development, if the weight of earlier copper coins did not matter, then the sole determinant of value was quantity. The more coins one possessed, the more money one had in one's possession. This is the normal situation expected when dealing with a fiduciary coinage of low intrinsic worth. Of course the value of the coins could be lowered by a number of factors, chief among them the failure of the mint to limit the numbers minted, but it would not make a difference if some coins were heavier than others.[25] If this were the case in Egypt prior to 695, however, why then would the people reject "lightweight" copper coins as asserted in the above passage? How could a coin be described as lightweight if no weight standard had been specified?

The answers to these questions lie in an analysis of al-Maqrīzī's assertion that the year 695/1295-96 marked the first time the value of copper coins was determined by weight. Specifically, we must explore the math behind the exchange rates

---

[23]Allouche, *Mamluk Economics,* 71. The original Arabic is found in the *Ighāthah,* 70, but see also 37-38. Al-Maqrīzī gave no source for his account of this event, which took place well before his birth. It is probable that the ultimate source for this account was a now-lost section of the history of al-Yūsufī. This is warranted by the observation that a similar account (lacking a few details) is also found in Badr al-Dīn Maḥmūd ibn Aḥmad al-ʻAynī, *ʻIqd al-Jumān fī Tārīkh Ahl al-Zamān,* ed. Muḥammad Muḥammad Amīn (Cairo, 1987-91), 3:303. The dependence of both al-Maqrīzī and al-ʻAynī on al-Yūsufī has been established by Donald P. Little, "The Recovery of a Lost Source for Bāḥrī Mamlūk History: al-Yūsufī's *Nuzhat al-Nāẓir fī Ṣīrat al-Malik al-Nāṣir," Journal of the American Oriental Society* 94 (1974): 42-54.

[24]Note that the term *"dirham"* is both the generic name for a silver coin, a unit of account used in valuation, and a weight unit of approximately three grams. In this case it is clearly used to signify a weight unit. See George C. Miles, "Dirham," in *The Encyclopaedia of Islam,* 2nd ed., 2:319-20.

[25]Therefore I must disagree with Rabie, who posits the existence of "lightweight" copper coins in the early Bahri period (*Financial System*, 188).

along with a closer examination of other contemporary textual sources. Al-Maqrīzī wrote that the exchange rate of these new copper coins was set at one *raṭl* of *fulūs* equal to two silver *dirham* coins. In Egypt at that time, a *raṭl* was a unit of weight equivalent to 144 *dirham* weight units. If the exchange rate cited above is correct, the math is quite simple. With their weight fixed at one *dirham*, 144 of the new copper coins of 695 would weigh a *raṭl*, and collectively be worth two silver *dirham*s. Thus 72 of these *fulūs* would equal one silver coin.[26] If the new *fulūs* were prepared with care and indeed weighed a *dirham*, the holder of the coppers desiring to use them in a commercial transaction could either count out the coins or weigh them to reach the desired amount, for the resulting sums would be equivalent. Thus a customer could count out 18 *fulūs* to purchase an item priced at a quarter-*dirham*, but then for an item priced at four silver *dirham*s, he could weigh out four *raṭl*s of *fulūs* rather than count out 288 separate coins. But other than the ease with which such interchangeability must have aided transactions, what else could have been behind the establishment of a weight standard for low value copper coins?

The establishment of a weight standard may also be explained as a attempt to minimize the harm that was evidently being done to those using *fulūs* by the way in which copper coins had previously been valued in the marketplace. This explanation is based on the fact that al-Maqrīzī was wrong in his assertion that 695 was the first time Mamluk copper had passed by weight (the explicit first mentioned above). Other Mamluk sources mention two instances in the two years preceding 695 where the copper:silver exchange rate specified the total weight of copper coins required to buy a silver coin but not their number. According to al-Suyūṭī (like al-Maqrīzī a ninth/fifteenth century source), in 693/1293-94 it took one *ūqīyah* of copper coins to equal one-quarter of a silver *dirham*.[27] At twelve *ūqīyah*s to the *raṭl*, this would result in an exchange of one *raṭl* of copper coins worth three silver *dirham*s. Al-Suyūṭī then mentioned that the rate subsequently fell to one *raṭl* of copper equal to two silver coins, a rate corroborated for 694/1294-95 by al-Maqrīzī in his *Sulūk,* (and also cited as the rate reaffirmed in 695).[28] In

---

[26]This exchange rate represents a devaluation of the copper:silver ratio found much earlier in the seventh/thirteenth century. In 622/1225 it took 48 *fulūs* to buy one good silver coin, and 16 to purchase one low silver coin. The exchange rates quoted in most discussions of al-Kāmil′s reforms of that year usually fail to differentiate between the types of silver coins available in the market. See Aḥmad ibn ʻAbd al-Wahhāb al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1964-), 29:131, n. 2, but note that the editors mistakenly identify a *dirham wariq* as a high silver content coin.

[27]Jalāl al-Dīn al-Suyūṭī, *Ḥusn al-Muḥādarah fī Akhbār Miṣr wa-al-Qāhirah* (Cairo, 1904), 2:177. See also Popper, *Egypt and Syria,* 67.

[28]Al-Suyūṭī, *Ḥusn,* 2:177; al-Maqrīzī, *Kitāb al-Sulūk li-Maʻrifat Duwal al-Mulūk,* ed. Muḥammad

neither of these years is the number of copper coins necessary to reach the required weight specified. Thus we are left to conclude that prior to 695 no weight standard had yet been fixed for the copper coins. What was important was the total weight of copper coins required to exchange for a silver *dirham*, not their number. In effect, copper coins had become little copper ingots, valued at or slightly above their copper content. In such a context, a heavier coin would be worth more than a lighter one.

The events leading up to 695 reveal a fundamental tension that apparently existed up to the last decade of the seventh/thirteenth century. This tension resulted in different rules in effect for transactions involving copper coins depending on whether the transaction was small or large. Simply stated, it meant that those who held lighter-weight coins would always face the potential of loss in value when they tried to use those *fulūs* in large scale transactions. If, for example, a baker sold loaves of bread for a single *fals* or two per loaf, it is likely that he accepted these coins by tale. Yet if he had to pay for his silver *dirham*s′ worth of wheat using several *raṭl*s of these same coins (as was evidently the case in 693-94), he would need more of the light-weight coins to make the desired exchange weight. It is no wonder that before 695 the Cairenes are said to have refused to use the lighter-weight coins said to have been issued by Kitbughā′s minions. Since the exchange rate for larger transactions was already two *raṭl*s of copper coins per silver *dirham*, it would have required more of the newer coins to reach that weight.

Once the weight of individual copper coins was standardized, however, the number of copper coins necessary to total a *raṭl* would remain relatively constant. If the individual *fals* weighed a *dirham*, then it should always take 144 of these *fulūs* to reach a *raṭl*. Of course the value of that *raṭl* of *fulūs* vis-à-vis silver *dirham*s could change in response to any number of market factors, but by minting copper coins to a specified weight standard, the nameless officials responsible were in effect attempting to guarantee the extrinsic value of coined copper. Given these circumstances, a weight standard for the *fulūs* can be seen for what it was, an attempt to ensure that the same petty coins could be used in confidence both by tale and by weight.

I have discussed this account in some detail because it sets the parameters of all subsequent *fals* crises of the remainder of the period under consideration here. In every example, the *fulūs* are said to circulate at an established rate of exchange until the presence of lighter coins (either officially minted or perhaps counterfeits) forces a drop in the copper:silver exchange rate, which in turn causes upheaval in the marketplaces of Cairo. This brings about the minting of new full-weight coins which circulate at the old exchange rate. The old *fulūs* are usually said to have decreased in value, taking many more of them to equal a silver *dirham* than

before. This basic cycle of events is mentioned at least four more times in the Mamluk sources for the period up to 759.

The first such occurs in 705/1305-6, during the second reign of al-Nāṣir Muḥammad.[29] The next crisis of *fulūs* falls in the years 720-21/1320-22, during the third reign of al-Nāṣir Muḥammad. This episode is noteworthy because some of the new full-weight coins issued in response to the turmoil are said to have included a "heraldic napkin" *(buqjah)* in their design as a way to differentiate them from the preceding coins.[30] This account is closely followed by the events of 724/1323-24.[31] The final example occurs in 745/1344-45, during the reign of al-Ṣāliḥ Ismā'īl.[32] While the odd detail may vary between these accounts, the basic pattern is very familiar.[33]

It remains to be seen if the numismatic evidence corroborates the above analysis. Here the scantiness of this evidence proves an obstacle. There are no known Egyptian *fulūs* from the reign of Kitbughā, for example, and there are very few known from the sultans before him, so we are unable to mesh the account of 695 with precise numismatic data. Yet the surviving coins are not entirely mute concerning the possible establishment of a *dirham*-weight *fals* in or around 695. There do exist five measurable samples of coins that fall on either side of that date. These samples allow us to ascertain if a weight standard was ever established for *fulūs* during the first century of Mamluk rule.

Muṣṭafá Ziyādah and Sa'īd 'Abd al-Fattāḥ 'Āshūr (Cairo, 1934-73), 1:810.

[29] Al-Maqrīzī, *Sulūk,* 2:17. See also al-'Aynī, *'Iqd,* 4:410, where there is no mention of the minting of new coins, and K. V. Zetterstéen, *Beiträge zur Geschichte der Mamlukensultane in den Jahren 690-741 Higra, nach arabischen Handschriften* (Leiden, 1919), 132, for an even briefer account. Al-Maqrīzī's passage reads "in that year economic transactions in Cairo ceased due to the increase of the number of *fulūs* as well as [an increase] in the lightweight *fulūs*. . . . New *fulūs* were ordered struck and the lightweight *fulūs* were exchanged at the rate of two and one half [silver *dirham*s] per *raṭl,* and business resumed."

[30] Al-Maqrīzī, *Sulūk,* 2:205-6; cf. Rabie, *Financial System,* 195-96. J. W. Allan has argued that this rhomboid is but a frame for the words it surrounds and not necessarily a heraldic device. See his "Mamluk Sultanic Heraldry and the Numismatic Evidence: A Reinterpretation," *Journal of the Royal Asiatic Society* (1970): 99-112, especially 100.

[31] Al-Maqrīzī, *Sulūk,* 2:253, idem, *Al-Mawā'iẓ wa-al-I'tibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār* (Bulaq, 1270/1853-54), 2:148-49; Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1942), 9:77; al-Suyūṭī, *Ḥusn,* 2:180. There is no evidence to support the weight standard of a "*dirham* and one-eighth" cited by the editors of the *Sulūk,* and repeated in the text notes of the *Nujūm.*

[32] Al-Maqrīzī, *Sulūk,* 2:669.

[33] All except the last are discussed in Rabie, *Financial System*, 195-97.

The sole anterior sample is that of the Ayyubid Cairene *fulūs* of al-Kāmil Muḥammad and al-Ṣāliḥ Ayyūb.[34] While they were minted several decades before Kitbughā's reign, they do provide a baseline against which the early Mamluk *fulūs* may be compared. The weights of 85 of these coins are plotted in a frequency table (Fig. 2).[35] The wide range of coin weights—from less than 1.40 to more than 4.90 grams—and utter lack of a pronounced peak in any weight interval are strong visual proof that these Ayyubid coppers were not struck to a weight standard. It is safe to conclude, therefore, that if a weight standard for copper coins is subsequently encountered, it is of Mamluk origin.

The remaining four coin samples date from after the reign of Kitbughā. Three are dated to the third reign of al-Nāṣir Muḥammad, and the fourth to the reign of al-Ṣāliḥ Ismāʿīl. Figure 3 tabulates the earliest sample from the third reign of al-Nāṣir Muḥammad, struck during the years 710-12/1310-13. The sample consists of twelve coins dated 710, and fourteen additional coins which, while undated, can be assigned to this period on stylistic grounds.[36] While this period does not match up with any of the crises noted above, these coins represent the closest available chronological set of data to the events of 695, and therefore should be examined. The weights of these 26 coins are plotted on Figure 3. The sample is admittedly quite small, but the peak interval (2.80-2.89 grams) is noteworthy. It falls close to the value of approximately 3.00 grams which is the weight usually associated with the *dirham*-weight unit in the Mamluk era.[37] Nine of the 26 coins fall in that range. While it would be unwise to build an argument on such a tiny sample, this graph—with its pronounced peak and tight cluster of 25 of the 26 coins—suggests at the very minimum that more attention was being paid to the weight of the *fulūs*.

The next set of coins can be clearly linked to the events of 720-21 mentioned above. This is evident from the *buqjah* which is quite prominent in the coin design. A small sample of 15 of these coins is tabulated in Figure 4. The shape of the graph is similar to Figure 3, albeit shifted slightly to the left on the horizontal

[34]While the Egyptian coppers of al-Kāmil Muḥammad are mint-less, they are attributed to Cairo by archeological evidence. See Michael Bates, "The Function of Fatimid and Ayyubid Glass Weights," *Journal of the Economic and Social History of the Orient* 24 (1981): 65, n. 8.

[35]A frequency table plots the number of coins on one axis against weight units on the other axis, and is a useful tool for illustrating metrological aspects of a coinage sample. The author would like to thank the many curators and private collectors who graciously made the collections in their care available for this metrological analysis.

[36]The coins in question are *CMSES* types 231-2. For a discussion of the style of these coins, see Khoury, "The Copper Coinage of al-Nasir Muhammad ibn Qala'un," 14-15.

[37]For the range of values for such units as the *dirham* and *mithqāl*, see my forthcoming "Mamluk Metrology and the Numismatic Evidence."

axis. The sample is too small to safely confirm or deny the existence of a weight standard, yet it does establish a base set of data to which future specimens may be added in the hope of eventually corroborating the literary accounts of this coinage. Still, if a *dirham* weight standard of approximately 3.00 grams was in place, the peak interval (2.50-2.59 grams) raises the possibility that this sample itself contains examples of the light-weight counterfeit coins mentioned by al-Maqrīzī in his accounts of the *buqjah* coinage.

The third and final batch of al-Nāṣir Muḥammad′s coins studied contains 299 specimens of an epigraphic design.[38] These coins are undated, but can be placed with confidence in the last decade of his rule. Several factors support this attribution, the most important being the extremely close resemblance of these coins to the dated issues of Damascus from 735-41/1334-40.[39] (This is, incidentally, one of the few instances in which there appears to have been coordination in the minting of *fulūs* between Cairo and one of the Syrian mints. The significance of this awaits further study.) While this sample of coins does not chronologically match any of the incidents mentioned above, its size makes it a valuable source of metrological information. The weights of these coins are plotted in Figure 5. This frequency table has the prototypical bell-shaped curve that is expected when charting a coinage prepared to a fixed weight standard. The coins are tightly clustered around the peak interval of 2.90-2.99 grams. The average weight of the sample is 2.98 grams. Given the *dirham*-weight unit of about 3.00 grams for the Mamluk period, this data does indeed support the conclusion that by the fourth decade of the eighth/fourteenth century, Egyptian copper coins were being struck to the *dirham*-weight standard.

This standard was evidently continued into at least the reign of al-Ṣāliḥ Ismāʻīl (743-46/1342-45). A sample of 188 coins dated 745-46 and bearing the name of this sultan is plotted in Figure 6.[40] With these dates, these coins are strongly linked to the episode of *fulūs* crisis in 745 discussed by al-Maqrīzī. While the curve is not the perfect bell-shape seen in Figure 5, it is a tightly packed histogram, suggesting close attention was paid to coin weight. The most interesting feature of the table is clearly the large number of coins that fall in the intervals 3.00 to 3.09 and 3.10 to 3.19 grams. This would suggest either that the coins were struck to a

---

[38]These coins are *CMSES* types 220-1. A total of 275 of these coins came from the hoard published by Balog as ″Tresor de Monnais en cuivre Mamlouks Bahrides″ (see note 21). Balog provided less than 20 weights in this article. Balog identified 263 coins as type 220-1. The additional 12 are the result of my attribution.

[39]The Damascene coins are CMSES types 222-226. For this and other stylistic reasons, Khoury also attributes these Cairene coppers to the latter years of his reign. (Khoury, ″The Copper Coinage of al-Nasir Muhammad ibn Qala′un,″ 17-18.

[40]These coins are *CMSES* types 285-6.

standard slightly higher than the *dirham*-weight unit, or that the *dirham*-weight unit was slightly heavier than previously assumed, but final word on this should be postponed until more specimens of these types are known and weighed.

V

Lastly, in light of this discussion of the literary and numismatic evidence, what conclusions can be drawn for the first century of Mamluk Egyptian *fulūs?* First, given the uneven quality of the numismatic evidence, any conclusions must be painted in the broadest possible strokes. A corollary of this is that the literary and numismatic evidence simply do not correlate closely. Coins discussed by the chronicles in certain years are often rare or even unknown, and those coins that do survive in large numbers are often not mentioned by the surviving literary sources at all. Thankfully, the possibilities for meshing chronicle and coin improve after this first century of Mamluk rule.

Secondly, we must back away from Balog′s assertion that the *dirham*-weight standard was in place for the copper coins from the beginning of the Bahri period. The first mention of such a standard does not appear until 695, and the available numismatic evidence does not begin to support such an assertion until the third reign of al-Nāṣir Muḥammad. Figure 2 is proof that the Ayyubids did not utilize a standard weight *fals*. For the next eight decades we simply do not have enough coins to work with. It is only with Figure 5, plotting coins attributed to the late 730s, that we have a statistically viable sample indicating a weight standard was in use, and that that weight standard is close to the 3.00 gram range usually associated with the *dirham*-weight.

Thirdly, what was gained by the institution of a weight standard for the *fulūs?* Seen in the light of how copper coins circulated and were exchanged, the establishment of such a standard is best viewed as an attempt to insure that *fulūs* could be used for both small-scale and larger transactions; that those who took them by tale could also use them by weight. The fact that the 759 reform featuring *mithqāl*-weight coppers was maintained for more than three decades—the situation did not disintegrate until the 790s—further indicates that fixing the weights of Egyptian copper coins was an effective measure.

And finally, there is still work to be done in Mamluk numismatics and monetary history.

The following types have been identified. ″Epigraphic″ means that the most noteworthy feature of coins is their legend. They lack a clearly identifying symbol or design. Unless specifically mentioned otherwise, references are to Balog′s *CMSES*.

Rotting Ships and Razed Harbors: The Naval Policy of the Mamluks*

> When the people of Beirut noticed [the fleet], they evacuated their wives, children, and possessions from the city, so that Beirut was emptied of its inhabitants. Neither the governor *(mutawallī)* of Beirut nor his troops were there, just the soldiers of the regional amirs of the Gharb. . . . The Franks landed at a place known as al-Ṣanbaṭīya in the west of the city. . . . They took possession of the city, plundered, and burned our house and the market near the harbor. Some courageous Muslims banded together and fought with individual Franks in the lanes, killing some and losing three Muslims in these skirmishes. . . . The Franks remained in Beirut till shortly before the afternoon prayer *(al-aṣr)* then returned to their ships . . . and headed for Sidon . . . where they again left their boats near the town. . . . Meanwhile the governor of Damascus, Shaykh, who would later become Sultan al-Mu'ayyad Shaykh . . . arrived in Sidon with his troops and pushed the Franks back. . . . Then the governor of Damascus ordered the governor of Beirut to cut off the heads of the Franks killed in Beirut . . . and send them to Damascus, then to Egypt.[1]

As related in this passage, the local inhabitants of Beirut and the other coastal cities were helpless against the constant attacks of the Frankish corsairs on their towns. This situation was not inevitable but was the result of Mamluk policy. This eyewitness account by the nobleman Ṣāliḥ ibn Yaḥyá of the attack of a joint Genoese-French fleet on Beirut and Sidon in the year 1403 illustrates three crucial aspects of the Mamluk defensive posture in Syro-Palestine: there was no regular Mamluk fleet to prevent a Frankish attack on the Syro-Palestinian coast; Beirut at that time was not fortified to halt a Frankish attack; only local troops were

*This article is part of a Ph.D. dissertation, ″Verbranntes Ufer: Auswirkungen mamlukischer Seepolitik auf Beirut und die syro-palästinensische Küste in mamlukischer Zeit (1250-1517),″ submitted to the University of Cologne.

[1]Ṣāliḥ ibn Yaḥyá (d. after 1436), *Tārīkh Bayrūt: Akhbār al-Salaf min Dhurrīyat Buḥtur ibn 'Alī Amīr al-Gharb bi-Bayrūt*, ed. Francis Hours and Kamal Salibi (Beirut, 1969), 32-34.

stationed on the coast and the Franks were therefore free to plunder the harbor towns until the regular Mamluk army arrived from Damascus.

This article will review the three most important components of Mamluk naval policy and assess the effectiveness of that policy in securing the coast. This three-part review will be followed by a discussion of why the Mamluks never initiated a lasting program to build and maintain a fleet.

The main aim of the Mamluks after the expulsion of the Crusaders from the Syro-Palestinian coast in 1291 was to prevent their return and to that end they destroyed the harbors there. This ″scorched earth″ policy was designed to prevent the Crusaders from capturing a fortified town on the coast and using it as a base for further operations in Syria. This razing of the harbors was combined with the transfer of the line of defense further inland from the coast, where fortifications were built and troops garrisoned. These troops could deploy to the coast within days if an attack by Frankish forces took place.

The second component of Mamluk naval policy was the building of ad hoc fleets. These were the only manifestations of Mamluk naval activity. The naval squadrons were designed only to transport troops to a destination, not to wage battle in naval encounters. These ships were galleys which depended on oarsmen and thus had a limited range. Because of weather conditions, they were unable to operate year-round and therefore their use was seasonal. A recurring feature of the Mamluk ad hoc fleets was that they did not survive from one reign to the next. Once the sultan who had built the ships died, his successors were so occupied by the ensuing power struggle that they left the boats of their predecessor to rot. This lack of continuity was the main reason no regular fleet was maintained and no lasting naval program ever came into being under the Mamluks.

The third pillar of Mamluk naval policy was their attempt to involve European powers, through alliances and treaties, in the defense of the Mamluk Empire. In the beginning of their reign the Mamluks concluded treaties with the Crusader states and the kingdom of Aragon. In the second half of the fourteenth century the Venetians had emerged as the main trading partner and ally of the Mamluks. But the Venetians could not successfully prevent other European freebooters from constantly attacking the Mamluk coast.

Generally, Mamluk naval policy contributed to the success of the goal of preventing the return of the Crusaders. In doing so they neglected the needs of the local populations on the coast, who as a consequence lived in dilapidated towns and were under the constant threat of Frankish pirate attacks. The question remains why the Mamluks chose this particular naval policy in order to defend their coasts and did not opt for a more aggressive approach at sea like the Ottoman Empire.

THE RAZING OF COASTAL CITIES

> The conquest [of Acre in 1291] was followed by the fall of Sidon, Beirut, and ʿAthlīth in the same year. With this conquest the whole coast was liberated, and when these towns were captured they were totally razed out of fear that the Franks could reconquer them. They have stayed in Muslim hands until now.[2]

With these words the Mamluk historian al-Qalqashandī hailed the successful defense of the coast as proven by the results. This defensive strategy of destroying the coastal cities was no Mamluk invention. It hearkens back to the example set by the Ayyubid sultan Ṣalāḥ al-Dīn (Saladin) (1171-93). On several occasions his fleets were defeated by the Franks, and his biographer al-Kātib ʿImād al-Dīn al-Iṣfahānī had much to say about these maritime disasters. He explained that something like this was bound to happen because the rulers of Egypt had preferred to employ only worthless riffraff rather than recruit good sailors.[3]

Ṣalāḥ al-Dīn had experienced a serious setback when he could not break the blockade of the Crusader ships around Acre in the year 1191. The Crusaders therefore were able to reconquer Acre, which Ṣalāḥ al-Dīn had taken from them in 1187.[4] Salāḥ al-Dīn was so disappointed by that failure that he decided to destroy Ascalon when the English King Richard I Lionheart (1189-99) was advancing on it. He preferred to destroy this coastal town rather than let it fall into the hands of his enemy.[5]

When the Mamluks seized power they emulated the practice Ṣalāḥ al-Dīn employed at Ascalon by destroying and razing all the harbors of the Syro-Palestinian coast reconquered during the following years. After the Crusaders were repelled, the towns of the coast were never again fortified by the Mamluks. The worst destruction of coastal towns took place in Palestine because of the geographical

proximity of Jerusalem, the potential target of any new Crusade. Beirut and Tripoli were relatively favored by their location further away from the Holy City. Beirut would become the most important trading city on the coast, and Tripoli under the Mamluks played an important role as a center of provincial administration.[6]

The Syro-Palestinian coast was systematically razed from Ascalon in the south to the harbor of Antioch, St. Simeon (al-Suwaidā'), in the north. The only exception to this pattern was Tripoli, which fell in 1289 to the Mamluks. It was totally destroyed but then rebuilt in a new location three kilometers inland, at the foot of Mount Lebanon. The new location of Tripoli was chosen for strategic reasons. At the foothills the Mamluks could fight Frankish attackers already present in the plain between Tripoli and the shore. Contemporary observers did not like the new location of the city. Ibn Taghrībirdī said it was built in a place where foul winds reigned and the town generally had an unhealthy atmosphere.[7]

The location of the new Tripoli was part of the Mamluk strategy to move the defense lines away from the coast to locations further inland. All the major fortresses on the shore disappeared. They were replaced by smaller towns and a few walls with small garrisons. These fortifications were only shadows of the former Crusader castles. Even Beirut, the only remaining real harbor on the Syro-Palestinian coast, was stripped of its walls and only had some fortifications near the harbor to blunt the initial impact of a Frankish attack.

Such a policy meant that local notables like the Druze family of the Buhturids of the Gharb and the so-called Turcomans of the Kisrawān were responsible for regional defense.[8] These local notables had the task of delaying Frankish attackers until the regular Mamluk troops could arrive from Damascus. Communications with Damascus were conducted by means of pigeons during the day and fire signals at night.[9]

As it usually took some days before reinforcements reached Beirut, the town had often already been pillaged when the troops finally arrived. Thus the Mamluk system of destroying coastal cities and building a defense line inland from al-Bīrah in the north to al-Karak proved to be successful, when we consider that no new Frankish invasion could gain a foothold in Mamluk territory, but unsuccessful in terms of personal security for the local inhabitants. For them the initiation of a fleet-building program would have been a better long-term option than destroying

their cities. Very little of the vast wealth generated by the Levant trade stayed in the Syro-Palestinian coast, which remained poor.

In contrast to the Syro-Palestinian cities, Egyptian coastal cities were not razed, probably because previous attempts by the Crusaders to land in the delta had been successfully repulsed by the Muslims. The Mamluks had faith in their ability to defend the Egyptian coast and therefore did not destroy the cities there, although they too suffered from neglect.

As a consequence of the total devastation of the Syro-Palestinian coast, these towns recovered only slowly, and did not flourish during the Mamluk period. The military interest of the Mamluks was directed toward their eastern frontier where they expected an attack from the powerful Ilkhans. There the Mamluks built their fortresses directly on the frontier. The Mamluk sultan Baybars I (1260-77) described the contrasting military policies in the west and in the east as follows:

> One part (of the Muslim armies) uproots Frankish fortresses and destroys (their) castles, while (another) part rebuilds what the Tatars destroyed in the East and increases the height of their ramparts (compared with what they were).[10]

The devastation of the Syro-Palestinian littoral and the transfer of the defense line was very effective in preventing the return of the Franks. This was the Mamluk credo which never changed. Only minor fortification works were undertaken by the Mamluks. The victims of this policy, as mentioned previously, were the local inhabitants of the coast who lived in dilapidated towns and were under constant threat of a Frankish attack.

While it is clear that the destruction of the coastal cities was the cornerstone of Mamluk defense policy along the Syro-Palestinian coast, there is some evidence of Mamluk naval activity throughout the two hundred and fifty years of their rule. This evidence will be examined below. From this it can be concluded that the Mamluks tried, at least from time to time, to fight on the sea.[11]

Attempts to Wage War on the Sea

The great naval powers in the Mediterranean at the time of the Mamluks were the Venetians, Genoese, Catalans, and the Hospitaller Knights of Rhodes. Later in the fifteenth century, the emerging Ottoman fleet would manage to change the balance in favor of the Muslims. However, the few Mamluk naval endeavors that

[11]For a more detailed description of the following events, see part 1 of the author′s dissertation, ″Verbranntes Ufer.″

were undertaken were directed mainly against Cyprus in an attempt to stop pirate activity against Mamluk shores.

Baybars I undertook the building of a fleet but the performance of the Mamluk navy bordered on the comic. In 1270 twelve enemy vessels entered the harbor of Alexandria and sacked a merchant ship. During this episode the newly-constructed Mamluk vessels were not deployed because the admiral was visiting the sultan in Cairo.[12] In 1271 this fleet was dispatched against Cyprus, presumably with the intention of stopping the flow of supplies to the Crusader states along the Syro-Palestinian coast from there.[13] This took place while the Cypriot ruler, Hugh III of Lusignan, was accompanying the English Prince Edward on a military expedition in Palestine.[14] When Baybars learned of this, he ordered his fleet into action, hoping to benefit from the absence of the Cypriot ruler from the island.[15] The Mamluk fleet, disguised as Christian ships and flying flags displaying the Christian cross, was not up to the task at hand. The fleet was dashed on the reefs when approaching the harbor of Limassol (al-Nimsūn) in Shawwāl 669/May-June 1271. The local inhabitants completed the destruction of the ships and took custody of the surviving Mamluk sailors.[16] Ibn ʻAbd al-Ẓāhir, eschewing other explanations for this inept performance, attributes the destruction of the fleet to the wrath of God because the ships had displayed Christian symbols.[17] Although this first Mamluk naval expedition had ended in a fiasco, Frankish supremacy on the sea did not prevent Baybars from continuing his military advance in Palestine.[18]

According to Ibn ʻAbd al-Ẓāhir it was planned that the Mamluk attack would force Hugh to go back to Cyprus (see Ibn ʻAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir,* 386). It is unclear whether the Mamluks intended to conquer the island or only to loot. Thorau argues the fleet did not contain enough ships or men for a possible conquest of the island (see Thorau, *Sultan Baibars I.,* 253).

Undaunted, Baybars built a new fleet in Cairo, the number of ships exceeding the number destroyed at Cyprus.[19] This fleet, however, apparently never set sail, as no fighting by these vessels is mentioned in the sources.

The next Mamluk ship-building project was undertaken after the fall of Acre in 1291 and the end of the Crusaders in Palestine, at the initiative of the Mamluk sultan al-Ashraf Khalīl (1290-93), in the year 692/1293. Sixty well-equipped ships were constructed and high-ranking Mamluk officers were made part of the crew. After the boats were finished, a review on the Nile was staged. For the spectators special lodgings were built on the island of al-Rawḍah and outside of Cairo. Each boat had, besides a tower and fortress for defense purposes, a ram and special equipment to throw naphtha. Allegedly, when the Franks heard of this fleet, they immediately sent envoys who sued for peace.[20] This report obviously is greatly exaggerated, and there is no evidence that this new navy was ever engaged in any serious naval encounter. It is more likely that these vessels were left to decay when rebellious amirs killed Sultan al-Ashraf Khalīl in Muḥarram 693/December 1293.

The first known success achieved by Mamluk ships was the conquest of the small island of Arwād just off the shore of Ṭarṭūs (Anṭarsūs). Arwād had remained in the hands of the Crusaders while the rest of their territory had been lost. The island was finally taken in 702/1302. Even though Arwād lay just off the coast, the local governor needed help and asked for ships to come all the way from Egypt,[21] clearly indicating that there were no Mamluk ships cruising the Syrian coast.

The year 1366 saw the collapse of yet another fleet-building project of the Mamluks. This project was initiated in response to the attack on Alexandria in 1365 by the Cypriot King Peter I of Lusignan (1359-69). Peter, who was also titular king of Jerusalem, was one of the last Frankish rulers to try to revive the Crusades. Between 1362 and 1365 he went to Europe to seek help for his planned excursion against the Mamluks and to recruit troops for this expedition.[22] In spite of receiving little support from Europe he attacked Alexandria. He landed in Muḥarram 767/October 1365 with his fleet of Cypriot ships and some European

boats.[23] Although he may have intended to remain in Alexandria and exchange the city for Jerusalem, he was forced to abandon the totally-plundered city because he could not expect to hold it against the main Mamluk forces arriving from Cairo.[24]

Although the troops of the Cypriots stayed just a few days in Alexandria, this event showed clearly the inability of the Mamluks to defend against attacks from the sea. A relatively small fleet of Franks had managed to occupy and sack the most important Mamluk harbor without any real resistance. In response the commander-in-chief *(atābak)* Yalbughā al-ʻUmarī ordered an expeditionary fleet to be built in order to avenge the Cypriot assault on Alexandria.[25] The governor of Damascus, Baydamur al-Khwārizmī, announced at the end of 1365 the assembling of craftsmen in a wood near Beirut to build ships.[26] Baydamur then went personally to Beirut to supervise the construction work, while pains were taken to hide the building site from the Cypriots.[27] This ambitious project was doomed when Yalbughā al-ʻUmarī was killed by Mamluk rivals at the end of 1366. With him his navy also died.[28]

> When Yalbughā al-ʻUmarī died on Sunday, 10 Rabīʻ II 768/15 December 1366, work on the ships stopped. Only two ships were brought to the sea. Their names were Sanqar and Qarājā, named after two prominent amirs of the time. Baydamur hurried to build them and equipped them with masts and rudders. They remained at a place near Beirut where they were left to rot in the same way as the rest of the fleet, which was not brought down from al-Masṭabah to the sea at Beirut. A lot of money had been spent on the project but no one benefited from it . The only useful thing remaining was the iron, which the local people took from the rotting ships.[29]

In Egypt at least some of the ships had made it into the water. In Rabīʻ I 768/November 1366 a review of this fleet was held in Cairo, where it allegedly frightened the Catalan envoys. Music was played and the sky was lighted by

naphtha bombs. Nevertheless, this fleet was never put into service after the death of its builder Yalbughā al-ʻUmarī.[30]

In the following years the Cypriots attacked several Mamluk coastal installations. A peace treaty was signed in 1370 only after Peter I of Lusignan was killed by his nobles, who were unhappy with the expenses of his war.[31] This peace agreement was also due to Genoese and Venetian pressure on the kingdom of Cyprus, because of the disruption in trade occasioned by these hostilities. The Venetians especially emerged after this as the main trading partners of the Mamluks, whereas the Genoese took a more hostile approach. Genoese pirates became a constant nuisance for the Mamluks thereafter. Cyprus had overextended its forces and as a result had lost its leading role in maritime trade to the Italian seafaring nations. The impotence of the kingdom of Cyprus was fully demonstrated when Genoa conquered Famagusta, the most important harbor of the island, in 1373.[32]

The lessons of the skirmishes with the Cypriots were inescapable for the Mamluks. They had been unable to defend their coastal territory from the raids of a seemingly insignificant power and had utterly failed in their attempt to carry the battle to the shores of Cyprus. What they needed was a disciplined and well-outfitted fleet capable of performing these roles in defense of their kingdom.

Some fifteen-odd years later, the Cypriot King Janus (1398-1432) supported Catalan corsairs in their pirate activities, and henceforth, the Catalans supplanted the Genoese as the main sea-borne threat to the Mamluks.[33] These pirate attacks intensified after the Catalan King Alfonso V (1416-58) came to power and pursued an aggressive policy in the eastern Mediterranean as king of Catalonia, Sicily, and Naples.[34] In response to this threat and to rumors of a new Crusade under Alfonso V, Sultan al-Ashraf Barsbāy (1422-38) initiated several successful expeditions against Cyprus. In 1424 he sent a small fleet to Famagusta, which was cordially received by the Genoese governor, who seems to have chosen to remain neutral in this particular Mamluk-Cypriot conflict. From Famagusta the Mamluk expedition

proceeded to Limassol, where they sacked the town.[35] Encouraged by this success, Barsbāy planned a larger expedition.[36] In the arsenals of Būlāq near Cairo new ships were built. In the following year a grand total of forty ships were gathered in Tripoli, representing the most impressive Mamluk fleet to date. This fleet departed Tripoli in Ramaḍān 828/July 1425 and sailed for Cyprus, once again availing themselves of the neutrality and hospitality of the Genoese governor of Famagusta. Near Larnaka the Mamluk fleet engaged and defeated twelve Cypriot ships under the command of the brother of the Cypriot king. This was the first Mamluk victory in a naval battle. The Mamluks then sacked the fortress of Limassol, but departed for Egypt in Shawwāl 828/August 1425 after rumors reached them that naval help from Europe was on its way to Cyprus.[37]

Janus, fearing a new Mamluk attack the following year, attempted to rally support from European allies, but with little success. Venice stood with the Mamluks, and even Alfonso V demanded money and then sent only a token force.[38] Janus's fears proved to be well-founded, and an even larger Mamluk fleet landed troops on the island who then marched on Nicosia.[39] In the ensuing battle King Janus was captured and his palace put to the torch.[40] The victorious fleet then returned to Egypt, where it had to be anchored at several coastal towns because no Egyptian harbor had the capacity to accommodate the entire fleet.[41] Janus was compelled to pay a 200,000 dinar ransom and agree to an annual tribute. He also had to

promise to stop pirate activity originating from his island directed at Mamluk shores.[42]

At this juncture it would seem that the Mamluks could have changed the balance of power in the eastern Mediterranean had they occupied Cyprus. Barsbāy, however, seems to have been content that Cyprus had become a Mamluk vassal and promised to halt piracy. Although these expeditions against Cyprus were the highlight of Mamluk naval activity, they still did not reach a very high standard. The testimony of the Venetian merchant Piloti, who resided in Egypt for lengthy periods between 1396 and 1438, that the Mamluks did not have enough rudders to equip their galleys, and that they were compelled to transport troops to Cyprus on Nile barges, is certainly telling.[43] Indeed, there are only a few passing references to Barsbāy's fleet later in the sources.

Meanwhile, a new center of Frankish pirate activity developed at Rhodes, and the task of responding to this threat fell to Sultan Jaqmaq (1438-53), who dispatched a fleet of fifteen vessels from Būlāq in 1440. The fleet sailed via Cyprus to Rhodes, where they succeeded only in plundering a sugarmill. A subsequent naval encounter with the Hospitallers ended without a clear result and the Mamluk fleet, frustrated, returned to Egypt.[44] Jaqmaq waited two years before attempting a new expedition against Rhodes. In 1442 he ordered the construction of new ships in Cairo, Tripoli and Beirut,[45] and this fleet sailed in the direction of Rhodes in 1443, where an attack was launched against the nearby island of Castolorizo. Castolorizo was sacked and 200 captives taken, but before an attack on Rhodes could take place bad weather forced the fleet back to Egypt. Although the sultan was disappointed, the people considered this campaign more successful than the first.[46] Jaqmaq launched a third campaign in 1444, the fleet arriving at Rhodes in August, where troops were landed and the fortress besieged. This assault was repelled by the Hospitallers and the Mamluk force retreated.[47] In commenting on

this defeat, Ibn Iyās says that God did not want Jaqmaq to enjoy the same success as his predecessor Barsbāy.[48] The Mamluks posed no subsequent threat to Rhodes, which eventually fell to the Ottomans in 1522.

The Mamluk overlordship of Cyprus led to their involvement in its internal affairs when King John (1432-58) died and the succession to his throne was disputed. His daughter Charlotte, with the support of Cypriot noblemen, was installed as queen (1458-64),[49] even though her rule was challenged by John's illegitimate son, Jacob, who sought the intervention of the Mamluks on his behalf.[50] He presented himself as the rightful heir since he was male and respected Mamluk suzerainty. While this argument won over some of the Mamluks, Ibn Taghrībirdī comments that, because he was a bastard, the laws of the Franks did not permit him to claim the throne.[51] The Mamluks nevertheless intervened on his behalf, al-Ashraf Īnāl sending a message claiming the island on behalf of Jacob.[52] Some factions of the Mamluks, however, disputed the intervention on grounds that Charlotte also recognized Mamluk supremacy and paid the tribute. While the sultan wavered, Jacob seems to have gained the support of powerful amirs through his generous spending in Cairo. These amirs insisted that Īnāl should install Jacob as king[53] and to this end a fleet was once again constructed and passed in review on the Nile before setting sail for Cyprus in autumn, 1460.[54] With the help of this Mamluk force Jacob conquered Nicosia, the capitol, although Charlotte escaped to the coastal city of Kyrenia, where she was besieged by her half brother.

Inexplicably, most of the Mamluk force supporting Jacob suddenly returned to Egypt, whether due to concerns about bad weather,[55] or more likely due to reports relating to the health of the sultan. When the inevitable struggle to place a new sultan on the throne began, no leading amir wanted to be away from Cairo. Shortly thereafter Īnāl died, and the small Mamluk force remaining on the island under Jānibak al-Ablaq was not sufficient to influence the outcome of the succession dispute.[56] The situation in Cyprus remained in limbo even though the new sultan,

al-Ẓāhir Khushqadam, sent additional Mamluk contingents to the island in support of Jacob in 1461 and again in 1463. In each case these troops returned without having accomplished their objective, much to the consternation of the sultan. According to Ibn Taghrībirdī, Khushqadam was unable to prevent these troops from returning to Egypt, even though in 1462 he issued an order forbidding the entrance into Mamluk harbors of any ship returning from Cyprus.[57]

Ultimately Jacob prevailed, even managing to conquer Famagusta, which had been in the hands of the Genoese for nearly one hundred years.[58] Shortly thereafter Jacob killed the Mamluk amir Jānibak, even though Jānibak had fought by his side. Jacob appeased Khushqadam's anger about this murder with large sums of money.[59] This ended the presence of Mamluk troops on the island. In the autumn of 1464 Jacob finally became lord of the whole of Cyprus when he conquered Kyrenia, the last stronghold of his half sister. Jacob II was the first king of Cyprus to rule over the entire island in a hundred years. However, the rule of the Lusignans over Cyprus would soon end. Jacob II had married the Venetian noblewoman Katherine Cornaro and when Jacob III (1473-74) died after only one year in power, she became queen and then abdicated in 1489, leaving Cyprus to the Venetians.[60] The island would later fall to the Ottomans, who were able to secure their conquest with a powerful navy, something the Mamluks lacked.

The feat of Vasco da Gama in sailing around the Cape of Good Hope in 1498 resulted in a Portuguese presence near the east African coast which presented a threat to Mamluk and Venetian trade in the Indian Ocean and the Red Sea. In fact, the Portuguese had produced a naval revolution with a fleet of ocean-going, cannon-heavy sailing ships possessing great range, mobility, and fire power and capable of operating the year around far from home. Neither the Mamluks nor the Ottomans could compete on the open seas with them. The Portuguese presence had a great impact on the revenues the Mamluks derived from the spice trade, and Mamluk merchants increasingly complained that the Portuguese captured Muslim trading ships in the Indian Ocean.[61] The Mamluks attempted to counter the Portuguese by striking an alliance with the rulers of Gujarat in Northwest India;

the Portuguese seaman Lopo-Soares reports a passing encounter with a fleet of the Mamluk-Gujarat alliance near Malabar in 1504.[62] The Portuguese also posed a threat to the holy cities of Mecca and Medina and it was for this reason that Sultan Qānṣawh al-Ghawrī dispatched several vessels in the direction of India in 1505, although they seem to have had no effect on Portuguese activities.[63] The impotence of the Mamluk response to these Portuguese incursions may be gauged by the fact that al-Ghawrī had to resort to threats that he would destroy the grave of Jesus and other Christian places of pilgrimage if Portuguese actions in the Indian Ocean did not stop.[64] The Portuguese clearly considered these idle threats and the Portuguese King Manuel I (1495-1521) soothed the nerves of the Pope by pointing out the Mamluks were too interested in the money derived from Christian pilgrims to do anything which would interrupt this steady flow of revenue.[65]

During the waning days of the Mamluk Sultanate the Mamluks enlisted help from both the Ottomans and the Venetians in their attempts to counter Portuguese naval activities, which, among other things, sought to divert the spice trade away from its old routes through the Gulf and the Red Sea.[66] In spite of the strained relations resulting from the Mamluk-Ottoman war in Anatolia from 1485 to 1491, there is clear evidence that from 1507 on, the Ottomans provided the Mamluks with war materials such as wood and copper, and also sent marine soldiers.[67] According to Portuguese sources, the Venetians assisted the Mamluks by providing boat-building experts and cannons.[68] Such help from the Venetians is very probable because the Levant trade, now clearly threatened by the Portuguese, was a major source of income for them. With Venetian assistance, the Mamluks now intensified the building of ships at Suez.[69] At the same time Qānṣawh created a small flotilla in the Mediterranean to facilitate the transfer of important war materials from

Asia Minor to Egypt. These ships were later lost in September 1510, when they were sunk by ships of the Hospitallers of Rhodes.[70]

The fleet resulting from this new collaboration with the Ottomans and the Venetians went to sea in 912/1507, destined for India under the joint command of the Mamluk Ḥusayn al-Kūrdī and the Ottoman Salmān Ra'īs.[71] The fleet was initially victorious in an encounter with the Portuguese at Chaul in January 1508,[72] but in a return engagement the Portuguese destroyed a great number of the Mamluk ships at Diu on the northwest coast of India.[73] The manifest inability of the Mamluks to guarantee the security of maritime trade in the Indian Ocean and the Red Sea finally moved the Indians to threaten collaboration with the Portuguese. A delegation carried this threat to Cairo in 1510. Qānṣawh al-Ghawrī tried to appease them, but it was another full five years before a new expedition could be mounted to the Red Sea.[74]

In the spring of 1514 the sultan had personally gone to Suez to observe the construction of his new fleet. There he found that the command of the fleet was in the hands of the Ottoman captain Salmān, who had at his disposal two thousand Ottoman troops.[75] Although rumors abounded that Sultan Selīm I (1512-20), having just registered a tremendous victory over the Safavids of Iran in August 1514, might next attack the Mamluks,[76] the joint Mamluk-Ottoman fleet—consisting of twenty ships outfitted with cannons—sailed for India in the summer of 1515.[77]

The story of the end of the Mamluk Sultanate is well known, and was played out while this fleet was at sea. Perhaps the Ottomans, during this period of collaboration, had discovered the true state of Mamluk military preparedness. Whatever the case, the Ottoman army shortly defeated the Mamluks in the field at Marj Dābiq, north of Aleppo, on 25 Rajab/24 August 1516,[78] Qānṣawh al-Ghawrī

losing his life in defense of his kingdom. The Ottomans then took Cairo the very next year, hanging the last Mamluk sultan Ṭūmān Bāy (1516-17) at the Bāb al-Zuwaylah gate.[79] When the Mamluk-Ottoman naval forces returned in August 1517, the Ottoman captain Salmān had thrown his Mamluk co-commander into the sea once he had heard of the Ottoman victory.[80] This expedition had never made it to India, although Salmān had launched an unsuccessful attack against Aden.[81] He did repulse a Portuguese attack on Jiddah in April 1517, after which the Portuguese departed from the Red Sea.[82]

In summarizing Mamluk attempts to wage sea-borne warfare, the following observations may be made. There was never a regular fleet operating in Mamluk waters, but rather fleets were built on an ad hoc basis for specific expeditions, and when the expedition was over, the ships were left to rot. This happened after the expeditions against Cyprus under Barsbāy, and again against Rhodes under Jaqmaq. There was no continuity to programs of ship building and naval preparedness from one sultan to the next, and such attempts as there were ceased with the death of the sultan who initiated them, as was the case with Baybars I, al-Ashraf Khalīl, and Yalbughā al-ʻUmarī. The only sustained naval activity during the entire period of the Mamluk Sultanate was that which took place in the Indian Ocean and Red Sea, lasting more than ten years. Most naval operations were carried out in close proximity to the Mamluk coast, the main focus being Cyprus. The attacks against Rhodes and activities in the Red Sea were exceptions. Mamluk naval expeditions were reactions to specific acts of aggression against Mamluk coastal towns or merchant activities. Acts of piracy against Mamluk shores continued throughout the entire period of the sultanate, in spite of Mamluk attempts to put a stop to this activity. For the whole of the Mamluk era there is no evidence of a state-sponsored trading fleet, but only of a few vessels owned by merchants. Apparently, no Mamluk ship was ever seen in a European harbor. This second component of Mamluk naval policy, the waging of sea-borne warfare, had only one great success: the capture of the Cypriot King Janus in 1426. All other expeditions ended in failure.

Naval Defense through Treaty

Another facet of Mamluk naval policy was their attempt to secure their naval defenses through alliances and treaties with European powers. Two phases can be

distinguished in this effort. The first lasted until 1291 and concluded with the final expulsion of the Crusaders. The diplomatic thrust of treaties concluded during this period was to insure Mamluk rule of the Holy Land. The majority of these treaties were concluded with the Crusader states, which found it necessary and expedient to accept certain compromises due to heavy Mamluk pressure. One early treaty, dating from 669/1271 and concluded between Baybars I and the Hospitallers,[83] required the Hospitallers to stop any foreign incursion into Mamluk territory, whether by land or sea, save one by a large force headed by a European king.[84] Similarly, Sultan al-Manṣūr Qalāwūn concluded a treaty in 680/1281 with Bohemond VII of Tripoli, which extracted from Bohemond a promise that he would not aid any enemy of the Mamluks who attacked them.[85] An agreement struck between Qalāwūn and the Kingdom of Jerusalem in 682/1283 went even further. It required the authorities in Acre to give the Mamluks two months′ advance warning of any landing of an overseas force on Mamluk shores.[86] A similar treaty of Qalāwūn's was concluded with Tyre in 684/1285, wherein the Europeans pledged to secure the Mamluk state against foreign invaders and to withhold assistance from other Franks attempting to harm the Mamluks.[87] It should be noted that, in spite of these treaties, both Tyre and Acre fell to Mamluk forces in 1291. In addition to the Crusader states, the Kingdom of Lesser Armenia was forced to enter into a similar pact at the end of the fifteenth century. [88]

The greatest success of this policy of securing naval defense through diplomacy was the Catalan-Mamluk treaty of 689/1290, an agreement reached between Alfonso III (1285-91) and Qalāwūn. The Catalans became an emerging power in the eastern Mediterranean after occupying Sicily in 1282. Searching for new allies, the Catalans approached the Mamluks.[89] In the resulting treaty they pledged they were prepared to fight in defense of the Mamluk Empire on the sea and proclaimed their desire to be friends with all the friends of the Mamluks. The treaty is explicit in its mention of the pope, other Frankish rulers, Venice, Genoa, and the Crusaders:

if any of these intended harm to the Mamluks, the Catalan king would prevent it. He would sequester the enemy's galleys in order to prevent them from attacking the Mamluk coast and harbors. If one of the Crusader states should break its treaty commitments to the Mamluks, the Catalans pledged not to provide troops or weapons to that state. They would never conspire with the pope or others against the Mamluks, and if they should learn of such a conspiracy, they would be under obligation to inform the Mamluks.[90]

This treaty was renewed in 692/1293 between al-Ashraf Khalīl and Jacob II (1291-1327).[91] Most Europeans were shocked that such a treaty would be concluded by a European power with the Mamluks after they had taken Acre in 1291. Pope Nicholas IV (1288-92) had, in fact, already announced a total embargo on trade with the Mamluks.[92] And in fact, the Catalans concluded peace with the Holy See in 1302, after which they joined the trade embargo.[93] In the end, the Catalans never had to demonstrate whether or not they would truly have provided a naval defense for the Mamluks. After 1292 the Mamluks controlled the entire Syro-Palestinian littoral, but since their naval inferiority remained, they continued to try to bolster their defenses against piracy through treaties.

The intent of Mamluk policy during the second phase was to prevent the possible return of the Crusaders to positions from which they had been driven and to combat Frankish piracy on Mamluk shores. For a time immediately after the fall of Acre and the resulting papal ban on trade with the Mamluks, there could be no commercial treaties between Europe and the Mamluk state. Observance of the embargo was fairly strict during the first half of the thirteenth century, but even then it was not completely effective. During this period what remained of the Levant trade passed through Cyprus, European merchandise being transported to the island from where it was transshipped on small Cypriot boats to the Mamluk coast. By the second half of the fourteenth century the embargo began to loosen, due in part to the desire of the Italian seafaring nations to trade with the Mamluks and the possibility of purchasing exemptions from the papal ban. This arrangement proved to be lucrative for the popes, and Italian merchants availed themselves of the opportunity to purchase exemptions allowing them one or even more trips to

the Muslim Levant.[94] When the Venetians concluded a new trade agreement in 1345, they noted that they had not been in Mamluk territory for twenty-three years.[95]

The Italian maritime powers replaced Cyprus in the Levant trade after the Cypriot attack on Alexandria in 1365. Subsequently, Venice became the main trading partner and ally of the Mamluks, with whom they maintained harmonious relations. Genoese and Catalan pirates, however, continued to harass the Mamluks.[96] Venetian support for the Mamluks against Frankish corsairs was demonstrated during the Cypriot-Mamluk war in 1366, when they ordered an embargo on the export of weapons and military support for Cyprus, despite the protests of Pope Urban V.[97] Another instance of Venetian support for the Mamluks took place in 1403, when they warned the Mamluks of an imminent Genoese attack on the Syro-Palestinian coast. The commander of the Genoese fleet, the French Marshal Boucicaut,[98] learned of the betrayal when he captured a Venetian ship near Beirut, whose captain confessed to having warned the coastal towns.[99] In an act of revenge, the Genoese looted a Venetian spice repository in Beirut.[100]

The Mamluks and Cypriots concluded a treaty in 1414, the Cypriots pledging to cease pirate activities and to return all Muslim prisoners who had not been baptized.[101] This peace was fleeting, however, and in 1425 Barsbāy dispatched another expedition against the island. During this operation both the Genoese and the Catalans agreed to remain apart from the conflict in return for a Mamluk agreement to favorable trade relations.[102] The Genoese governor of Famagusta, acting in accord with this new relationship, allowed the Mamluk expeditionary fleet to

anchor in his harbor.[103] This signaled a change from the aggressive policy of the Genoese toward the Mamluks that had characterized this relationship at the end of the fourteenth and beginning of the fifteenth century. Catalan piracy, however, remained a significant irritant to the Mamluks during the fifteenth century, even though the Catalan King Alfonso V and Sultan Barsbāy had concluded a peace treaty.[104] Ashtor thinks Alfonso V agreed to peace in the hope of achieving better conditions for trade, and when these did not materialize, he unleashed his pirates in the quest for booty.[105] On the other hand, the Mamluks were successful in pacifying Cyprus and the Cypriots were compelled to cooperate. The Mamluks were able to use the island as an intermediate port in 1440 and 1443 on the way to and from Rhodes.[106]

The Venetians continued through the fifteenth century the policy of cooperation with the Mamluks, which, though not a formal alliance, was seen by both sides to be mutually advantageous. The Venetians continued to benefit from favorable trade relations with the Mamluks and took care to secure Mamluk interests when possible, as, for example, in 1444, when they participated in a Crusader alliance against the Ottomans, but ordered their captains not to attack the Mamluks or Mamluk possessions during this anti-Ottoman campaign.[107] Twenty years later the Venetians demanded the release of Muslim merchants who had been seized by the Hospitallers of Rhodes while on board a Venetian vessel. This show of force secured the release of the merchants,[108] and bolstered the Venetian role in the transport of Mamluk merchants and their goods between Alexandria and Beirut. Mamluk-Venetian relations drew even closer in 1489, when the last Cypriot queen abdicated in favor of the Venetians. When Sultan Qāytbāy expressed some displeasure at this development and the fact he had not been consulted before the fact, he was mollified by assurances that a Venetian government and fleet in Cyprus would be all the more effective in providing protection against pirates, due to closer proximity, and that the yearly tribute of 8000 ducats would be paid by the Venetians as it had been by the Cypriots.[109]

The relationship, of course, had a few ups and downs. In 1512 Sultan Qānṣawh al-Ghawrī felt obliged to send a communication via a Venetian envoy complaining that the Venetians had become lax in patrolling for pirates and Cyprus had once again become a haven for freebooters. The Venetians responded that they wanted to fulfill their obligations but had been temporarily distracted by affairs in Europe.[110] Venice promised to redouble their efforts in order that the Mamluks would have no reason to complain.[111] This exchange is clear evidence of the fact that the Mamluks had placed at least a part of the responsibility for their naval defense in the hands of the Venetians. The Venetians also assisted the Mamluks in the construction of ships and cannons in response to the Portuguese appearance in the Red Sea at the beginning of the sixteenth century.[112]

Another aspect of the Mamluk policy of relying on others to provide their naval defenses was their employment of Maghribi mercenaries, probably recruited from territories controlled by the Hafsids, who, in contrast to the Mamluks, possessed considerable skills in equipping and manning ships.[113] A number of Maghribi mercenaries were involved in the unsuccessful defense of Alexandria against Peter I of Lusignan in 1365.[114] When a counter offensive was planned under the command of Yalbughā al-ʻUmarī in the following year, both Maghribi and Turcoman mercenaries were employed to man Mamluk vessels. The planned attack never took place, however, due to the death of al-ʻUmarī.[115] Contemporary observers noted the prowess of the Maghribis in naval defense. When an enemy ship was captured in the harbor of Alexandria in 1368, the Mamluk historian al-Nuwayrī suggested the use of Maghribi mercenaries to secure the harbor.[116]

Maghribi seamen were held in high regard throughout the Mamluk period. When the Mamluks constructed their Red Sea fleet in 1505 to fight the Portuguese,

the majority of the crews consisted of Turcomans, black slaves, and Maghribis.[117] The evidence for these Maghribi mercenaries is confined to Egypt. There is no evidence that they served along the Syro-Palestinian coast. The Turcoman naval mercenaries derived from the Turcoman principalities along the coast of Asia Minor, where they were active as corsairs. This activity gave rise to Venetian demands that the Mamluks prevent Turcoman piracy against Venetian vessels, to which the Mamluks agreed in a Mamluk-Venetian commercial treaty in 1415.[118] This promise to restrain the Turcomans does not seem to have been strictly enforced, however, because in 1471 we read about the Venetian senate complaining to the Mamluk sultan that the Mamluk governors in Syria were allowing Turcoman pirates into their harbors, where they were attacking Venetian vessels.[119] Finally, we also find mention of a Castilian, Pedro de la Randa, who fought as a naval mercenary for the Mamluks, but was in the end beheaded because he refused to become a Muslim.[120] To sum up, it seems that naval mercenaries were only occasionally employed by the Mamluks. This happened in cases of urgent need, such as the Mamluk-Cypriot War of 1365-70 and during the few seaborne military expeditions of the Mamluks.

When all other avenues failed, the Mamluks were not averse to buying security from attacks from the sea. According to the Venetian merchant Emmanuel Piloti, Sultan Faraj (1399-1405, 1405-12) dispatched an important spice merchant in 1403 with a large sum of money to Alexandria in order to bribe a Genoese fleet which had already looted Beirut and was threatening Alexandria. In this instance, fate was on the side of the Mamluks. The fleet had departed before the merchant arrived to pay the bribe, its crews having been decimated by the outbreak of a virulent disease.[121]

If I may use a currently topical term, the attempts of the Mamluks to "outsource" their naval defenses met with mixed success. The treaties with the Crusader states prior to 1291 allowed the Mamluks to gain total control over the Holy Land. The second phase of treaties and alliances, after the fall of Acre in 1291, achieved a limited success in that the Crusaders were unable to reestablish themselves in the Levant, but proved ineffective in preventing attacks by Frankish corsairs. Although the Venetians assisted the Mamluks on many occasions, they could not provide a

defense over the entire Mamluk coast, which was subjected to repeated corsair attacks. The deployment of naval mercenaries had only a very limited effect and was not carried out continuously or on a large scale. Meanwhile, the populations of the Mamluk coastal cities suffered from this inability of the Mamluks to protect them from continuing pirate attacks. The frustrations of the local population are illustrated by an incident in 1439, when a group of locals tried to take matters into their own hands. Declaring jihad, they boarded three vessels in Damietta and set sail to defend Beirut, but were sunk in Beirut harbor by four Frankish ships.[122]

WHY DID THE MAMLUK EMPIRE FAIL TO BECOME A NAVAL POWER?

The question of why the Mamluks did not create a regular fleet and thereby extend their influence and power in the eastern Mediterranean has been addressed by David Ayalon in his short study, "The Mamluks and Naval Power."[123] He cites two principal causes: a lack of natural resources, especially wood and iron, and their social and military preferences based on their tradition of mounted warfare. The ingrained disdain of these archers on horseback for other forms of combat not only worked against their ever becoming a naval power, but also extended to their reluctance to embrace and develop an infantry and its concomitant weaponry such as the cross bow and, later, firearms. He also cites the absence of a credible naval challenge outside the Mediterranean prior to the emergence of the Portuguese threat in the Indian Ocean. The Mamluks were prepared to accept naval inferiority in the Mediterranean so long as their trade with India was not at risk.[124]

The scarcity of wood has often been cited as a reason for the inferiority of Muslim ship building.[125] Such arguments may have led Ayalon to conclude that the Mamluks lacked sufficient wood for ship building on a large scale. Nevertheless, the Mamluks ruled over North Syria and parts of Cilicia, where there were ample forests. There were also considerable timber resources near Beirut and Tripoli. The Mamluks constructed large parts of their few transport fleets in Syria in proximity to these forests. Even Egypt had wood. The fleet that transported Jacob II to Cyprus to install him as king in 1460 was constructed in Egypt in a single year.[126] Wood could be found in the Delta and along the Nile. Fahmy has written

about a variety of trees which grew in Egypt in the Middle Ages.[127] Christides thinks the argument about the alleged scarcity of wood is highly questionable. According to him the amounts by which the forests in the Middle East are alleged to have diminished in the Middle Ages have been greatly exaggerated.[128]

Besides relying on their own timber resources, the Mamluks could also import wood from Asia Minor, if needed. They did this several times during the fifteenth and sixteenth centuries.[129] The facts surrounding the alleged lack of iron suggest this argument too is fallacious. Iron was especially of value for shipbuilding in the Mediterranean because here the planks of the vessels were held together with iron nails, whereas "in the Red Sea and the Indian Ocean they were stitched."[130] Iron was mined in the Mamluk Empire and both Ibn Baṭṭūṭah and al-Qalqashandī wrote about an iron mine near Beirut.[131] According to Ayalon, this mine did not produce enough iron and, moreover, it was the only one in all of Syria and Egypt at the time.[132] On the other hand, Fahmy writes about iron found in Egypt in the eighth century and made into nails for the construction of ships.[133] Even if it is not clear if there was still sufficient iron in Egypt in Mamluk times, it could have been imported from elsewhere within the Muslim realm, for example, from Asia Minor[134] or the Maghrib.[135] Moreover, there was always a possibility of importing iron from Europe, despite papal injunctions. In a Catalan-Mamluk treaty of 689/1290, for example, the Catalans promised to sell iron to the Mamluks.[136] Subsequently, after Catalan-Mamluk relations had deteriorated, the Venetians exported iron to the Mamluks.[137] If iron was in such short supply, it is hard to explain events like the one which took place near Beirut in 1366, when the local

population was allowed to scavenge the abandoned fleet which had been constructed for the planned invasion of Cyprus, carrying away iron and other salvageable materials.[138] The locals clearly knew how to make use of it.[139]

We must agree with Ayalon, however, regarding the Mamluks' commitment to a social order based on mounted warfare and its concomitant training and exercises as predisposing the Mamluks to reject the idea of seafaring.[140] There was not only no prestige associated with waging war on the sea, but to address someone as *"yā usṭūlī"* (sailor) allegedly would send him into a rage, even though in earlier times seamen had been referred to as "warriors in the path of God."[141] Young mamluks were inculcated in the art and discipline of *furūsīyah* as a component of their formal education,[142] and with few exceptions, only members of the Mamluk military class were allowed to ride horses.[143] The bond between mamluks, their horses, and their social hierarchy was thus complete. It goes without saying that no part of their education or training broached the subject of seamanship or waging seaborne warfare.

The Mamluks were not unaware of their naval weakness. Baybars I, writing to the king of Cyprus after his naval forces had been defeated by the latter in 1271, notes that the horses of the Franks were their ships and the ships of the Mamluks were their horses, meaning that the Franks might have the upper hand on the sea with their ships, but on land where it really counted, the Mamluks had more success with their horses.[144] This weakness was commented on by some contemporary historians. Al-Maqrīzī contrasts the situation of the Mamluks with that of the Fatimids, who he claims had five thousand naval captains in Egypt in the eleventh century. He also notes that under Ṣalāḥ al-Dīn there existed a special secretariat for the fleet *(dīwān al-usṭūl),* which administered the construction of fleets and the payment of crews. But the later Ayyubids and the Mamluks turned their backs on this heritage.[145] Ayalon has shown that from more than a thousand

biographies from the Mamluk era, not a single one recounts the life of a naval commander.[146]

There was a considerable conservatism in the Mamluk Empire which resulted in a reluctance to embrace change. Ayalon's point that the Mamluks were uninterested in naval warfare due to the absence of a credible seaborne challenge outside the Mediterranean prior to the emergence of the Portuguese in the Indian Ocean underlines this conservatism. They would accept their naval inferiority in the Mediterranean as long as their trade with India was not at risk. This conservatism emerged in other military areas as well, most notably in their reluctance to adopt firearms, well-illustrated by the overthrow of Sultan al-Nāṣir Muḥammad (1496-98) when he attempted to form a military unit of black slaves with firearms.[147]

It is interesting to speculate on what might have been. Had the Mamluks not ceded the Mediterranean to the Europeans, might not they have profited to a much greater degree from trade? One can only guess at the possibilities that might have existed for Mamluk merchants in Europe. Had they understood that the idea of a new Crusade had become increasingly unpopular and unlikely, might not they have rebuilt their coastal towns? Had they not been wed to a social and military structure so imbued with an ethos dependent upon horses, might they not have challenged Europe for naval supremacy in the Mediterranean?

A single Mamluk officer has left us a rather amazing document. Muḥammad ibn Mengli wrote a treatise on naval warfare, "Al-Aḥkām al-Mulūkīyah wa-al-Ḍawābit al-Nāmūsīyah fī Fann al-Qitāl fī al-Baḥr."[148] He was a member of the *awlād al-nās,* his father having come to Egypt from Central Asia.[149] While his exact rank is unclear, he refers to himself as *naqīb al-jaysh* in Alexandria in 770/1368-69, and has been judged by a modern biographer to have been among the most important dignitaries in Alexandria at the time.[150] Ibn Mengli was aware of the work on naval warfare written by the Byzantine Emperor Leon VI (886-912), the "Naumachia,"[151] and incorporates part of it in his own work.[152] Ibn Mengli

demonstrates a detailed knowledge of naval warfare in this work and even asserts that Muslim methods of waging naval warfare were superior to those of the Byzantines.[153] At the very least this is evidence that a high-ranking Mamluk officer had given serious thought to the theory of naval warfare.

Another possible source of inspiration for the Mamluks was Muslim naval experience in the Red Sea and Indian Ocean.[154] This is most impressively illustrated at the end of the fifteenth century in the book *Kitāb al-Fawā'id fī Uṣūl al-Baḥr wa-al-Qawā'id* by Ibn Mājid al-Najdī. Ibn Mājid writes about the use of stars and compass in navigation and describes the particularities of seafaring in the Red Sea and Indian Ocean.[155] There is no evidence, however, that experience gathered in the Red Sea and Indian Ocean was ever put to work in the Mediterranean by Mamluk seafarers, and perhaps because they were never challenged or stimulated, these mariners found themselves both technically and tactically wanting when the Portuguese suddenly appear in these "Muslim" waters.[156] What might have been if the Mamluks could have combined the theoretical knowledge of naval warfare of Ibn Mengli with the seafaring abilities of a Red Sea captain like Ibn Mājid?

Al-Suyūṭī and His Works: Their Place in Islamic Scholarship from Mamluk Times to the Present

Editor′s note: The article that follows was written by Dr. Saleh at my request. It is my intention that from time to time we will publish a biographical article summing up what is known about an important person who lived during the rule of the Mamluks. The article should provide more detail than, for example, the *Encyclopaedia of Islam* and should include an extensive bibliographical apparatus. In short, it should provide a starting point for anyone wanting to know about a particular person who flourished under the Mamluks. Dr. Saleh compiled a list of famous Mamluk intellectuals, those usually referred to in the scholarly literature as ″polymaths″ because they contributed to so many different fields. From this list she selected al-Suyūṭī, both because of his inherent interest and because his life has been well documented in the primary and secondary literature. Dr. Saleh has agreed to produce a second biography for a future issue. If you are interested in participating in this project, please let us know.

Recognized as the most prolific author in the Islamic world, past and present, Jalāl al-Dīn al-Suyūṭī is represented in virtually every genre of scholarly and literary production that existed during the Mamluk age. He believed himself to be the most learned man of his time, and this as well as even bolder claims that he made polarized his contemporaries into ardent supporters versus vehement adversaries. The controversy over the value of his contribution to scholarship continues to this day.

Al-Suyūṭī′s life has been described in great detail elsewhere,[1] and here it is necessary to give only a brief outline. ʻAbd al-Raḥmān ibn Abī Bakr ibn Muḥammad

[1]Al-Suyūṭī′s own autobiography, *Al-Taḥadduth bi-Niʻmat Allāh,* has been edited with extensive and valuable commentary by Elizabeth Sartain (*Jalāl al-Dīn al-Suyūṭī,* University of Cambridge Oriental Publications, no. 23 [Cambridge, 1975]). Two of al-Suyūṭī′s pupils wrote full-length biographies of their teacher: ʻAbd al-Qādir al-Shādhilī, *Bahjat al-ʻĀbidīn bi-Tarjamat Ḥāfiẓ al-ʻAṣr Jalāl al-Dīn al-Suyūṭī,* ed. ʻAbd al-Ilāh Nabhān (Damascus, 1998) and Shams al-Dīn al-Dāwūdī, ″Tarjamat al-Suyūṭī,″ of which an unedited manuscript is held in Tübingen (Sartain, *Al-Suyūṭī,* 1:148). Full-length modern biographies include Ṭāhir Sulaymān Ḥammūdah, *Jalāl al-Dīn al-Suyūṭī: ʻAṣruhu wa-Ḥayātuhu wa-Āthāruhu wa-Juhūduhu fī al-Dars al-Lughawī* (Beirut, 1989), Saʻdī Abū Jīb, *Ḥayāt Jalāl al-Dīn al-Suyūṭī maʻa al-ʻIlm min al-Mahd ilá al-Laḥd* (Damascus, 1993), Muḥammad al-ʻArūsī al-Maṭwī, *Jalāl al-Dīn al-Suyūṭī* (Beirut, 1995), and Iyād Khālid al-Ṭabbāʻ, *Imām al-Ḥāfiẓ Jalāl al-Dīn al-Suyūṭī, Maʻlamat al-ʻUlūm al-Islāmīyah* (Beirut, 1996), in addition to numerous books and articles devoted to specific aspects of al-Suyūṭī′s work.

ibn Abī Bakr ibn ʿUthmān ibn Muḥammad ibn Khiḍr ibn Ayyūb ibn Muḥammad ibn al-Humām Jalāl al-Dīn al-Khuḍāyrī al-Suyūṭī was born on 1 Rajab 849/3 October 1445. His mother, a Circassian slave, was said to have given birth to him in the family library, where his father had sent her to retrieve a book; hence his prophetic nickname *"ibn al-kutub"* (son of books).[2] Al-Suyūṭī's father, a scholar, died while al-Suyūṭī was a small child, but guardians made sure that the boy received the education usual for one of his background, beginning with memorizing the Quran and proceeding to the various religious sciences, grammar, *adab,* and Shafiʿi jurisprudence. He was given his first *ijāzah* to teach grammar and *adab* at the age of sixteen, and by the following year had been given permission to teach Shafiʿi jurisprudence and issue *fatwá*s by the chief qadi, ʿAlam al-Dīn Ṣāliḥ al-Bulqīnī.

At the age of eighteen al-Suyūṭī inherited his father's former post as professor of Shafiʿi jurisprudence at the mosque of Shaykhū, and later added the post of teacher of hadith at the Shaykhūnīyah. He also was appointed to two other positions which seem to have been administrative rather than instructional: shaykh of sufis at the mausoleum of Barqūq al-Nāṣirī, and supervisor of the Baybarsīyah *khanqāh.*

Even as al-Suyūṭī's scholarly fame began to spread abroad, his career in Egypt became mired in numerous disputes. Disagreements with other ulama on specific points of theology and law invariably degenerated into reciprocal personal attacks. There were also a number of widespread controversies (which involved the entire community of the ulama and in some cases the amirs and up to the sultan himself) into which al-Suyūṭī waded, including the question of the orthodoxy of the famous sufis Ibn al-Fāriḍ and Ibn al-ʿArabī (al-Suyūṭī defended it) and the question as to whether or not women would see God in the afterlife (al-Suyūṭī denied that possibility). His contentiousness and irascibility progressed to the point that he refused to pay the customary monthly courtesy call on the sultan Qāytbāy in order to receive personally his stipend as shaykh of the Baybarsīyah *khānqāh,* citing the practice of the early pious Muslims in refusing to frequent worldly rulers.[3]

---

[2]ʿAbd al-Qādir ibn Shaykh al-ʿAydarūsī, *Al-Nūr al-Sāfir ʿan Akhbār al-Qarn al-ʿĀshir,* ed. Muḥammad Rashīd al-Ṣaffār (Baghdad, 1934), 51.

[3]This incident provides a good example of al-Suyūṭī's wont to vindicate his actions by writing one or more books. The result in this case was *Mā Rawāhu al-Asāṭīn fī ʿAdam al-Majīʾ ilá al-Salāṭīn* (What the masters related regarding not frequenting sultans), ed. Majdī Fatḥī al-Sayyid (Tanta, 1991), as well as several books justifying his habit of wearing the *ṭaylasān,* a sort of shawl, to the few meetings he did have with Qāytbāy, a habit which had drawn negative comment from one of his arch-enemies, Ibn al-Karakī, a favorite of the sultan's: *Ṭayy al-Lisān ʿan Dhamm al-Ṭaylasān* (Holding the tongue from censure of the *ṭaylasān*) in *Majmūʿ Tisaʿ Rasāʾil* (Lahore, 1890) and "Al-Mufākharah bayna al-Ṭaylasān wa-al-Ṭarḥah" (Contest between the *ṭaylasān* and

In the late 890s/1480s, al-Suyūṭī began to withdraw from public life. He progressively resigned from his various teaching and administrative posts and stopped delivering *fatwá*s. In 906/1501 he was dismissed from his post at the Baybarsīyah *khānqāh* following acrimonious disputes with the sufis there,[4] and when the sultan Ṭūmānbāy, in support of the sufis, sought to have him killed he went into hiding. Upon the sultan's death al-Suyūṭī reappeared but retreated completely to his house on Rawḍah Island, announcing that he was devoting himself to God, refusing to leave the house and receiving visitors only reluctantly. There he remained, writing and revising his works, until his death on 19 Jumādá I 911/18 October 1505.

What was al-Suyūṭī's stature as a scholar? There can be no doubt that he was endowed with an incredibly agile and retentive mind. He claimed to have memorized 200,000 hadiths, which were all that had come to his attention; if he had located more, he would have memorized them as well.[5] In speed of writing and composition al-Suyūṭī was "one of the great signs *(āyāt)* of God,"[6] and he was able to edit and dictate several works simultaneously; his pupil al-Dāwūdī is reported to have said: "I have seen the shaykh write three quires in one day, both composing and writing down, as well as dictate hadith and answer opponents."[7]

Quite early in his scholarly career al-Suyūṭī claimed special expertise in a number of subjects: "I was endowed with deep penetration in seven sciences: Quran commentary, hadith, jurisprudence, grammar, rhetoric *(ma'ānī)*, rhetoric *(bayān)*[8], and style *(badī')*[9] (in the style of Arabs, not in the style of Persians and

the *ṭarḥah* [a sort of veil]), Chester Beatty MS 3420. On Ibn al-Karakī's relationship with Qāytbāy see Helena Hallenberg, "The Sultan Who Loved Sufis: How Qāytbāy Established a Shrine Complex in Dasūq," *Mamlūk Studies Review* 4 (2000): 147-66. An additional factor in al-Suyūṭī's reluctance to meet with the sultan, according to his sufi biographer 'Abd al-Wahhāb al-Sha'rānī (d. 973/1565), was the fear that the Prophet, who had appeared to al-Suyūṭī more than seventy times while he was awake, would hide himself from him if he did so (*Al-Ṭabaqāt al-Ṣughrá,* ed. 'Abd al-Qādir Aḥmad 'Aṭā [Cairo, 1970], 29-30).

[4]These reached the point that the sufis "rose up against their shaykh . . . and almost killed him, then they carried him in his clothes and threw him into the fountain." Muḥammad ibn Aḥmad Ibn Iyās, *Badā'i' al-Zuhūr fī Waqā'i' al-Duhūr,* ed. Paul Kahle and Muṣṭafá Muḥammad (Istanbul, 1931), 3:378.

[7]Ibid.

[8]"Al-ma'ānī wa'l-bayān: two of the three categories into which, since the time of al-Sakkākī (d.626/1229), the study of rhetoric has often been divided, the other being badī'. *'Ilm al-bayān* can best be translated with 'science of figurative speech,' as it only deals with the simile (as an

philosophers); and I believe that what I attained in these seven sciences (with the exception of jurisprudence) was never attained by any of my teachers, let alone others. I do not make this claim for jurisprudence, for there my teacher[10] has a wider perspective."[11] He also claimed mastery, though to a lesser degree, of *uṣūl al-fiqh,* polemics, morphology, division of inheritances, elegant prose writing, letter-writing, Quranic recitation, medicine, and accounting.[12] He consciously avoided the "sciences of the ancients," particularly logic.

Al-Suyūṭī came to feel that he had been born into an age of widespread ignorance and scholarly decline, and that as the most knowledgeable person of his time he had a special mission to assemble and transmit the Islamic cultural patrimony before it disappeared entirely due to the carelessness of his contemporaries.[13] This consciousness of his own superiority led him to make several very controversial claims.

Al-Suyūṭī's conviction that "he alone, in an age of increasing ignorance, was a true scholar"[14] first led him to claim that ". . . the tools of *ijtihād* have been perfected in me—I say that praising God and not out of pride."[15] Al-Suyūṭī noted that one could be a *mujtahid* in one field but not necessarily another, acknowledging that "most people are not aware of *ijtihād* in hadith and Arabic, but are aware of *ijtihād* in shari'ah only."[16] Al-Suyūṭī, however, claimed *ijtihād* in all three of these fields, a rank unequalled, in his view, by anyone since the time of al-Subkī (d. 756/1355).[17]

[17]Al-Suyūṭī, *Al-Taḥadduth,* vol. 2 of Sartain, *Al-Suyūṭī,* 205-14.

The rejection of this claim by most of his contemporaries led al-Suyūṭī to explain himself in the face of what he felt was their misunderstanding. Their accusation that he had claimed unrestricted, independent *ijtihād* like that wielded by the four imams who had founded the major schools of law was false. Rather, he was entitled to ″derivative″ *(muntasab)* unrestricted *ijtihād* within his *madhhab*: ″When I attained the rank of unrestricted *ijtihād,* I did not depart in giving legal opinions from the *madhhab* of al-Shāfiʻī.″[18]

Al-Suyūṭī set out his claim to *ijtihād* at length in his *Al-Radd ʻalá Man Akhlada ilá al-Arḍ wa-Jahila anna al-Ijtihād fī Kull ʻAṣr Farḍ* [Refutation of those who abide on the earth and are ignorant of the fact that *ijtihād* is a duty in every age].[19] As the title implies, al-Suyūṭī believed that anyone who denied the possibility of *ijtihād* was ignorant; it is a collective duty *(farḍ kifāyah)* which he, as the only qualified person, was discharging on his contemporaries′ behalf. He admitted, however, that while most of his opposition came from those who mistakenly denied the possibility of the current existence of any *mujtahid,* another group admitted that possibility but considered al-Suyūṭī unworthy of it.[20]

Al-Suyūṭī′s conviction of his intellectual superiority, indeed uniqueness, grew until he was impelled to make a yet bolder claim: to be the restorer of religion *(mujaddid)* expected at the end of every century:

> . . . I hope . . . to be the *mujaddid* at the end of this ninth (fifteenth) century, just as al-Ghazālī had hoped for himself, because I alone have mastered all kinds of different disciplines, such as Qur'ānic exegesis and its principles, Prophetic tradition and its sciences, jurisprudence and its principles, language and its principles, syntax and morphology and their principles, polemics, rhetoric and good style, and history. In addition to all this, there are my outstanding, excellent works, the like of which nobody has written before, and their number up till now is about 500. I have originated the science of the principles of language *(uṣūl al-lughah)* and its study, and nobody has preceded me in this. It follows the same lines as Prophetic tradition and principles of jurisprudence. My works and my knowledge have travelled to all countries, and have reached Syria, Rūm, Persia, the Hijaz, the Yemen, India, Ethiopia, North Africa, and Takrūr, and have spread from Takrūr to the ocean. In all that I

[18]Al-Shaʻrānī, *Al-Ṭabaqāt al-Ṣughrá,* 17-21.

[19]Ed. Fu'ād ʻAbd al-Munʻim Aḥmad (Alexandria, 1985).

[20]Al-Suyūṭī, ″Irshād al-Muhtadīn ilá Nuṣrat al-Mujtahidīn″ [Guidance for the rightly guided to support of the *mujtahid*s], quoted in Sartain, *Al-Suyūṭī,* 1:68.

> have mentioned, I have no equal, nobody else living has mastered the number of disciplines that I have, and, as far as I know, nobody else has reached the rank of unrestricted *ijtihād* except for me.[21]

Undaunted by his contemporaries′ reaction to this claim, which will be discussed below, al-Suyūṭī went on to convince the shadow ʿAbbasid caliph, al-Mutawakkil ʿalá Allāh ʿAbd al-ʿAzīz, to appoint him qadi-in-chief over all qadis in all the lands of Islam, with the power to appoint and dismiss whomever he liked. When the qadis predictably rose in outraged protest, the caliph backed down and rescinded the appointment, saying, ″What part did I have in this? It was the shaykh Jalāl al-Dīn who persuaded me that it was desirable; he said that this was an ancient post, and the caliphs used to grant it to whomever they chose among the ulama.″[22] Uncharacteristically, al-Suyūṭī unfortunately does not seem to have left an account of this affair from his point of view;[23] one can only speculate that it represented another aspect of his attempt to secure recognition as the foremost scholar of his time.

It appears that this recognition was more readily granted by those who were separated from al-Suyūṭī by either distance or time. He was widely revered outside of Egypt, and a great proportion of his writing consists of the *fatwá*s he issued in response to requests from abroad. After his death a superstitious awe began to accrue to the scholar, at least according to his student Ibn Iyās, who reported that upon his death, some people bought his shirt and cap, hoping to obtain blessing through them.[24] There were even claims of miracles circulated, which purportedly al-Suyūṭī had requested be kept secret until after his death. These included the report of a servant that he and his master had miraculously been transported in an instant to Mecca and then just as quickly returned to Cairo,[25] and prediction of the Ottoman invasion and subsequent ruination of Egypt in 923/1517.[26]

Among al-Suyūṭī′s contemporary peers, however, his own pupils seem to have been somewhat isolated in their great admiration and respect for the man. His arrogance and combative personality made it virtually impossible for other scholars to appreciate his undeniable accomplishments, and his more extravagant claims in particular were met with outrage and scorn. His professional life consisted

largely of disputes with other scholars (another large body of his writing consists of refutations of others′ opinions, numerous titles beginning with *Al-Radd ʿalá . . .*).

Perhaps the most powerful individual with whom al-Suyūṭī was in conflict was Ibn al-Karakī, a favorite of the sultan Qāytbāy—a conflict that caused him serious difficulties.[27] His bitterest rival, however, appears to have been al-Sakhāwī.

Al-Sakhāwī′s entry on al-Suyūṭī in his biographical dictionary, *Al-Ḍaw' al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ,* drips with vitriol. He accused al-Suyūṭī firstly of plagiarism: ″. . . he would take . . . a lot of earlier works in various fields which were not well known to his contemporaries, change a little bit, and then present them attributed to himself, and make a great fuss in presenting them such that the ignorant would suppose them to be something unequalled.″[28] He added sarcastically, ″If he were going to steal them, I wish at least he had not distorted them—if he had just copied them it would have been more useful.″[29]

Al-Sakhāwī went on to denigrate al-Suyūṭī′s mastery of grammar (of which, we may recall, al-Suyūṭī was particularly proud) by accusing him of phonetic corruption *(taḥrīf)* and misspelling or misplacement of diacritics *(tasḥīf).* This he attributed to al-Suyūṭī′s faulty education which resulted from his having acquired much of his learning by reading independently rather than receiving it orally from a teacher.[30]

Al-Sakhāwī was particularly scornful of al-Suyūṭī′s claim to *ijtihād;* and not al-Sakhāwī alone but, he claims, ″Everybody rose against him when he claimed *ijtihād.*″[31] In fact, al-Sakhāwī said, the claim was made ″to cover up his mistakes.″[32] In sum, al-Sakhāwī admitted grudgingly that al-Suyūṭī was ″quick at writing,″ but his truly distinguishing feature was his ″folly and excessive arrogance, even to his mother, so that she continually complained of him.″[33]

As noted before, al-Suyūṭī seems to have been appreciated best at a distance. The sufi writer al-Shaʿrānī (d. 973/1565), for instance, venerated al-Suyūṭī and wrote of him, ″He was the most knowledgeable person of his time in the sciences and arts of hadith.″[34] Complimentary entries on him appear in many later biographical

dictionaries and histories, from that of his pupil Ibn Iyās (d. ca. 930/1524)[35] through al-Ghazzī (d. 1061/1651)[36] and Ibn al-ʻImād (d. 1089/1679).[37] The centuries following al-Suyūṭī's death are replete with abridgements, commentaries, and supercommentaries on his works (the pre-modern counterpart to our secondary literature).

With the rise of European interest in Islamic history and literature, al-Suyūṭī came in for his share of the disdain generally heaped on all authors post-dating the "golden" Abbasid period. Ignaz Goldziher (d. 1921), for instance dismissed a lifetime of work with the scathing comment: ". . . our ingenious al-Suyūṭī did not shrink from drawing up treatises which, at a cursory glance, purport to have no other end than the elucidation of the subject set down on the title page, but which, on closer examination, prove to be nothing other than polemical works whose sole purpose is to serve as an exaggerated advertisement for their author and as instruction to his contemporaries in his unsurpassed and unsurpassable greatness and erudition."[38]

Goldziher apparently shared al-Suyūṭī's contemporaries' outrage at his daring to claim the right of *ijtihād* as well as the status of the most learned man of the time:

> Even if a not inconsiderable degree of vanity and self-esteem is required to list the description of his own life and scholarly labors among the biographies of the mujtahidūn—a vanity which is best illustrated by the pompous style and manner in which al-Suyūṭī speaks of his own works and refers to his own academic career—this is to a large extent overshadowed by the almost nauseating kind of self-adulation we find in his lesser works.
>
> Despite his ability and diligence, and despite the value of his achievement, he must naturally have become an insufferable figure to many of his learned contemporaries, to whom the circumstance of his laying claim to all merit for himself seemed to detract from their own worth.[39]

[39]Ibid., 80.

Many earlier modern Arab scholars, and some up till the present, share this assessment, though without Goldziher's venomous and curiously personal dislike. They tend to dismiss al-Suyūṭī as a mere compiler. Saʿdī Abū Jīb, for instance, while titling his article "Al-Suyūṭī: Allāmat ʿAṣrih" [al-Suyūṭī: the most erudite of his age], opined that al-Suyūṭī's writings are not innovative nor do they show creative thought; this is only to be expected as that was the style for scholarly writing in his day. His value lies in the fact that he preserved for us earlier writings that were otherwise destroyed by the Mongol invasions and the fall of Spain.[40]

Al-Suyūṭī's modern Western biographer, Elizabeth Sartain, cautiously agreed, at least partially, with this negative evaluation of scholarship in the Mamluk age and, by extension, that produced by al-Suyūṭī. While defending al-Suyūṭī against al-Sakhāwī's charges of plagiarism, Sartain deferred final judgment as to the "originality" of his work to "specialists in the fields of Muslim learning in which he wrote."[41] She did note that the age's emphasis on oral transmission and memorization helped to discourage original thought,[42] and concluded that despite the favorable conditions, and "in spite of the great activity of scholars, few outstanding contributions to knowledge were made, and by al-Suyūṭī's time there was evidence of steady decline in academic standards."[43]

In contrast, and perhaps in reaction to this, in recent times there has been what might be termed a revival of interest in al-Suyūṭī and his work. An only moderately intensive search for books and articles dealing exclusively or substantially with the subject of al-Suyūṭī yielded a total of 192 titles, the vast majority written within the last thirty years. Following the traditional path, many of these are commentaries (s. *sharḥ*) on specific works. Others discuss al-Suyūṭī's sources and methodology in his endeavors in such fields as Quran commentary, philology, jurisprudence, and history, while still others attempt to evaluate his contributions and his significance as a scholar to those fields.

Two international conferences devoted solely to al-Suyūṭī have been held in Egypt, one in 1976 and a second in 1993, the latter commemorating the five hundredth anniversary of al-Suyūṭī's death.[44] (That same year an entire issue of

[40]Saʿdī Abū Jīb, "Al-Suyūṭī: ʿAllāmat ʿAṣrih," *Al-Turāth al-ʿArabī* 13, no. 51 (1413/1993): 63-78.

[41]Sartain, *Al-Suyūṭī,* 1:115.

[42]Ibid., 123.

[43]Ibid., 119. Al-Suyūṭī, of course would have agreed with her assessment of scholarship in his age while excepting himself. See Sartain's lengthy discussion of this topic, which is much more nuanced than my extracts might suggest, pp. 112-33.

[44]The proceedings of both conferences have been published: *Jalāl al-Dīn al-Suyūṭī*, prepared by al-Majlis al-Aʿlá li-Riʿāyat al-Funūn wa-al-Ādāb wa-al-ʿUlūm al-Ijtimāʿīyah, 13-19 (Cairo, 1978) and *Al-Imām Jalāl al-Dīn al-Suyūṭī: al-Iḥtifāʾ bi-Dhikrá Murūr Khamsat Qurūn ʿalá Wafātih:*

the journal *Al-Turāth al-ʿArabī*[45] was devoted to articles treating various aspects of his life and work.) While the first conference was attended only by Egyptian participants, the second widened its scope to include contributors from a wide range of Muslim countries: Egypt, Syria, Jordan, Palestine, the United Arab Emirates, Saudi Arabia, Turkey, Azerbaijan, Morocco, Kuwait, Pakistan, Senegal, Malaysia, Qatar, Iraq, and Tunisia. Neither, however, included any Western participants, and the papers published in the proceedings of both conferences (which treated basically the same themes as other literature on al-Suyūṭī) showed virtually no awareness of, or perhaps interest in, Western contributions to Suyūṭī studies.

Spokesmen for both conferences expressly stated that their purpose was to ″revive″ the memory of al-Suyūṭī, which had been unfairly allowed to lapse. The second conference went on to lay out a number of ambitious goals in this regard. These included, among others, organizing competitions (with prizes) for students carrying out al-Suyūṭī studies; production of a film on al-Suyūṭī; translating some of his works into world languages; urging journalists and other disseminators of information in all Islamic countries to educate the people about al-Suyūṭī′s contributions to Islamic culture; and enlisting the cooperation of various Muslim institutions to revive al-Suyūṭī′s beloved *ijtihād*.[46]

Some Western scholars as well have become more appreciative of the value of al-Suyūṭī′s work. For instance, Éric Geoffroy′s 1997 *Encyclopaedia of Islam* article on al-Suyūṭī disputes the widespread condemnation of al-Suyūṭī as merely a compiler. No doubt he did do a great deal of compiling, extracting, summarizing, and commenting on earlier works (including his own) in keeping with his perceived mission of preserving the Islamic scholarly heritage. Yet he went beyond that, according to Geoffroy: ″. . . he prefigures the modern period by certain aspects, such as being partly an autodidact, presenting to a public, which he wanted to be widened, manuals which were centered around precise themes. . . . He indeed takes up themes which were usually neglected in Islamic literature. . . . As for form, al-Suyūṭī′s procedure is scientific in so far as he quotes his sources with

precision and presents them in a critical way. In the introduction to a work, he often defines the method which he is going to follow. His works benefit from a clear structure, and he often broke new ground by expounding his material according to its alphabetical order."[47]

In any discussion of al-Suyūṭī, one is bound to express admiration, whether frank or grudging, and astonishment at the sheer massive quantity of his literary output. Al-Suyūṭī incorporated lists of his own works in other works on several occasions, and the biographies written by his students al-Shādhilī and al-Dāwūdī contained such lists approved by him. These lists differ from one another, ranging in size from 282 to 561 titles. Later biographical descriptions of al-Suyūṭī almost always include a count of his works if not a list; these range up to the nearly one thousand titles claimed (but not listed) by Ibn al-Qāḍī (d. 1025/1616).[48]

The first modern Western attempt to compose a list of al-Suyūṭī's works, drawing from various sources, was carried out by Gustav Flügel in 1832,[49]and named more than 500 titles. Carl Brockelmann (who was concerned only with extant manuscripts) listed 415.[50] Since then a number of works have been devoted to the question of al-Suyūṭī's production and to attempting to pin the list down.[51]

Each list contains, and omits, works respectively omitted and contained in other lists.

Elizabeth Sartain, in her work on al-Suyūṭī's autobiography, detailed the difficulties that preparing a definitive list of his works would entail:

> At one stage of my research, I had hoped to be able to prepare a complete list of al-Suyūṭī's works. Regrettably, this turned out to be impossible. Al-Suyūṭī's works number altogether some 600; one could conceivably prepare an accurate and complete list even of so large a number of works, were it not for the obscurity and confusion concerning the exact titles and subjects of many of them. Some of these problems can be solved by reference to existing MSS, other obscurities cannot be clarified because the works concerned have been lost. This confusion has several causes: firstly, many of the works have more than one title, for instance, a book referred to in one context by its proper title, may be mentioned in another context merely as "Commentary on such-and-such a work" or "Treatise on such-and-such a subject". These titles then become recorded in lists of al-Suyūṭī's works as if they are separate works. I suspect that al-Suyūṭī himself occasionally made this mistake in his own lists of his works, and certainly Brockelmann's list has several examples of such confusion. Secondly, it was al-Suyūṭī's habit to rewrite his works, to abridge them, sometimes more than once, to issue parts of a larger work separately, and sometimes to join short works together in a larger one. This means that there may be two or more works on exactly the same subject, sometimes with very similar titles; once the titles are misrecorded by copyist or cataloguer, it becomes impossible to distinguish between them except by reading them, if copies have survived and are accessible. The task of drawing up a list of al-Suyūṭī's works would be easier if he had written less; as it is, anyone who embarks on this task will be obliged to consult many of those MSS of al-Suyūṭī's works which have survived, and these probably run into thousands, scattered in libraries all over the world.[52]

Shaybānī and Aḥmad Sa'īd al-Khāzindār, *Dalīl Makhṭūṭāt al-Suyūṭī wa-Amākin Wujūdihā* (2nd ed., Kuwait, 1995); Nāṣir ibn Sa'ūd ibn 'Abd Allāh Salāmah, *Mu'jam Mu'allafāt al-Suyūṭī al-Makhṭūṭah bi-Maktabat al-Mamlakah al-'Arabīyah al-Sa'ūdīyah al-'Āmmah* (Riyadh, 1996).

[52]Sartain, *Al-Suyūṭī,* 1:179.

Although valiant efforts have been made in this direction, notably by Aḥmad al-Sharqāwī Iqbāl and Muḥammad Ibrāhīm al-Shaybānī with Aḥmad Sa'īd al-Khāzindār in their identifications of extant manuscripts,[53] it appears that for the matter to be solved (to the extent possible given the survival or lack thereof of any given work) it would require implementation of the primary recommendation set forth at the 1993 conference. This called on ISESCO (the Islamic Educational, Scientific, and Cultural Organization) to appoint a committee of experts to prepare a detailed, indexed list of al-Suyūṭī's works, indicating manuscript locations of extant works, and date and place of publication of published titles.[54]

How was it possible for one man to produce such a huge quantity of work? 'Iṣām al-Dīn 'Abd al-Ra'ūf admonished us not to dismiss this as impossible; after all, al-Suyūṭī began writing at the age of seventeen and spent the last years of his life in seclusion, totally devoted to his work of composing and editing.[55] Moreover, as Sartain and others have noted, al-Suyūṭī often divided single works into sections, giving each section a separate title. Al-Sakhāwī sniffed, "He [al-Suyūṭī] mentioned that his compositions exceed three hundred books. I saw of them what consisted of a single sheet of paper [e.g., a *fatwá*]; as for those that are less than one quire, they are many."[56] To be fair to al-Suyūṭī, though, we must note that conversely a number of his works consist of many volumes. Clearly there is no getting around the fact that the man was extraordinarily productive.

The range of subjects which al-Suyūṭī covered is equally impressive. Lists of al-Suyūṭī's works are typically divided by subject. His student al-Shādhilī's list, approved by the master himself in the year 904/1498-99, for instance, is classified as follows: Quran commentary and what relates to it, 37 titles; hadith and what relates to it, 207 titles; what is related to the terminology *(muṣṭalaḥ)* of hadith, 24 titles; jurisprudence, 73 titles; principles of jurisprudence, principles of religion, and sufism, 17 titles; philology, grammar, and morphology, 57 titles; rhetoric, 7 titles; works combining various subjects, 10 titles; literature, anecdotes, prose

[56]Al-Sakhāwī, *Al-Ḍaw' al-Lāmi',* 4:68.

composition, and poetry, 97 titles;[57] and history, 32 titles.[58] This is virtually a syllabus of classical Islamic scholarship.

What, then can be said about the true value, the quality as opposed to quantity of this vast corpus? Al-Suyūṭī clearly considered his work qualitatively and not just quantitatively superior to that of any of his peers: ″It is my wont to write only on matters in which I have no precursor and then to exhaust the subject completely.″[59] Yet he never claimed to have authored four or five or six hundred weighty tomes. He was well aware of the different levels of significance of his various works (one might quibble with his decision to award a title to a one-page *fatwá* and list it as a ″work″). A valuable glimpse into his thinking is provided by his list of his own works that appears in his autobiography *Al-Taḥadduth bi-Niʻmat Allāh*. This list, unlike all others including those drawn up by him, is divided not by subject matter, but into seven classes delineated by worth and degree of originality.

Al-Suyūṭī described the first class of his works as follows: ″Those for which I claim uniqueness. The meaning of this is that nothing comparable has been composed in the world, as far as I know. This is not due to the incapability of those who came before—God forbid—but it simply did not happen that they undertook anything like it. As for the people of this age, they cannot produce its like due to what that would require of breadth of vision, abundance of information, effort, and diligence.″[60]

This section consists of 18 titles:

Eight in the field of philology and grammar:

″Jamʻ al-Jawāmiʻ fī al-ʻArabīyah″
Its commentary, entitled ″Hamʻ al-Hawāmiʻ″
″Al-Ashbāh wa-al-Naẓā'ir fī al-Qawā'id al-ʻArabīyah, ″ also entitled
″Al-Maṣā'id al-ʻAlīyah fī al-Qawā'id al-ʻArabīyah″
″Al-Silsilah fī al-Naḥw″
″Al-Nukat ʻalá ′Al-Alfīyah′ wa-′Al-Kāfiyah′ wa-′Al-Shāfiyah′

---

[57]Most of these are *maqāmāt;* Brockelmann labelled them al-Suyūṭī′s ″experiment[s] in belles-lettres″ and noted dryly that they ″. . . only have the title and the form (rhymed prose) in common with the perfect examples of this genre. . . .″(Carl Brockelmann, ″Al-Suyūṭī, Abū′l Faḍl ʻAbd al-Raḥmān b. Abī Bakr b. Muḥammad D̲jalāl al-Dīn al-K̲h̲uḍairī al-S̲h̲āfiʻī,″ *The Encyclopaedia of Islam,* 1st ed., (reprint), 7:573. While perhaps artistically lacking, the subject matter of these *maqāmāt,* which ranges from information on plants to erotica, once again highlights al-Suyūṭī′s amazing versatility.

[58]Al-Shādhilī, *Bahjat al-ʻĀbidīn,* 175-255.

[59]Al-Suyūṭī, ″Ghāyat al-Iḥsān fī Khalq al-Insān,″ quoted in Goldziher/Hunwick, ″Ignaz Goldziher on al-Suyūṭī,″ 94.

[60]Al-Suyūṭī, *Al-Taḥadduth,* vol. 2 of Sartain, *Al-Suyūṭī,* 105.

wa-′Al-Shudhūr′ wa-′Al-Nuzhah′[61]″ in one composition
″Al-Fatḥ al-Qarīb ‘alá ′Mughnī al-Labīb′[62]″
″Sharḥ Shawāhid ′Al-Mughnī′″
″Al-Iqtirāḥ fī Uṣūl al-Naḥw wa-Jadaluh″

Six in the field of Quran and its commentary:
″Al-Itqān fī ‘Ulūm al-Qur’ān″
″Al-Durr al-Manthūr fī al-Tafsīr bi-al-Ma’thūr″
″Tarjumān al-Qur’ān″
″Asrār al-Tanzīl″
″Al-Iklīl fī Istinbāṭ al-Tanzīl″
Tanāsuq al-Durar fī Tanāsub al-Āyāt wa-al-Suwar

One each in hadith, biography, jurisprudence, and a rebuttal of logic and scholastic theology:
″Nukat al-Badī‘āt ‘alá ′Al-Mawḍū‘āt′[63]″
″Ṭabaqāt al-Nuḥāh al-Kubrá,″ entitled ″Bughyat al-Wu’āh″
″Al-Jāmi‘ fī al-Farā’iḍ,″ incomplete
″Ṣawn al-Manṭiq wa-al-Kalām ‘an Fann al-Manṭiq wa-al-Kalām″

Subsequent generations have agreed with al-Suyūṭī′s esteem for these 18 works. All of them were valued enough to be represented by extant manuscripts; the value accorded to them in more recent times can be gauged by the fact that all but 3 of them have been published (some many times).

Al-Suyūṭī described his second class as one ″for which comparable works have been composed, and a very learned person could produce its like. This class includes works of which at least a volume, more or less, was completed,″[64] though some of them are labeled ″unfinished.″ This class comprises 50 titles; many of these are abridgements of Suyūṭī′s or others′ works, abridgements of abridgements, and commentaries on commentaries. Of these, 38 titles are extant, and 30 of these titles have been published.

[61]″Al-Alfīyah fī al-Naḥw wa-al-Ṣarf″ by Ibn Mālik (d. 672/1274); ″Al-Kāfiyah fī ‘Ilm al-I‘rāb″ and ″Al-Shāfiyah fī ‘Ilm al-Taṣrīf″ by Ibn al-Ḥājib (d. 646/1249); ″Shudhūr al-Dhahab fī Ma‘rifat Kalām al-‘Arab″ by Ibn Hishām (d. 761/1360); ″Nuzhat al-Ṭarf fī ‘Ilm al-Ṣarf″ by al-Maydānī (d. 518/1124). (Sartain, *Al-Suyūṭī,* 1:180, n. 12)

[62]″Mughnī al-Labīb ‘an Kutub al-A‘ārīb″ by Ibn Hishām (d. 761/1360). (Sartain, *Al-Suyūṭī,* 1:180, n. 13)

[63]″Al-Mawḍū‘āt min al-Aḥādīth al-Marfū‘āt″ by Ibn al-Jawzī (d. 597/1200). (Sartain, *Al-Suyūṭī,* 1:180, n. 7)

[64]Al-Suyūṭī, *Al-Taḥadduth,* vol. 2 of Sartain, *Al-Suyūṭī,* 106.

Class three consists of 60 works of small size, ranging from 2 to 10 quires (s. *kurrāsah*).[65] Of these, 55 are extant, and only 17 of them remain unpublished.

Class four comprises quire-length works, excluding *fatwá*s.[66] Al-Suyūṭī listed here 102 works, including 59 extant works of which 32 have been published. This section includes, among other things, his many *maqāmāt,* which are not here listed individually under their separate titles but have often been so listed and so published.

*Fatwá*s are gathered into a class of their own. Al-Suyūṭī characterizes them as being of the size of ″quires—more or less,″[67] though as we have seen they could be ″less″ than a quire to the extent of being a single page. There are 80 titles here; of these, a surprising 67 are extant and 60 have been published (though most often in compilations, not separately).

Al-Suyūṭī´s class six is quite interesting. These, he said, are ″compositions that I do not count because they are of the type done by idlers who are interested merely in transmitting, which I composed at the time I was studying and seeking *ijāzah*s—although they contain good points compared to what other people write.″[68] Most of these 40 titles are ″*muntaqá*s″ [selected extracts] of other works; indeed, they appear to be little more than al-Suyūṭī´s study notes. Not surprisingly, only 8 are extant, none of them published.

The final class consists of works ″which I started then lost interest in, having written only a little.″[69] These 83 titles again seem mainly to consist of notes and study aids: abridgements, marginal notes on commentaries and supercommentaries, versifications, no doubt to aid in memorization. Of these 15 still exist and 6, all on the subject of hadith, have even been published.

This gives us a snapshot, based on one listing, of the place of al-Suyūṭī´s works in Islamic scholarship. We can attempt to judge the value placed on a given work by succeeding generations by seeing whether or not that work was copied and has left surviving manuscripts. As mentioned earlier, a number of attempts have been made to identify the existence and location of manuscripts of all of al-Suyūṭī´s works.[70]

[65]Ibid., 111.

[66]Ibid., 115.

[67]Ibid., 121.

[68]Ibid., 126.

[69]Ibid., 129.

[70]Brockelmann, *GAL,* 2:180-204, S2:179-98; Iqbāl, *Maktabat al-Jalāl al-Suyūṭī;* Sā‘ātī, ″Fihris Makhṭūṭāt al-Suyūṭī″; al-Shaybānī and al-Khāzindār, *Dalīl Makhṭūṭāt al-Suyūṭī.* Al-Shaybānī and al-Khāzindār located manuscripts representing 724 works and were unable to locate manuscripts for 187 more titles, giving a total of 911 works.

In turn the judgment of more modern times on the worth of a certain work is evidenced by publication or lack thereof. I have come up with a list of 392 works written by al-Suyūṭī that have been published at least once, without counting additional editions of the same title.[71] Surely the production of such a huge number of works judged worthy of publication is a tremendous achievement.

It is an interesting though probably ultimately futile exercise to seek a definitive enumeration of the individual works within the corpus of al-Suyūṭī's literary production and to trace the existence and location of their manuscripts and history of publication. However, stepping back now to focus on the forest instead of the trees, al-Suyūṭī gave the world an enormous quantity of scholarly material, saving and transmitting treasures of the Islamic cultural heritage but also adding his own valuable contribution to it.

[71]Other such listings, all of which I have taken into account, include again Iqbāl, *Maktabat al-Jalāl al-Suyūṭī* and al-Shaybānī and al-Khāzindār, *Dalīl Makhṭūṭāt al-Suyūṭī,* as well as Nabhān, "Fihris Mu'allafāt al-Suyūṭī al-Maṭbū'ah"; Salāmah, *Mu'jam Mu'allafāt al-Suyūṭī;* Yūsuf, "Al-Mustadrak 'alá Fihris Mu'allafāt al-Suyūṭī al-Maṭbū'ah"; and al-Lahhām, "Al-Mustadrak al-Thānī 'alá Fihris Mu'allafāt al-Suyūṭī al-Maṭbū'ah."

Mamluk Legitimacy and the Mongols: The Reigns of Baybars and Qalāwūn

To date scholars have established that the early Mamluk sultans legitimized their rule through the conscious use of Islamic themes.[1] As yet however, one crucial issue that has not been routinely addressed, but should be, is audience. Much of the scholarship on Mamluk legitimacy assumes that this legitimacy was asserted in relation to an internal audience, by which is meant either the military elite, the non-military populace, or both. But Mamluk legitimacy must also be examined in light of various external audiences. The most significant of these, and the one discussed here, was those Mongol sovereigns with whom the Mamluks were in the closest contact, namely, the rulers of the Golden Horde and the Ilkhanids. Mamluk assertions of legitimacy can be detected in the diplomatic letters and embassies Baybars and Qalāwūn exchanged with each Mongol power.

Furthermore, although scholars have already discussed the Islamic foundation on which Mamluk legitimacy rested, as yet no one has asked, ″Why this particular

---

[1]Only Stefan Heidemann ventures into a discussion of the external Mongol audience; the remaining scholars (mentioned below) focus fairly exclusively on the internal audience. This focus itself is quite clear, but rarely made explicit. See Stefan Heidemann, *Das allepiner Kalifat (A.D. 1261): Vom Ende des Kalifates in Baghdad über Aleppo zu den Restaurationen in Kairo*, Islamic History and Civilization, 6 (Leiden, 1994); also P. M. Woods, ″Islamic History, 1200-1500: The Transition from Late Medieval to Early Modern,″ a paper presented at the Smithsonian Institution on the occasion of the opening of the Esin Atil exhibition, ″Renaissance of Islam: Art of the Mamluks,″ 1981.

foundation?″ To address this question in part, we must first acknowledge that the ideology expressed in the diplomatic interaction was not the product of any individual Mamluk sultan alone; rather, it arose from an amalgam of existing diplomatic protocol, the wishes of the sultan and his closest military advisors, and the stylistic, rhetorical, and ideological concerns of the religiously-trained scholars who actually produced the letters. Indeed, each diplomatic mission, and thus the ideas embedded within it, must be seen as the product of a great and, unfortunately, largely indiscernible collaboration of minds. Certainly, however, the religious orientation of much of Mamluk ideology must be understood in part as a contribution from the religious scholars who wrote it.

But this alone is not enough to explain the Mamluk recourse to religious symbolism; indeed, they were hardly the first to employ it. In fact, we must also consider the influence of Mongol ideology. It must be remembered that at least until 1335 Mamluk assertions of legitimacy for the external audience were directed primarily at the Mongols on a number of levels. The Mamluk sultans came to power in an age that can be described as one of Nomad Prestige,[2] and witnessed the appearance of a new and powerful legitimizing ideology, that of the Mongol ruling family. In brief: Chinggis Khān and his descendants saw themselves as a divinely-favored dynasty, whose members were destined to rule the entire world through their possession of a special good fortune (the imperial *su*), which had been granted by the supreme deity Tenggeri, who represented Heaven or the Great Blue Sky itself.[3] In such an ideological context, any independent ruler intent on retaining his independence was a rebel, not only against the Chinggis Khanid family, but worse yet, against the Will of Heaven as well. The wholesale and merciless slaughter of such rebels was therefore necessary and good, since it both implemented the Divine Will and provided an excellent object lesson for other would-be rebels. In addition to this clear, uncompromising, and universalist ideology of rule, the Mongols brought with them innovations in concepts of law, among which was the introduction of an all-important set of laws and decrees issued by Chinggis Khān himself, the *yāsā* (Mongolian *yasagh*). This was to play an important role in legitimizing ideology both during and after the Mongol period.[4]

O. Morgan,

Mongol claims to legitimacy were made known to others in a variety of ways: first and imperfectly through the Mongols′ written and verbal demands for submission from as-yet-undefeated rulers, among them the Mamluk sultans themselves. Second, and more thoroughly, the Mongols disseminated their ideology directly to the newly-subdued either through the command appearance of new vassals at Mongol courts, or through the retaining and ″reeducating″ of the hostage relatives of such vassals. Likewise some scholars furthered literate knowledge about the Mongols, including their ideology, by writing treatises on them.[5]

The Mamluk sultans in particular had other reasons to be familiar with the Mongol manifestation of legitimacy. Many of the early Mamluks not only had originated in lands controlled by scions of the House of Chinggis Khān, but came from a pagan steppe background similar to the Mongols′ own; this the Mamluks′ subsequent Arabic Islamic education could only overlay, not erase. More notably, an unspecified number of Mamluks were themselves Mongols, some of whom had fought in the Mongol conquering armies. Likewise the Mamluk sultanate received and absorbed several successive waves of immigrant Mongols in its first fifty-odd years.[6] These were welcomed into the Mamluk military elite at all levels, including the highest. In fact, with such numbers of Mongols on hand and such a level of expertise among them, the Mamluk sultanate may have had arguably the best possible knowledge of Mongols and their ways for a region not under Mongol rule at that time.

Thus the Mamluks were faced not only with the very real, physical menace of the nearby Ilkhanids, but also with the less tangible but equally real shadow of Mongol prestige from both the Ilkhanids and the Golden Horde. They had no ready ideological response to the Mongol claim of divine favor, the supremacy of the *yāsā* or the apparent superiority of the Chinggis Khanid ruling family. In fact the Mamluks were ideologically weak even without the Mongol menace. In a world where lineage had mattered and would matter for centuries, the Mamluk sultans were singularly ill-suited to justify their rule, for they uniformly suffered from the significant problem of slave origin. They were at worst men whose

professional careers had begun with a period of servitude, or at best, the sons and grandsons of such men. Slaves were nobodies, their origins mostly unknown and assumed to be unimportant. A slave had no illustrious lineage; if he did, few either knew about it or cared.

Admittedly the Mamluks were military slaves, not domestic or agricultural workers, and military slavery was the most elevated kind of male bondage in terms of career possibilities and relative social status. Nevertheless the stigma of servitude, combined with the resulting perceived lack of illustrious lineage, posed a real, significant, and long-term ideological problem both for Mamluk rulers and for the religious scholars who produced the actual Mamluk diplomatic missives.

That this issue was perceived as an ideological weak spot can be gleaned from Mongol opinion of the Mamluks. In Hülegü´s 658/1260 demand for total submission from Quṭuẓ, for example, Hülegü denigrated the latter for his servile origins.[7] The Ilkhanids´ Armenian allies were even more insulting, according to Grigor of Akner, who relates that when Baybars attempted to correspond with the Armenian king Het'um in the early 660s/1260s, Het'um called him a dog and a slave, and refused to have any dealings with him. When Baybars subsequently took Het'um´s son Lev'on captive in 664/1266, he reportedly asked the Armenian prince: ″Your father called me a slave and would not make peace. Am I the slave now, or you?″[8] Nor were later Mamluk rulers safe from such accusations—Ghazan reportedly hurled them at both al-Nāṣir Muḥammad and his father Qalāwūn when conversing with local ulama during the Ilkhanid occupation of Damascus in 699/1300.[9] Nearly a century later Tīmūr, who was not even himself a Mongol, disparaged the slave origin of sultan Barqūq in a letter to the Ottoman Yıldırım Bayazid.[10]

Thus given both their own lack of lineage and the awesome challenge of Mongol prestige, it is not surprising that, for the external audience, the early Mamluk sultans and the scholars around the throne turned to an ideology of legitimacy that was defined simultaneously by religion and military action. Using such concepts as Mamluk achievement on the battlefield in the name of religion, and the physical protection of Muslims and Islamic society—both officially

sanctioned by the Cairene Abbasid caliphs—the Mamluk sultans managed to sidestep the linked issues of slavery and unknown lineage, and respond to the ideological and military challenges of Mongol power in general. The Ilkhanid threat in particular had the unexpected positive side effect of giving Baybars, Qalāwūn, and their civilian and military advisors something on which to focus and by which to find definition. If the Ilkhanids were infidels and Slaughterers of Muslims, Murderers of the Abbasid Caliph, and so on, then the Mamluks could be Defenders of Islam, Protectors of Muslims, Friends of the Caliph, etc. The Mamluks maintained their ideology of religious guardianship in the face of Mongol prestige at least until the death of al-Nāṣir Muḥammad.[11]

THE MAMLUKS AND THE GOLDEN HORDE

Historians face a paucity of evidence when investigating the relations of the early Mamluk sultans to the Golden Horde. Fortunately this has not deterred the determined, and a number of authors have contributed short, medium, and even lengthy expositions of the subject, among them S. Zakirov, Reuven Amitai, David Ayalon, Stefan Heidemann, Peter Jackson, and Marius Canard.[12] Given the extensive nature of some of these contributions, I will restrict the present study to an investigation of the ideology involved in those relations, although this may still require the presentation of material well-examined elsewhere. Certainly the effort of the aforementioned scholars is to be commended, since none of the letters are preserved in documentary form, and very few remain even in literary form, despite the time, effort, and money Baybars and Qalāwūn expended on establishing and maintaining cordial ties to Saray. We must therefore rely on the particulars of behavior and event, and those snippets of messages that were provided at the discretion and literary judgement of the chroniclers. This situation is further complicated by the chroniclers′ own biases, for their initially strong interest in the

---

[11]This should not imply that by avoiding genealogical issues the Mamluks lost interest in them. On the contrary, all of the early Mamluk sultans made considerable efforts to develop their own dynasties, although only Qalāwūn was at all successful. Likewise examples exist of individual Mamluks whose illustrious—albeit questionable—lineage is traced in the sources. Quṭuẓ is one example; al-Mu'ayyad Shaykh (815-24/1412-21) is another. The attempts by chroniclers to discover or uncover lineages worth the name for important Mamluk figures only highlights the concern with which contemporary society viewed the issue.

Golden Horde dwindled over the years. One might surmise that the Golden Horde could not compete with the far more absorbing and dramatic Ilkhanids, who received much more ink. Nevertheless the importance of the Golden Horde to Mamluk rulers should not be underestimated.

As early in his reign as 660/1262 Baybars sent out feelers to the Golden Horde in the form of a letter to Berke Khān, which he entrusted to a reliable merchant.[13] This attempt was probably spurred by the news of a battle between Berke Khān and Hülegü, which Hülegü had lost.[14] No full copy of the letter remains, but its author, Baybars′ redoubtable biographer and head chancellor Ibn ʻAbd al-Ẓāhir, cannot resist describing his work and even giving an example or two of his style. By this point, Baybars had heard rumors that Berke Khān had converted to Islam. Thus in the letter Baybars urged Berke Khān to fight Hülegü, reminding him that as a Muslim he must wage holy war against other Mongols, even if they were his relatives. (Ibn ʻAbd al-Ẓāhir informs us that he himself supported this argument for Baybars by pointing out that the Prophet had fought his own relatives from among the Quraysh in order to ensure their conversion.[15]) Clearly as a non-Mongol trying to intervene in the affairs of the Mongol ruling family, this was the only approach Baybars could take. Further emphasizing this Muslim-infidel dichotomy, Baybars/Ibn ʻAbd al-Ẓāhir appealed to anti-Christian sentiment: ″Reports have come one after the next that, for the sake of his wife and her Christianity, Hūlāwūn [*sic*] has established the religion of the cross, and has advanced the observance of his wife′s religion over your religion. He has settled the unbelieving *jathlīq* [Nestorian Catholicus] in the home of the [Abbasid] caliphs, [thereby] preferring her over you.″[16] Thereafter we learn that the letter urged Berke Khān to fight Hülegü, and discussed Baybars′ own efforts as a *mujāhid*.[17]

Although Baybars received no immediate answer to his first effort at contacting the Golden Horde, relations nevertheless developed further later that same year, when a group of about two hundred Mongols appeared in eastern Syria, heading for Damascus. Initially their approach triggered the sending out of a Mamluk reconnaissance force, the scorching of a wide swathe of earth around Aleppo and an upsurge of panic throughout the Syrian population. When the Mamluk force actually encountered the Mongols, however, it was revealed that the infidels were

in fact Muslims and bore greetings to the ruler of Egypt from none other than Berke Khān. Once the religious identity of the group had been established, Baybars ordered that they be welcomed warmly, sent robes of honor to them and their wives, and had houses built for them in Cairo.[18] They finally arrived in that city on 24 Dhū al-Hijjah 660/9 November 1262.[19] The Mamluk sultan met them personally two days later on 26 Dhū al-Hijjah/11 November and held a great ceremony of welcome for them in which he handed out robes, horses and money, and appointed their leaders amirs of one hundred and the rest amirs of varying lesser degrees.[20]

Almost immediately after the arrival of the Golden Horde delegation Baybars hastened to prepare envoys of his own to send to Berke Khān. He also scrambled to present the right image. A week later on 2 Muḥarram 661/16 November 1262 Baybars inaugurated a refugee Abbasid as the caliph al-Ḥākim in the presence of the Mongol leaders, his own envoys, the senior Mamluk amirs, and the most important religious personnel in Cairo. Al-Ḥākim's lineage was verified, and a family tree drawn up. Baybars swore allegiance to the caliph, promising to rule in a godly fashion and to fight for God's sake. In return al-Ḥākim invested Baybars with the care of Muslim lands and Muslims in general, exhorted him to perform jihad, appointed Baybars his partner in supporting the truth [of religion],[21] and finished by giving two brief sermons. In them al-Ḥākim focused on the concepts of *imāmah* (leadership of the Muslim community) and *jihād* (here: military struggle against infidels). To underscore the importance of these two themes al-Ḥākim evoked the horrors of Hülegü's sack of Baghdad, then demonstrated that Baybars had revived the imamate, driven away the enemy, reestablished the Abbasid caliphate to its exalted position, and supplied it with a willing army. Al-Ḥākim finished by exhorting his listeners to fight the holy fight, and reminded them of their religious duty to obey those in command, i.e., Baybars.[22] After the ceremony Baybars had a letter to Berke Khān drawn up, in which he urged the Mongol ruler to perform jihad against Hülegü, described the composition and strength of his own armies, enumerated his allies and enemies, and went on to reassure Berke Khān of the warm welcome the Mongol delegation had received. In addition Baybars discussed al-Ḥākim's inauguration in Cairo and al-Ḥākim's lineage. A copy of the caliph's family tree accompanied the letter, and the envoys were sent off in Muḥarram 661/November-December 1262.

[22]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 143-45.

Stefan Heidemann links the investiture of al-Ḥākim to Baybars′ ideological requirements for establishing relations with Berke Khān. Baybars had already legitimized himself to the internal audience through the establishment of his first Abbasid caliph, al-Mustanṣir, whom he had then summarily disposed of by sending him off to die attempting to retake Baghdad.[23] Upon the arrival of Berke Khān′s followers, Baybars found himself facing a new audience, but without a caliph. Heidemann points out that the non-Mongol Baybars had several ideological strikes against him when compared to Berke Khān, including Baybars′ status as a former slave, and his origin in Qipchak lands, which at that time were subordinate to the Golden Horde.[24] Fortunately however, Berke Khān had converted to Islam, and luckily Abū al-ʻAbbās Aḥmad, another Abbasid, had made it back from the debacle in Iraq and was available for the caliphate. Baybars hastily had him recognized, and thereby in his message to Berke Khān was able to refer to a number of legitimizing concepts that could be palatable both to a new believer and to a member of a major ruling house. These included al-Ḥākim′s status as (albeit newly-minted) Abbasid caliph, al-Ḥākim′s several hundred years of lineage, the caliph′s formal recognition of Baybars′ rule and Baybars′ own position as a successful *mujāhid* bearing the Abbasid seal of approval. In this way Baybars managed to provide himself with enough creditability to approach the ideologically awe-inspiring Chinggis Khanid.[25]

In all likelihood Berke Khān was willing to be approached, for a few months later in Rajab 661/May-June 1263, i.e., before Baybars′ envoys could have traveled to Saray and back, an independent embassy from the Mongol ruler arrived in Alexandria by boat and was conveyed from there to Cairo. The full text of Berke Khān′s letter is not included in any of the Mamluk chronicles, but Ibn ʻAbd al-Ẓāhir summarizes the contents as follows: After expressing peace and gratitude, Berke Khān got down to business by asking for Baybars′ help against their common foe, Hülegü. Portraying Hülegü as defying the law/decrees *(yasaq)* of Chinggis Khān and his family *(ahl),* Berke Khān then explained that his own battles with Hülegü were motivated by the desire to spread Islam and Islamic rule, return the Islamic lands to the condition they had previously enjoyed, and avenge the Islamic community in general.[26] Finally he requested that Baybars send a force out to the

---

[23]For a thorough discussion of al-Mustanṣir′s disastrous campaign see Amitai-Preiss, *War,* 56-60.

[24]Heidemann, *Kalifat,* 165.

[25]Ibid., 166.

[26]Al-Nuwayrī uses *yasaq* in *Nihāyat al-Arab,* 30:87; Ibn ʻAbd al-Ẓāhir uses *sharīʻah* in *Rawḍ,* 171. Jackson understands *yāsā* here as meaning a single decree of Chinggis Khān; namely that Jochi and his descendants (i.e., the Golden Horde) were to enjoy the revenues of northwestern Iran. These were what Hülegü had diverted to himself. See Jackson, ″Dissolution,″ 235.

Euphrates to attack Hülegü, and also come to the aid of the Saljuq ruler, ʻIzz al-Dīn Kay Kāʼūs.[27]

That the message was received well can be inferred from Baybars′ response, which took up seventy half sheets of Baghdadi paper[28] and was again written by none other than Ibn ʻAbd al-Ẓāhir. Unfortunately like the others, no copy of this letter has been preserved, so we must rely on Ibn ʻAbd al-Ẓāhir′s own report of its contents. Indeed he assures us that he filled the message with Quranic *āyah*s, hadith exhorting jihad*,* compliments to the recipient, and heroic descriptions of the Egyptian armies and their own dedication to the holy fight.[29] Simultaneously sweetening and further emphasizing the message was the staggering number of gifts Baybars sent to the Mongol ruler. These included items of worship (prayer-carpets, a copy of the Quran alleged to be in the handwriting of the third caliph, ʻUthmān), items of jihad (swords, helmets, arrows, bows and bowstrings, horses and their trappings), and more conventional gifts (clothes, slaves, candles, rare animals, and so on).[30]

Nor was this all. In an additional demonstration of piety, manliness and religious solidarity, Baybars had al-Ḥākim invest Berke Khān′s envoys with the *futūwah* trousers during their stay in Cairo. Baybars had already initiated al-Ḥākim through the power delegated to him by his first caliph, al-Mustanṣir. Thus in what was to be one of only a few diplomatic encounters for the caliph, al-Ḥākim in turn performed the ceremony with both Baybars′ envoys to Berke Khān and Berke Khān′s own envoys. Then he preached a new sermon, the text of which is not recorded, and entrusted the embassy with clothes to present to Berke Khān himself, thereby including him in this special ritual.[31] Later Berke Khān′s envoys were sent out to visit the Islamic holy cities, where Baybars had the Mongol ruler′s name mentioned in the *khuṭbah* after his own in a further show of Islamic unity.[32]

Thereafter ambassadors continued to travel back and forth between the two rulers. On 10 Dhū al-Qaʻdah 662/4 September 1264 another of Berke Khān′s embassies arrived in Cairo, along with Baybars′ own returning envoys. Their arrival fortunately coincided with a comprehensive military review and extensive games, thus the Mongol ambassadors were invited to attend and watch all the

festivities, which included an expansive ceremony of investiture. Baybars must have hoped to impress them by displaying his resources for pursuing jihad. That the desired effect was achieved is suggested by Ibn ʻAbd al-Ẓāhir, who writes that the envoys asked Baybars during the military review whether these were the forces of Egypt and Syria combined, to which Baybars responded that they were only the forces stationed at Cairo. Naturally Ibn ʻAbd al-Ẓāhir portrays the ambassadors as being dumbfounded and amazed.[33]

By contrast with Berke Khān′s previous ambassadors, who had met with the caliph al-Ḥākim and attended the *futūwah* initiation ceremony in 661/1263, however, these envoys had no recorded interaction with the caliph. Rather they frequented martial ceremonies and services of investiture. The only specifically Islamic event they attended was the circumcision of Baybars′ son and heir al-Malik al-Saʻīd.[34] This suggests Baybars′ interest in promoting his own would-be dynasty. In fact, as a result of his achieved cordiality with the Golden Horde, Baybars was soon able to dispense with elaborate rituals involving al-Ḥākim, and eventually restricted him to a circumscribed life in the citadel. Heidemann suggests that at this point Baybars′ legitimacy needed no further help from the caliph.[35] In addition, al-Ḥākim represented a potential rallying point for would-be rivals in Egypt and Syria, and thus had to be kept in seclusion. Worthy of note is that the chronicles record the arrival of various other Abbasids in Damascus after al-Ḥākim′s establishment; they also report that these claimants were all intercepted and sent straight to Cairo, after which they uniformly disappear from historical view.[36]

In 663/1265 Baybars sent his own ambassador to Saray. According to al-Nuwayrī the purpose of this embassy was to intercede with Berke Khān on behalf of the Byzantine emperor Michael Paleologus, whose lands the Golden Horde had been raiding for some time. But naturally Baybars did not let slip the opportunity to send gifts to the Mongol ruler, among them such significant religious mementos as three turbans that had been taken to Mecca on the ʻ*umrah* expressly for Berke Khān, and a bottle of water from the well of Zamzam, as well as some nice balsamic oil.[37]

Thus Baybars, despite his lowly origin and the tenuous nature of his ideological position, managed to establish a good rapport with Berke Khān based on Baybars′ promotion of proper Islamic military values. Or did he? The image we have is almost uniformly presented from Baybars′ own point of view, as distilled through

the historical work of Ibn ʻAbd al-Ẓāhir and then copied by later writers. By contrast, two other Mamluk authors suggest that Baybars′ relationship to Berke Khān was anything but that of equal to equal. The first is Ibn Wāṣil, who reports, when describing the contents of Baybars′ letter of Muḥarram 661/November 1262, that Baybars enumerated the glories of the Islamic armies *(al-ʻasākir)* but then went on to point out that they were all obedient to Berke Khān and awaiting his command, *″fī ṭāʻatihi wa sāmiʻah li-ishāratih.″*[38] We discover a similar phenomenon in the work of al-Yūnīnī. In a discussion of Baybars′ subsequent embassy to Berke Khān sent later that same year (661/1263), al-Yūnīnī reports that the accompanying letter suggested that Baybars would enter into a subordinate relationship to Berke Khān. This was to be achieved through Baybars′ joining of the *″īlīyah″* (here: group of subordinates) and becoming obedient to the Golden Horde ruler: *″al-dukhūl fī al-īlīyah wa al-ṭāʻah.″*[39]

A related point should be made here about the proposed joint Mamluk-Golden Horde campaigns against the Ilkhanids, which were a common theme of this diplomatic interaction. It is interesting to note that in one Mamluk source the Mongol envoys are made to quote Berke Khān as saying, ″I will give you [Baybars] the land that your horses reach in Ilkhanid territory.″[40] The generous granting of land by one ruler to another in this fashion can hardly be described as a relationship of equals, but rather as that of sovereign and loyal subordinate. Thus whatever Baybars′ understanding of his relationship with the Golden Horde, or more precisely, whatever the view he wanted Ibn ʻAbd al-Ẓāhir to present of him, it may in fact have differed from the Golden Horde′s image of the way things were. It seems possible that, despite Berke Khān′s new-found faith and supposedly new, Islamic way of doing things, he may actually have looked on Baybars with the old Mongol world view: that is, as an obedient subject, who happened in this case to be Muslim, and whom he could order to ride out on campaign or promise land to as he pleased. True, Baybars appears to have responded favorably to these suggestions, but no actual military alliance ever took place.[41] Nevertheless, this is not to suggest that Baybars was ever involved in an *actual* overlord-vassal relationship with Berke Khān. There is no evidence that Baybars sent any hostages to Berke′s court at any time or for any reason. Likewise the reports of gifts that Baybars sent to

[41]Ibn al-Dawādārī, *Kanz,* 8:167.

Saray suggest that these were just that—gifts, and not some kind of obligatory tribute. Thus, the imbalance, if one there was, appears to have existed on a purely ideological level.

At any rate, Baybars′ relations with the Golden Horde went on to survive Berke Khān′s death in 665/1267, for Baybars wrote to Berke Khān′s great-nephew and heir Möngke Temür and set a similar tone to that of his earlier correspondence. Since Möngke Temür was not a Muslim, however, Baybars found himself employing a more limited ideological coin. No text of this letter remains, which is unfortunate since it would be interesting to see how Baybars and his chancellery composed this missive without the religious imagery that had permeated his letters to Berke Khān. All we know is that in the letter Baybars offered his congratulations on Möngke Temür′s ascension and his condolences over Berke Khān′s death, and urged Möngke Temür to fight Hülegü′s son Abaka, who had succeeded to Ilkhanid rule.[42] Thereafter the two monarchs continued to exchange messages and gifts, and Baybars continued to urge Möngke Temür to attack Abaka.[43] In 670/1272 Möngke Temür wrote requesting Baybars′ military assistance against the house of Hülegü, and proposing that all the Muslims lands in Abaka′s hands be returned to Baybars′ control.[44]

After Baybars′ death on 28 Muḥarram 676/1 July 1277, the Mamluk chroniclers report little diplomatic activity for the brief reigns of his sons, with the exception of the arrival in Alexandria of a Golden Horde embassy in Rabīʻ I or II 676/July-August 1277, which went up to Cairo.[45] Clearly this embassy had been sent before news of Baybars′ death reached Saray. We may assume that al-Malik al-Saʻīd met with the embassy, and likewise presumably sent them home again eventually, but the sources are extremely laconic and offer no illuminating details whatsoever. The Mamluk chronicles remain silent on this subject for the rest of al-Malik al-Saʻīd′s reign, which could mean that neither side sent envoys, or that diplomatic interaction did occur but the historians were too preoccupied tabulating factional strife among members of the military elite to notice it. But since diplomatic activity with the Golden Horde continued under Qalāwūn, it seems that the nearly

three-year period from Baybars′ death to Qalāwūn′s ascension could not have witnessed anything too out of the ordinary.

Unfortunately none of the letters from Qalāwūn′s reign have been preserved either as documents or literary works. We do know, however, that Qalāwūn sent a message and sixteen loads of cloth, clothes, objets d′art *(tuḥaf),* mail, helmets, and bows to the Golden Horde quite early in his reign.[46] Qalāwūn may have been hedging his bets with that embassy, since the gifts were for everyone and anyone of importance in Saray: the ruler Möngke Temür, his brother Töde Möngke and nephew Tölebugha, one of the major Mongol generals, Noghai Noyan, a number of royal ladies and the Saljuq sultan ʻIzz al-Dīn Kay Kāʼūs. We may presume that at the very least Qalāwūn intended to maintain cordial relations. He may also have hoped to keep the channels open for the importation of new mamluks from Golden Horde territory, a crucial concern for him.[47] Nevertheless the Mamluk historians took no notice of the embassy until 681/1282, when Qalāwūn received a message from his *own* envoys to the Golden Horde, who wrote to inform him that Möngke Temür had died before their arrival, so they had presented their gifts to his brother and successor Töde Möngke instead.[48]

In 682/1283 Töde Möngke′s first embassy arrived in Cairo. His envoys were both *faqīh*s, and bore news of Töde Möngke′s conversion to Islam, his ascension to the throne, and his intention to implement the shariʻah in his lands. Töde Möngke requested that Qalāwūn provide him with a Muslim name and send him both a sultanic and a caliphal banner, as well as some small drums, with which to ride when fighting enemies of the faith.[49] Here we see Qalāwūn cast in the role of ″senior in Islam,″ requested to provide the necessary paraphernalia for Töde Möngke so that he too could be a good *mujāhid*. Qalāwūn′s response was to send the envoys to the Hijaz to perform the pilgrimage, although the sources are silent about whether he had Töde Möngke′s name and titles mentioned after his own in the sermons in Mecca, as Baybars had done for Berke Khān in 661/1263. Upon the return of the two *faqīh*s to Cairo, Qalāwūn sent them back to Töde Möngke with envoys of his own in 682/1283-84. Presumably Qalāwūn fulfilled Töde Möngke′s request, since there is no word to the contrary, and since such a refusal would have been significant enough to warrant one.

[46]Ibn ʻAbd al-Ẓāhir, *Tashrīf al-Ayyām wa-al-ʻUṣūr fī Sīrat al-Malik al-Manṣūr,* ed. Murād Kāmil (Cairo, 1961), 17-18.

[47]That the slave trade was on Qalāwūn′s mind is clear from his actions in Rabīʻ I 679/July 1280, seven months after his ascension to the throne, when he began negotiations with the Byzantine Emperor Michael Paleologus over a treaty in which the free passage of slave merchants ultimately became a significant clause. For a full discussion see Canard, ″Traité,″ 197-224.

[48]Ibn ʻAbd al-Ẓāhir, *Tashrīf,* 17-18.

[49]Ibid., 46; al-Nuwayrī, *Nihāyat al-Arab,* 31:102-103.

In this way Qalāwūn not only perpetuated the relationship of solidarity in religion that Baybars had started, but also managed to establish himself as the religious senior, a concept that seems to be new and specific to him. Peter Jackson has pointed to the importance of hierarchy, status, and seniority among members of the Mongol ruling family; thus Qalāwūn's proclamation of seniority must have resonated strongly in a milieu already imbued with the weight of such claims.[50]

Qalāwūn also based his legitimacy in part on his control of the Abbasid caliph, as Baybars had done before him. Of course al-Ḥākim played no important foundational role as he had during Baybars' reign. Moreover, as Heidemann has indicated, al-Ḥākim's activity in general under Qalāwūn was extremely circumscribed: no sermons, no *futūwah* ceremonies, no recorded relationship to the ongoing diplomacy with the Golden Horde.[51] Nevertheless the figure of the caliph, at least, continued to play a role in Qalāwūn's relation with the Golden Horde, although Qalāwūn may not have wanted it to do so. But the token nature of al-Ḥākim's role during Qalāwūn's reign is underscored by the caliph's forcibly secluded lifestyle—one wonders if the caliph was at all involved in the sending of his own banner to Saray, or whether it was done without his participation.

In addition to fulfilling Töde Möngke's petition, Qalāwūn himself seems to have asked for something from Töde Möngke, although nowhere do we discover what that request was. Indeed we can only infer its existence from the information for the year 685/1286-87, when one of the two *faqīh*s returned from Saray to inform Qalāwūn that he had been granted all that he had asked.[52] Given the phrasing of the report, it seems possible that Qalāwūn made a number of different requests. But what were they? What might Qalāwūn have wanted from Töde Möngke in 682/1283-84? None of the Mamluk historians tells. Perhaps Qalāwūn was once again seeking to ensure the steady flow of mamluks from the Black Sea region. In addition, it so happens that at that time Qalāwūn was embroiled in unfriendly negotiations with the Ilkhanid ruler Aḥmad Tegüder, as will be discussed below. Was Qalāwūn asking Töde Möngke for military assistance against Tegüder? Did he seek a re-creation of those grand campaigns to divide Ilkhanid territory between two Muslim warriors that Baybars and Berke Khān had discussed but never carried out? After all, Töde Möngke was portraying himself to Qalāwūn as a new convert, and had specifically requested the paraphernalia of holy war from him. What better time for Qalāwūn to encourage him to try it?

It is interesting that Aḥmad Tegüder was also depicting himself to the Mamluk sultan as a new Muslim, which may have put Qalāwūn in an odd ideological

[52]"*Al-ijābah ḥaṣalat ilá jamī' maṭlūb mawlānā al-sulṭān,*" Ibn 'Abd al-Ẓāhir, *Tashrīf,* 143.

position. How might he have responded to each of these two Mongol leaders? What arguments could the non-Mongol, former slave, Muslim protector of the Abbasid caliph use when faced with a friendly, newly-converted Mongol ally and a hostile, newly-converted Mongol would-be overlord who was a distant cousin to the ally? Without any documentary or much literary evidence, or even knowledge of the nature of Qalāwūn´s request, we can only surmise. But one answer might well be this concept of seniority in religion, which wove through Qalāwūn´s ideological interactions not only with Töde Möngke, but also with Tegüder, as we shall see below. At any rate, by the time Töde Möngke´s answer arrived, Tegüder was dead, and the danger (if there had been any) had passed, which might explain the laconic quality of the Mamluk chronicles on the subject. This was to be the last substantial mention of Qalāwūn´s diplomatic relations with the Golden Horde, who receded into the chronicles´ background.

The Mamluks and the Ilkhanids

While relations between the Mamluks and the Golden Horde were characterized by mutual expressions of friendship, religiosity, and solidarity in Islam against the infidels in Iran, Mamluk relations with those very infidels were characterized by hostility, mutual mistrust, and outright warfare. Baybars´ reign was largely shaped by bad news from the east, the north, or the northeast, whether reports of Ilkhanid raids, trouble with their allies the Armenians, or full-fledged military endeavors from either or both directions. Most encounters between the two sides involved battles, skirmishes, plotting and subterfuge, inciting middlemen to harass the enemy, or spying. In the interests of preserving space, I shall not here plunge into the intricacies of Baybars´ hostilities towards the Ilkhanids, but refer the reader to the work of Reuven Amitai on the subject for a thorough and comprehensive view of the particulars.[53] Rather I shall focus on the diplomatic activity between Baybars and Abaka, that is, the exchange of messages or embassies, and the legitimizing ideology embedded within them. Here the relationship was simple and straightforward from each point of view: Baybars was a good Muslim ruler and Protector of Islam faced with a tyrannical dynasty of pagans; Abaka was a divinely-designated ruler from the princely house of Chinggis Khān against whom an illegitimate rebel of tainted slave origin had arisen.

That Abaka felt it was high time the rebel submit can be inferred from his embassy of 664/1265-66. Unfortunately the Mamluk chronicles tell us little on the subject. Abaka´s ambassadors met with Baybars in Syria, bringing him a gift and asking for peace *(ṣulḥ)*. As Amitai has pointed out, it was most likely that ˝peace˝ here meant no more than obedience to Abaka, especially since the Ilkhanids had

---

[53]Amitai-Preiss, *War*.

recommenced military movements against Baybars′ territory at the same time.[54] Likewise the gift, whatever it was, may have been no more than symbolic, with its acceptance conveying Baybars′ willingness to submit. We cannot be sure however, since we are told little more about the ultimate fate of either the ambassadors or their gift.[55]

The way was prepared for the next exchange of envoys by a singular chain of events. In 664/1266 a Mamluk force sent to Cilicia captured in battle Lev‘on, son of the Armenian king, along with some of his close relatives.[56] King Het‘um entered into negotiations with Baybars for the conditions of his son′s release. Among the conditions was that Het‘um should send to Abaka and obtain from him one Sunqur al-Ashqar, a former Mamluk, who had been in prison in Aleppo in 658/1260 when Hülegü had captured the city. When Hülegü left, he took Sunqur (among others) with him.[57] Het‘um traveled to Abaka′s court in 665-66/1267-68 to make the petition, but Sunqur′s whereabouts were unknown.[58] In the following year, 666-67/1268-69, Het‘um sent an envoy back to Abaka, who by this time had managed to find Sunqur.[59] Sunqur was conveyed back to Cilicia, Baybars was informed of his arrival and the exchange of Sunqur for Lev‘on was made.[60]

[57]For an in-depth discussion of Sunqur, Lev‘on, and their exchange one for the other see Amitai-Preiss, *War,* 118-120. Also see Faḍl Allāh ibn Abī al-Fakhr al-Suqā‘ī, *Tālī Kitāb Wafāyāt al-A‘yān,* ed. and tr. Jacqeline Sublet (Damascus, 1974), 85 (Arabic text); Ibn ‘Abd al-Ẓāhir, *Rawḍ,* 327; and the romantic but inaccurate rendition of Grigor, ″Archers,″ 355.

[58]Amitai-Preiss discusses the various accounts of how Sunqur al-Ashqar was located or contacted in Ilkhanid lands; see Amitai-Preiss, *War,* 120. Of them all, I personally find the arguments of Smbat and Grigor most convincing, namely, that Sunqur′s whereabouts were at first unknown, and that in fact it took Abaka some time to find him. There was, after all, no special reason for Abaka to keep track of one person from among the prisoners his father had brought out of Aleppo nearly 10 years earlier. Likewise it is quite possible that Sunqur′s new life and/or career among the Ilkhanids, whatever it was, took him to any number of locations within their territory. Het‘um′s request would therefore have necessitated that Sunqur be identified, located, and, if far away from Abaka, brought in to the *ordo,* all of which could easily take months.

[59]Smbat, ″Chronique,″120; Grigor, ″Archers,″ 371.

[60]Al-Nuwayrī, *Nihāyat al-Arab,* 30:154; Smbat, ″Chronique,″ 120; Grigor, ″Archers,″ 371; Baybars al-Manṣūrī, *Tuhfah,* 64; also see Amitai-Preiss, *War*, 119.

By the time of his dramatic ransom for the Armenian prince, Sunqur had been living with the Mongols for several years, and it is therefore reasonable to assume that he spoke Mongolian with a degree of proficiency. Before letting him go to Cilicia, Abaka seems to have entrusted Sunqur with an oral message to deliver to Baybars. Little record of this message can be found; indeed it seems that the chroniclers were initially unaware of it, since the only reference to it appears in the text of Baybars′ correspondence with Abaka in 667/1269, as discussed below.

Nevertheless this oral message reestablished diplomatic contact between the two rulers. Thereafter Baybars and Abaka established a wary, short-lived, and unfriendly set of diplomatic exchanges, facilitated in part by the Armenian king. In 667/1269, for example, Baybars permitted an Ilkhanid envoy to enter his realms bearing written and oral messages, both of which are extant today at least in part.[61] A large chunk of the oral message is preserved:

> The King Abaka, when he emerged from the East, took control of all the world. All entered into obedience to him, and no opposer opposed him; he who opposed him died. As for you: [even] if you rose up to the sky or sank down to the ground, you would not free yourself from us. The best policy is that you make peace *(ṣulḥ)* with us. . . . you are a mamluk and were sold in Sivas; how do you [dare] oppose the kings of the earth?[62]

Here we see a combination of the Mongol imperial ideology of world conquest, and Mongol disdain for slave origin. In fact, Abaka took this opportunity to strike Baybars in his weakest ideological point. Apparently Abaka had as little tolerance for the Mamluk sultans′ former bondage as had his own father or their mutual allies the Armenians.

Abaka′s written letter was likewise short on grammar and shorter on charm.[63] In it Abaka acknowledged that Quṭuẓ, not Baybars, had been responsible for executing Hülegü′s envoys in 658/1260; such an acknowledgment would allow Abaka to accept Baybars as a vassal. After discussing Sunqur′s children and a number of other Qipchak Turks whom Baybars had requested be sent to Mamluk realms, Abaka went on to brag that only discord among the Mongols themselves had kept him from riding towards (and presumably attacking and demolishing)

---

[62]Ibn al-Dawādārī, *Kanz,* 8:140. For a translation of a slightly different version of the text, see Amitai-Preiss, *War*, 121.

[63]For a translation and commentary see Amitai-Preiss, ″Exchange.″

Baybars. Abaka then reached the crux of the letter, his call for Baybars to become a vassal: ″You suggested that ′We [i.e., Baybars] become subject *(naṣīr īl)* and give power [over to Abaka]′; we deem that appropriate from you.″[64] Abaka went on to emphasize the universal obedience enjoyed by his family, then ordered Baybars to send representatives from among his brothers and sons to the Mongol court, where they would learn about the *yāsā* and then be returned to Baybars (presumably to teach him in turn). This was standard Mongol procedure to initiate subordinates.

Baybars′ response was even shorter than Abaka′s initiative, and was equally unfriendly. It opened with a disinterested tone, saying that only because of ″what Shams al-Dīn Sunqur al-Ashqar said to us″[65] had Baybars expressed interest to the Armenian king in exchanging embassies. The reference here must be to the oral message sent to Baybars via Sunqur from Abaka, although this is one of the only instances in the histories that we find even this roundabout mention of it. The letter carefully distanced Baybars from Quṭuz (the Envoy Murderer) by emphasizing how Baybars had sent Abaka′s embassy back unharmed. The letter then mocked Abaka′s attempts to persuade Baybars to any kind of agreement. As evidence for the impossibility of a relationship between them, it attacked the issue of Chinggis Khanid law by arguing that Baybars′ *yāsā* was greater than that of Chinggis Khān.[66] The use of the word *yāsā* here must be understood as a reference to the shari‘ah with its concomitant religious supremacy (to Muslim eyes) over any pagan dynastic law. Certainly there is no evidence that Baybars attempted to found or promulgate a set of laws or decrees similar to the *yāsā* of Chinggis Khān; indeed, such developments in legitimizing strategy appeared much later.[67]

Baybars further belittled the Mongols in his response to Abaka′s proclamation of universal obedience by pointing to the battle of ‘Ayn Jālūt and the death in it of Hülegü′s general Kitbugha. He also reminded Abaka of Abaka′s intention to send one of his own relatives to Baybars, and Baybars′ willingness to trade the favor. This is a startling statement, since the sending of relatives was one way that the Mongols themselves established their vassals. Combined with Baybars′ proclaimed

---

[64]Ibn ‘Abd al-Ẓāhir, *Rawḍ,* 340.

[65]Ibid., 341.

[66]For the *yāsā* see the references in footnote 4.

[67]The Ottomans, for example, did not develop a special law code until Fatih Mehmed promulgated the *kanunname* and *yasakname* during his reign (1449-80). See Halil İnalcık, ″Suleiman the Lawgiver and Ottoman Law,″ *Archivum Ottomanicum* 1 (1969): 105-38.

superiority of the shari'ah, this statement suggests that Baybars was envisioning at the very least a relationship of equals, if not even that Abaka should be inferior to him.[68]

Unlike in his letters to Berke Khān, the specifically Islamic content of Baybars' message to Abaka is noticeably muted. Rather he seems in this exchange to have relied ideologically on evocation of military victories over the Ilkhanid forces, denial of interest in relations with Abaka and allusions to his own equality to the Ilkhanid ruler. Although he asserted the supremacy of his own *yāsā* (the shari'ah) over that of Chinggis Khān, he did not refer to it by its Islamic name. Nor did the letter mention the Abbasid caliph at any point, which was a significant departure from the correspondence sent to Berke Khān. One probable reason for this omission was the hopelessly un-Islamic nature of the recipient. Berke Khān had presented himself as interested in nothing but Islam, which allowed Baybars and his ideologues to sidestep the daunting issues of Mongol legitimacy and prestige that might otherwise have been raised. But it must have been clear that Islamic terminology would be meaningless to Abaka, which thus led to the use of phrasing that would resonate properly. That the embassy led to nothing positive can be inferred from the events of the next year, in which a Mongol force raided the area around Aleppo.[69]

It was not until 670/1272 that a second attempt at so-called diplomacy took place between the two rulers, again through intermediaries. In that year Baybars received envoys from the chief Mongol in Anatolia, Samaghar, and the chief Anatolia minister, Mu'īn al-Dīn the Parvānah, who were seeking a peace agreement.[70] Ibn Shaddād reports that Samaghar invited Baybars to send him envoys for Abaka, with whom Samaghar himself would intercede for the Mamluk sultan.[71] Accordingly Baybars chose two amirs and sent them off via the horses of the *barīd*. They went first to Anatolia, where they met with Samaghar and the Parvānah, and from there were conveyed to meet Abaka. The Persian historians mention nothing of the envoys' audience with Abaka, or even the presence of Mamluk envoys at the Ilkhanid court. If the Mamluk sources are to be believed, however, the meeting was just as unfriendly as the previous one. If there was a written letter no copy remains, thus our information is confined to snippets of the oral message preserved in the chronicles. Ibn 'Abd al-Ẓāhir credits the Mamluk amirs with saying to Abaka: "The sultan sends greetings to you and says that the

[71]Ibn Shaddād, *Tārīkh,* 34.

envoys of Möngke Temür [of the Golden Horde] have come to him repeatedly [saying] that the sultan [Baybars] should ride from his side, and the king Möngke Temür should ride from his side. Wherever Baybars′ horse reached would be his, and wherever Möngke Temür′s horse reached would be his.″[72] Clearly the riding out and taking of land would be at the expense of Ilkhanid sovereignty. Abaka′s response, also as recorded by Ibn ʻAbd al-Ẓāhir, indicates that he understood this point quite well, for he reportedly became enraged and stormed out of the audience.

Ibn Shaddād presents an alternate, more convincing view: in the oral message Baybars refused vassalage but, in an assumption of personal responsibility for all Muslims, asked Abaka to give back the Muslim lands he held.[73] Not surprisingly Abaka found this to be an non-viable option, but suggested that each ruler retain what he already had (and, presumably, refrain from trying to take any more land from the other).[74] In this report Abaka comes across as willing to consider the establishment of some kind of status quo. Although discussions continued for a time, in the end Baybars′ envoys were sent back without any agreement having been reached.[75]

That the negotiations were theoretically still open is indicated by the fact that Abaka sent a second embassy to the Mamluk sultan in the following year; it arrived in Damascus in Ṣafar 678/August-September 1272. That Baybars was uninterested in an agreement can be inferred from the fact that he seems to have been determined to put the Mongol envoys in their place. Ibn ʻAbd al-Ẓāhir indicates that they were required to perform the *jūk* three times before Baybars′ governor in Aleppo, likewise in Ḥamāh and so on.[76] Since the *jūk* was a sign of deference and respect to high-ranking Mongols, Baybars indicated his assumption of at least equal status to Abaka by making the Mongol envoys perform it in front of his own local governors.[77] There was no celebration upon the embassy′s arrival, but Baybars had troops brought in and paraded in front of them to impress or awe them.

[74]Ibid.

[75]Ibid.; Amitai-Preiss, *War*, 128.

[76]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 404.

[77]Here Baybars may well have been portraying his strength to his own troops by using the *jūk*, which involved getting down on one knee and putting an elbow on the ground. Al-Nuwayrī, *Nihāyat al-Arab,* 27:339. Certainly there might be no small psychological gain for Baybars′ own followers from seeing him treat the Mongol envoys in this fashion. For psychological warfare see Amitai-Preiss, *War*, 129. Unfortunately, however, in the interest of space I must leave the subject of Baybars′ relation to his own troops for a later endeavor.

No copy remains of Abaka′s second letter, if there was indeed a written document in addition to the oral message. We know from Ibn ʻAbd al-Ẓāhir, however, that Abaka wanted a peace agreement *(ṣulḥ)* with Baybars, engineered through the mediation of Sunqur al-Ashqar. But Ibn ʻAbd al-Ẓāhir goes on to tell us that Abaka wanted to ratify this treaty by having either Baybars or his heir come to his court. Thus the peace treaty Abaka sought seems to have been no more than the relationship of vassalage he had previously attempted to create. Baybars was not interested, and replied with an echo of his former statement: Abaka might come to Baybars′ *own* court if he desired a peaceful agreement. This reinforced the Mamluk presentation of the relationship as one in which Abaka was at best of equal standing, if not even inferior to Baybars. Of course from Abaka′s point of view such a relationship was inconceivable.[78] Only a few days after Baybars sent the embassy back towards the borders, he himself set out to engage and defeat a Mongol force at the Euphrates. Baybars al-Manṣūrī considers this battle and Baybars′ victory in it to have been a turning point for the Mamluk sultan, after which Baybars′ reputation increased greatly and his fear of Ilkhanid strength decreased.[79] Certainly this marked the end of Baybars′ attempts at diplomatic interaction with the Ilkhanids as well.

Qalāwūn had no diplomatic exchanges with Abaka, but Mamluk-Ilkhanid relations in general under Qalāwūn did pick up where they had left off under Baybars: in a state of open hostility and an ideological relationship of good Muslim vs. bad infidel on the one hand and Glorious Khān vs. lowly rebel on the other. This culminated in Qalāwūn′s defeat of Abaka′s brother Möngke Temür[80] at the battle of Homs in 680/1281. It was only when both Abaka and Möngke Temür died later that same year and another one of Hülegü′s sons, Tegüder, converted to Islam that a wrench was thrown into the Mamluk ideological works.

In Jumādá I 681/August 1282 the newly-named Aḥmad Tegüder sent envoys to Qalāwūn. Modern scholars have interpreted this in various ways, for which see the pioneering work of P. M. Holt in particular, as well as the revision of Adel Allouche.[81] Holt points out the caution, hostility, and fear the Mamluks manifested

towards the Mongols in general and Tegüder′s envoys in particular, but ultimately suggests that Tegüder was seeking some kind of a truce with Qalāwūn.[82] Allouche proposes a revision of this view by arguing that Tegüder′s purpose in contacting the Mamluk sultan was to establish Qalāwūn as a subordinate to himself.[83] Here I will follow Allouche′s assessment, namely that Tegüder′s first communication to Qalāwūn was a call for the latter to become Tegüder′s vassal, since divisions of religion no longer separated them.[84]

Tegüder′s first set of ambassadors were Quṭb al-Dīn Maḥmūd al-Shīrāzī and Shams al-Dīn ibn al-Taytī al-Āmidī. They were brought under close escort to Cairo, where they met with Qalāwūn in the autumn of 681/1282. According to Shāfiʿ ibn ʿAlī the embassy was received in great style, at night, in an audience lit by numerous candles.[85] Tegüder had sent both oral and written messages. The letter proclaimed the good news both of Tegüder′s conversion and his accession to the throne, from which he intended to set right Muslim affairs. This established Tegüder immediately as a rival to Qalāwūn in the realm of virtuous Muslim rulership, and thereby added a new ideological dimension to the weight of Mongol prestige and Ilkhanid hostility. Tegüder informed Qalāwūn of a Mongol *kuriltai* that had taken place in which all the participants had wanted to attack the Muslims, but he alone had dissented out of a sense of moral good. Here Tegüder may have been hoping to intimidate Qalāwūn with the image of Mongols united against him, while simultaneously reinforcing the portrayal of his own moral integrity.

Thereafter Tegüder′s letter included a lengthy section on the various deeds the new Ilkhan had performed for the good of the Muslim community. First and foremost was his establishment of the rule of Islamic law *(nawāmīs al-sharʿ al-muḥammadī),* which may have functioned as his substitute for the *yāsā* vaunted by Hülegü and Abaka. (It is significant that Tegüder and his cousin Töde Möngke both began their reigns in this fashion, and at approximately the same time.) The letter went on to talk about Tegüder′s pardoning of criminals, his inspection of the organization of pious endowments, his construction of new buildings for religious use, and the regularization of protection for the pilgrimage caravans. Particularly in these last two areas Tegüder threatened Qalāwūn′s legitimacy, for Qalāwūn was a great founder of religious building projects, and was also responsible not

only for the pilgrims who passed through his own realms, but for all pilgrimage activities in the Hijaz as well.

The letter went on to inform Qalāwūn that Tegüder had ordered his soldiers not to harass merchants travelling back and forth between his lands and Qalāwūn's territory. Then it reported that Tegüder had caught Qalāwūn's spy disguised as a dervish, whom out of the goodness of his heart he had sent back to Qalāwūn rather than execute. This allowed Tegüder to arrogate the moral high ground to himself, from which he (or his scribes) proceeded to lecture Qalāwūn about the evil effect spies had on the Muslim community. The letter then summed up with the point of Tegüder's message, in which he demanded that Qalāwūn submit to his authority and enter into a vassal-overlord relationship with him.[86]

In his response Qalāwūn was faced with the ideological ramifications of Tegüder's conversion, which denied him the easy defense of a good Muslim ruler facing a non-Muslim foe, and presented him with an imposing rival in the realm of responsible Islamic rule. The Mamluk response was twice as long as the Ilkhanid letter, and it addressed not only Tegüder's written letter point by point, but also the oral message *(mushāfahah)* that accompanied it.[87] Qalāwūn's letter opened with an acknowledgment of Tegüder's conversion and his emergence from the ways of his relatives. The letter expressed Qalāwūn's relief over Tegüder's new-found faith, then introduced a critical point in the Mamluk sultan's ideological self-defense by praising God that Qalāwūn had converted first and thus had seniority in religion: "We thanked God for making us among the predecessors and first ones to this station and rank [or: to this religion, station, and rank[88]], for making firm our feet in every situation of endeavor *(ijtihād)* and holy fight *(jihād)* where without Him feet would quake."[89] Ideologically this projected religious primacy was akin to Qalāwūn's status vis-à-vis Töde Möngke of the Golden Horde, and gave the Mamluk sultan a base from which to withstand the Muslim Tegüder's call for vassalage.

Qalāwūn's letter went on to acknowledge the various ways Tegüder had acted as a good Muslim ruler, and assured him that this was correct procedure. Coming on the heels of his assertion of religious seniority, this had the effect of reinforcing

[89]Ibn 'Abd al-Ẓāhir, *Tashrīf,* 11.

Qalāwūn′s image as a Muslim ruler who already knew what he was doing, and was therefore superior to a newcomer like Tegüder. The letter′s tone became critical when it castigated previous Ilkhanids for taking control of other rulers and their kingdoms, notably the Saljuqs, without due cause, and warned that this kind of oppression was not the behavior of a pious king. Such a statement contributed to the image of Qalāwūn as knowledgeable advisor, while further setting the stage for his later treatment of the question of vassalage.

On the freedom of merchants the letter asserted Qalāwūn′s own sovereignty by assuring Tegüder that Qalāwūn, too, had ordered his governors not to harass them; this had the effect of making their free passage a matter requiring the attention of both rulers. It is significant that the letter specifically mentioned the governors of al-Raḥbah and al-Bīrah, both of which forts were thorns in the Ilkhanids′ military side. Turning to the question of the alleged spy, the letter cast doubts on Tegüder′s projection of moral superiority by charging that real dervishes had been mistaken for spies and murdered in Mongol lands, and that Tegüder himself had sent quite a few actual spies into Qalāwūn′s territory.

Thereafter Qalāwūn′s letter came to the questions of vassalage. Carefully it avoided a direct answer but intimated a certain lack of interest on Qalāwūn′s part by going on at length about the importance of true friendship. That Qalāwūn had some misgivings about Tegüder′s understanding of the nature of friendship was then made clear when the letter condemned Tegüder for using inappropriately harsh and threatening language in an ostensibly cordial message.

Finally the letter addressed Tegüder′s oral message, which can be reconstructed to include three points. First Tegüder said that he would stay in his own territory (and not attack Qalāwūn′s lands) if Qalāwūn would reach an agreement with him *(ittifāq),* i.e., become his vassal. In response Qalāwūn′s letter suggested that an agreement could only be reached if Tegüder had true friendship in mind, i.e., if it were in fact a peaceful agreement and not a vassal-overlord arrangement. Second, Tegüder suggested that if Qalāwūn were not really interested in expansion, he should stay within his own territories (and stop raiding into Tegüder′s territory). In reply the letter lambasted Tegüder for the conduct of his governor and brother Qunghurtai in Anatolia, claiming that Qunghurtai was shedding blood, wreaking destruction, enslaving innocents, selling free persons as slaves, and all while the Islamic tax *(kharāj)* from that land was coming to Tegüder.[90] This portrayed Tegüder as the bad ruler oppressing Muslims, and left the door open should Qalāwūn decide later to present himself as the virtuous Muslim savior-king freeing the oppressed in Anatolia. Third, Tegüder challenged that if Qalāwūn refused to

[90]Tegüder actually did execute Qunghurtai later, but this had no particular effect on Qalāwūn′s letter.

stop raiding into Tegüder's land, he should choose a battlefield (and they would settle the matter that way). In response Qalāwūn's letter ridiculed the Ilkhanid armies by pointing out that they had seen battlefields in Syria before, and were afraid to come back to them any time soon.[91]

In this exchange, as in his relationship to the Golden Horde, Qalāwūn's legitimacy rested primarily on the new concept of religious seniority. Nevertheless he and his chancellery did not hesitate to refer to past Mamluk military victories over the Ilkhanids as Baybars had done. Allouche has argued that Qalāwūn may also have relied on the position of the Abbasid caliph, to whom all Muslims (and therefore presumably Tegüder as well) owed allegiance. Allouche's argument centers on the fact that the caliph was in fact mentioned early in the correspondence, for a sentence to this effect was preserved in those copies of the letters found in Shāfi' ibn 'Alī, Vassāf, and Bar Hebraeus.[92] Reasons for the omission of the caliphal reference from the copies in Ibn 'Abd al-Ẓāhir, Ibn al-Dawādārī, and al-Maqrīzī are worth investigation, although we shall not be able to do so here.[93] But if the caliph was indeed included in the correspondence, then this confirms that al-Ḥākim continued to play an ideological role in foreign diplomacy, just as he did in Qalāwūn's relations with the Golden Horde. And if the deletion of the caliphal reference in Ibn 'Abd al-Ẓāhir (and through him many of the other Mamluk chronicles) was deliberate, then this could support the thesis that Qalāwūn was uneasy about that caliphal role.

Nevertheless Qalāwūn's ideological position as (potentially) caliph-brandishing religious senior was still tenuous, at least to some minds. Ibn 'Abd al-Ẓāhir went to the trouble of shoring up Qalāwūn's arguments in his biography of the sultan, where he discredited Tegüder at length by portraying his conversion as fake and an attempt to dupe Qalāwūn.[94] By contrast, other Mamluk historians (especially those not writing under sultanic patronage) were either neutral or even convinced of the genuineness of Tegüder's conversion.[95] Regardless, this marked the beginning of a trend for Qalāwūn, his descendants, and their ideologues, who were reluctant to believe that any Ilkhanid conversion to Islam could be genuine, although they were quick to believe it from the Golden Horde. Such a point of view was ideologically advantageous for the Qalawunids, since it allowed them to revert to

the older model of Mamluks protecting Muslims from infidels or, in this case, false converts.

Tegüder′s second embassy arrived in Damascus on 12 Dhū al-Hijjah 682/2 March 1284. The Ilkhanid′s spiritual advisor Shaykh ‘Abd al-Raḥmān was in charge, riding with a large, armed escort and the *jitr* or royal parasol.[96] In Mamluk lands only the sultan rode with the *jitr,* thus Shaykh ‘Abd al-Raḥmān′s appearance with it was a challenge to Qalāwūn′s sovereignty. The shaykh refused to relinquish the parasol at the border, but was deprived of it and of his armed escort against his will by the Mamluk governor of Aleppo, who had gone to meet him.[97] This cold welcome was designed to convey Qalāwūn′s rejection of any further thoughts of vassalage, should Tegüder entertain them. Shaykh ‘Abd al-Raḥmān and the truncated remainder of his entourage were conveyed secretly and under heavy guard to Damascus ″in the medieval equivalent of a sealed train,″ as Holt has so aptly put it.[98] There they were lodged in the citadel and given considerable daily stipends—the shaykh himself reportedly received 1,000 dirhams per day[99]—but were nevertheless forced to cool their heels for six months. During this period their sender Tegüder died, and Qalāwūn met with them only after verifying this fact.

Qalāwūn then received the embassy at night in early Jumādá II 683/August 1284, surrounded by an impressive display of lighted candles (reportedly 1,500[100]) and his best mamluks, dressed in their finest. Without telling the envoys of Tegüder′s death, Qalāwūn heard the content of the letter.[101] It had been dated Rabī‘ I 682/May-June 1283, and in it Tegüder outlined the way he and his Mongol cousins in various khanates had managed to shelve their past disagreements and agree to return to a state of unity.[102] As in his first letter, Tegüder may have been trying to present a united Mongol front in order to awe Qalāwūn. Tegüder′s letter went on to point out that the Ilkhan′s sending of the shaykh ‘Abd al-Raḥmān had been at Qalāwūn′s request,[103] then finished by dropping the references to obedience and submission *(ṭā‘ah)* that had been used in the first letter, and requested only a peaceful agreement *(ṣulḥ* and *ittifāq).* Allouche suggests that this change in wording reflected Tegüder′s new interest in negotiations as opposed to his previous demand

[100]Ibid., 265.

[101]Ibn ‘Abd al-Ẓāhir, *Tashrīf,* 68.

[102]Ibid., 70.

[103]Ibid., 71.

for Qalāwūn's vassalage.[104] But immediately thereafter came a warning to Qalāwūn to ignore naysayers: "Perhaps a small group of fools from among those who like discord and hypocrisy will not agree to an accord ([since] their dispositions are incompatible with peaceful agreement), desiring [thereby] to put out the light of God with their mouths (but God's light is complete!), and to go against their community out of a greedy ambition to accomplish their desire. What is required here therefore is that their words not be heard and their deeds left [alone]."[105] If Tegüder had been interested in negotiations then this type of closure, combined with the grandiose manner in which Shaykh ʻAbd al-Raḥmān crossed into Qalāwūn's realm, does not suggest negotiation between equals, but rather between superior and subordinate.

Obviously Qalāwūn and his ideologues were saved from the necessity of working out an ideologically appropriate response to Tegüder by the happenstance of the latter's death. Shortly after hearing the content of Tegüder's message Qalāwūn demonstrated the depth of his antagonism towards his deceased co-religionist by moving Shaykh ʻAbd al-Raḥmān and the other envoys into different quarters in the citadel, drastically reducing their stipends, relieving them of the bulk of their possessions, and leaving them to languish. Shaykh ʻAbd al-Raḥmān himself died shortly thereafter; his cohorts remained incarcerated until most of them were eventually freed dramatically by the intervention of a sympathetic poet and one of the Mamluk amirs.[106] Thereafter Qalāwūn returned to ideological business as usual with Tegüder's pagan successor Arghūn.

To conclude: early Mamluk assertions of legitimacy for the external audience were primarily directed at and defined in relation to the Mongols. For the Mamluk sultans the basic threat of Ilkhanid hostility was further complicated by the more abstract problem of Mongol prestige. Nor was this prestige an issue merely with the Ilkhanids, but also had a significant effect on Mamluk relations with the rulers of the Golden Horde. As former slaves in a world obsessed with genealogy, and as Qipchak Turkish nobodies faced with the weight of the divinely-ordained Chinggis Khanid dynasty, its impressive military legacy, and its obsession with the position of laws and decrees, Baybars, Qalāwūn, and their ideologues turned to a combination of military action and religious principles for definition. These included the manipulation of the Abbasid caliph and his own prestige, an emphasis on those military aspects of the faith in which the Mamluks could excel, proclamation

Qalāwūn´s Patronage of the Medical Sciences in Thirteenth-Century Egypt*

Introduction

It is generally held that the medical sciences in the Islamic world reached their peak during the eleventh century and then subsequently declined.[1] Yet there are many indications that, in fact, medicine, or aspects of it, continued to flourish in the following centuries. One thinks particularly of the hospitals founded by Nūr al-Dīn (ca. 548-49/1154) and by al-Qaymarī (ca. 646/1248) in Damascus and by Ṣalāḥ al-Dīn in Cairo in the twelfth century, as well as the long list of illustrious physicians who served in both, not to mention the biographical dictionaries of Ibn al-Qifṭī (d. 645-46/1248)[2] and Ibn Abī Uṣaybiʻah (d. 668-69/1270)[3] which vividly portray the vitality of intellectual life, including the medical sciences, in their time.[4] In the late thirteenth century the Mamluk sultan Qalāwūn established a

*This article is a revised version of a paper presented at ″The Mamluk Sultanate: Cities, Societies, Economies″ conference, sponsored by *Mamlūk Studies Review,* DePaul University, and The University of Chicago. The author gratefully acknowledges the comments of the readers, of Dr. Ingrid Hehmeyer of the Royal Ontario Museum, Toronto, Canada, and of Professor Emeritus Michael E. Marmura, Department of Near and Middle Eastern Civilizations, University of Toronto.

[1]Joseph Schacht, for example, says of the eleventh century: ″It is the last century before the slow and irresistible decline of the Greek scientific spirit in the Arab-Islamic world.″ (Cited by Michael Dols, *Medieval Islamic Medicine: Ibn Riḍwān´s Treatise ″On the Prevention of Bodily Ills in Egypt*,″ translated with an introduction by Michael W. Dols; Arabic text, ed. Adil S. Gamal [Berkeley, 1984], 66, n. 344). Joseph Schacht and Max Meyerhof state with regard to some of the great medical figures of the twelfth and thirteenth centuries: ″The merit of these men to have maintained the ancient sciences is so much the greater, inasmuch as the Islamic orthodoxy which had been always opposed to these studies was very strong ever since the end of the XIth c., and exerted a well-nigh overwhelming influence at the courts of those kings and princes who were inclined to promote learning.″ (*The Medico-Philosophical Controversy between Ibn Buṭlān of Baghdad and Ibn Riḍwān of Cairo* [Cairo, 1937], 8-9). See also George Sarton, *Introduction to the History of Science*, (Baltimore, 1927), 1:738.

hospital in Cairo which, as both teaching and treatment center, was clearly intended to be the foremost medical facility of its day in the Islamic world. It was also at this very time that his contemporary, the famous doctor and former Chief Physician of Egypt, Ibn al-Nafīs (d. 687/1288),[5] advanced his theory regarding the lesser circulation of the blood several centuries before Europeans arrived at similar conclusions.[6] Indeed, Qalāwūn′s hospital in Cairo attracted the support of Ibn al-Nafīs who donated his library and house to the institution.[7] How then shall we reconcile the judgement of historians with the evidence of interest in, and intellectual vitality of, the medical sciences so apparent in the late thirteenth century?

Consideration of the personal and political agenda involved in Qalāwūn′s patronage as reflected in the documentation of his activity in the field may yield clues in this regard. After surveying Qalāwūn′s activities more generally, we will focus in particular on evidence found in the diploma of appointment (*taqlīd*) issued by the sultan′s chancery to the Chief Physician Muhadhdhib al-Dīn Ibn Abī Ḥulayqah on the occasion of his appointment to the professorial Chair of Medicine at Qalāwūn′s hospital in Cairo, al-Bīmāristān al-Manṣūrī. Although the evidence of the *taqlīd* may not provide conclusive proof regarding Qalāwūn′s intentions, it will nonetheless stimulate further discussion of the intellectual environment which framed his patronage of the medical sciences in late thirteenth century Egypt.

Qalāwūn′s patronage is rather richly documented. Although the original hospital founded by the sultan in Cairo in 683/1285 is no longer standing, several narrative reports record its commissioning, the purchase of the site, construction, and inaugural ceremonies.[8] Two extant *waqfīyah*s describe the site and legally attest to

THE HOSPITAL IN CAIRO

The sources tell us that in 682/1283[13] Qalāwūn purchased the site and commissioned the construction, in the street known as Bayn al-Qaṣrayn in the heart of what had been Fatimid Cairo, of a hospital, which he intended, along with his tomb *(qubbah),* to be the focal point of his monumental complex. The location chosen for the complex was the site of one of the former Fatimid palaces, now inhabited by some female descendants of the Ayyubid ruling family. The choice of site was quite deliberate. Qalāwūn clearly wished his monumental complex to be located in proximity to the tomb of his master, the last Ayyubid sultan of Egypt, al-Ṣāliḥ Najm al-Dīn Ayyūb.[14] The sultan purchased the site through his agent *(wakīl)* and compensated the women with Qaṣr al-Zumurrud to which they were expeditiously removed.[15] Construction began in 683/1284-85 and was completed in 684/1285. Inaugural ceremonies, attended by the sultan, at which he dedicated the hospital to all classes of Muslims, were held soon after.[16]

Although this complex also included a madrasah and a Quran school for orphans *(maktab al-sabīl),* it is clear that Qalāwūn took special interest in the hospital. It was not the first hospital that he had founded. Early in his reign, in 680/1281-82, Qalāwūn established a hospital in Hebron about which, unfortunately,

Inscriptions from the madrasah containing dates are recorded in *RCEA*, 13:30-36, nos. 4844-50, 4852-53. See also Michael Meinecke, *Die Mamlukischen Arkitektur in Ägypten und Syrien,* Abhandlungen des Deutschen Archäologischen Instituts Kairo, Islamische Reihe, 5 (Gluckstadt, 1992), pt. 2:61. The combination of hospital and tomb in the pre-Mongol period is found in Damascus (Bīmāristān al-Qaymarī, constructed in 646/1248) where, however, the hospital is located across the street from the tomb, and at several sites in Anatolia. Qalāwūn´s complex appears to be the only Mamluk instance of this combination (Dr. Yasser Tabbaa, personal communication). See also *RCEA,* 12, nos. 4408, 4409, 4410, 4411.

no further information has as yet come to light.[17] Also, an inscription at the Nūrīyah in Damascus, dated 682/1283, records that renovations and further embellishments were undertaken at that hospital during Qalāwūn′s reign, probably on his orders.[18] Also, although the endowment provided by Qalāwūn for his hospital in Cairo was enormous, that for the madrasah was, say several sources, barely sufficient.[19] In fact, Shāfi‘ ibn ‘Alī, a scribe in Qalāwūn′s chancery and the author of a history of Qalāwūn′s reign, claims that Qalāwūn had not wanted to build a madrasah in the first place, that this was one of the ″*ziyādāt*,″[20] ″excesses″ or perhaps ″additions,″ of Qalāwūn′s mamluk, ‘Alam al-Dīn Sanjar al-Shujā‘ī, who besides serving several terms as vizier (or *mudabbir al-mamālik*) in charge of the financial administration, also frequently functioned as chief architect, engineer, and project manager in this sultan′s building program. In any case nothing was spared with regard to the hospital. Qalāwūn built, as is reported in the diploma for the Chair of Medicine, ″a hospital to dazzle the eyes.″[21] Medicine was taught in the hospital[22] and also, according to al-Maqrīzī, in the madrasah.[23] The library, housed in the *qubbah,* included medical texts, among them, probably, those donated by Ibn al-Nafīs.[24] The importance attached by Qalāwūn to the hospital was underlined by his appointment of the Chief Physician as professor of medicine at this institution. Far from being an honorary post or cushy sinecure, this position carried important responsibilities related to the supervision and regulation of the medical profession and its practitioners, including physicians *(al-aṭibbā’ al-ṭabā’īyah),* ophthalmologists *(al-kaḥḥālīn),* and surgeons *(al-jarā’iḥīyah).*[25] The diploma attests to the fact that a high standard of conduct was expected in the profession and that the responsibility for its upholding was delegated

to the *ra'īs al-ṭibb*. Not only did the Chief Physician have authority over doctors and other practical day-to-day matters, but he was encouraged to pursue the more intellectual and theoretical side of his profession as well. The diploma urges that he ″be seized by the desire to occupy himself with works written in the field *(al-muṣannafāt),* the science of nutrition *('ilm al-taghdhīyah),* knowledge of the questions *(ma'rifat al-masā'il), ḥafẓ al-fuṣūl* (attentiveness to or protection of the branches or specializations [?]) and *baḥth* (study of) *al-qānūn wa-al-kulliyāt.*″[26]

Qalāwūn′s Motives

The founding of hospitals had most often been a royal enterprise, though not exclusively so. One has only to mention the hospitals established by the Buyid ruler 'Aḍūd al-Dawlah (d. ca. 367/978) in Baghdad, Ibn Ṭūlūn (d. 270/884) in Cairo, Nūr al-Dīn ibn Zangī (d. 569/1174) in Damascus, and Ṣalāḥ al-Dīn (d. 589/1193) in Cairo and Jerusalem to demonstrate this point. Moreover, this prerogative seems to have been exercised most frequently not by the caliph, but by military rulers. Philanthropy of this sort was a particularly effective legitimizing strategy for secular military rulers, perhaps because hospitals functioned primarily as charitable and convalescent institutions along with whatever instruction they may have provided, and their charitable role especially gained widespread support. The *waqfīyah* for Qalāwūn′s hospital specifies that it was intended for all Muslims in need of medical attention, whether male or female, residing in Cairo or Miṣr (Fusṭāṭ) or their environs, or arriving from other provinces or countries. The Muslim sick and infirm would be treated at the hospital irrespective of race or other characteristics, whether rich or poor, regardless of their station in life.[27]

Not only was the establishment of hospitals an elite prerogative, but the direction of the hospital at this time was an office of state. In late thirteenth-century and early fourteenth-century Egypt, a high-ranking bureaucrat served in this capacity. Al-Nuwayrī (d. 732/1332), the author of the chronicle *Nihāyat al-Arab fī Funūn al-Adab,* held this position at Qalāwūn′s hospital from 1303 to 1308, which certainly explains why his report, along with the endowment deed itself, provides the most detailed account of the services provided by the hospital.[28] Moreover, as already

---

[26]Ibn al-Furāt, *Tārīkh,* 8:23-24. It seems quite probable this last reference alludes to Ibn Sīnā′s *Al-Qānūn fī al-Ṭibb* and Ibn Rushd′s *Kitāb al-Kulliyāt* although it is possible that the sense intended might also be a more general one.

[27]Ibn Ḥabīb, *Tadhkirah*, 1, appendix, 358, lines 315-18. See also al-Nuwayrī, *Nihāyah*, 31:107; Ibn al-Furāt, *Tārīkh,* 8:9; al-Maqrīzī, *Khiṭaṭ*, 2:406.

[28]Al-Nuwayrī, *Nihāyah*, 31:105-13. A well-known amir who later held this post was Ṣarghitmish, appointed by al-Nāṣir Muḥammad. See Muḥammad M. Amīn, *Al-Awqāf wa-al-Ḥayāh al-Ijtimā'īyah fī Miṣr, 648-923/1250-1517* (Cairo, 1980), 126.

noted, the appointment of the Chief Physician to the Chair of Medicine at the hospital signaled the importance attached by the sultan to this institution and also, perhaps, to the teaching of medicine.

Another factor which may have influenced the sultan′s decision to found a hospital is the fact that Cairo was now the preeminent capital of the Islamic world. Qalāwūn′s career in Egypt and Syria spanned the period in which Baghdad had fallen to the Mongols and the caliph had been killed. Baybars had brought a surviving member of the Abbasid family to Cairo and put him on the caliphal throne.[29] Cairo, then, was, in fact, the new seat of the caliphate. In its newly exalted position it was only fitting that this city should display all the trappings of the throne of Islam, including a hospital equal to the ʻAḍūdī hospital in Baghdad or the Nūrīyah in Damascus. The founding of a hospital was an entirely appropriate gesture, given the rising political star of the new seat of both caliphate and sultanate.

Yet another consideration may have been that the institution of *waqf* provided donors with a means to avoid confiscation of property or its fragmentation in adverse times or at death. Qalāwūn may have had such thoughts in mind when he established this institution with a rich endowment. Moreover, the *waqfīyah* allowed him to retain control during his lifetime. As *nāẓir* (supervisor) of the hospital, he would retain the right to administer the properties, a privilege his sons would inherit at his death, and which would devolve to his mamluks should his own bloodline die out.[30]

Finally, although this sultan gives no evidence of a particularly religious personality, perhaps Qalāwūn may have wished to cover his bases in this regard; a good deed now might win rewards in the Hereafter as the endowment deed actually reminds us.[31] A prophetic hadith, which constitutes part of the founding inscription for the renovations undertaken at the Nūrīyah during Qalāwūn′s reign,[32] is repeated in a slightly altered form in the *waqfīyah* for the *bīmāristān* (″Idhā

māta al-ʿabd inqaṭaʿa ʿamaluhu illā min thalāthin: ṣadaqah jāriyah aw ʿilm yantafiʿu bi-hi aw walad ṣāliḥ yadʿū lahu. . . .″ [When a man dies, his deeds come to an end except in three respects: a permanent charitable donation, or learning from which one benefits, or a pious son who prays for him.])[33] and may have been taken to heart by Qalāwūn.

While the above suggestions are somewhat speculative, the sources suggest other possible, and perhaps more concrete, motives. One anecdote claims that Qalāwūn′s troops had massacred a large number of Cairenes over a three-day period. Remorseful, Qalāwūn vowed to build the hospital in recompense. That Qalāwūn would have ordered or sanctioned such a bloodbath, however, seems out of character, for he is described in contemporary sources as mild-tempered, abhorrent of bloodshed, his only fault being greed.[34] Elsewhere it is reported that during his amirate, having fallen ill in Syria as he set out on a campaign, Qalāwūn was treated and cured with medicine obtained from the Nūrīyah, the hospital built by Nūr al-Dīn ibn Zangī in Damascus. With health restored Qalāwūn eventually visited the hospital and was so awed by it that he vowed to build a hospital like it should he ever ascend the throne.[35] This explanation seems more plausible than the first and the sources do in a rather nebulous way link Qalāwūn with Nūr al-Dīn′s initiative.[36] Whether this motive was conjured up after the fact or actually played a role in Qalāwūn′s building program, however, cannot be known.

Qalāwūn′s decision to undertake this project must have been at least partially inspired by such considerations. Nevertheless, I find it of considerable interest that Qalāwūn should choose at this particular time, and in the context of the major monument of his reign, to patronize the medical, rather than the religious, sciences, for as is well attested, this was a religiously conservative age. The Crusades and the Mongol invasions had made Egypt and Syria in the thirteenth century the bulwark and refuge of Islam. The Mamluk ruling elite, in touch with the mood of the times and seeking to gain legitimacy for themselves and the cooperation of the religious establishment, whatever other projects they might undertake, made it their business to establish religious institutions (madrasahs, *khānqāh*s, *zāwiyah*s)—lots of them. Indeed, the urban landscape of cities like Cairo and Jerusalem was transformed during the Mamluk period by building projects of this kind. With the explosion of religious facilities the demand for religious personnel

[34]Northrup, *From Slave to Sultan,* 56, 142.

[35]Al-Maqrīzī, *Khiṭaṭ,* 2:406.

[36]For example, al-Maqrīzī, *Khiṭaṭ,* 2:408, mentions that whereas Nūr al-Dīn financed his hospital from a legal source, Qalāwūn′s financial sources were suspect. Qalāwūn′s renovations at the Nūrīyah also suggest a link (see above).

also grew. The increasingly well-entrenched religious elite and their religious, scholarly, and pedagogical activities eventually brought about an intensification of the religious atmosphere.

On the other hand the medical sciences, associated as they were with the Ancients, though they had provided the starting point and basis for Islamic medicine, were, at least at some level and in some circles, especially perhaps among Hanbalis,[37] regarded with a certain disdain because of their non-Islamic or pre-Islamic, secular, origin. A well-trained physician was expected to have studied philosophy as well, a characteristic that would have won disapprobation in some religiously conservative quarters.[38] Also, the medical profession had until the eleventh century been dominated by *dhimmī*s, i.e., Christians and Jews. Even in Ṣalāḥ al-Dīn's day in late twelfth-century Egypt, many *dhimmī* physicians were in his service.[39] At a time when anti-Christian sentiment was perhaps on the rise, the medical sciences may have suffered to some degree because of their close connection with non-Muslim practitioners. In fact, the *waqfīyah* for Qalāwūn's hospital specifies that Christians and Jews were neither to be treated nor employed there.[40] It is all the more interesting then that the appointee to the Chair of Medicine was a recent Christian convert to Islam.[41] The medical sciences were, therefore, in some sense "tainted." Among some upper class and well-educated Muslims, however, a more liberal attitude toward the secular sciences does seem to have prevailed. We know, for example, that the medical sciences were among the subjects of interest and discussion in the salons of the ruling elite.[42]

At the popular level hospitals were seen primarily as charitable institutions, not especially as institutions of medical learning or research associated with a

[42]Ibn al-Furāt, *Tārīkh,* 8:23, where in the diploma it is mentioned that Muhadhdhib al-Dīn and his father had been in the service of kings and that he and his brothers had grown up in their presence, etc. See also Schacht and Meyerhof, *Medico-Philosophical Controversy,* 9 and Meyerhof and Schacht, introduction to Ibn al-Nafīs, *Theologus,* 16, citing al-Ṣafadī's biography of Ibn al-Nafīs, stating that Muhadhdhib al-Dīn was among those amirs and others who used to seek the company of Ibn al-Nafīs at his house.

non-Islamic or pre-Islamic tradition.[43] As charitable institutions, hospitals could be used as an instrument to win popular support.[44] Qalāwūn′s reputation as a beneficent ruler flourished at least partly through his association with the hospital as a charitable institution rather than an institution of medical learning. As late as the nineteenth century women visited his tomb to receive the sultan′s *barakah* (blessing) which, they believed, would save them from childlessness.[45] In fact, Qalāwūn′s name is still to this day revered; it is now attached to the eye clinic which stands on the site of the original hospital.

Yet, the teaching of the medical sciences was, in my view, a most important aspect of Qalāwūn′s hospital.[46] The *waqfīyah* reiterates the need for members of the medical profession who ″are concerned with *'ilm al-ṭibb,″* not just treatment, to be employed at the hospital.[47] The *waqfīyah* also specifically provides for the appointment of a doctor who will occupy himself with '*ilm al-ṭibb* in its various fields and who will sit in the large ″office″ (*al-maṣṭabah al-kubrá,* lit. the large stone bench or platform) designated for him.[48] Al-Nuwayrī, who as *nāẓir* of the hospital in the early fourteenth century had personal experience of its administration, records that the *ra'īs al-aṭibbā'*, whose functions have already been described, and who was simultaneously appointed to the Chair of Medicine in the hospital during Qalāwūn′s reign, was to give lectures in medicine which the students would find useful (″yajlisu fīhi ra'īs al-aṭibbā' li-ilqā' dars ṭibb yantafi'u bi-hi al-ṭalabah″).[49] The *taqlid* for the Chair of Medicine elaborates: included in the *waqf* was the creation of a place specifically for those concerned with *'ilm al-ṭibb* ″which was [now] almost unknown. . . He selected for the purpose from among the learned in medicine those who were best suited to lecturing (man yaṣluḥu li-ilqā' al-durūs), and from whom both the chief *(ra'īs)* and the deputy *(mar'ūs)* among the people of this profession would benefit.″[50] The emphasis here seems to be on teaching. Thus, though the hospital was perhaps seen primarily as a charitable

[45]Stanley Lane-Poole, *A History of Egypt in the Middle Ages* (London, 1921; repr. 1925), 283-84.

[46]In this I disagree with Behrens-Abouseif, who states (*Physicians under the Mamluks,* 17) that though many hospitals had a doctor on staff, not much teaching of the medical sciences actually occurred in them. At the Manṣūrīyah, she says, the teaching of medicine was not an important function since, according to the *waqfīyah,* only one doctor was employed.

[47]Ibn Ḥabīb, *Tadhkirah*, 1, appendix, 359, line 220; 366, lines 284-85.

[48]Ibid., 366, lines 284-85.

[50]Ibn al-Furāt, *Tārīkh,* 8:26.

institution, the teaching of the medical sciences was, nevertheless, an important focus. This once again suggests that Qalāwūn was interested not only in gaining popular favor through charity, but also in fostering medical learning.[51]

The documents associated with the hospital and with the appointments to medical posts during Qalāwūn's reign provide further evidence for the importance of the teaching of medicine in the hospital. The *taqlīd* for the Chief Physicianship *(riyāsat al-ṭibb)* suggests that, as has been related, "because *'ilm* is of two kinds, the science of religion *('ilm al-adyān)* and the science of the body *('ilm al-abdān),"* Qalāwūn was determined to improve knowledge *(al-naẓar)* in these two sciences.[52] This idea is reiterated in the *taqlīd* for the appointment to the Chair of Medicine at the hospital. This document states that whereas those kings who had preceded him had occupied themselves with the science of religion, they had neglected the science of the body; each of them had built a madrasah, but none had concerned himself with a hospital.[53] Thus, they had neglected the saying of the Prophet that "learning is of two kinds" *[al-'ilm 'ilmān]*.[54] None of his predecessors had encouraged any of his subjects to occupy himself with the science of medicine; none had created a *waqf* to support the pursuit of learning in this science *['alá ṭalabat hādhā al-'ilm]*. None had prepared a place for those who occupied themselves with this science; nor had they appointed anyone to represent this occupation. When he realized this, Qalāwūn joined through these religious and worldly means ("waṣalnā min hādhihi al-asbāb al-dīnīyah wa-al-dunyawīyah mā faṣalūhu") what his predecessors had severed and he built a hospital.[55] These passages make it clear that Qalāwūn made a deliberate decision to sponsor the medical sciences.

---

[51]Dols (*Medieval Islamic Medicine,* 32) remarks that "there was keen competition for instruction in these hospitals, which played an increasingly important role in medical education. . . . A close association can be seen between the highly developed hospitals and medical education in medieval Islamic society."

[52]Ibn al-Furāt, *Tārīkh,* 8:23.

[53]To which predecessors does the document refer since, in fact, rulers such as Nūr al-Dīn and Ṣalāḥ al-Dīn had built hospitals? I would suggest the possibility that the Ayyubids al-Malik al-Kāmil and al-Malik al-Ṣāliḥ Najm al-Dīn Ayyūb and the Mamluk al-Ẓāhir Baybars are intended. Qalāwūn had close ties with all three. He had probably been a mamluk of al-Kāmil before passing into the service of al-Ṣālih and was a close associate of al-Ẓāhir Baybars. See Northrup, *From Slave to Sultan,* 65-75. Furthermore, the *waqfīyah* states that Qalāwūn built the hospital in the "*khaṭṭ*" [quarter] of the Kāmilīyah, the Ṣālihīyah, and the Zāhirīyah madrasahs, thereby making a visual statement regarding his patronage. See Ibn Ḥabīb, *Tadhkirah*, 1, appendix, 355, lines 194-95. See also Ibn Abī Uṣaybi'ah's biography (*'Uyūn al-Anbā'*, 590-99) of the father, Rashīd al-Dīn Ibn Abī Ḥulayqah, in which his relations with these three rulers is well documented.

[54]Ibn al-Furāt, *Tārīkh,* 8:25. Issa Bey (*Bimâristans,* 42) cites a verse by Būsīrī without, unfortunately, giving his source: "Tu fondas une école et un Bimaristan, Pour redresser les religions et les corps."

[55]Ibn al-Furāt, *Tārīkh,* 8:25.

The problem is how to interpret his choice. Did he, perhaps, simply want to distinguish himself from his predecessors? Should his medical project be seen as a challenge to the religious conservatism or narrowmindedness of certain groups? Or was Qalāwūn′s aim to restore balance between the spiritual and the physical as the rhetoric suggests?

The deliberate way in which Qalāwūn approached this project, his previous sponsorship of hospitals and the multiple mentions in the documents of the need to redress the balance between the religious and the medical sciences suggest that his agenda, in addition to whatever political and social goals were involved, was also inspired by concern for the medical sciences themselves. His appointments in the field might be expected to reflect this concern.

THE APPOINTMENT OF MUHADHDHIB AL-DĪN IBN ABĪ ḤULAYQAH (B. 620/1223) TO THE CHAIR OF MEDICINE

The quality of institutions is determined, not just by the physical facilities, or the services described in brochures (or in this case the *waqfīyāt*), but by those associated with them, who administer them and who practice and teach in them. In this regard the teaching appointment at the hospital may be significant and an inquiry into the holders of the office during Qalāwūn′s reign might be expected to provide insights regarding Qalāwūn′s decision to support the medical sciences and the agenda behind his patronage. The qadi Muhadhdhib al-Dīn Ibn Abī Ḥulayqah and his brothers, the qadis ʻAlam al-Dīn Ibrāhīm (d. 708/1308-9)[56] and Muwaffaq al-Dīn Aḥmad Abū al-Khayr, were the sons of Rashīd al-Dīn Abū al-Waḥsh Ibn Ḥulayqah (d. 676/1277-78).[57] Rashīd al-Dīn was the most prominent pupil of the well-known Chief Physician in Damascus, Muhadhdhib al-Dīn Ibn al-Dakhwār (564-65–627-28/1169–1230), who in ca. 622/1225 gave as *waqf* his house for use as a medical school.[58] Rashīd al-Dīn was thus connected by his training with one of the most outstanding members of the medical profession in thirteenth-century Egypt and Syria. From the diploma for the *riyāsat al-ṭibb* we learn that Rashīd al-Dīn had been in the service of kings *(mulūk)* and that the brothers had grown up in their presence.[59] This family was, then, also well-connected. Rashīd al-Dīn′s three sons were appointed jointly to the *riyāsat al-ṭibb* in 684/1284-85. Muhadhdhib al-Dīn, however, was designated as the primary *ra'īs* among them.[60] Qalāwūn

[60]Ibid.*,* 8:24.

appointed him to the Chair of Medicine at the hospital as well.[61] Al-Ṣafadī's biography of Ibn al-Nafīs yields the interesting bit of information that in addition to the "princes" who used to seek company in his house was Muhadhdhib al-Dīn Ibn Abī Ḥulayqah, the Chief Physician.[62] Muhadhdhib al-Dīn, therefore, might be considered a protege of Ibn al-Nafīs and thus linked with the great tradition of medical men connected to the Nūrīyah and even the ʻAḍūdī hospital in Baghdad.[63] Yet Muhadhdhib al-Dīn leaves little trace in the sources. He does not seem to have distinguished himself in any way, nor to have made any outstanding contribution to the science or profession of medicine while in office, if the silence of the sources is any indication.[64]

In the tradition of medieval Islamic prosopography, the biographical dictionaries and necrologies found in many chronicles of the time reflect an ideal but supply little personal detail. The diplomas provide scant additional information. Nevertheless, it may be worthwhile to give some attention to the way in which Ibn Abī Ḥulayqah is described in the two diplomas at our disposal. The diploma of appointment to the *riyāsat al-ṭibb* simply states that Qalāwūn has appointed Ibn Abī Ḥulayqah to both the *riyāsah* and the *tadrīs* because he has raised him to the place of Ibn Sīnā.[65] In the diploma for the Chair of Medicine at the hospital, Ibn Abī Ḥulayqah is called the "Ḥakīm Hippocrates," "al-Jalīl Socrates," "al-Fāḍil Galen," and "al-Afḍal Dioscorides." He is the "Socrates of the region *(al-iqlīm),*" the "Galen of his time" and "the Ibn Sīnā of the day." Stock phrases though they may be, expectations were apparently high.[66]

Given the fact that hospitals in general were widely seen as charitable, rather than as teaching, institutions, one must also inquire regarding the nature of the Chair of Medicine at Qalāwūn's hospital in Cairo. Qalāwūn appointed not just a learned physician but the same man he had appointed to the *riyāsat al-ṭibb*. Was his main goal simply to elevate the status of the hospital by appointing the Chief Physician to the teaching post in it? Unfortunately, neither the *waqfīyah,* which mentions the teaching function at the hospital, nor the *taqlīd* which appoints Ibn Abī Ḥulayqah to the professorship at the hospital tells us anything about his actual teaching duties or the curriculum other than that he was to sit in the place

provided for him at the scheduled hours, where he would give lectures of benefit to the students.

Although we may not be able to learn much about Ibn Abī Ḥulayqah himself, the diploma of appointment to the professorship of medicine at the hospital suggests expectations for this individual. Indeed, it contains a curious but extremely interesting reference which may be key and which, I believe, addresses the sultan's aspirations for his appointee. The reference reads: ". . . wa li-yubṭil bi-taqwīmihi al-ṣiḥḥah mā allafahu Ibn Buṭlān . . ." (. . . may he [Ibn Abī Ḥulayqah] negate by his Tables of Health that which Ibn Buṭlān wrote . . .),[67] a play on words which carries an historical allusion clearly intended to awaken the memory of an incident which had occurred two centuries earlier in Fatimid Cairo, namely, the bitter personal encounter and scientific dispute between two physicians, Ibn Buṭlān and ʻAlī ibn Riḍwān, of which a partial written record has been preserved.[68] What meaning would this reference have had for the thirteenth-century reader of this document? Does it shed any light on Qalāwūn's motives?

Ibn Buṭlān and Ibn Riḍwān: Ghosts from the Fatimid Past

Ibn Buṭlān (d. 458/1066) was a resident of Baghdad, a Nestorian Christian and theologian, and perhaps a priest.[69] But he was also a physician and the author of a number of works, the most important and well known of which was his *Taqwīm al-Ṣiḥḥah* or *Tables of Health (Tabula* or *Tacuini Sanitatis).* This work, borrowing a technique from astronomy, systematically arranged information on hygiene, dietetics, and domestic medicine in tabular form, an idea that seems to have been original in this field at that time.[70] The reference in our document plays both on Ibn Buṭlān's name (from the root *b-ṭ-l, yubṭil*) and on the title of his work, *Taqwīm al-Ṣiḥḥah.*

In 440/1049, Ibn Buṭlān set out from Baghdad for Cairo. The primary purpose of his trip seems to have been to make the acquaintance of the learned Muslim Cairene doctor Ibn Riḍwān. They did meet but, unfortunately, took an instant and bitter dislike to each other on several accounts. The acrimonious nature of their relationship can be partially explained by Ibn Riḍwān's difficult personality. He was known for his venomous attacks against both the living and the dead (including such luminaries as Ḥunayn b. Isḥāq, the famous Nestorian Christian physician

[70]Sarton, *Introduction to the History of Science,* 1:731.

and translator of ancient Greek medical texts [d. 260/873], al-Rāzī, the illustrious physician and philosopher [d. 313/925 or 323/935], Ibn al-Jazzār, the Qayrawani physician [d. 395/1004-5], and Ibn Buṭlān′s own Christian teacher Ibn al-Ṭayyib, learned in medicine but also in the Islamic religious sciences [d. 435/1043]).[71] At the lowest level their mutual dislike turned on physical appearances. Ibn Riḍwān criticized Ibn Buṭlān′s looks, but not to be outdone, Ibn Buṭlān responded in verse:

> When his face appeared to the midwives
> They recoiled in perplexity
> And said, keeping their words to themselves:
> Alas, had we only left him in the uterus.[72]

Though their mutual dislike extended to this very personal level, it was also fueled by their disagreement over more serious intellectual issues regarding the method of study, curriculum, and practice of medicine. The dispute itself concerned the ″issue of differences in the constitutions of newborn birds and chickens,″[73] or which is warmer, the chicken or the bird (?), an issue which was, in fact, central to the Galenic system, the study of bodily humors in relation to disease.[74] Ibn Buṭlān, though a follower of Hippocrates and Galen, nevertheless challenged the traditional belief in this regard to which his adversary Ibn Riḍwān, also an ardent devotee of Galenism, firmly adhered.[75] As Dols notes, their dispute over whether the chicken or the bird was warmer presents both of these learned doctors at their absolute worst.[76] Of greater importance is that it does bring into focus several significant medical issues in the medieval Arab Islamic world, namely: the persistence and strength of the Hellenistic tradition in this period,[77] the tension between dogmatism and empiricism in Hellenistic learning and in medieval Islamic medicine,[78] and the question of how best to study medicine.[79]

Ibn Riḍwān and Ibn Buṭlān came from very different backgrounds and had entered the medical profession by very different educational routes. Ibn Buṭlān seems to have led a privileged life. He was well-educated, well-traveled, and, though a Christian, well-versed in the Islamic sciences and in Arabic literature. He knew Greek and Syriac and had studied with some of the most famous physicians of his day. He was also the author of a number of works, including, in addition to his *Taqwīm,* the *Da'wat al-Aṭibbā'* or *The Doctors´ Dinner Party* (a criticism of medical charlatanism), a book of remedies, a treatise on the purchase of slaves and detection of physical defects in them, and the memoirs of his trip from Baghdad to Cairo.[80] Ibn Riḍwān´s family in contrast was poor. He was the son of a baker in Giza and had probably never left Cairo. Unable to afford study with any learned doctor, Ibn Riḍwān, by working as an astrologer on the streets of Cairo, managed to earn enough to acquire a basic medical education, largely through self-study. Having become very learned in the medical sciences, he eventually worked his way up through the ranks to the post of Chief Physician.[81] He was, in fact, no slouch. His literary output, consisting mainly of medical treatises, was copious,[82] and in his writing Ibn Riḍwān demonstrates a thorough knowledge of ancient Greek medicine and a firm loyalty to Galen.[83] Yet, despite their widely divergent origins, Ibn Riḍwān and Ibn Buṭlān share some points in common. Both were extremely well-grounded in the classical curriculum, based on Hippocrates and especially Galen. Both expressed dismay at what they perceived to be the slipping standards of medical education in their day.[84] In other words both shared a common culture which demonstrates the continuing strength of the Hellenistic tradition in the medieval Arab Islamic world.[85]

Their dispute, however, also brings to light the existence of tension within Hellenistic learning itself between Dogmatism on the one hand and Empiricism on the other. The Dogmatists hoped ˝to create an exact science of medicine on the basis of the largely empirical writings of Hippocrates,˝ ˝through philosophic speculation formulated on a priori principles or *dogmata* of medical knowledge,˝ ˝and deduced treatments from them.˝[86] The Empiricists, on the other hand,

[86]Ibid., 21.

recommended ″observation and experience and used the inductive method.″[87] Both trends, already present within Galenism, had been absorbed by Islamic medicine.[88] In this dispute Ibn Riḍwān in some respects appears to be more closely attached to the Dogmatist school whereas Ibn Buṭlān, in his challenge to the traditional Galenic belief regarding the chicken and the bird, demonstrates a more liberal spirit.[89]

Finally, the two men were at each other′s throats over the question of how best to study medicine. Ibn Riḍwān was a self-taught man who had learned most of what he knew from books,[90] and, as has been pointed out by others, he made of that necessity a virtue in his argument with Ibn Buṭlān. Hellenistic learning then was not the issue between them; rather it boiled down to who was better educated in that tradition, and it was in this framework that the issue of how best to acquire a superior medical education arose.[91]

Conflicting opinions regarding the two doctors are found in the works of their medieval colleagues as well as in those of modern scholars. Ibn Abī Uṣaybiʻah considered Ibn Riḍwān ″a better medical man and better trained in the philosophical and associated sciences.″[92] On the other hand, Ibn al-Qifṭī summed up Ibn Riḍwān as ″a man of narrow mind and not of sound judgment.″[93] More recently M. C. Lyons has remarked that while Ibn Riḍwān′s critique of medieval medicine in the Islamic world is in some respects ″self-deceiving,″ nevertheless it may ring true, for similar thoughts are found in the works of Ibn Rushd.[94] Finally, Joseph Schacht and Max Meyerhof concluded that Ibn Riḍwān was ″not an original thinker but merely a strong exponent of Hippocrates′ and Galen′s thought, except for his list of remedies that were unknown to the ancients.″[95] Whatever the case may be, it is clear that while sharing a common tradition and some ideas, Ibn Riḍwān and Ibn Buṭlān were of different social background, religious affiliation, and approach to their profession.

THE SIGNIFICANCE OF THE REFERENCE TO IBN BUṬLĀN IN THE DIPLOMA ISSUED TO MUHADHDHIB AL-DIN IBN ABĪ ḤULAYQAH

Now, finally, we must consider the intent behind the inclusion of the reference to Ibn Buṭlān in Ibn Abī Ḥulayqah′s diploma and what the appointee would have inferred from it. In some respects it seems strange that this dispute should be recalled two centuries later. Yet, the reference assumes that the reader is familiar with what was intended, a point which is in itself of interest. In fact, Ibn Buṭlān′s works were still popular. The *Taqwīm al-Ṣiḥḥah* had caused a stir in its day because Ibn Buṭlān had had the novel idea to adapt a method of presenting information, which until then had been used only in astronomy, to the field of medicine. The use of tables allowed him to systematize a great deal of information. The method was eventually applied in still other fields, in geography, for example.[96] In fact, the use of tables became such a popular way of presenting information that the term ″*taqwīm,*″ which until then had retained the original sense of ″rectification,″ ″correction,″ or ″reform,″ came to mean in thirteenth-century common usage simply ″tables.″[97] Further evidence of the enduring popularity of this work in the thirteenth century is that the first translation of the *Taqwīm al-Ṣiḥḥah* into Latin seems to have been made at that time, quite probably in the second half of the century, the date of the earliest extant manuscript (and there are a large number of them).[98] Finally, another indication that Ibn Buṭlān′s works were still widely read is the fact that the earliest Mamluk painting to have survived is a miniature from a manuscript of his *Daʿwat al-Aṭibbāʾ (The Doctors′ Dinner Party)* which dates to 1273.[99] Thus, we know for a fact that Ibn Buṭlān′s name was still on people′s lips; his works were widely known and read in the second half of the thirteenth century. Most well-educated Muslims would have been familiar with Ibn Buṭlān′s works and most probably would have understood the allusions found in the *taqlīd*. The problem for us is one of interpretation. As we have seen there are many levels to the original dispute between Ibn Buṭlān and Ibn Riḍwān and we are not even certain whether the reference in the *taqlīd* aims to recall some aspect of that dispute or whether it refers to the *Taqwīm* itself. What then exactly did the scribe intend by exhorting Ibn Abī Ḥulayqah to ″negate″ by his *taqwīm* (or his rectification, reform, correction) what Ibn Buṭlān had written?

One thought that comes to mind is that this rather hostile reference to Ibn Buṭlān may have been inspired by his Christianity. Ibn Abī Ḥulayqah, it should be remembered, was a recent convert. The reference might have been the scribe′s

---

[96]Ibn Buṭlān, *Le Taqwīm,* 37-38.

[97]Ibid., 14.

[98]Ibid., 43.

[99]Richard Ettinghausen, *Arab Painting* (Cleveland, 1962), 143-44.

way of reminding Ibn Abī Ḥulayqah of his place. But Ibn Buṭlān had lived in a more liberal age when discussions between Christians and Muslims, especially at the Fatimid court in Egypt, were nothing out of the ordinary and when, in fact, there even seems to have been something of a Christian revival in Egypt.[100] Ibn Buṭlān, though a Christian, was well versed in the Islamic sciences and Ibn Riḍwān counted Jews among his closest colleagues. Thus, it seems unlikely that Ibn Riḍwān's acrimonious attacks against others, including Ibn Buṭlān, were religiously motivated and that the dispute was remembered in that way.[101] By the thirteenth century, however, the atmosphere had changed and the pressures on the Dār al-Islām had resulted in an intensification of the religious environment. During Qalāwūn's reign two centuries later, I have argued elsewhere that, even in the face of the Crusades and the Mongol invasions, there was no large-scale persecution of Christians; whatever anti-Christian measures were taken during his reign were directed against Christian employees in the financial diwans.[102] It was precisely in this regard that Ghāzī ibn al-Wāsiṭī, himself a bureaucrat and contemporary of Qalāwūn, wrote his tract against the employment of Christians and Jews in the bureaucracy.[103] The *waqfīyah* for the hospital does include an explicit injunction against the employment of Christians and Jews as well as against their treatment there.[104] The fact that Muhadhdhib al-Dīn belonged to a family of recent converts to Islam could, therefore, have occasioned the reference to Ibn Buṭlān. Muhadhdhib al-Dīn had converted to Islam during the reign of Baybars;[105] ʻAlam al-Dīn, his younger brother, converted just before his appointment;[106] the third brother, Muwaffaq al-Dīn Aḥmad, had apparently converted to Islam only in 683/1283-84, a timely conversion in light of the fact that soon after, he too was appointed jointly with his brothers to the *riyāsat al-ṭibb*. He converted in the sultan's presence whereupon the sultan bestowed upon him a robe of honor.[107] To accept the

appointment, even as a junior member of the family triumvirate, he had to be Muslim. While hostility to Ibn Buṭlān in the original incident does not seem to have been based on religion, it is possible that, given the recent conversion of the Ibn Abī Ḥulayqah family to Islam and the prohibition in the *waqfīyah* of the employment or treatment of *dhimmī*s at the hospital, this derogatory reference to Ibn Buṭlān in the *taqlīd* may have been intended to remind them of their place, especially as in the *riyāsah* they had some authority over other doctors, including Muslims.[108] Perhaps there was sensitivity to the fact that the work of Ibn Buṭlān, a Christian, had gained such popularity and that the new appointee to the professorship at the hospital was but a recent convert and perhaps not a very sincere one at that. The Christian biographer, Ibn al-Ṣuqāʿī, seems to want to reassure this readers in this regard when he reports that although one of the brothers, ʿAlam al-Dīn Ibn Abī Ḥulayqah, had been offered the patriarchate (before his conversion to Islam), he had declined it.[109]

Ibn Buṭlān was also criticized for his willingness to stray from the Galenic straight path.[110] When he realized through observation the necessity of correcting an axiom of Galenic medicine, he had no difficulty in doing so. Ibn Riḍwān had been much more rigid in his adherence to Galen. Like Ibn Buṭlān, Ibn al-Nafīs in thirteenth century Egypt, though as well-grounded in Galen as his predecessors, was critical of the master and in fact, on the basis of his observation, refuted Galen in his discovery of the lesser circulation of the blood. Ibn al-Nafīs, however, was not admonished for his empiricist tendencies. In fact, he was revered, as is demonstrated by the fact that the ruling elite and physicians sought his company. Thus, one´s position toward Galenism also does not seem to have inspired the reference.

I tend to think that the rather adversarial innuendo behind this play on words has to do with the nature of the *Taqwīm al-Ṣiḥḥah* itself. As we have seen, Ibn Buṭlān´s great contribution was to have pioneered a method to systematize data in the form of tables. Elkhadem argues that Ibn Buṭlān had a social as well as a practical goal: to make hygiene and health information more accessible and understandable to the general public.[111] At the same time, however, this form of presenting data might be seen as a perfect illustration of Ibn Riḍwān´s contention that standards in medical education were slipping. Ibn Riḍwān had been critical of the growing tendency to write summaries and to study medicine from compendiums

---

[108]According to the *taqlīd* (Ibn al-Furāt, *Tārīkh,* 8:244), Muhadhdhib al-Dīn was made preeminent among the three brothers and in this position had important responsibilities (see above).

[109]Ibn al-Ṣuqāʿī, *Tālī,* 60, n. 69.

[110]Schacht and Meyerhof, *Medico-Philosophical Controversy,* 78.

[111]Ibn Buṭlān, *Le Taqwīm*, 14-21, 28 for a discussion of the organization and contents of the work.

rather than from the original works; students no longer studied original texts but only the abridgements or summaries. Ibn Buṭlān's *Taqwīm* would seem to illustrate the point.[112] Despite Ibn Buṭlān's attack on medical charlatanism and slipping standards of medical education, his own *Taqwīm* was perhaps viewed as the very kind of work that was leading to the decline in the medical sciences. The diploma, as we have seen, suggests that the teaching of medicine was in Qalāwūn's day neglected, almost unheard of. The reference to the *Taqwīm al-Ṣiḥḥah* may, thus, have been intended to exhort Muhadhdhib al-Dīn in his new teaching position to restore the status of the science of medicine to its former high level by promoting (like Ibn Riḍwān and contrary to Ibn Buṭlān) the study of the medical sciences from the original texts. Whatever the case may be, the reference to the dispute seems to establish Ibn Riḍwān as a role model for Ibn Abī Ḥulayqah.

CONCLUSION

Qalāwūn's deliberate decision to patronize the medical rather than the religious sciences was certainly motivated by a complex of religious, political, social, and personal considerations. These considerations included piety, charity, the preeminent status of Cairo in the Islamic world of the late thirteenth century, legitimation, relations between the religious (and especially the conservative) elite and the Mamluk ruling class, and possibly the personal benefits accruing to the donor of a *waqf*. Beyond these important, though quite mundane goals, however, the sources hint that Qalāwūn may have aimed at something more: the fostering of medical learning. At the least, it appears that he wished to restore the balance between the spiritual and medical branches of learning. More ambitiously, he may have wished to restore the medical sciences to their former glory. Our inquiry into his patronage has produced some tantalizing fragments of information regarding the intellectual environment which informed his decision, but no conclusive evidence that enables us to decipher with any certainty the nature of his own personal vision. His hospital, planted among the madrasahs of his predecessors, was intended to make a statement, but it is difficult to translate that statement in full. Whereas Qalāwūn's monuments constituted a dramatic visual affirmation of his sponsorship of the medical sciences and of his aspirations in their regard, aspirations that are reiterated in a literary way in the diplomas, his appointment of Muhadhdhib al-Dīn Ibn Abī Ḥulayqah to the *riyāsat al-ṭibb* and the *tadrīs al-bimāristān* is more puzzling. The sources are silent regarding Muhadhdhib al-Dīn's accomplishments, suggesting that he may have failed to fulfill expectations. Yet it would be unfair to judge Qalāwūn's patronage of the medical sciences on the basis of this one appointment. If, moreover, the intent of the reference in the

[112]Schacht and Meyerhof, *Medico-Philosophical Controversy,* 22.

diploma was to intimate sultanic support for the approach to the restoration of the science and study of medicine favored by Ibn Riḍwān (i.e., a return to the study of original texts), then the opportunity to pursue new knowledge through the empirical method favored by al-Rāzī, Ibn Buṭlān, Ibn al-Nafīs, and others may have been lost, not for lack of intellectual vitality but simply because of the path chosen. Before arriving at such a conclusion, however, the impact of Qalāwūn´s patronage on the medical sciences must be further explored through a study of the hospital, its charitable and educational roles, the fortunes and management of its endowment, and the careers of Muhadhdhib al-Dīn´s successors in the years following Qalāwūn´s reign. This path will be followed in another study now in progress.

The Sultan, The Tyrant, and The Hero: Changing Medieval Perceptions of al-Ẓāhir Baybars*

As the true founder of the Mamluk state, al-Ẓāhir Baybars is one of the most important sultans of Egypt and Syria. This has prompted many medieval writers and historians to write about his reign. Their perceptions obviously differed and their reconstructions of his reign draw different and often conflicting images.

In this article I propose to examine and compare the various perceptions that different writers had of Baybars's life and character. Each of these writers had his own personal biases and his own purposes for writing about Baybars. The backgrounds against which they each lived and worked deeply influenced their writings. This led them to emphasize different aspects of his personality and legacy and to ignore others. Comparing these perceptions will demonstrate how the historiography of Baybars was used to make different political arguments concerning the sultan, the Mamluk regime, and rulership in general. I have used different representative examples of thirteenth- to fifteenth-century histories, chronicles, and biographical dictionaries in compiling this material. I have also compared these scholarly writings to the popular folk epic *Sīrat al-Ẓāhir Baybars.*

In his main official biography, written by Muḥyī al-Dīn ibn ʻAbd al-Ẓāhir, Baybars is presented as an ideal sultan. By contrast, works written after the sultan's day show more ambivalent attitudes towards him. Some fourteenth-century writers, like Shāfiʻ ibn ʻAlī, Baybars al-Manṣūrī, and al-Nuwayrī, who were influenced by the regime of al-Nāṣir Muḥammad, tend to place more emphasis on his despotic actions. Other late Mamluk historians, like al-Maqrīzī, al-ʻAynī, and Ibn Taghrībirdī, demonstrate a more balanced approach towards the sultan, and present him as a great ruler while still acknowledging his shortcomings and excesses. In the popular epic *Sīrat al-Ẓāhir Baybars*, he is a Muslim hero. Comparing these three main perceptions of Baybars—as idealized sultan, harsh despot, or Muslim hero—shows that certain qualities such as just rule and commitment to Islam were to be emphasized when constructing the ideal image of the ruler, while others

*This paper was first presented at the conference on "The Mamluk Sultanate: Cities, Societies, Economies" sponsored by *Mamlūk Studies Review,* The University of Chicago, and DePaul University, Chicago, December 3, 1998. I would like to thank the American University in Cairo for providing me with a grant to attend that conference.

such as cruelty and despotism were to be ignored or downplayed. It also allows us to see through the seemingly straightforward veneer of narrative that these sources employ and to glimpse the undercurrents beneath.

Ibn ʻAbd al-Ẓāhir (1223-92), Baybars′s loyal employee, wrote the sultan′s official biography.[1] The writer was chief clerk in Baybars′s chancery and drafted many state documents himself.[2] Thus he was witness to many of the events he described.[3] Baybars was very much involved in the writing of this work. The writer often read out drafts to the sultan, who duly rewarded him.[4] Ibn ʻAbd al-Ẓāhir gives Baybars a voice in several passages of the book that begin with phrases like ″the sultan told me″ or ″I was informed by the sultan,″ which indicates that his source for this version of an event was the sultan himself.[5] This work was clearly intended as a panegyric of Baybars and sought to promote the Mamluk regime.

Ibn ʻAbd al-Ẓāhir presented Baybars as an ideal ruler and an excellent soldier, ignoring events that could have tarnished Baybars′s image or else relating them in ways that worked in the sultan′s favor. He considered him the true hero of the famous battle of ʻAyn Jālūt and attributed the larger part of the victory to his military efforts rather than those of the actual leader of the armies, Quṭuz.[6] Furthermore, instead of arguing that Baybars had no role in the murder of Quṭuz, Ibn ʻAbd al-Ẓāhir insisted that Baybars alone was responsible for killing him and was not a member of a larger conspiracy.[7] This was to legitimize Baybars′s rule

---

[1]The other biography of Baybars is *Tārīkh al-Malik al-Ẓāhir* by ʻIzz al-Dīn ibn Shaddād. Unfortunately it does not survive in full. The extant part, dealing with the years 1272-78, has been edited and published by Aḥmad Hutayt: ʻIzz al-Dīn Muḥammad ibn ʻAlī ibn Ibrāhīm ibn Shaddād, *Tārīkh al-Malik al-Ẓāhir,* Bibliotheca Islamica, 31 (Wiesbaden, 1983). These two works are the main primary sources used by later medieval historians writing on the reign of Baybars.

according to what Ibn ʻAbd al-Ẓāhir claimed to have been a law of the *yasa,* namely that a regicide should succeed to the throne.[8] Because of the semi-official nature of the book, we may consider Ibn ʻAbd al-Ẓāhir′s account to be the one promoted by Baybars himself.[9]

Ibn ʻAbd al-Ẓāhir′s account of Baybars′s life focused on the sultan′s military endeavors and achievements. He also emphasized the sultan′s piety and his services to Islam; for example, he restored the Abbasid caliphate in Cairo. This of course further legitimized his rule. It also gave him leverage in his confrontation with the Mongols.[10] Ibn ʻAbd al-Ẓāhir also gave many examples of Baybars′s pious acts, especially his pilgrimage to the holy sites in Mecca and Medina, his ban on the consumption of wine[11] and hashish,[12] and his campaigns against prostitution.[13] The writer′s description of Baybars′s pilgrimage is rather elaborate. The sultan′s trip to the Hijaz, like many of his endeavors, was arranged in semi-secrecy.[14] This habit of making a mystery of his whereabouts and travels contributed to Baybars′s development into a romantic character.[15]

Ibn ʻAbd al-Ẓāhir sought to impress upon his readers that Baybars performed the rites of pilgrimage perfectly. He humbled himself before God:

> He remained like an ordinary person not shielded by anyone and protected only by God. He was alone in praying and performing the rites of pilgrimage. He then went over to the Kaʻbah—God bless it—and washed it with his hands. He carried the water in a waterskin over his shoulders and washed the blessed house and remained among the common people. . . . He held people′s hands—may God help him—and assisted them to the Kaʻbah; one commoner clung to him and could not keep hold of his hand because of the crowds and so clung to the sultan′s clothes and tore them and almost threw him on the ground.[16]

[15]Thorau, *Lion of Egypt,* 197.

[16]Ibn ʻAbd al-Ẓāhir, *Rawḍ,* 355.

He also instructed his close employees to distribute money and clothing discreetly to the people of the Ḥaram. Baybars obviously wanted to perform the pilgrimage correctly and to carry out all the rites to perfection, so much so that he had the Hanafi *qāḍī al-quḍāh* accompany him throughout the trip and instruct him in matters of religion.[17] Ibn ʻAbd al-Ẓāhir concluded the account of the pilgrimage by declaring that: ″the sultan performed the duty of pilgrimage as it should be.″[18]

Baybars the ideal sultan was also necessarily a just ruler. Ibn ʻAbd al-Ẓāhir dealt extensively with Baybars′s administration of justice. He described how Baybars restored the Dār al-ʻAdl and often presided over the court himself.[19] He related various cases to prove to his readers that Baybars was extremely firm and stern about justice. For example, a man was in dispute with the sultan over the ownership of a well which Baybars had started digging and which the man had completed. Baybars insisted that he and his opponent be treated equally before the *sharʻ* and stepped down from his position of judge at the Dār al-ʻAdl so that the *qāḍī al-quḍāh* could decide the case. The qadi ruled that the sultan had the right to the well but must pay the building expenses of his opponent.[20] Baybars is thus shown as setting an example to demonstrate that the *sharʻ* and rule of law must be observed by all, even the sultan. He is portrayed as a strong sultan who is not afraid of being made equal with his subjects.

Ibn ʻAbd al-Ẓāhir′s presentation of Baybars′s death was in line with his approach throughout the rest of the work. In dealing with this he was very formal and discreet: he merely stated that Baybars fell sick and died.[21] He did not mention any of the unseemly circumstances of his illness, which according to other reports was due to poison or drinking too much *qumz,* a favorite Mamluk alcoholic drink made from mares′ milk.[22]

By contrast, in later works written during the fourteenth and fifteenth centuries, a more ambivalent attitude towards Baybars emerged. This led the writers of these works to include less glamorous and less flattering accounts of the sultan alongside accounts of his military achievements and the glories of his reign. Some of these

[21]Ibid., 472-73.

[22]For example: Aḥmad ibn ʻAlī al-Maqrīzī, *Kitāb al-Sulūk li-Maʻrifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah (Cairo, 1957), 1:635; Mufaḍḍal ibn Abī al-Faḍā′il, *Histoire des sultans mamlouks: texte arabe publié et traduit en francaise par E. Blochet* (Paris, 1919), 276-77; Nāṣir al-Dīn Muḥammad ibn ʻAbd al-Raḥīm ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed. Qusṭanṭīn Zurayk (Beirut, 1942), 7:85.

historians, such as Baybars al-Manṣūrī (d. 1325), Shāfi' ibn 'Alī (d. 1330), Ibn al-Dawādārī (d. 1336), and al-Nuwayrī (d. 1332), may have wished to diminish the importance of Baybars's legacy in order to enhance the achievements of the regime of al-Nāṣir Muḥammad. This is particularly evident in Shāfi' ibn 'Alī's *Ḥusn al-Manāqib al-Sirrīyah al-Muntaza'ah min al-Sīrah al-Ẓāhirīyah,* his *mukhtaṣar* of Ibn 'Abd al-Ẓāhir's *Rawḍ*. P. M. Holt argued that this work might have appeared as a sort of companion to Shāfi''s biography of Qalāwūn, *Al-Faḍl al-Ma'thūr min Sīrat al-Sulṭān al-Malik al-Manṣūr* during the third reign of al-Nāṣir Muḥammad.[23] This later work was intended as praise of Qalāwūn and served to legitimize his regime and by extension, those of his sons.[24] Shāfi' had the task of justifying Qalāwūn's usurpation of the throne from the sons of Baybars, his *khushdash* and former sovereign to whom he owed allegiance. This prompted Shāfi' to slight Baybars's reputation while simultaneously praising Qalāwūn. Yet even in these works, Baybars's legacy and importance could neither be ignored nor completely obliterated. Historians writing in the later Mamluk period, such as Ibn al-Furāt (d. 1404), al-Maqrīzī (d. 1441), al-'Aynī (d. 1451), and Ibn Taghrībirdī (d. 1469), even expressed a sense of nostalgia for "the good old days" which prompted al-Maqrīzī to describe Baybars as "one of the greatest rulers of Islam."[25]

In these later works, Baybars's role in the murder of Quṭuz was no longer the main one, nor was it necessarily to be celebrated.[26] The murder of Quṭuz was presented as a conspiracy involving several amirs, among whom was Baybars.[27] In some versions he was not even the one to deal either the first blow or the death blow.[28] They further emphasized the abhorrent nature of the act by portraying

Quṭuz in positive terms as a good and pious Muslim, suggesting he did not deserve to be killed and that his murder was therefore unjust.[29] Quṭuz in these writings was a good, pious sultan who was betrayed by his men. This was emphasized by reports that Quṭuz was originally ″Maḥmūd″, the Muslim-born son of the Khwarizm-shahs, who was sold into slavery after the Mongol defeat of his dynasty and who was later the hero of the battle of ʻAyn Jālūt, where the Muslims achieved victory over the Mongols.[30] In contrast to Ibn ʻAbd al-Ẓāhir′s version, which left no room for contenders to the throne, Shāfiʻ ibn ʻAlī wrote that the top Mamluk amirs had chosen Sayf al-Dīn Balban al-Rashīdī, ″the most prominent amongst them,″ to be their next sultan.[31] The idea that Baybars was not among the prominent Mamluk amirs is echoed in Ibn Kathīr′s version, which complements Shāfiʻ′s. Ibn Kathīr wrote:

> It is said that when he [Quṭuz] died the amirs were confused amongst themselves over whom to make sultan. They each feared the consequences and that what befell others could quickly befall them [i.e., that they could be murdered by fellow Mamluks like Quṭuz, his predecessor Aybak, and the Ayyubid Tūrañshāh before them], so they agreed on Baybars al-Bunduqdārī, though he was not among the most prominent *muqaddamīn;* they wanted to try it out on him.[32]

These writings presented the harsh and despotic side of Baybars′s rule. Baybars was known for his strictness and severe punishments.[33] These writers reported that he spied on and imprisoned several top Mamluk amirs, often on the grounds that they were conspiring against the sultan.[34] These accounts tended to present unfavorable images of Baybars as a paranoid, insecure dictator rather than a strong ruler trying to control a huge empire. Baybars′s imprisonment of Shams

al-Dīn Sunqur al-Rūmī, for instance, could have been presented as an example of the sultan reining in his top generals, which was always a challenge for the Mamluk regime. Instead, Shāfi‘ ibn ‘Alī and al-Nuwayrī cast shadows on Baybars's character in their accounts of the incident. According to Shāfi‘, the sultan imprisoned Sunqur al-Rūmī, who had tortured one of his mamluks to death despite the sultan's intercession. Shāfi‘ explains that Sunqur had discovered that the mamluk was a spy for Baybars.[35] Al-Nuwayrī's version, on the other hand, suggests that the sultan might have been attracted to the mamluk, who was "good looking," and it was this which prompted Sunqur al-Rūmī to punish him.[36] Both explanations for the imprisonment of this amir thus portray Baybars in a negative light.

Other writers, like al-Maqrīzī, did not criticize this toughness that Baybars demonstrated in dealing with the Mamluks. So, for example, in dealing with the imprisonment of a top general, Sayf al-Dīn Balban al-Rashīdī, al-Maqrīzī mentioned his several transgressions and Baybars's patience and tolerance until he was informed—through spies, of course—of this amir's conspiracy with an Ayyubid ruler against Baybars, which the sultan could not allow to go unpunished.[37] Here Baybars hardly seemed despotic in seeking to control the Mamluk generals and preempting a coup d'etat.

Nevertheless, even these later writings, which were not intended to idealize Baybars, acknowledged his active role in the administration of justice and the implementation of shari‘ah.[38] Unlike Ibn ‘Abd al-Ẓāhir, who suspiciously ignored Baybars's decision to appoint four chief judges from the four schools, later sources dealt with the decision but differed in its evaluation. Shāfi‘ ibn ‘Alī, in his *mukhtaṣar* of Ibn ‘Abd al-Ẓāhir's work, explained that the reason behind the decision was the strictness of the Shafi‘i qadi, Ibn Bint al-A‘azz, which led to a state of stagnation in the administration of justice.[39] Ibn Kathīr explained that Ibn Bint al-A‘azz held up rulings that went against the Shafi‘i *madhhab* but were allowed by other *madhāhib*.[40] This was also the explanation given by al-‘Aynī later in the fifteenth century.[41] The qadi's adherence to the letter of the law rather than its spirit appeared almost unjust and obstructive. Thus Baybars's decision was presented as an

innovative solution to the everyday problems which people faced in the qadi's court. It could be interpreted as an act of religious tolerance that simultaneously enhanced the power of the sultan.[42]

For writers like al-Nuwayrī, Ibn Bint al-Aʿazz was a respectable, firm judge who followed shariʿah strictly even when it was in contradiction to the interests of the ruling authorities, the Mamluks. In this version of the incident, the qadi had issued a ruling which harmed the interests of one of the top amirs, and it was this amir who suggested that Baybars appoint four chief judges.[43] Al-Nuwayrī's probable disapproval of the decision is hinted at by his account of the Syrian judges' resistance to this decision. They first refused their appointments and then tried to resign, but the sultan would hear none of that.[44] That there would be resistance to such a decision after traditional Shafiʿi control is perhaps understandable.

Al-Maqrīzī's account, on the other hand, included an anecdote that reveals how unpopular the decision was. Somebody saw al-Ẓāhir Baybars in a dream after his death and asked him how God had judged him. Baybars responded that he received the most punishment for appointing four judges since this had disunited Muslims.[45] This then was his most unjust decision according to al-Maqrīzī.

The ambivalence of later Mamluk sources towards Baybars's harshness and injustice is further demonstrated in their accounts of the fires in Fustat and the taxation of Damascus. Both cases were ignored by Ibn ʿAbd al-Ẓāhir, who sought to promote an ideal image of the sultan.

The fires that plagued Fustat in 1264 were obviously dangerous and threatened to lead to disorder. They occurred during a time when Crusaders were among the main enemies of Islam and when toughness with Franks and Christians in general was welcomed by many Muslims. Copts were blamed for the spread of the fires, supposedly as revenge for Baybars's attacks on and destruction of churches in Syria after his defeat of various Frankish enemies.[46] Baybars reacted by ordering that all Copts and Jews, including the elders of both communities, be burned. They responded by offering to ransom themselves. Some sources report that the elders of the community paid the ransom.[47] While none of the writers consulted outwardly criticized Baybars's actions, some of their accounts seem to suggest they thought the punishment was too severe. Thus Mufaḍḍal ibn Abī al-Faḍā'il (a Copt himself) along with al-Nuwayrī wrote that a pious Coptic monk who was

known for helping people in need regardless of their religion paid the requested amount.[48] This man was tortured to death on the basis of a *fatwá* given by the *fuqahā'* citing ″fear of *fitnah*.″[49] The positive terms in which that man is described suggest that by helping pay the fine he was doing a good deed, which in itself implies that these people were treated unjustly.

While all sources appreciated Baybars′s war efforts and his victories against the Mongol and Frankish enemies of Islam, later sources also acknowledged that this glory came at a high price. Building and sustaining large armies cost a lot of money. This overburdened some members of the population more than others. Baybars raised the taxes on Damascus and its environs, arguing that this was land reconquered from the Mongols and therefore as technically *'anwah* land it could be taxed at a higher rate.[50] The sultan′s earlier decision to appoint four chief qadis came to his service. He secured *fatwá*s from Hanafi jurists legitimizing his argument and his decision.[51] Yet this decision was listed among Baybars′s injustices in several later sources. The understandable unpopularity of this maneuver was still clear a century later in Ibn Kathīr′s *Al-Bidāyah* where he wrote:

> This issue is famous and there are two opinions on the matter; the correct one is that of the majority, which is that [Muslim property reconquered from infidels] should be returned to its original owners.[52]

This decision was listed among Baybars′s injustices in several later sources. Ibn al-Furāt and al-Nuwayrī reported that the people of Damascus suffered so much that they prayed Baybars′s rule would end.[53] Al-Nuwayrī wrote that various ulama of Damascus had pleaded with Baybars to decrease the heavy taxes, and though the sultan promised them to end all taxes once he defeated the enemy, he broke his promise.[54] After much pleading and with the intercession of al-Ṣāḥib Fakhr al-Dīn (son of the vizier Ibn Ḥannā), who had studied Shafi'i jurisprudence, Baybars agreed to allow Damascenes to keep their property in return for a million dirhams paid in installments.[55] When he died, Damascenes had paid only half of the amount due.

Historians of the fourteenth and fifteenth centuries cast doubts over the manner of Baybars's death which further tarnish his image. In several versions, the sultan had planned to poison another man but the cups were mixed up and Baybars drank the poison by mistake.[56] The insinuations in these stories cannot be ignored. First they imply that Baybars was in the habit of killing and poisoning other men for no legitimate reason. In this case, the man for whom the poison was intended was an Ayyubid who had performed outstandingly in a battle and received high praise, which is said to have made the sultan jealous. But more importantly, these reports imply that Baybars deserved to die such a death, which in itself betrays the authors' true judgment of his rule. Most versions suggest that Baybars died of poison, although they differ in their rendition of the details. This air of conspiracy and mystery adds to the legend of the sultan.

While historians were busy writing their interpretations of the Mamluk regime and the reign of Baybars, other histories, unofficial and unscholarly, were also being constructed. The events of Baybars's life and reign provided a source for popular entertainment. The first major work of a popular nature to take Baybars as its protagonist was *Sīrat al-Ẓāhir Baybars*.

The dating of *Sīrat al-Ẓāhir Baybars* is a fundamental problem facing researchers who wish to use it as a source for cultural and social history. We know that some form of the *Sīrah* had come into being by the fifteenth century, because it was mentioned by Ibn Iyās.[57] His comments were very brief and do not indicate to what degree it had developed by then. The earliest extant manuscript of the *Sīrah* is found in the Vatican collection and dates back to the sixteenth century.[58]

The fact that the *Sīrah* was primarily a work for oral performance meant that it was a fluid, changing text, rather than a static and defined one. The storyteller and the audience reconstructed the already fluid text at every recitation. This work, which began as an *oral* folk epic, was eventually put into writing, though most surviving manuscripts of the *Sīrah* date back only to the eighteenth or nineteenth centuries.[59] Even so it continued to be a living oral tradition; E. W. Lane gave an account of the reciters of "*Seeret Ez-Zahir*" in the nineteenth century, and Ṭāhā

Ḥusayn mentioned public recitations and the sale of printed editions of it in the early twentieth century.[60]

The printed versions of the *Sīrah* that are now available are not carefully prepared editions of specifically identified manuscripts, nor are they faithful to the richness and language of the manuscripts.[61] The only serious academic work carried out so far on *Sīrat al-Ẓāhir Baybars* is the still incomplete translation into French—without an accompanying edited Arabic text—by Georges Bohas and Jean-Patrick Guillaume.[62] This translation is based on a nineteenth-century manuscript from Aleppo.[63] For this article I have used the printed edition currently available in the bookstores of Cairo. This is a five-volume edition published in 1996 by al-Hay'ah al-Miṣrīyah al-'Āmmah lil-Kitāb.[64] The title page of each part (of which there are fifty in the five volumes) includes the title *Sīrat al-Ẓāhir Baybars, Tārīkh al-Malik al-'Ādil Ṣāḥib al-Futūḥāt al-Manṣūrah* and announces that it is a second edition of a version first published in 1341/1923.

The importance of *Sīrat al-Ẓāhir Baybars* in studying the historiography of Baybars himself has not received sufficient consideration. It is as if scholars of the *Sīrah* were trying to divorce its protagonist from his historic counterpart. It is important for the scholar to realize and to emphasize that Baybars the sultan, Baybars of the historical scholarly sources, and Baybars of the *Sīrah* are not identical. Yet it is equally important to realize that this distinction was probably lost on most reciters, listeners, and readers of *Sīrat al-Ẓāhir Baybars*. Thus the reconstructions of Baybars's life through the *Sīrah*—just as those in traditional primary sources—were meant to comment on Baybars the sultan and consequently on rulership in general even while they entertained the public.

The *Sīrah* relates the exploits of "Maḥmūd" Baybars, the legendary Muslim hero who triumphs over wicked *kuffār*. It is important to note that in the epic it is Baybars, not Quṭuz, who is born into a noble Muslim family.[65] This fabricated royal lineage might have been necessary to legitimize Baybars's—and by extension, the Mamluk regime's—rule. Just as in official discourse Baybars needed the legitimation provided by a caliph's seal, so in popular discourse this legend served

to affirm the right of slave troops who were born non-Muslims to rule over most of the central Islamic lands.

Most medieval scholarly sources did not dwell on Baybars′s pre-Mamluk life. He entered official narrative as a mamluk of Aydakin Bunduqdār, after which he rose through the military bureaucracy and became one of the top mamluks of al-Ṣāliḥ Ayyūb.[66] *Sīrat al-Ẓāhir Baybars* offered a domesticated image of this military slave. It did not portray Baybars in any barracks. Instead, ″Maḥmūd″ was adopted by a rich Damascene lady, Fāṭimah al-Aqwasīyah. She is the one who named him ″Baybars,″ after her deceased son.[67] Thus the *Sīrah* domesticated its hero and presented him in terms to which the audience could relate. The motif of Baybars′s adoption is repeated with al-Ṣāliḥ Ayyūb and Shajar al-Durr, who also adopt Baybars as their son and name him as al-Ṣāliḥ′s heir. The emphasis on Baybars′s origin as "Maḥmūd," as well as his adoption by prestigious Muslim families, appears to be a response to the charge that Mamluks did not know their families and their parents. For a culture that highly esteems the family as a social unit it would have been important to present the hero as a man from a ″good family.″

All medieval scholarly reports, both those in Baybars′s favor and those against him, claimed that he had played a part in the regicide of his predecessor, Quṭuz. Contrary to that stance, however, *Sīrat al-Ẓāhir Baybars* attempted to clear its hero from any such charge. The relationship between the two men was portrayed as amiable and strong; Quṭuz treated Baybars very generously and appointed him his heir to the throne.[68] Baybars in turn ″commended Quṭuz′s doings and rulings and praised him.″[69] Quṭuz was mysteriously killed and a note beside the corpse accused Baybars of the regicide.[70] It turned out that Baybars′s Frankish enemy, Juwān, was behind both the murder and the accusation, and subsequently Baybars was cleared.[71]

Sīrat al-Ẓāhir Baybars is rather nuanced in its interpretation and representation of Baybars′s legend. It presents him as a hero, a good pious Muslim ruler. Yet unlike the ideal sultan which Ibn ʻAbd al-Ẓāhir makes Baybars out to be, *Sīrat al-Ẓāhir Baybars* humanizes rather than valorizes its protagonist. This Baybars is not a larger than life hero; he does not perform miraculous feats himself and is often caught in troublesome situations and needs assistance. It is the secondary

″helper″ characters of ʿUthmān and Jamāl al-Dīn Shīḥah (an Ismaʿili chief) who perform miracles and are often considered to be divinely guided.[72] Baybars himself is neither almighty nor invincible. This almost subversive portrayal of a ruler′s power is best exemplified in the way the *Sīrah* deals with Baybars′s relations with the Ismaʿilis.

In the official narrative Baybars crushed and subjugated the Ismaʿilis of Syria.[73] A great deal of emphasis is placed on how they were forced to pay tribute to the Mamluks rather than to the Franks.[74] In the *Sīrah,* however, the Ismaʿilis are presented as one of Baybars′s main support groups who came to his rescue when he was in danger and performed miracles to save him.[75] Their leaders saved Baybars from deadly situations when Christian enemies tried to kill him.[76] It is as if he owed to them his sultanate and the maintenance of his power. Yet even in the *Sīrah* Baybars appointed their leader for them, choosing an outsider for the job; an act of extreme subjugation for such a group.[77]

Baybars′s piety and loyalty to Islam was stressed throughout the *Sīrah* primarily in terms of popular religious beliefs and practices.[78] He was looked after by several saints who saved him by miracles from life-threatening dangers.[79] He was also depicted as performing orthodox religious rituals strictly.[80] Sayyidah Zaynab is the patroness of many of the characters of the *Sīrah,* ensuring their victory and helping them out of trouble.[81] Sayyidah Nafīsah is the one who unites Baybars with his aide and companion ʿUthmān ibn al-Ḥublá.[82]

Baybars′s loyalty to Islam was also expressed in terms of strong religious prejudice against Franks as well as Christians in general. The Franks were the main enemies of Islam in the *Sīrah*, along with fire-worshipping Mongols. Baybars′s principal enemy and the personification of evil in the *Sīrah* was Juwān, a Christian monk who disguised himself in several personae, including that of chief qadi, in

order to kill Baybars and defeat the Muslims. This motif of the Christian villain in Muslim disguise is echoed throughout the *Sīrah.* Several minor villains also turn out to be Christians in disguise. [83] Baybars defeats them all, with the help of ʻUthmān or the Ismaʻilis. Tough and despotic measures taken by Baybars and Shīḥah against Christians, such as destroying churches or turning them into mosques, are related with pride.[84]

As in the more scholarly sources, in constructing a heroic image of Baybars, a great deal of emphasis is placed on his justice. Baybars himself laid down forty conditions which had to be met before he would accept the sultanate. Most of these conditions have to do with government and the administration of justice. Similar to the image of Baybars in some of the later medieval sources, despotic suspicion seems behind some of these conditions. Thus any two amirs consulting over a decision of the sultan's would be killed, amirs were not to convene except in the sultanic *dīwān,* and only the ulama had the right to voice opposition to any of his decrees.[85] In contrast, Jamāl al-Dīn Shīḥah set only one condition for Baybars to be sultan: ″Abide by justice and fairness. For I have made you ruler over Egypt, Syria, and other Muslim lands as long as you obey God. If you steer away from the course of Truth you will be dismissed and we would not owe you any obedience.″[86]

The despotic side of Baybars which was apparent in many of the medieval sources is, as one might expect, almost absent in the *Sīrah.* Yet the *Sīrah* does deal with the taxation of Damascus, which was considered one of Baybars′s most unjust decrees. In the *Sīrah,* Baybars tries to levy taxes on Damascus in order to fight the Mongol enemy Hulāwūn, but the Damascenes refuse to pay, arguing ″you are a king and kings meet one another and fight for their positions; . . .we serve whoever sits on the throne.″[87] The pious shaykh al-Nūrī tells Baybars that these taxes are unjust. When Baybars asks how he is then to defend his land from unbelievers, the shaykh curses him and accuses him of insulting the men of virtue and the doctors of the law.[88] The *Sīrah* reverses the traditional balance of power between ruler and subjects. Baybars appears helpless in the face of strong opposition from the people and the ulama. This must have brought a sort of sweet imaginary revenge to audiences accustomed to heavy taxation throughout the centuries.

[86]Ibid., 1084-85.

[87]M. C. Lyons, *The Arabian Epic: Heroic and Oral Story-Telling* (Cambridge, 1995), 1:33.

[88]Ibid.

While in the scholarly sources most justice was carried out within the boundaries of formal judicial and legal procedures, the *Sīrah* celebrates a more crude street style of justice, where Baybars always defeats the "bad guys."[89] His use of questionable means is justifiable, because it leads to the triumph of good over evil. Thus one of the recurring motifs of the work is Baybars killing off an evil character apparently without due cause. In court, the truth is made clear and it becomes obvious that Baybars's action had been just. His taking the law into his own hands is not condemned.

This practical attitude towards justice and the law demonstrated in the *Sīrah* was paralleled by a distrust of qadis and the court system. Thus Baybars's main opponent and the personification of evil in the *Sīrah,* the Christian spy Juwān, spent the first half of the work disguised as chief qadi in the Ayyubid court. In his position as qadi he repeatedly tried to prosecute Baybars for the various murders, but Baybars always came out justified. The *Sīrah* also made fun of the schools of law. To save himself from a long wait for their case to be heard by a qadi, ʻUthmān, Baybars's friend and aide, proposed that he would be a Hanafi while Baybars could be a Shafiʻi "for today."[90] This further confirms the pragmatic stance that the *Sīrah,* and by extension its Cairene audience, took with regard to the law, a stance that one could argue is still part of Egyptian urban culture to this day.

Baybars's reputation, from the earliest scenes of the *Sīrah,* is based on his justice. In his pre-sultanate days, Baybars rose quickly through the government bureaucracy and at each new post fought corruption and injustice against the common people. This—rather than some miraculous power—seems to have been both his greatest credential and his greatest achievement. Baybars's main attraction as a hero in this *Sīrah* was his ability to defeat wrongdoers and dispense justice. This fight to establish internal justice and order preceded external battles against enemy troops.

It is Baybars's local reputation as a man of honor and courage, a man capable of fighting corruption, which qualified him to lead armies into battle and earn his troops' loyalties.[91] The *Sīrah* is full of anecdotes about Baybars's military capabilities and stories of his courage in battle.[92] In many instances, however, Muslim victories were due more to trickery and intelligence than simply to military and physical power.

[89]*Sīrat al-Ẓāhir Baybars*, 147, 151, 226, 278, 285, 363, 369, 373, 378, 426, 556, 563.

[90]Lyons, *The Arabian Epic*, 1:34.

[91]Khūrshīd, *Aḍwāʼ*, 105-6.

[92]*Sīrat al-Ẓāhir Baybars*, 981-82, 989, 996, 1163.

Fourteenth-century Egyptian scholars writing under Qalawunid influence and patronage tended to throw unfavorable light on Baybars′s image and present his legacy in a negative manner. The text of the *Sīrah* appears to be conscious of those subtle tensions. In *Sīrat al-Ẓāhir Baybars,* Baybars the protagonist is poisoned to death by none other than Qalāwūn![93]

Thus historians of the thirteenth, fourteenth, and fifteenth centuries and the creators of *Sīrat al-Ẓāhir Baybars* presented very different perceptions of al-Ẓāhir Baybars. These varying and often contradictory accounts show that they used the historiography of this sultan to make various political arguments. For example, Ibn ʻAbd al-Ẓāhir glorified Baybars in an attempt to legitimize his rule and promote the then newly-established Mamluk regime. This he accomplished by presenting its founder as an ideal sultan and ruler. Historians of successive generations demonstrated more ambivalent attitudes towards Baybars. Some, like Baybars al-Manṣūrī, Shāfiʻ ibn ʻAlī, and al-Nuwayrī, might have been interested in de-emphasizing Baybars′s achievements in order to enhance those of the regime of al-Nāṣir Muḥammad. This might not seem strange in light of the changes that al-Nāṣir Muḥammad was introducing to the institutional foundations set by the founders of the Mamluk state, including his own father, Qalāwūn. His experience being ousted from the sultanate twice left him determined to turn his third reign into a new beginning for Mamluk rule and to make a name for himself as a great ruler.[94] To justify and rationalize his innovations it followed that al-Nāṣir Muḥammad and his court intellectuals would attempt to slight the founders and originators of the very traditions they sought to overturn. It is revealing that al-Nāṣir Muḥammad chose to destroy and rebuild at a lower height Baybars′ famous Bridge of the Lions, the lions adorning the bridge being Baybars′s emblem.[95] This might have prompted fourteenth-century Egyptian historians to include negative aspects of Baybars′s rule and character. That they were not writing under his control, as Ibn ʻAbd al-Ẓāhir was, also allowed them more freedom in expressing their views—a point which Shāfiʻ ibn ʻAlī explicitly makes.

In contrast to the Egyptian authors, most Syrian historians of the fourteenth century, like al-Yūnīnī and Ibn Kathīr, were religious scholars and teachers.[96]

For a review of literature discussing the existence of a ″Syrian school″ of Mamluk historiography see Li Guo, ″Mamluk Historiographic Studies: The State of the Art,″ *Mamlūk Studies Review* 1 (1997): 29, 37-41.

Their distance from the court and the fact that they did not hold official positions meant that they were less likely to be influenced by the attempts to slight and defame the legacy of Baybars for the benefit of the Qalawunid dynasty. The third Syrian historian of this period referred to in this article is Abū al-Fidá, the Ayyubid prince of Ḥamāh.[97] Though Abū al-Fidá was part of the ruling regime he was more concerned in his work with provincial affairs. Being an Ayyubid himself, he did not need to legitimize the Qalawunid dynasty and consequently he, too, was not overly prejudiced against Baybars. Thus the attitudes expressed by fourteenth-century Syrian historians towards Baybars paralleled those of later Egyptian historians of the fifteenth century.

Yet obviously the legacy of Baybars was so strong that even rival regimes could not afford to ignore his achievements. His military victories and conquests and his establishment of a strong, centralized, extensive empire were not ignored by any of the Mamluk writers I consulted. Needless to say, a severe attack on the founder of the Mamluk state would have undermined the legitimacy of the regime under which they all lived and worked. Furthermore, the ambivalence that these writers demonstrated towards Baybars suggests that while they appreciated his contributions to state building and his establishment of order and military conquests, they also realized that these came at a heavy price. Maintaining large armies that were strong enough to expand Mamluk rule into Nubia, Libya, and Armenia, to keep such a huge empire together, and to fight off enemies, east and west, such as the Mongols and the Crusaders, also entailed a high degree of discipline and order and were—necessarily—funded by heavy taxation. However, by the fifteenth century writers were removed from the events of Baybars′s reign and the heavy burdens caused by his achievements had been somewhat forgotten. His reign came to represent an age of glory, perhaps because these writers perceived their own time as one of decline and decadence. In popular memory Baybars lived on through *Sīrat al-Ẓāhir Baybars,* which presents him as a humanized Muslim hero who fought the internal as well as external enemies of Islam and who carried out justice for all. During the nineteenth century, an age of European occupation and Egyptian defeat, these memories of past glory were so popular that E. W. Lane reported that there were thirty reciters, in Cairo alone, who specialized exclusively in *Sīrat al-Ẓāhir Baybars.*[98]

Arabic Studies of Mamluk Jerusalem: A Review Article

The study of Islamic Jerusalem by Arab scholars over the last century has been less important than the work of non-Arab scholars, but the situation is now changing. Arab scholarly studies of Islamic Jerusalem have blossomed since the early 1980s and publications by Arab authors now predominate in terms of number, and increasingly also in terms of quality. This is especially the case since the mid-1990s with the M.A. theses of the students at the Institute of Islamic Archaeology, al-Quds University, and other institutions. Arab scholarship has reached the point where it is scarcely possible to do thorough research about Mamluk Jerusalem without an awareness of Arabic publications. This article has the objective of presenting what recent Arabic scholarship has to offer for the study of Mamluk Jerusalem. It does not attempt to survey the work of Western or Israeli scholars, whose publications are better known and more easily accessible than Arabic ones.[1]

Arabic publishing activity about Mamluk Jerusalem began as early as 1866, when Mujīr al-Dīn´s fundamentally important history about Jerusalem and Hebron was first edited.[2] But the first significant scholarly work had to wait until after the First World War with Kurd ʻAlī in the 1920s,[3] and Mukhliṣ in the 1920s and 1930s,[4] and more substantially until after the Second World War with al-ʻĀrif, starting in 1947[5] and culminating in his *Mufaṣṣal* of 1961,[6] and al-Dabbāgh in the

---

[1]This article borrows heavily from my forthcoming publication, *The Sites and Monuments of Islamic Jerusalem* (Beirut, 2000), which is intended to provide encyclopedic coverage and comprehensive bibliography for all the Islamic sites and monuments.

[2]Mujīr al-Dīn, *Al-Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl* (Cairo, 1866). His history in manuscript form remained well-known throughout the Ottoman period to Jerusalemites and travellers/pilgrims, such as the late seventeenth-century sufi author ʻAbd al-Ghanī al-Nābulusī.

[3]Muḥammad Kurd ʻAlī, *Khiṭaṭ al-Shām* (Damascus, 1925-28).

[4]See his collected articles reprinted in Kāmil al-ʻAsalī, ed., *Turāth Filasṭīn fī Kitābāt ʻAbd Allāh Mukhliṣ maʻa Dirāsah Mufaṣṣalah ʻan Ḥayātihi wa-Shakhṣīyatihi al-ʻIlmīyah* (Amman, 1986).

[5]See especially ʻĀrif al-ʻĀrif, *Tārīkh al-Ḥaram al-Qudsī* (Jerusalem, 1947); idem, *Tārīkh al-Quds* (Cairo, 1951); and idem, *Tārīkh Qubbat al-Ṣakhrah al-Musharrafah wa-al-Masjid al-Aqṣá al-Mubārak wa-Lamḥah ʻan Tārīkh al-Quds* (Jerusalem, 1958).

[6]ʻĀrif al-ʻĀrif, *Al-Mufaṣṣal fī Tārīkh al-Quds* (Jerusalem, 1961). It does not completely supersede his earlier books.

1970s.[7] Those studies covered the fuller history of Jerusalem, of which the Mamluk period is only a part. The first lengthy studies focused on the Mamluk period were by al-Imām in 1976,[8] and Ḥamūdah in 1979,[9] but those studies were largely reworkings of the information that Mujīr al-Dīn had provided. Only al-ʻĀrif′s studies included much additional documentation, such as the texts of building inscriptions.

But it was in the 1980s that the shelf of Arabic publications about Jerusalem in the Islamic periods, and specifically in the Mamluk period, began to fill up, in particular with the publications of Kāmil al-ʻAsalī.[10] While not attempting to cite every Arabic publication, this article will present the most important publications, arranged by topic.

TEXT EDITIONS

Many Arabic manuscripts have been edited over the years, but a sizable number still await editing. The single most important text for the history of Mamluk Jerusalem, Mujīr al-Dīn′s *Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl*, written in 900–902/1495–96, was first edited in the nineteenth century, while the most commonly cited version, which contains editing mistakes and misprints, was published in 1973.[11] An index was produced in 1988.[12] A careful new critical edition was published in 1999,[13] but because it does not have an index, it does not fully obviate the need for the 1973 edition.[14] A second major text for the later

[8]Rashād al-Imām (Rached Limam), *Madīnat al-Quds fī al-ʻAṣr al-Wasīṭ (1253-1516)* (Tunis, 1976).

[9]ʻAbd al-Raḥmān Saʻīd Ḥamūdah, ″Bayt al-Maqdis fī ʻAhd al-Mamālīk″ (M.A. thesis, al-Azhār University, 1979).

[10]There are two festschrifts for Kāmil al-ʻAsalī: *Kāmil al-ʻAsalī, al-ʻAlāmah al-Maqdisī wa-Qaḍīyat al-Quds* (Jerusalem, 1996) and Ṣāliḥ al-Ḥamārnah, ed., *Dhākhirat al-Quds: Buḥūth wa-Dirāsāt Muhdāh li-Dhikrá Kāmil Jamīl al-ʻAsalī* (Amman, 1996), and a biography: Muḥammad Ghūshah, *Al-Quds fī Turāth Kāmil al-ʻAsalī* (Jerusalem, 1998). A full bibiliography of Kāmil al-ʻAsalī can be found in my *Sites and Monuments of Islamic Jerusalem.*

[11]Mujīr al-Dīn, *Al-Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl (* Amman, 1973).

[12]Isḥāq Mūsá al-Ḥusaynī and Ḥasan al-Silwādī, *Fahāris Kitāb al-Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl li-Mujīr al-Dīn al-Ḥanbalī* (Jerusalem, 1988).

[13]Mujīr al-Dīn, *Al-Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl,* volume 1 edited by ʻAdnān Yūnis ʻAbd al-Majīd Abū Tabbānah and volume 2 edited by Maḥmūd ʻAwdah al-Kaʻābnah (Amman, 1999). This is the published version of their M.A. theses of 1999 and 1997 respectively for Jāmiʻat al-Najāḥ al-Waṭanīyah, Nablus.

[14]One should note the following studies about Mujīr al-Dīn: Kāmil al-ʻAsalī, ″Mujīr al-Dīn al-ʻUlaymī al-Ḥanbalī: Mu'arrikh al-Quds: Naṣṣ Jadīd ʻan Ḥayātihi wa-Naṣṣ Dhayl Kitābihi *al-Uns*

Mamluk period by Mujīr al-Dīn, his general history entitled *Al-Tārīkh al-Mu'tabar fī Anbā' Man 'Abara fī al-Tārīkh,* remains unedited.[15] The other text of fundamental importance for Mamluk Jerusalem, especially for the buildings on the Ḥaram al-Sharīf, *Masālik al-Abṣār fī Mamālik al-Amṣār*, which al-'Umarī wrote around 745/1345, was first edited in 1924.[16]

A recently edited text is by Ibn Nubātah, a native of Cairo and a poet who was the superintendent of the Church of the Holy Sepulchre and Christian pilgrimage in the 1330s under Amīn al-Dīn 'Abd Allāh, the governor of Damascus. While normally resident in Damascus, Ibn Nubātah made frequent trips to Jerusalem, especially around Easter. In 733/1333 or 735/1335–36 Amīn al-Dīn 'Abd Allāh traveled to Jerusalem to inspect his newly constructed al-Madrasah al-Amīnīyah and its endowments. Ibn Nubātah accompanied him on that trip and wrote an account that is most interesting for the description of al-Madrasah al-Amīnīyah.[17]

The genre with the largest number of texts is the "Islamic Merits of Jerusalem" literature, surveyed by al-'Asalī and Ibrāhīm in the 1980s.[18] Three recently edited "Merits of Jerusalem" texts from the Mamluk period are Ibn 'Asākir's *Tārīkh Madīnat Dimashq*,[19] al-Maqdisī's *Muthīr al-Gharām*,[20] and al-Suyuṭī's *Itḥāf al-Akhiṣṣā' bi-Faḍā'il al-Masjid al-Aqṣá*.[21] There are many additional unedited manuscripts, but their value as independent works is lessened because the authors

[21]Abū 'Abd Allāh Muḥammad Shams al-Dīn al-Suyuṭī, *Itḥāf al-Akhiṣṣā' bi-Faḍā'il al-Masjid al-Aqṣá,* ed. Aḥmad Ramaḍān Aḥmad (Cairo, 1982-84).

frequently reworked earlier texts. That makes the study of the ″Merits of Jerusalem″ literature relatively unfruitful.

One should also note the three publications by al-Dabbāgh, al-ʻAsalī, and al-Tāzī with excerpts of travellers and pilgrims from all periods writing in Arabic about Jerusalem,[22] such as for the Mamluk period Muḥammad Abū Muḥammad al-ʻAbdarī, a native of North Africa, who went on pilgrimage to Mecca and spent five days in Jerusalem in 690/1291—the brief information about Jerusalem in his *al-Riḥlah al-Maghribīyah* focused on the Ḥaram—and Khālid ibn ʻĪsá al-Balawī, a qadi and native of Spain, who went on pilgrimage to Mecca and spent two months in Jerusalem in 737/1337. His account of his travels, *Tāj al-Mafraq fī Taḥliyat ʻUlamā' al-Mashriq,* concentrated on the Ḥaram and the religious scholars in the city.

PRIMARY DOCUMENTS

There are a number of collections of documents covering both the Mamluk and Ottoman periods, such as Darrāj′s collection of documents connected with the Franciscan monastery on Mount Zion,[23] al-ʻAlamī′s publication of *waqf* documents related to the Maghribi Quarter (the area of the Western Wall plaza today),[24] and al-ʻAzīzī′s presentation of some documents related to the Christians.[25] The 800-odd documents found in the Islamic Museum in the mid-1970s, known as the Ḥaram Documents, studied in most detail by Donald Little, have attracted only limited attention from scholars writing in Arabic. While al-ʻAsalī[26] and al-Ṣāliḥīyah[27] published the texts of some of the documents, information derived from the documents rarely appears in Arabic studies of Mamluk Jerusalem. Abū Ḥāmid′s

M.A. thesis about the Islamic law court judges in the Mamluk period is one notable exception.[28]

But by far the most important documentary source for Mamluk Jerusalem is the Ottoman *sijill*s, the records of the Islamic law court in Jerusalem during the Ottoman period. Most of the annual volumes survive, including some from the first years of the Ottoman period, each containing summaries of hundreds of court cases written in Arabic.[29] A thorough examination of the documents in the *sijill*s is a mammoth task that remains to be undertaken, but would reveal hundreds of court cases related to such topics as property ownership and endowments that shed light on the Mamluk period. For example, many Ayyubid and Mamluk period endowment documents, lost in the original, are preserved because they were copied into the *sijill*s. Al-ʻAsalī throughout his numerous books and articles,[30] along with ʻAbd al-Mahdī,[31] largely pioneered the practise of using the *sijill*s extensively for documenting the history of the Islamic institutions in Jerusalem, and most other scholars have subsequently included *sijill* citations in their publications. But citations of the *sijill* documents must be used with caution because they are prone to errors, and regrettably some authors deliberately cite erroneous or incomplete *sijill* references as a way to prevent rivals from finding the specific documents. The Ottoman Islamic law court *sijill*s represent a vast source of as yet untapped information about Jerusalem and they are far and away the most potentially fruitful topic for research into Mamluk Jerusalem.

As an example of what remains to be learned about Mamluk Jerusalem from the Ottoman *sijill*s, Ghūshah has come across a number of citations that refer to the location of the various city gates both before and after the rebuilding of the city wall by the Ottomans in the 1530s. Those *sijill* references, such as the ones to both an old and new Bāb al-Khalīl (Jaffa Gate), seem to demonstrate that the Ottomans did not always build their city wall on top of the derelict Ayyubid-Mamluk walls, but rather in the west and south the Ottomans expanded the area enclosed

[28]Muḥammad Ḥusayn ʻAlī Abū Ḥāmid, "Quḍāt al-Quds fī al-ʻAṣr al-Mamlūkī" (M.A. thesis, Jāmiʻat al-Qadīs Yūsuf, 1998).

[29]For the best presentation of what the *sijill*s have to offer, see the chapter by Khaḍr Salāmah in Robert Hillenbrand and Sylvia Auld, eds., *Ottoman Jerusalem: The Living City* (London, forthcoming 2000). The most easily accessible microfilm copy of the *sijill*s is at the University of Jordan.

[30]He published numerous documents in his *Wathā'iq Maqdisīyah Tārīkhīyah* volumes. See Fahmī al-Anṣārī, "Sijillāt al-Maḥkamah al-Sharʻīyah wa-Wathā'iquhā wa-Dawr Kāmil al-ʻAsalī," in *Kāmil al-ʻAsalī,* 245-54. (Response by Khaḍr Salāmah, pp. 255-73).

[31]ʻAbd al-Jalīl ʻAbd al-Mahdī, *Al-Madāris fī Bayt al-Maqdis fī al-ʻAṣrayn al-Ayyūbī wa-al-Mamlūkī: Dawruhā fī al-Ḥarakah al-Fikrīyah* (Amman, 1981).

by their city wall to include some neighborhoods that had built up over the previous centuries outside the earlier derelict walls.[32]

INSCRIPTIONS

The bulk of the Arabic inscriptions from the Mamluk period were published by Max van Berchem in the 1920s. Only a handful of new inscriptions have been identified since then, notably by Manṣūr, who included in his M.A. thesis several previously unpublished Mamluk inscriptions in the Islamic Museum on the Ḥaram al-Sharīf in Jerusalem.[33] A complete catalogue of the Arabic inscriptions in the Islamic Museum, including a number of previously unknown Mamluk period inscriptions, is in preparation by Khaḍr Salāmah and Robert Schick.

ARCHITECTURE

Little architectural study was done prior to Michael Burgoyne's *Mamluk Jerusalem*,[34] the fundamentally important work, but one should note the dissertations by Nāṣir,[35] the general corpus of Islamic monuments in Jerusalem prepared by Najm and others,[36] and studies of the Madrasah al-Ṭashtamarīyah, al-Turbah al-Kīlānīyah, and the Sabīl of Qāytbāy.[37] Al-ʻAsalī's publications are less studies of architecture than they are documentary histories based on the Ottoman *sijill*s.[38]

As recent additions to the architectural study of the city, one should note Hawari's study of the Ayyubid architecture of Jerusalem,[39] and Natsheh's study of

sixteenth-century Ottoman public architecture in the city.[40] Al-Anṣārī′s studies of some secondary mosques in the Old City from the Mamluk period concentrate more on their recent history.[41] Rizq has compared the monuments in Jerusalem with those that the same patrons built in Cairo.[42]

There are numerous Mamluk buildings in the Old City that are not included in Burgoyne′s study, while the historical documentation provided by Richards from the Ottoman *sijill*s is far from exhaustive. But only a few more Mamluk buildings have been added to the documented corpus of buildings. Al-Dajjānī′s study of the Tomb of David on Mount Zion and Ṭaha′s study of the Golden Gate in part covered the Mamluk period.[43] But more significantly, Abū Rayyā′s study of the Islamic monuments on the Mount of Olives covered much new ground.[44] Abū Rayyā was remarkably successful in combining attestations from Western Christian pilgrims and Arabic sources; that enabled him to determine that the Church of the Ascension on the Mount of Olives was converted from an open structure into an enclosed mosque just prior to 737/1337. He also documented for the first time the Maqām al-Arba‘īn, located in the middle of the Muslim cemetery near the Mazār Salmān on the east side of the Mount of Olives. It may be the same monument as the mausoleum of al-Sittah Zahrah, the wife of the amir Tughān al-‘Uthmānī, the inspector of the two Ḥarams and the governor of Jerusalem in the 840s/1430-1440s.

Another addition to the corpus of Islamic buildings in the city is Ghūshah′s study of the Sa‘dī Quarter, the area between Damascus Gate and Herod′s Gate north of the Via Dolorosa.[45] Ghūshah′s book is the first comprehensive study of

[45]Muḥammad Ghūshah, *Ḥārat al-Sa‘dīyah fī al-Quds al-‘Uthmānī* (Jerusalem, 1999) (a greatly expanded version of his M.A. thesis for the Institute of Islamic Archaeology, al-Quds University, 1998).

one of the residental neighborhoods in the Old City, in which he provides historical and architectural documentation for some forty buildings, most previously unstudied.While most of those buildings date to the Ottoman period, he presented architectural documentation or information derived from the Ottoman *sijill*s about the Bāb al-Dā'īyah gate, removed when the Ottomans rebuilt the walls, the Zāwīyah al-Lu'lu'īyah, endowed in 775/1373, the *dār* of the amir Ṭūghān, founded in 864/1459, and the oven and mill of Dā'ūd ibn al-Asyad, endowed in 879/1474.

There is little architectural documentation left to be done for the buildings on the Ḥaram al-Sharīf and the other major public monuments in the Old City, but much remains to be documented elsewhere, such as the little-known northeast area of the Old City, east of Herod's Gate and north of the Via Dolorosa. A number of Mamluk madrasahs and other buildings attested in historical sources such as Mujīr al-Dīn's history have yet to be identified on the ground, while there are numerous extant buildings with architectural features suggesting a date in the Mamluk period that have not been identified or documented. A thorough examination of the Ottoman *sijill*s should provide information to help resolve the numerous outstanding questions of identification.

ART

Little about Islamic art of Mamluk Jerusalem has been written, despite the riches of the Islamic Museum on the Ḥaram al-Sharīf, which houses a large collection of Quran manuscripts, lamps, incense burners, and other objects that were endowed to the al-Aqsa Mosque, Dome of the Rock, or other Islamic institutions over the centuries. Beyond Abū Khalaf's thin study that includes photographs of a mosque lamp from the time of the governor Tankiz, there is little to note.[46] A catalogue of some, but by no means all, of the exquisite Quran manuscripts in the Museum, including a number of Mamluk period ones, is currently in press.[47]

GENERAL HISTORY

Several authors, notably Ghawānmah and 'Alī, have produced general studies of the Mamluk period.[48] There are also numerous recent general multi-period histories of Jerusalem that include the Mamluk period; al-'Asalī's work on medicine is of

especial interest.[49] Many others are not worth listing here. Evidence for the first years of Ottoman rule sheds much light on the preceeding late Mamluk period; the best study of sixteenth-century Ottoman Jerusalem is the one by Ya‘qūb.[50]

EDUCATION

Islamic education has been the topic of several studies.[51] The histories of the numerous madrasahs in the Mamluk and Ottoman periods, focusing on information derived from the Ottoman *sijill*s about their administrators and teachers, have generated numerous studies.[52] The information that Mujīr al-Dīn provided about the madrasahs in Jerusalem has been rehashed more times than is worth citing here, most recently in al-‘Alamī's thin study.[53]

PEOPLE BURIED IN JERUSALEM

Studies of famous Muslims buried in Jerusalem is a sub-field of its own, with information for the Mamluk period largely derived from Mujīr al-Dīn. Kāmil al-‘Asalī wrote about each of Jerusalem's cemeteries and mausolea,[54] while al-Anṣārī studied the Māmillā Cemetery, and collected the names of the people known to be buried there.[55]

VARIOUS

A number of other studies on specific topics are also worth noting, such as Yaḥyá's study of libraries,[56] and Tasan's study of administration.[57] Jerusalem in

Arabic literature during the Crusades has been the subject of two books by ʻAbd al-Mahdī.[58] The biography of Kamāl al-Dīn ibn Abī Sharīf at the end of the Mamluk period has been studied in detail by Abū Sanīnah.[59]

POPULAR ARTICLES

Occasional brief popular articles about Islamic Jerusalem are published in the Islamic magazines *Hadī al-Islām*, published by Wizārat al-Awqāf wa-al-Shu'ūn wa-al-Muqaddasāt al-Islāmīyah bi-ʻAmmān since 1956; *Hudá al-Islām*, published by Idārat al-Awqāf wa-al-Shu'ūn wa-al-Muqaddasāt al-Islāmīyah bi-al-Quds since 1982; *al-Isrāʻ*, published by Dār al-Fatwá wa-al-Buḥūth al-Islāmīyah fī al-Quds wa-al-Diyār al-Filasṭīnīyah since 1996, and *Al-Minbar*, published by Dā'irat al-Awqāf al-Filasṭīnīyah since 1997. Those articles do not warrant separate mention here. But one should also be aware of the popular magazine *Al-Quds al-Sharīf* published between 1984 and 1994. Of particular interest are the many articles that al-ʻAsalī published there. Occasional details in those articles are not found in his other publications.[60] The publications of the Yawm al-Quds conferences held annually in Amman, Jordan and at al-Najah National University in Nablus are of limited interest.

ACCESSIBILITY

While I have attempted to show the range of current Arab scholarship, tracking down the references I have given is a difficult problem, especially the various unpublished M.A. and Ph.D. dissertations. The numerous interesting publications of the Qism Iḥyā' al-Turāth al-Islāmī (Department of the Revival of Islamic Heritage) in Abū Dīs,[61] regrettably are also very poorly distributed. One needs to be in Jerusalem itself to track the citations down; Fahmī al-Anṣārī´s library in East Jerusalem is the place to start.[62]

REVIEWED BY LI GUO, University of Notre Dame

The history of Mecca, especially that of the period after the glorious years of Muḥammad′s life and activities there, has drawn increasing scholarly attention recently, after having been ″strangely neglected practically,″ in Franz Rosenthal′s words,[1] since the third/ninth century, the time of the renowned Meccan historians al-Azraqī (d. ca. 246/860) and al-Fākihī (d. after 272/885). Among the leading local historians (those belonging to the so-called ″Hejazi school″ in the long chain of development of historical writing), Taqī al-Dīn Muḥammad ibn Aḥmad ibn ʻAlī al-Makkī al-Ḥasanī al-Mālikī al-Fāsī (d. 832/1429) is without doubt one of the most original and outstanding, a pioneering sort of figure. The book under review is the first serious attempt to present this historian′s life and labor in a monograph.

Unfortunately, the scholarly value of the book is considerably limited. The major disappointment is the fact that only one manuscript (Ibn Farḥūn′s [d. 799/1397] *Naṣīḥat al-Mushāwir*) has been consulted in this pioneering study—if one may call it that, in view of a lack of other publications on the subject. While use is made of some well-known primary and secondary sources in Arabic, western scholarship on the subject is largely ignored, except for brief mentions of Carl Brockelmann′s *Geschichte der arabischen Litteratur*, Franz Rosenthal′s *A History of Muslim Historiography* and Heinrich Ferdinand Wüstenfeld′s 1859 work *Die Chroniken der Stadt Mekka.* (I doubt the original German text of the latter was ever consulted inasmuch as every single German word in the title given in the bibliography is misspelled [p. 212]). There are no indexes of any sort. These shortcomings, combined with the poor quality of printing and frequent typografical errors (the most awkward is the conjunction *wāw* being repeatedly set at the end of a line), make the book look less than serious.

The book is divided into two major parts, and they are preceded by a Preface and followed by Concluding Remarks. The Preface (pp. 2-6) outlines the purpose, scope, and method of the study. The author states that what made him embark upon the task is the fact that Taqī al-Dīn al-Fāsī, a leading figure in revitalizing the Hejazi historical tradition following a long decline after the third/ninth century, and one of the most prominent scholars of the ninth/fifteenth century in Mecca, has long been hidden from the limelight. He is hardly known outside the circle of

[1] ″al- Fāsī,″ *The Encyclopaedia of Islam*, 2nd ed., 2:828-29.

a few specialists, and his achievements as well as his influence on the development of Hejazi historiography have been little studied and not fully appreciated.

Part One, ″al-Fāsī′s Biography″ (*Sīrat al-Fāsī*), consists of four chapters: (1) ″His Upbringing and Life″; (2) ″His Education″; (3) ″His Fellow Scholars″; and (4) ″His Students″ (pp. 7-66). Although the format here is typical, the content is quite insubstantial. The title of chapter 1 is rather misleading in that the chapter merely gives a list of al-Fāsī′s famous family members (pp. 7-18), but nothing is said about ″his upbringing and life.″ Given the fact that the main source for this part is al-Fāsī′s own biographical work *al-ʻIqd al-Thamīn*, in which he devoted considerable attention to his own autobiography, the author′s failure to present a meaningful biography is regrettable.

Chapter 2 offers yet another list, this time that of al-Fāsī′s teachers and his journeys in search of knowledge. Each name, and each city, is accompanied by a lengthy footnote that contains commonplace information. I do not see, for instance, the need to footnote ″Mecca″ (p. 19), ″al-Masjid al-Ḥarām″ (p. 20), ″Ibn Ḥajar al-ʻAsqalānī″ (p. 27), and many others, in this slim volume. The lengthy explanation of the meaning of ″*ijāzah*″ (p. 30) is redundant as well. One gets the feeling that the author is trying to expand the study into a book from the very limited original data he has collected. The name dropping is necessary only if the author demonstrates that these people′s writings and teachings had significant impact on al-Fāsī′s own career as an historian. But unfortunately, it is exactly at this point that the present book falls short. For instance, it is well known that the great historian Ibn Khaldūn (d. 808/1406) was al-Fāsī′s teacher and patron, and that his methods and writings profoundly influenced al-Fāsī′s historical thinking and writing. Although considerable space is devoted to Ibn Khaldūn and his relationship to al-Fāsī (pp. 40-54), one finds mostly digressive passages about *Ibn Khaldūn′s* biography and *his* major works. Only a few pages are left to deal with the real subject here, that is, Ibn Khaldūn′s influence on al-Fāsī′s writing (pp. 50-54); even this little space is filled with citations from al-Fāsī′s own works where he mentioned Ibn Khaldūn as his source. There is no synthesis, let alone analysis.

The same method and style continue in chapter 3 (pp. 55-60), which deals with al-Fāsī′s fellow scholars, among whom the most intriguing is Ibn Ḥajar al-ʻAsqalānī (d. 852/1449). The chapter turns out to be primarily a biography of *Ibn Ḥajar* and a list of *his* works. Nothing is said about his dealings with, and influence on, al-Fāsī. Chapter 4 follows suit, with more name dropping and no discussion. Oddly, only at the end of Part One is there passing mention of al-Fāsī′s career as the Mālikī chief judge in Mecca, a position that provided him with a great deal of firsthand information on the city, its institutions, and its people, giving his accounts of the history of the city a certain sense of authenticity. This point, unfortunately, is not elaborated by the author. One also wonders why this

portion, which is essential to a better understanding of al-Fāsī's world view and his sources, should be given so little attention and be put here, disjointedly, at the very end of his biography.

Part Two, "al-Fāsī and His Labors in Historical Writing" (*al-Fāsī wa-Juhūduhu al-Tārīkhīyah*), is the better and more substantial and informative segment of the book (pp. 68-192). It has five chapters: (1) "al-Fāsī's works"; (2) "The Hejazi School of Historical Writing"; (3) "The Features of Historical Writing in al-Fāsī's Time and Their Impact on His Works"; (4) "al-Fāsī's Framework of Historical Inquiry" (*Iṭār al-Baḥth al-Tārīkhī*); and (5) "al-Fāsī's Influence on Later Historiography."

Chapter 1 lists al-Fāsī's major works with information on the manuscripts and publication records of these titles. Twenty titles, with several additional miscellanies, are listed; among them the two most important and original are *Shifā' al-Gharām bi-Akhbār al-Balad al-Ḥarām*, a history of Mecca, and *al-'Iqd al-Thamīn fī Tārīkh al-Balad al-Amīn*, a biographical dictionary of the people associated with Mecca, including the author's own autobiography. Of the former, only the old 1956 edition is mentioned, while the new 1996 Mecca edition (edited by Sa'īd 'Abd al-Fattāḥ et al.) failed to make the list. This is the part from which the reader would naturally crave more information, since this is the first effort ever to study al-Fāsī's works in a comprehensive way, but it falls short on detail. The majority of the entries are only given as titles, without any additional information; as for the titles that do get some attention, the information is usually brief (pp. 68-72). As if to compensate for the dearth of substance in this section, the author has devoted a longer segment (pp. 73-79) to quoting citations that praise al-Fāsī's writings. However, these citations are mainly stock clichés common in medieval Muslim scholarly critique, and they are all quoted from al-Fāsī's own *al-'Iqd al-Thamīn*.

Chapter 2 deals with an interesting topic, that is, the Hejazi school of historical writing. Leaning heavily on Brockelmann, Rosenthal, and Shākir Muṣṭafá, the author first gives a detailed overview of the development of historical thinking and writing in Mecca and Medina in the early Islamic era. The main thesis is that the awareness of Muslim historical writing started as early as the beginning of Islam, when Mecca was the center of Muslim learning. While early authors focused on broader themes concerning *maghāzī*, or early Muslim conquests, and *ḥadīth* transmission, it was not until the third/ninth century, when the Hejaz was less in the spotlight in the Islamic political arena, that we see historians like al-Azraqī and al-Fākihī engage in recording *akhbār* about the holy city Mecca *itself* as well as giving descriptions of its topography. The motive for such pursuits seems to have stemmed from the desire among the local '*ulamā*' to bring back to the Muslims' collective consciousness the importance of the holy places, to remind Muslims of their duties of pilgrimage to these places, and to provide guides for

such visits. Later authors of the ″Hejazi school″ did not exceed this scope until the ninth/fifteenth century, when al-Fāsī emerged as an ″historian″ in the real sense, whose writings combined clearly executed chronicles with in-depth historical analysis, not only bringing the ″Hejazi school″ back on the map of Muslim historiography, but also influencing later historians in the Hejaz and elsewhere.

Chapter 3, which deals with the specifics of the historical writings of al-Fāsī′s time and their influence on al-Fāsī, is a natural continuation of the previous chapter. It is also of special interest for Mamluk scholars in that this chapter touches upon some important issues in Mamluk historiography as a whole. According to the author, the historical writing in al-Fāsī′s time, i.e., the ninth/fifteenth century, can be characterized by five phenomena regarding themes, methodology, approach, etc., and they are: (1) quoting (*al-naql*) from other sources; (2) writing epitomes of existing works (*al-talkhīṣ wa-al-ikhtiṣār*); (3) writing continuations (*al-tadhyīl*) of existing works; (4) autobiography; and (5) local history. Each of these categories is treated in detail, placing al-Fāsī′s writing, which reflects in various ways all these facets, within the context of mainstream historiography in Egypt and Syria, whose leading figures include al-Maqrīzī, Ibn Ḥajar (al-Fāsī′s friend), al-ʻAynī, Ibn al-Ṣayrafī, al-Sakhāwī, al-Suyūṭī, Ibn Taghrībirdī, and Ibn Iyās, among others.

More discussion of al-Fāsī′s own historical writings continues in chapter 4, where several issues pertaining to al-Fāsī′s historical methodology, his major achievements, and the continuity and discontinuity of his own works as well as those of the ″Hejazi school″—as opposed to those ″common features″ nourished through the labors of the Egyptian and Syrian masters mentioned above—are addressed. Among many issues dealt with here, students of Mamluk history may be particularly interested in learning more about al-Fāsī′s two masterpieces, which represent, respectively, the two major genres of historical writing of his time: his biographical dictionary of the learned persons of Mecca (*al-ʻIqd al-Thamīn*) and his local history of Mecca (*Shifāʼ*). Fortunately, nearly half of the book (pp. 115-80) is devoted to these two works. In discussing *al-ʻIqd*, the author first presents a layout of the structure and main contents of the work; some textual aspects such as the alphabetical order of arranging the 3,500 plus entries (p. 117) as well as other principles that guided the organization of this bulky work (pp. 118 f.) are given special attention. The author points out that this alphabetical order is also found in Ibn Ḥajar′s biographical work *al-Iṣābah fī Tamyīz al-Ṣaḥābah*, which follows a model set by Ibn al-Athīr (d. 733/1332) and other earlier authors such as Abū ʻAbd Allāh ibn Mundah (d. 395/1005), Ibn ʻAbd al-Barr (d. 462/1070), and others. As regards the content of the work, the author calls attention to the fact that the biographical section proper is preceded by an introduction of the *faḍāʼil* genre, or praise for the virtues of a city, which is itself a summary of

al-Fāsī's history of Mecca, the *Shifā'*. Furthermore, this introduction is sometimes considered as an independent work by the title of *al-Zuhūr al-Muqtaṭafah min Tārīkh Makkah al-Musharrafah* (p. 127). The author then moves on to a detailed discussion of the composition of a typical biographical entry in the work (pp. 129-37). The significance of studying such entries is highlighted, as "these biographies have preserved for us a picture of the intellectual and cultural life of the era" by showing vividly the network that ties the *'ulamā'* with their teachers, students, and most importantly, their peers, depicting these people's friendship, fellowship, rivalry, and competition "in a way that is no less revealing and nuanced than that of political histories" (p. 129). For those familiar with Michael Chamberlain's work on Damascene *'ulamā'*, al-Fāsī's biographical dictionary seems to offer an analogy, or a mirror, of the same kind of struggle, or civil *fitnah*, but this time in a Hejazi context.

Source criticism is another issue that is noteworthy (pp. 138-45). In addition to conventional literary sources, al-Fāsī, we are told, also utilized material evidence, such as that of ruins, inscriptions, etc., as well as documents, such as official communiqués, letters, speeches, etc., in his work. This method was advocated by his mentor Ibn Khaldūn, whose influence on the younger al-Fāsī manifested itself in many ways in the latter's work. This last point is addressed in some detail in the following section on the "historical critique" (*al-naqd al-tārīkhī*) in *al-'Iqd* (pp. 147-52). The main conclusion is that al-Fāsī practiced what his teacher Ibn Khaldūn preached in that his critical spirit as a true historian is seen not only in his method of establishing sound chains of transmitting historical data, his careful treatment of sources, and his cautious handling of conflicting accounts and stories, but also his speaking his mind in the practice of the methodology of *al-jarḥ wa-al-ta'dīl*, i.e., critique, verifying reliable accounts and disputing false statements.

The discussion of al-Fāsī's history of Mecca, the *Shifā'*, follows the same style and format (pp. 153-80). A description of the structure and composition of the work (pp. 154-56) is followed by a lengthy source "criticism" (pp. 156-75), which turns out to be a long, and unnecessary, list of the literary sources mentioned by al-Fāsī, with a brief description of the documents utilized in the work and citations of poems found in the book. Like many of the previous segments, there is very little analysis but rather merely digressive listing and citations. Several issues are in order here. First, regarding the development of the writing of Meccan local history, the author is of the commonly-held opinion that al-Fāsī followed the pattern established by al-Azraqī and al-Fākihī, that is, a work that combines topography, legends of pre-Islamic Mecca, and history per se. It is noted that al-Fāsī did not employ the conventional annalistic form in writing his chronicles; in other words, his "history" is thematically arranged, a form that is not widely represented in Mamluk historiography. Of special interest for students of the

Mamluks will be the author's discussion of the Mamluk documents preserved in local archives that are not found in other sources, such as personal letters exchanged between the *'ulamā'* concerning the riots led by Egyptian pilgrims in Mecca in 730/1329 (pp. 172-73), and the official decrees dealing with personnel changes at the office of the governor (*wilāyah*) in Mecca.

Speaking of the poetry in al-Fāsī's historical work, the author has rightly observed that many of the poems found in al-Fāsī's history are *not* related to the events of the narrative line (p. 175). This is by no means something unique to al-Fāsī's work. As I have discussed elsewhere, by the time of the so-called "Syrian school of historical writing," i.e., that of the seventh-eighth/thirteenth-fourteenth century Syrian authors al-Birzālī, al-Yūnīnī, and al-Dhahabī (from whom al-Fāsī evidently quoted heavily), the notion that a *tārīkh* is not only a record of factual events, but a register of Muslim religious learning and a selective anthology of Arabic cultural and literary heritage appears to have gained a considerable following.[2] It is assumed that the poems found in a historical work need *not* necessarily be relevant to the narrative line. Al-Fāsī's case provides another piece of evidence that this notion was widely accepted, and practiced, by later Mamluk historians, including those who were as far away as the Hejaz.

The book concludes with a chapter on al-Fāsī's influence on the development of the "Hejazi school" of historical writing. According to the author, al-Fāsī's importance as a role model for later Meccan historians manifests itself in several aspects: his methodology (*manhajīyah*), his style (*uslūb*), and his approach (*ṭarīqah*), that is, his way of classifying major themes, laying out the contents, setting the goal of each work by an explicit introduction, and presenting historical events in a thematic rather than annalistic form. Special emphasis is placed on al-Fāsī's attentiveness to field work in his effort to verify facts from various sources, and his critique of conflicting accounts. In this connection, the chapter leaves much to be desired. A discussion, for instance, of the common elements and differences between this "Hejazi school" as compared to other "schools" in the Mamluk period, such as those of Syria and Egypt, would be most welcome. Regarding the genre of autobiography, a genre that did not advance itself very much in the Mamluk period, it is well known that al-Fāsī wrote his autobiography in the third person as part of his biographical dictionary *al-'Iqd*, but what can one say about it as compared to other contemporary autobiographies, if there were any? What was its influence on later similar attempts (such as the famous one by al-Suyūṭī [d. 911/1505], who credited al-Fāsī as the inspiration for his effort) in terms of format, structure and method?

---

[2]*Early Mamluk Syrian Historiography* (Leiden, 1998), 1:96.

Overall, the book is useful for those who are interested in general Mamluk historiography and the local history of Mecca, especially that of the Mamluk period. But great effort is needed to extract information and insight from this book, which is long on citation, often unnecessary, and short on synthesis and analysis.

IBN QĀḌĪ SHUHBAH, *Tārīkh Ibn Qāḍī Shuhbah*, Volume Four, Edited by Adnan Darwich (Damascus: Institut Français de Damas, 1997). Pp. 767.

REVIEWED BY DAVID C. REISMAN, Yale University

Twenty years after the publication of the first volume of the critical edition of Ibn Qāḍī Shuhbah's abridgement *(mukhtaṣar)* of his "Dhayl," Darwich has finally brought to a conclusion his superlative endeavor with the publication of volume four. Darwich entitled the work *Tārīkh Ibn Qāḍī Shuhbah*, but this is somewhat misleading. The work edited by Darwich is actually an abridgement of a larger history entitled "Dhayl," an historical record originally begun by Ibn Qāḍī Shuhbah's master Ibn Ḥijjī, but later expanded by Ibn Qāḍī Shuhbah. A holograph manuscript (Chester Beatty 5527) of the "Dhayl" was discovered three years ago in Dublin, Ireland, and was subjected to a detailed analysis in the pages of this journal by the present reviewer.[1] The publication of volume four of the "Tārīkh" (hereafter referred to as the "abridgement") by Darwich provides the opportunity to make some additional comments about Ibn Qāḍī Shuhbah's historical production as well as observations on Darwich's editorial techniques.

This final volume covers the years 801-8. By far the most important of these years was 803, in which Timur entered Syria from Anatolia and laid siege to Aleppo and Damascus among other cities. The significance of this campaign for the population of Syria and consequently for the historians Ibn Ḥijjī and Ibn Qāḍī Shuhbah is reflected in the lion's share of space Ibn Qāḍī Shuhbah allots to that year in his abridgement. Of the eight years recorded in volume four, 803 receives some one hundred pages of the printed edition. The other years are dispatched in some fifty pages each. The year 808, the last year for which there are extant manuscripts of the abridgement, is summarily and incompletely treated in a mere seven pages. It is unlikely that Ibn Qāḍī Shuhbah would have divided a year across volumes; this fact suggests that the holograph manuscript of the abridgement

[1]"A Holograph MS of Ibn Qāḍī Shuhbah's 'Dhayl'," *Mamlūk Studies Review* 2 (1998): 19-49.

that Darwich used is incomplete. Ibn Qāḍī Shuhbah′s student′s copy (the other manuscript used for volume four of the edition) ends abruptly even earlier: in the midst of the biographies for the year 806 (p. 390 n. 1).

The various elements of Ibn Qāḍī Shuhbah′s technique as an historian are conveyed in a most direct way in his retelling of the events of 803. A broad typology of sources can be discerned. And while no attempt is made to weave the various sources into a narrative whole, Ibn Qāḍī Shuhbah′s frank commentary on those sources proves to be more than adequate recompense for that lack. His information for events in Egypt is still drawn from the as yet unidentified Egyptian history that he shares with al-Maqrīzī.[2] His sources for the invasion of Syria by Timur, and especially Timur′s entrance into Damascus and the events that followed, include Ibn Ḥijjī′s original rough notes and an unnamed eyewitness account. In this regard, the publication of the final volume of Ibn Qāḍī Shuhbah′s abridgement brings to light a hitherto unnoted fact: neither Ibn Ḥijjī nor Ibn Qāḍī Shuhbah was present in Damascus during Timur′s occupation. Ibn Qāḍī Shuhbah tells us that Ibn Ḥijjī left Damascus for Zura‘ on 23 Rabī‘ II 803 and consequently he ″wrote very little on this *fitnah*″ (p. 161-62); he then states that his additional material comes from the written source of ″a trustworthy friend″ (p. 162). This last statement, along with the absence of any first person accounts from Ibn Qāḍī Shuhbah, clearly indicates that he had himself left the city prior to Timur′s arrival.

Ibn Qāḍī Shuhbah′s confidence in this trustworthy eyewitness occasionally wanes. He concludes a brief account of the destruction wrought by Timur′s troops by noting that ″the period of time was too short for precise reports, but general accounts by both the elite and the commoner, those present and those absent, are in accord″ (p. 169). His eyewitness′s report of the fall of the citadel in Damascus he deems too simple; he says ″it was more complicated than that″ (p. 175). He makes up for the occasional deficiencies in this source by including a wealth of other material, including synopses of Timur′s various proclamations (pp. 148, 167, 179). A marginal note in the ″Dhayl″ (Chester Beatty 5527) indicates that he drew on Ibn ‘Arabshāh′s biography of Timur[3] for his announcement of the latter′s death in 807 (p. 425). However, he was not aware of Ibn Khaldūn′s *Autobiography;* neither of the reports about the meeting between Timur and Damascene scholars accords Ibn Khaldūn the central and singular role Ibn Khaldūn accorded himself

---

[2]Both Ibn Duqmāq and Ibn al-Furāt have been tentatively suggested as that common source; see Reisman, ibid., 39, 42. It is worth noting that this source appears hostile to Ibn Khaldūn; a certain malicious glee can be detected in the explanation of why Ibn Khaldūn was divested of his judgeship (p. 143), an explanation absent from Maqrīzī′s account (*Sulūk*, ed. Sa‘īd ‘Abd al-Fattāḥ ‘Āshūr [Cairo, 1972], vol. 3, pt. 3, 1027).

[3]Ibn ‘Arabshāh, *‘Ajā’ib al-Maqdūr fī Akhbār Tīmūr,* ed. Jacobus Golius (Leiden, 1636).

in his *Autobiography*.[4] For Timur′s sack of Baghdad in Dhū al-Qaʻdah 803, Ibn Qāḍī Shuhbah drew on ″a native of Damascus taken captive who knew Turkish″ (p. 191). Finally, it is now clear that Ibn Qāḍī Shuhbah drew on Ibn Ḥajar al-ʻAsqalānī for a number of biographies of these later years;[5] in one of his biographies for the year 806, Ibn Qāḍī Shuhbah states that ″[this] biography comes from the death notices that Ibn Ḥajar wrote for me″ (p. 392).

This brief source analysis suggests that Ibn Qāḍī Shuhbah′s abridgement will prove important to the study of Timur′s campaign in Syria. And while there is much unmined material that remains in the larger ″Dhayl″ (Chester Beatty 5527) for the years that overlap between the ″Dhayl″ and its abridgement, Darwich has done such a superlative job in editing the abridgement that immediate attention should now be directed to an edition of those years not covered in the abridgement but found in the ″Dhayl″: 809-10.

Darwich made use of every manuscript of the abridgement at his disposal for his complete edition. The remaining years (801-8) of the abridgement to survive are to be found in two manuscripts: the author′s holograph (Asad Efendi 2345), completed according to Darwich sometime before 840; and a copy made by Ibn Qāḍī Shuhbah′s student Khaṭṭāb ibn ʻUmar al-Ajlūnī (Paris 1098-9) made from ″fascicles″ *(karārīs)* around 840.[6] A comparison of Ibn Qāḍī Shuhbah′s holograph of the larger ″Dhayl″ with the holograph abridgement indicates that Ibn Qāḍī Shuhbah made additions to the latter from the former sometime after his student had made his copy. Interestingly, Darwich′s critical apparatus indicates that certain of these additions were made by Ibn Qāḍī Shuhbah both in his holograph and in his student′s copy (see pp. 7, 8, 172, 192, 196, 293, 301, 309, 340, 343, 346, 347), and that other additions were made by him in his student′s copy but not in his own holograph (see pp. 353, 358, 360, 365, 372, 373, 376). The first set of marginal additions, in both MSS, can be accounted for if Ibn Qāḍī Shuhbah made corrections to his student′s copy after the latter had completed it. The implication of the

---

[4]In fact, Ibn Qāḍī Shuhbah received his information on the meeting from Shams al-Dīn Ibn al-ʻIzz (d. 837/1433) who was himself present. And while Ibn al-ʻIzz provides a parallel account of some of the conversation that Ibn Khaldūn recorded in his *Autobiography,* it is clear that Ibn Khaldūn was not alone with Timur for the conversation and so contradicts Ibn Khaldūn (see pp. 167, 182). There is an English translation of the relevant part of Ibn Khaldūn′s *Autobiography* by Walter J. Fischel entitled *Ibn Khaldūn and Tamerlane* (Berkeley and Los Angeles, 1952).

[5]In *MSR* 2, 44, the present reviewer noted that Ibn Ḥajar al-ʻAsqalānī cited Ibn Ḥijjī′s ″Dhayl″ for biographical information (in the former′s *Al-Durar al-Kāminah*), and Li Guo (*MSR* 1, 19) signalled the existence of a manuscript of Ibn Ḥajar al-ʻAsqalānī′s continuation of his own *Durar* that has marginal notes in Ibn Qāḍī Shuhbah′s hand. The relationship of borrowing amongst these three scholars should be investigated more fully.

[6]For Darwich′s hypothesis concerning composition and copy dates for these manuscripts, see vol. 2, pp. 57ff., and vol. 4, notes to pages 172, 192, 196, 211, 213, 291, 368.

second set of marginal notes, found only in his student´s copy, will require further analysis; perhaps Ibn Qāḍī Shuhbah wanted to work with a clear copy of the abridgement in his process of revision? Further, these additions are not limited to material from the ˝Dhayl˝. One surprising observation that can now be made with the edited text of the abridgement at hand is that after 840 Ibn Qāḍī Shuhbah seems to have concentrated his efforts on providing a version of the abridgement that would supersede the larger history known as the ˝Dhayl.˝ This is evident from the fact that some of the marginal material found in the abridgement is not to be found in the ˝Dhayl˝ (see for instance a biography, pp. 251 ff., and additional lines, p. 59, lines 13-14).

These observations about the interrelationship of the two copies of the abridgement and the holograph manuscript of the ˝Dhayl˝ can only be made from the very detailed notes in Darwich´s critical apparatus. Indeed, his comments about the student´s copy (Paris 1098-9) extend beyond a record of textual variants to include observations of a broader importance, for instance, the fact that al-Ajlūnī did not accord Ibn Ḥijjī the rank of *˝ḥāfiẓ,˝* for in each instance that Ibn Qāḍī Shuhbah had so distinguished his master, al-Ajlūnī revised that title to *˝al-shaykh˝* (e.g. p. 216, n. 3), and that al-Ajlūnī often took it upon himself to revise Ibn Qāḍī Shuhbah´s Middle Arabic (pp. 21, n. 2, and 166, n. 2). The benefits to be had from such a detailed record of the two manuscripts thus supersede the rule regarding the elimination of secondary exemplars in the art of textual criticism. However, at least part of that rule still applies: Darwich need not have expended such energy in recording the minor errors of reading al-Ajlūnī committed, and thereby could have reduced some of the clutter of his critical apparatus.

Other material extraneous to the critical apparatus includes the citation of sources Ibn Qāḍī Shuhbah used for his history, and observations of Ibn Qāḍī Shuhbah´s editorial methodology in using those sources. A future modification would be to separate comments on the text and comments on the sources into two apparatuses. Finally, the fact that line numbers were employed for Darwich´s edition should have eliminated the need for superscript footnote references; this elimination would have greatly reduced the clutter of the text. The significance of these suggestions is far outweighed by the admiration that must be accorded Darwich as an historian of the Mamluk period. His profound grasp of the language and literature of the period is evident on every page of his edition, from his references to other sources (not limited to published texts) in the footnotes to the extensive vowelling of the text (the vocalizations of Turkish names are almost always correct).[7] On the rare occasions in which Darwich has made additions to

---

[7]Such detailed vocalization is rarely seen in editions of historical texts; typographical errors, while present, are minimal (e.g. read ˝al-fitnatu˝ for ˝al-fitnati,˝ 187:ult.).

the text, his surmises are independently corroborated by the Chester Beatty manuscript of the ″Dhayl″ (which was not known to him).[8]

As with the other volumes of his edition, Darwich has included in volume four an analytical section that briefly recounts major events of each year, divided into political, legal, intellectual, economic, social, and natural phenomena sections. Readers of Darwich have also come to expect the detailed indices found in each volume; these include people (those subject to death notices and those not), geographical and topographical names, technical terms, peoples and groups, and an index of works mentioned by the author. The usefulness of the people index extends beyond the reading of Ibn Qāḍī Shuhbah′s history, thanks to Darwich′s inclusion of basic biographical data under each name, often with a citation of another external source in addition to references to Ibn Qāḍī Shuhbah′s work. Minor errors and omissions have occasionally crept into these indices; for instance, references to Burhān al-Dīn Ibn Mufliḥ are also found on pp. 167 and 171; the reference to page ″9″ under Taymūr (Timur) should read ″19;″ and page 63 under the same entry is incorrect. In his introduction to volume two of his edition, Darwich promised a ″glossary″ for the whole of Ibn Qāḍī Shuhbah′s work which has yet to materialize.

Students and scholars of Mamluk history have reason to celebrate the conclusion of Darwich′s edition of Ibn Qāḍī Shuhbah′s abridged history. In the second volume of his edition (French Avant-propos, p. 8) , Darwich noted that the critical editing [of medieval Arabic texts] is a difficult undertaking and one which requires a clear vision of the whole civilization of a given epoch. With this final volume of Ibn Qāḍī Shuhbah′s history, Darwich has admirably demonstrated just what can be accomplished with such a vision.

CORRECTIONS AND ADDITIONS TO THE ARABIC TEXT

Some of the lacunae in the abridgement and some of the passages that Darwich found difficult to read in his two exemplars can be filled and read through recourse to the Chester Beatty MS 5527 of the ″Dhayl.″ Page, line and footnote numbers refer to Darwich′s volume four.

174.19. بَيْتي read Darwich: undotted in MSS Asad Efendi, Paris, and Chester Beatty : تبِنْي read Reisman.

ʻADNĀN Muḥammad Fāyiz al-Ḥārithī, *ʻImārat al-Madrasah fī Miṣr wa-al-Ḥijāz fī al-Qarn 9 H./15 M.: Dirāsah Muqāranah* (Mecca: al-Mamlakah al-ʻArabīyah al-Saʻūdīyah, Wizārat al-Taʻlīm al-ʻĀlī, Jāmiʻat Umm al-Qurá, Maʻhad al-Buḥūth al-ʻIlmīyah wa-Iḥyā' al-Turāth al-Islāmī, 1997). Two volumes.

REVIEWED BY DORIS BEHRENS-ABOUSEIF, University of Munich

This work consists of two volumes, the second of which is entirely dedicated to the illustrations, plans, and photographs. The subject defined by the author in his title is a comparison of madrasah architecture in Egypt and the Ḥijāz during the Mamluk period.

The study is divided into three parts. In the first part of his investigation al-Ḥārithī describes three madrasahs in Cairo: the madrasah-*khānqāh* of Faraj Ibn Barqūq, the madrasah of al-Ashraf Barsbāy in Cairo′s center, and that of Qāytbāy in the cemetery. The subject of the second part is the madrasahs of the Ḥijāz: the Bāsiṭīyah at Mecca and the Bāsiṭīyah at Medina, both built in the first quarter of the fifteenth century, and the madrasah of Qāytbāy in Mecca. The third part includes an analysis of and comparison between the Egyptian and the Ḥijāzī madrasah plans followed by a description of architectural and decorative elements of Mamluk (Cairene) madrasah architecture.

The study begins with a short discussion of the theories dealing with the origins of madrasah architecture (K. A. C. Creswell, G. Makdisi, O. Aslanapa, ʻA.

Ḥilmī, Ḥ. al-Bāshā, M. al-Kaḥlāwī), upon which the author comments that even though each of them has a certain validity, they do not take into consideration the variety of plans involved in madrasah architecture. It should be added that this variety of plans is even more pronounced in the period on which this study concentrates, which is the fifteenth century, when the Mamluk madrasah had already lost many of its earlier features in form as well as in function. In fact, none of the three Egyptian cases discussed was a madrasah in the classical sense, but rather a combination of *khānqāh* and madrasah; that of Qāytbāy was not a madrasah at all, but a Friday mosque with Sufi functions. The author does note the fluidity in the Mamluk terminological definition of these institutions as well as the flexibility of their function in the late period, but his interest is focused on the variety of plans used in late Mamluk religious architecture rather than on the architecture or the evolution of the madrasah as such, or on the relationship between form and function. It should be noted, however, that some functions, such as whether the madrasah was also a *jāmi'* (the presence, especially outside of Cairo, of a minaret is sometimes the decisive clue) and whether it also included a Sufi community (as did the madrasah of Barqūq), might be of relevance to the architectural layout of the complex. It is the author's opinion that if the function (madrasah, *khānqāh* or *jāmi'*) of an institution is defined by its inscriptions differently from the *waqf* deed, the inscription should be trusted (pp. 284f.). This view can by no means be supported, since the *waqf* deed not only names the type of foundation involved, but also describes its curriculum as well as the functions of the personnel attached to it; these are specific criteria for the definition of the institution which cannot be disregarded.

The architectural survey of all six buildings, which I will not discuss here, proceeds on the basis of an element-by-element formal description, as given in *waqf* documents, with the difference that the author indicates measurements. Al-Ḥārithī tells us that the two Bāsiṭīyah madrasahs of Mecca and Medina which are still extant have undergone only minor alterations. It is regrettable, however, that he does not seem to have visited them himself, as he bases his descriptions of their present state on oral communications by other scholars, using in addition literary and visual material. His reference to other Ḥijāzī monuments is mostly indirect, relying on other studies without the support of illustrations.

Information about Qāytbāy's madrasah in Mecca, which did not survive and for which no *waqf* deed is known, is provided from literary sources as well as from historic views and photographs in addition to an Egyptian survey map predating the Saudi destruction of the building. On the basis of this material the author

presents a reconstruction of the plan and elevation of this madrasah. No *waqf* document seems to exist for any of the Ḥijāzī foundations discussed by the author.[1]

In the third part of the book, which deals with analysis and comparison, al-Ḥārithī comes to the conclusion that the madrasahs of the Ḥijāz, while influenced by Egyptian architecture, developed their own local patterns based on the *ḥujrah*, which is a simple room used for the gatherings related to the institution′s functions, instead of the *īwān* or the arcaded hall. This *ḥujrah* is represented in the two madrasahs built by Qāḍī ʻAbd al-Basīṭ in Mecca and Medina, an observation that is also applicable to Mamluk Syrian architecture. It should be noted here that a characteristic function of the foundations attached to the mosques of Mecca and Medina, like Qāytbāy′s madrasah in Medina, was that of a hospice for pilgrims.

The final chapter deals with the architectural and decorative elements of the Mamluk madrasah with some interesting information on libraries and the location of the living units.

In spite of its comparative outlook this study focuses heavily on Cairene architecture, which the author seems to know better than the Mamluk architecture of Mecca or Medina of which, moreover, little has survived. Although the Mamluks′ patronage in the provinces, especially the Holy Cities, was substantial, their buildings outside Cairo did not belong to the same architectural school as those of the capital. In spite of undeniable mutual influences between Cairo and Syria, Cairene Mamluk architecture was not really duplicated elsewhere in the empire (not even in the Egyptian provinces themselves), with the exception of Qāytbāy′s buildings in Jerusalem and the Ḥijāz, which were erected by Cairene teams of master-builders and masons. One would have expected the author to recognize that the madrasah of Qāytbāy in Mecca was closer to Cairene tradition than other buildings because exceptionally, and like that of Medina, it was built by an Egyptian master-builder and Egyptian craftsmen. It would be interesting to investigate whether Ḥijāzī Mamluk architecture was related to that of the Syrian provinces.

Another aspect which should have been considered in a discussion of plans is the role of the urban setting which, as is well known, played a role in the design of Mamluk urban architecture, where the founder′s mausoleum—mostly absent in provincial architecture—occupied a prominent place. In the cases of Mecca and Medina, where the founders had an obvious preference for close proximity to the sanctuary (thus limiting the choices of available plots), adjustments to the plans must have been inevitable, as is evident in the Mamluk buildings around the Ḥaram of Jerusalem.

---

[1]The *waqf* deed of Qāytbāy′s madrasah in Medina has been discussed by me in *Mamlūk Studies Review* 3 (1999).

The illustrations in the second volume are of rather poor quality, and they deal essentially with Cairene architecture. The five historic photographs of Mecca and Medina from the collection of Sultan ʻAbd al-Ḥamīd and Muḥammad Ṣādiq Pasha are interesting.

The author, who used for his study an important number of literary sources, *waqf* documents, and many recent Arabic studies including unpublished M.A. and Ph.D. theses from Cairo is, on the other hand, poorly informed about research done in European languages, except for his short mention of Creswell′s ideas on the origins of the madrasah; not even the *Corpus Inscriptionum* has been consulted in the context of epigraphy. His very short bibliography of Western literature (which does include, however, references on Persian and Sassanian architecture) contains mistakes to the extent of being unintelligible. In this regrettable shortcoming al-Ḥārithī is not alone; rather, he represents a large part of scholarship on Islamic art history written in Arabic. Of course it is also true that Western scholars in this field have entirely disregarded recent art historical studies in Arabic, which despite their provincial character and, as a result, methodological weaknesses, can be useful to the Western reader. Islamic art history is a very young discipline in Arabic scholarship; unless it interacts with Western scholarship it will remain deficient.

Any information dealing with Mamluk architecture in the Holy Cities is of interest, since these buildings are not accessible to the non-Muslim scholar. Although this book is focused on Cairene Mamluk architecture, al-Ḥārithī does draw attention to the Mamluk buildings in Mecca and Medina. One should look forward to more material and more research on religious patronage and medieval architecture in the Ḥijāz.

FĀDĪ ILYĀS TAWWĀ, *Al-Manākh wa-al-Asʻār wa-al-Amrāḍ fī Bilād al-Shām fī ʻAhd al-Mamālīk (642-922 H./1250-1516 M.)* (Beirut: n.p., 1998). Pp. 590.

REVIEWED BY WILLIAM TUCKER, University of Arkansas at Fayetteville[1]

The present volume constitutes both a valuable addition to the historiography of the Syrian lands in the Mamluk period generally and a major contribution to the ecological and demographic history of the Mamluk realm in particular. Consisting

[1]I wish to thank my student, Farid al-Salim, for his assistance in sifting through the wealth of material presented in this volume.

of a brief introduction and three large chapters, as well as numerous charts and graphs, Tawwā´s study focuses upon the climate, agrarian commodity prices, and disease patterns in greater Syria between 1250 and 1517. As his introduction indicates, the author´s methodology reflects the theories of *Annales* historians such as E. Le Roy Ladurie, Fernand Braudel and, in Ottoman history, Daniel Panzac. Beginning with brief examinations of geographical features (e.g., relief, crops, forests, etc.), climate, and population, the introductory section continues with a survey of the techniques of climatic history, such as dendrochronology, phenology, and glaciology. The author concludes the first part of the initial chapter with remarks about climatic data as well as a set of tables of yearly weather data by seasons, climatic zones, and an outline of such weather phenomena as droughts, cold waves, floods, hail and snow.

The second part of Chapter 1 incorporates a detailed investigation of drought, especially three major waves (1292-98, 1304-20, 1359-89), and the effects of these water shortages upon agricultural production and livestock resources. Tawwā then examines episodes of cold and snow, torrential rains and floods, heat waves, and winds both hot and cold. Crop damage, human and animal mortality, infrastructural damage, and epidemic diseases are all noted as major by-products of these weather events. Chapter 1 concludes with a schematization of climatic fluctuations in the region during the Mamluk period (e.g., 1280-1320, warm winters; 1370-1440, warm winters) and the deduction that these fluctuations were consistent with what was happening elsewhere in the world at the time.

The second chapter of the book is devoted to an examination of grain and bread prices in Mamluk *Bilād al-Shām*. The author shows how weather conditions, wars, insect infestations, and the political elite´s manipulations of supplies and storage all affected the prices of wheat and bread. Important data in the text and tables demonstrate price fluctuations and their causes; for instance, plague and drought caused bread prices to soar between 1370 and 1400. In 1466 prices tripled because of harsh climatic conditions and an invasion of mice. Similar information is forthcoming about barley prices, but, interestingly enough, Tawwā points to the added factor that the demand for barley increased during times of war, when it was used for animal feed. Spiraling prices of wheat and barley are also shown to have stimulated price escalation of other commodities, such as meat, vegetables, fruits, etc. The section ends with a treatment of famines stimulated by rising prices and shortages and the linkage in such cases with malnutrition, disease, and the incidence of epidemics.

In the concluding chapter of his study, Tawwā examines the diseases and epidemics which attacked Mamluk Syrian territory. He devotes a good deal of attention to the various plague epidemics, which he divides into periods of one century each. Although he writes at length about the pandemic of 1347-49, he

also scrutinizes carefully the other major plague events, i.e., those of 1361-64, 1369, 1372, 1374, 1393, and 1459. The discussion continues with a consideration of factors leading to the development and proliferation of diseases such as plague and other maladies, including smallpox, malaria, and even epizootic (animal) diseases. Hygienic and personal habits had a significant role, according to the author. Limited cleanliness, wearing clothes of the deceased victims of contagious diseases, and crowding at prayers are all noted as factors in the spread of sickness.

The second part of the last chapter centers upon the demographic effects of the fifty-eight waves of plague which hit Syria during the Mamluk era. Tawwā concludes that *Bilād al-Shām* lost between 250,000 and a million people to plague during the relevant period. Peasants and middle-class urban dwellers were especially hard hit, and those whose professions brought them into contact with these groups (bakers, merchants, water carriers) also suffered disproportionately. The author argues that notables and government officials were less affected because of their possible isolation.

Finally, Tawwā analyzes the relationship between climate and plague occurrences. Drought, heat, and humidity apparently facilitated the spread of plague, as did the movement of people related to seasonal change. Plague also resulted in famine, price increases, and rural depopulation.

Unfortunately, the discussion of plague and other diseases, while interesting and carefully conceived, suffers from a lack of attention to important English-language studies of disease and plague, such as those of Michael Dols, William McNeill, Lawrence Conrad, and J. D. F. Shrewsbury, among others.[2] The important, albeit brief, article on epidemics by Boaz Shoshan is also missing, and this study might have been of use as regards chronology and original sources not utilized in the present work.[3]

In one of the most intriguing features of his volume, Tawwā offers, between pages 419 and 477, tables and graphs illustrating the life expectancy in *Bilād al-Shām* during the Mamluk period. These statistical illustrations unfortunately, but not unexpectedly given the source materials, provide information for male notables only. The materials indicate, according to the author′s analysis, that life expectancy decreased from an earlier high of 73 to 60.91 years in 1348/49 and then reached its lowest point, 59.15 years, in the late fourteenth century. Life expectancy rose in the fifteenth century but remained below 70. The author suggests,

incidentally, that this latter figure compares favorably with the current life expectancy in Lebanon, which he puts at 66 years. Not surprisingly, the data show that notables could secure a higher level of health protection and nutrition, enjoying higher life expectancy than the lower classes. One may, of course, question the nutritional quality of consumption related to affluence, more luxurious consumption not necessarily equated with nutritional advantage, although increased quantity could also have been a factor here.

All in all, this book is extremely useful and stimulating for anyone engaged with environmental, medical, economic, or simply Mamluk history. One may argue that the lack of familiarity with numerous English-language studies deprives the work of greater theoretical or comparative perspective. For instance, one might wish to assess the relationship between caloric intake and resistance to disease and the consequent relationship between food consumption levels and epidemic disease.[4] Also, questions arise about the absence of certain primary works, especially the history of Birzalī, which might have provided even more data and insight for the author.

In the final analysis, however, Tawwā is to be commended for the careful, painstaking, and systematic study he has produced. The illustrative tables, graphs, charts, etc., are in themselves valuable contributions, but in fact this volume offers the reader far more than that! It constitutes a major addition to the emerging field of disaster research in the Middle East.

SHAMS AL-DĪN MUḤAMMAD IBN ʻALĪ IBN ṬŪLŪN, *Inbā' al-Umarā' b*i-Inbā' al-*Wuzarā'*. Ed. by Muhanná Ḥamad al-Muhanná (Beirut: Dār al-Bashā'ir al-Islāmīyah, 1998). Pp. 128.

REVIEWED BY STEPHAN CONERMANN, University of Kiel

Shams al-Dīn Muḥammad ibn ʻAlī ibn Aḥmad al-Ṣāliḥī al-Dimashqī al-Ḥanafī, better known as Ibn Ṭūlūn, belongs to the species of ″quilldrivers.″ His urge to write may have been innate but in the end, Ibn Ṭūlūn just wanted to match his adored teacher al-Suyūṭī (d. 911/1505), whose titles, as is well known, number more than seven hundred.

---

[4]For some of the issues associated with malnutrition, immunity, and epidemics, see my article, ″Environmental Hazards, Natural Disasters, Economic Loss, and Mortality in Mamluk Syria,″ *Mamluk Studies Review* 3 (1999), especially 119-23.

Ibn Ṭūlūn was born in 880/1473 in al-Ṣāliḥīyah, near Damascus. At the age of eleven he received a scholarship to study jurisprudence at the Madrasah al-Māridānīyah. After completing some higher studies in Cairo he went back to the former Umayyad capital. There he found a job as a teacher of grammar, *tafsīr,* and hadith at the Madrasah al-Ṣāliḥīyah. Subsequently he held several other teaching and administrative posts, but never rose to higher ranks. Ibn Ṭūlūn died, more than seventy years of age, in 953/1546.

Although his contemporaries considered him an expert in *fiqh* and Tradition, only his historical writings have attracted the attention of modern specialists. This is probably due to the fact that these writings describe in detail the important change from Mamluk rule to Ottoman domination in Syria. Thus only a small number of his many extant works (from an original total of 750 titles) have been published, and only a very few have been the subject of scholarly studies.[1] Now Muhanná Ḥamad al-Muhanná presents us with his edition of Ibn Ṭūlūn's *Inbā' al-Umarā' bi-Abnā' al-Wuzarā',* which is based on the only existing manuscript, now in Berlin.[2]

Inspired by the Quranic verses "Appoint for me a minister *(wazīran)* from my household, Aaron, my brother. Gird by him my strength, and associate him in my affair. That we may glorify Thee often and make remembrance of Thee often. Verily Thou hast become of us observant,"[3] Ibn Ṭūlūn thought it a good idea to write a small book about the lives of thirty-two viziers. This genre was not altogether unknown, as exemplified by Muḥammad al-Ṣūlī's (d. ca. 336/947) *Kitāb al-Wuzarā',* Ibn al-Jarrāḥ's (d. 296/908) *Kitāb al-Wuzarā',* al-Jahshiyārī's (d. 331/942) *Kitāb al-Wuzarā' wa-al-Kuttāb,* al-Tha'ālibī's (350-429/961-1038) *Kitāb al-Wuzarā',* al-Ṣābī's (359-448/970-1056/57) *Kitāb al-Wuzarā',* and Ibn al-Ṣayrafī's (463-542/1071-1147) *Al-Ishārah ilá Man Nāla al-Wizārah.*

In his *Inbā' al-Umarā' bi-Abnā' al-Wuzarā'* Ibn Ṭūlūn gives his readers more or less important, but above all entertaining, information about some illustrious persons. Thus, we find al-Qāsim ibn Wahb (258-291/872-904),[4] vizier to the Abbasid caliphs al-Mu'taḍid (279-289/892-902) and al-Muktafī (289-295/902-908),

[4]No. 2, pp. 25-29.

and the three famous ministers of the Barmakid family during the reign of Hārūn al-Rashīd (170-193/786-809): Yaḥyá ibn Khālid (d. 190/805),[5] who remained in office for seventeen years (170-187/786-803), and his two sons al-Faḍl (d. 193/808)[6] and Ja'far (d. 187/803),[7] who frequently presided with Yaḥyá and also appear to have been styled *wazīr*. The end of this triad is all too well known: in January 187/803 the caliph suddenly decided to put an end to "the reign of the Barmakids" *(sulṭān Āl Barmak)*. He had Ja'far executed; al-Faḍl and Yaḥyá were brought to al-Raqqah, where they both died in prison.

Also included in this work are, for example, al-Muḥallabī (291-352/903-963), the prominent vizier to the Buyid amir of Iraq Mu'izz al-Dawlah (334-356/945-967) from 339/950 until his death in 352/963, and Muḥammad ibn 'Abd Allāh al-Gharnāṭī Lisān al-Dīn (713-776/1313-1375),[8] better known as Ibn al-Khaṭīb. During the reigns of Abū al-Ḥajjāj Yūsuf ibn Ismā'īl (733-755/1333-1354) and Muḥammad V al-Ghanī billāh (first reign 755-760/1354-1359; second reign 763-793/1362-1392), Ibn al-Khaṭīb not only held the office of chief administrator but also assumed the honorary title of *Dhū al-Wizāratayn*.

We furthermore encounter such celebrities as al-Ṭūsī (597-672/1201-1274)[9] and Ibn Sīnā (370-428/980-1037).[10] Al-Ṭūsī was in the service of the Mongol Khan Hülägü (654-663/1256-1265) during the sack of Baghdad in 1258 and later retained his office in the reign of Abaqa (663-681/1265-1282), while Ibn Sīnā was appointed vizier several times by various local rulers. The famous scholar, physician, and philosopher spent his last fourteen years at the court of 'Alā' al-Dawlah Muḥammad (d. 433/1041) in Isfahan.

Muhanná Ḥamad al-Muhanná gives the reader of Ibn Ṭūlūn's *adab* work a short introduction and adds some useful notes to the text. In sum, this is a good work, but considering the numerous writings of Ibn Ṭūlūn still awaiting publication one might say about this edition: nice to have, but nothing more and nothing less.

Najm al-Dīn ʻUmar Ibn Fahd, *Itḥāf al-Wará bi-Akhbār Umm al-Qurá,* vols. 1-3 edited by Fahīm Muḥammad Shaltūt, vol. 4 edited by ʻAbd al-Karīm ʻAlī al-Bāz, vol. 5 (Indexes) prepared by Muḥammad Ismāʻīl al-Sayyid Aḥmad and Ṣādiq al-Bīlī Abū Shādī (Mecca: al-Mamlakah al-ʻArabīyah al-Saʻūdīyah, Jāmiʻat Umm al-Qurá, Maʻhad al-Buḥūth al-ʻIlmīyah wa-Iḥyāʼ al-Turāth al-Islāmī, Markaz Iḥyāʼ al-Turāth al-Islāmī, 1983-1990).

Reviewed by Li Guo, University of Notre Dame

Najm al-Dīn ʻUmar, known also as Muḥammad Ibn Fahd (812/1409-885/1480), was a member of the prominent Ibn Fahd family in Mecca and the author of a history of the city entitled *Itḥāf al-Wará bi-Akhbār Umm al-Qurá*. The current complete edition of the work is a welcome addition to the expanding library of the key texts on the history of the Holy City of Islam in the aftermath of its glorious earlier days.

Unlike many medieval Arabic "universal histories," which usually begin with the Creation, Ibn Fahd's History of Mecca begins with the birth of the Prophet Muḥammad and runs to 885/1480, the year of the author's death. The main value of the work, which is a continuation of al-Fāsī's earlier history of Mecca and the basis of a later history of Mecca by the author's son ʻAbd al-ʻAzīz, rests on the author's account of the period of his own lifetime, which is covered in vol. 3 (601/1204-830/1426) and vol. 4 (831/1427-885/1480) of the present edition (vol. 4 was in fact a dissertation submitted to the University of Umm al-Qurá in Mecca). The edition, based on manuscripts from libraries in Cairo, Mecca, and Medina, is skillfully executed. The indexes (vol. 5), including the Quran, hadith, poetry, men's and women's names, place names, and bibliographical references, are very serviceable. However, the reader will find the edition less than user-friendly insofar as the pages are not marked by headers (e.g., the year in question), although each volume concludes with a detailed table of contents.

Encyclopedia of Arabic Literature, edited by Julie Scott Meisami and Paul Starkey (London and New York: Routledge, 1998). Two volumes.

Reviewed by Th. Emil Homerin, University of Rochester

Begun in 1990, the *Encyclopedia of Arabic Literature* aims to catalog writers and trends of Arabic literature from its beginnings until the late twentieth century.

Over one hundred individuals contributed entries to this work and its target audience of "students and academics working in Arabic language and literature and, more generally, in the fields of Middle Eastern culture, history and philosophy . . ., other Middle Eastern literatures . . ., comparative literature, non-western literatures and world literature."[1] The editors note further that they have sought "to emphasize the state of the art of current scholarship on Arabic literature, relying on recent research and less on received traditional opinion."[2] A fine product of these goals is Julie Scott Meisami's detailed entry for Abū Tammām, which cites five critical editions of his work and thirteen secondary sources in Arabic, French, German, and English. Unfortunately, not all entries meet this high standard including, surprisingly, Meisami's own entry for Ibn al-Fāriḍ, which lacks reference to any of more than a dozen scholarly books and articles on the poet and his verse published since 1980. There are other serious omissions: in T. Bauer's entry "al-Muʻallaqāt" one finds a citation to A. J. Arberry's uninspiring translations in *The Seven Odes,*[3] but not to Michael Sells' exquisite versions in his *Desert Tracings,*[4] while Renate Jacobi in her article on the *qasīdah* fails to cite even one of Jaroslav Stetkevych's essential writings on the subject.

Perhaps oversights are to be expected in such an ambitious encyclopedic project though, fortunately, they are few in the nearly one hundred entries on writers living during the Mamluk period. These subjects are "writers" broadly defined by the editors for the medieval period, where "the scope of 'literature' has not been restricted to belles lettres but has been extended to other types of writing—history, biography, geography, philosophy and so on—as medieval writers and readers did not make the same distinctions between various types of 'literature' as do modern ones."[5] This definition allows for a wide range of authors, from religious figures including ʻAbd al-Razzāq al-Qāshānī, Ibn Taymīyah, and al-Nawawī, to historians and secretaries such as Abū al-Fidā, al-Maqrīzī, and al-Qalqashandī. Many of these entries (nearly 30%) have been competently compiled by C. E. Bosworth, R. Irwin, A. Knysh, and D. S. Richards, and the vast majority of entries will be appreciated for their citation of recent text editions and studies of their respective subjects. Still, when one sifts through these entries of individuals, one finds too few poets and writers of belles lettres, in all about a dozen, including authors from the Maghrib and Andalusia. Among these, al-Būṣīrī and Ṣafī al-Dīn al-Ḥillī are the most frequently mentioned in the *Encyclopedia*, with the individual

[5] P. xi.

entry for each being written by C. E. Bosworth. Bosworth′s short entry for al-Būṣīrī focuses exclusively on the poet′s celebrated ode in praise of Muḥammad, the *Qasīdat al-Burdah;* there is no mention of other verse by al-Būṣīrī, such as his scathing poems against the Copts and corrupt officials, or even a citation to a text edition of his *Dīwān*. Bosworth does direct his reader to relevant entries in the *Encyclopaedia of Islam,* and to J. W. Redhouse′s 1881 English translation of the poem, though not to Stefan Sperl′s more recent translation and insightful comments on the ode.[6] Bosworth′s entry for Ṣafī al-Dīn al-Ḥillī is longer and more thorough, and he points out al-Ḥillī′s importance to the study of popular Arabic poetic forms and colloquial poetry in the thirteenth-fourteenth centuries. However, here again, Bosworth does not cite any published edition of the poet′s *Dīwān* or Arabic studies of the poet, including those by ʻAllūsh, al-Ayyūbī, and M. Rizq Salīm.[7] Nevertheless, readers should find both entries thoughtful and useful, particularly in comparison to D. J. Wasserstein′s paragraph ″Ibn al-ʻAfīf al-Tilimsānī.″ Wasserstein cropped his brief entry from J. Rikabi′s more extensive article in *EI*², which Wasserstein cites while omitting Rikabi′s concise description of the poet′s elegant style, which avoided the mannerism of the time, as well as his popular nickname of ″al-Shābb al-Ẓarīf″ (imagine an article on Samuel Clemens without ″Mark Twain″). Further, Wasserstein does not provide a bibliography, which should have included, minimally, Shākir Hādī Shukr′s edition of al-Shābb al-Ẓarīf′s *Dīwān*[8] and, perhaps, also ʻUmar Mūsá Bāshā′s chapter on the poet in his *Tārīkh al-Adab al-ʻArabī: al-ʻAsr al-Mamlūkī*.[9] A glance at this latter source also reveals several noted poets of the Mamluk period who deserve a place in any comprehensive work on Arabic literature, namely al-Ashraf al-Anṣārī, al-Tallaʻfarī, Ibn Mulayk al-Ḥamawī, and ʻĀ'ishah al-Bāʻūnīyah, though they and others are absent from the *Encyclopedia of Arabic Literature*.

Turning from entries on individuals to those on thematic subjects, one generally finds a fair representation of authors from the Mamluk period. References to relevant Mamluk examples are to be found, for instance, in entries for biography, Cairo, Damascus, didactic literature, Egypt, exegesis, geographical literature, grammar, historical literature, Syria, and travel literature. This is also the case for more specifically belles lettres subjects including *adab*, *ʻajā'ib* literature, allusion and intertextuality, *badīʻ, badīʻīyāt, khamrīyah,* literary criticism, love theory,

lughz, maqāmah, muʿāraḍah, muzdawijah, naẓm, and *zajal.* Further, exceptional coverage is given to the popular literature of the period, especially in the contributions of Shmuel Moreh, who pays particular attention to issues of medieval drama and acting. Moreh provides detailed entries and bibliographies on subjects including "acting and actors, medieval," "khayāl," "shadow-play," and "theatre and drama," and to this should be added his entry on the actor Ibn Mawlāhum al-Khayālī, and Everett Rowson's entries on the playwrites Ibn Sūdūn and Ibn Dāniyāl.

Surprisingly, the Mamluks and their writers are not mentioned in entries for the crusades, *futūḥ,* or patronage, nor do they figure in entries on the important poetic genres of *fakhr, ghazal, madīḥ, qasīdah,* or *ritha';* these latter entries effectively end around the year 1000 C.E. though, of course, Arabic poetry did not. Overall, the contributions to Arabic poetry and belle lettres made by the elite of the Mamluk domains are underrepresented in the *Encyclopedia of Arabic Literature,* though Robert Irwin's excellent entry "Mamlūks" goes far to correct this shortcoming. Irwin cites Arabic poetic activity and patronage by specific Mamluk sultans and amirs, as well as several entertaining anthologies composed during this period on life's pleasures, whether permissible or forbidden. Irwin mentions some of the historians and encyclopedists for which the Mamluk era is best known, but he also takes care to note the panegyric and devotional verse popular at the time, along with poetic treatises on law, grammar, love, and other subjects. Naturally, he discusses Ibn Dāniyāl and the shadow play, together with popular romances, such as ʿAntar. Irwin then draws attention to al-Subkī's *Kitāb Muʿīd al-Niʿam* and the *al-Madkhal* of Ibn al-Hājj as important sources for probing Mamluk life and times. He concludes with reference to several occult works composed during this period, while offering the opinion that the Mamluk era was "not a great age for Sūfī literature,"[10] which strikes me as a rather premature conclusion given that most such literature—including *dīwān*s by several students of Ibn al-Fāriḍ, as well as commentaries on his work and that of Ibn al-ʿArabī—lies unedited and, for the most part, unread in manuscript. Irwin provides a useful bibliography citing pertinent studies in both English and Arabic, thus rounding out his concise and balanced entry on the literature and culture of the Mamluk age for the *Encyclopedia of Arabic Literature*.

ʻIṢĀM MUḤAMMAD SHIBĀRŪ, *Al-Salāṭīn fī al-Mashriq al-ʻArabī: Maʻālim Dawrihim al-Siyāsī wa-al-Ḥaḍārī: Al-Mamālīk (648-923 H./1250-1517 M.).* (Beirut: Dār al-Nahḍah al-ʻArabīyah, 1995). Pp. 264.

REVIEWED BY STEFAN WINTER, The University of Chicago

Al-Mamālīk follows *Al-Salājiqah/al-Ayyūbīyūn* (Beirut, 1994) in Shibārū's two-part study in the political history of medieval Egypt and Syria. The volume is a handsomely produced paperback, and includes six maps; detailed analytical indices; tables of reigning Mamluk sultans, Khwarazm-Shahs, and Ilkhans; and an appendix of eleven samples (from previously published sources) of Mamluk diplomatic correspondence with Mongols, Byzantines and Crusaders.

The author introduces each sultanic regime with a chronological account of its rise and salient military ventures, followed by a chapter on the distinguishing features of its administrative system. This format seems to work better in the first volume, where it helps the reader sort out the muddle of Fatimid, Saljuq, Burid, Zangid, Crusader and Ayyubid potentates who controlled different parts of Egypt and Syria to varying degrees between 1055 and 1250. In the volume devoted entirely to the Mamluks, Shibārū takes six chapters to evoke one sultan after the other; each one apparently of interest only in so far as he did battle with the Mongols, Crusaders, Cypriots, or Ottomans.

Among the more interesting sections is Shibārū's detailed account of the rise of the Mongols (chapter two). Emphasizing (perhaps excessively so) the importance of the *yasa* law code, he is at pains to explain the Mongols' success in terms of their superior organization, not their barbaric savagery. Through this sympathetic look at the Mongols, the achievement of the Mamluks at ʻAyn Jālūt appears all the greater; the author treats neither the question of Mongol influence in the Mamluk system nor David Ayalon's criticism regarding the *yasa*'s abiding importance. Also novel is Shibārū's assertion (pp. 78-79) that the destruction of Baghdad in 1258, far from visiting disaster on Muslim civilization, actually facilitated the revival of culture and learning in the new, more dynamic capital of Cairo.

The book's bibliography basically consists of the standard "Top 40" of published narrative sources. Shibārū sprinkles footnote references to these liberally throughout those sections dealing directly with the Mamluks. But given the broad sweep of his presentation, it is unfortunate that he does not discuss the secondary literature or any diverging interpretations, particularly in the well-written chapters on the Mongols and on the Ottomans. (Much of the former seems to be more directly inspired by Grousset's *L'empire des steppes* than the odd footnote reference allows.) As is evident also in the first volume, the author is less sure-footed in European

history, apparently confusing several terms for the same Crusading order (pp. 28-9) and wrongly thinking that the 1311 council of Vienne was convened for the sake of planning a new attack on Egypt, but failed because Europe was ″moving toward laicisation and secularisation″ and had no more use for holy war (p. 89). But these are minor objections; the author′s overall command of the history not only of the central Islamic core-lands, but also of the Turco-Mongol and Frankish invaders, is laudable.

Shibārū′s analysis of the Mamluks′ major foreign wars is highly nuanced and intelligent, bringing out the diplomatic intrigues that broke the Mongol-Crusader-Armenian alliance in 1260, probing the Mamluks′ reticence in using firearms on the battlefield in 1516 though they had preceded the Ottomans in the adoption of siege artillery, and so on. It is thus regrettable that the author does not put his talents toward elucidating more of the inter-factional conflicts that so characterized the Mamluk system. In the ninth and final chapter, he does provide a competent overview of the Mamluk civil and military administration, covering the composition of the sultanic and provincial armies, the significance of *furūsīyah*, the institutionalization of four *madhhab*s, etc. By way of diachronic historical interpretation, however, Shibārū suggests only that the discipline of the Mamluk barracks began to deteriorate with the advent of the Burji regime, leading ultimately to the fall of the sultanate at the hands of the Ottomans.

The more specialised reader may regret further omissions, individual errors of detail, or the occasional inaccuracy of *hijrī* to *milādī* conversion. The primary appeal of this work is its broad perspective which, because it encompasses the rule of sultans in the Near East from the Saljuqs onward, transcends a simple panegyric to, or denunciation of, the Mamluk regime. In the first volume, Shibārū shows skillfully how neither racial nor religious affinities inevitably determined diplomacy and politics among the sultans, Crusaders, and Mongols, but concludes that the divide between Turkish and Kurdish rulers and the Arab populace facilitated the deposition of both the Abbasid and Fatimid caliphates. What is it then that links together the sultans from the Saljuqs to the Mamluks, but excludes the Ottomans? The author′s underlying ideological position becomes clear only in the unexpectedly bizarre and disappointing conclusion: citing Quranic verses and *hadith* to demonstrate that only Arabs qualify to be caliph, Shibārū commends the foreign-blooded sultans for their service to Islam in protecting the Arab caliphs before Ottoman Turks usurped and falsified that office in the sixteenth century. If one can disregard this dissatisfying conclusion, then the two volumes of Shibārū′s thoughtful, ambitious and eminently readable work together should make for a good introduction to the political history of medieval Syria and Egypt, of interest primarily to the Arabophone student and general reader, and perhaps also to the specialist concerned with contemporary Mamlukist historiography.

Sylloge Numorum Arabicorum Tübingen. Ḥamāh IV c Bilād aš-Šām III (Berlin: Ernst Wasmuth Verlag Tübingen, 1998). Edited by Lorenz Korn. Forward by Lutz Ilisch. Pp. 58.

REVIEWED BY WARREN C. SCHULTZ, DePaul University

Specialists in the field of Mamluk numismatics know that the basic reference work in the field, *The Coinage of the Mamluk Sultans of Egypt and Syria,* by Paul Balog (New York: American Numismatic Society, 1964; commonly referred to by the siglum MSES), has a distinct Egyptian bias in terms of the mints of origins for the coins described therein. This bias is both in number and in type, and is especially so for the copper *fulūs.* In his unpublished contribution to the Balog Memorial Symposium held in Israel in 1988, Lutz Ilisch, the director of the Forschungsstelle für islamische Numismatik, Tübingen (henceforth FINT), described this bias, and mentioned how Syrian Mamluk coins had become increasingly available on the coin market in the years since the publication of the MSES. Until the appearance of the volume under review, however, these Syrian coins remained relatively inaccessible for study. For this reason and others, its publication is thus a most welcome and important development.

By definition, a sylloge provides both illustrations and descriptions of each coin specimen preserved in a specific collection. This book is the fourth volume of a planned multi-volume series devoted to the massive and important holdings of pre-modern Islamic coins preserved at the FINT. It is the first FINT volume to address a mint city of the Mamluk Sultanate; previous volumes covered the mints of Palestine, Eastern Khorasan, and Northern and Eastern Central Asia. The work contains 21 plates illustrating both sides of 708 coins, 552 of which are Mamluk. (As Lorenz Korn points out in his brief and lucid introduction, Ḥamāh was an active mint from the late sixth to mid-ninth Muslim centuries. The volume thus describes 147 Ayyubid and 9 Mongol coins minted there as well.)

The basic arrangement of this sylloge is chronological, following standard numismatic conventions for coins that are anonymous, feature incomplete dates, or have no date at all. Since it is restricted to the FINT coins, it should be noted that this volume does not contain a complete mint series for this city. Thus, as is pointed out on p. 32, Mamluk gold coins from Ḥamāh are extremely rare, and none are found in this collection. This observation in no way detracts from the usefulness of this work, however, for as the noted Islamic numismatist Stephen Album has pointed out, the volume does present ″virtually a complete catalogue″ of everything known to have been minted at Ḥamāh.

The beauty of this work lies in its plates. The photography is uniformly excellent. The photographs are on a 1:1 scale, with clear and precise reproduction.

The value of the sylloge to the researcher is that the poor- as well as the well-struck coin is illustrated. And since the former seem to predominate in Mamluk coinage, a newcomer to the field of Mamluk monetary history would benefit from a perusal of the plates alone. Thus, for example, until the appearance of the FINT volumes for the mints of Aleppo, Tripoli, Cairo, and Alexandria, this volume will be the sole easily accessible resource for the as yet not fully understood *"fals khafīf"* series from the reigns of al-Nāṣir Muḥammad and before. Similarly, by including many "overstrikes," in which an existing coin has been struck again with another set of dies (c.f. the many examples on plate 19), this volume sheds some light on an important subfield of Mamluk numismatics: these overstrikes have been used to solve some thorny chronological problems of sequence for the copper coins in particular.

This work is more than pictures, however. A succinct yet thorough description of each coin is provided. The abbreviations used in these descriptions are easily mastered. Every coin has been weighed and measured. Die linkages between coins are pointed out. A list of basic legends is included. Omissions or gaps in legends and dates are noted and a provenance has also been given for each coin. In short, the information necessary to make sense of the coin illustrations has been provided. All reflect the cumulative expertise of those who have worked to make this collection available to a wider audience.

There remains one terminological quibble. Several silver coins in this sylloge are described as "half-*dirham*s." (See nos. 159, 165, 217, 218, 252, 256, 324, 335, 345, 356, 360, 433, 435, 471, 558, and 570.) In the wider context of Mamluk coinage, I find this term problematic, primarily for metrological reasons. Until the silver of Barsbāy and the later Circassian sultans, the many surviving specimens suggest strongly that Mamluk silver coins were prepared with only the most general and imprecise attention to a weight-standard. The coins in question here all share the fact that they weigh less than two grams. Yet this sample itself varies in weight from around 1.20 to 1.70 grams. When doubled, such "half-*dirham*s" yield quite different "full" *dirham* weights and values. Similarly, there are other coins in the sylloge that are less than two grams, yet are not labeled as "half-*dirham*s." (See nos. 221, 272, 343, 411, 419, 536, 537, 620, 684-6.) Such lightweight coins are clearly fractional *dirham*s, but to label them "half-*dirham*s" suggest a denominational precision not found for most of the Mamluk era. (Actual denominational terms like half, or quarter *[dirham]* do not appear on Mamluk coins until the mid-ninth/fifteenth century.) Something more than light weight is needed to justify the label. Otherwise the term becomes so imprecise as to be meaningless. There do exist, for example, small silver coins from the reigns of Baybars and his sons, struck with smaller dies featuring a design and legend different from the larger, "full" *dirham*s. While no denominational notation is

found in those die legends, the consistently smaller and lighter qualities of these coins combined with their special dies would seem to deserve the label. All the coins mentioned above, however, are struck with the same dies as the heavier coins which surround them. Little utility is gained from labels such as "half-*dirham*" in this context.

This observation does not detract from the overall importance of this book. It is a fundamental research tool for Mamluk monetary history, and a copy should be in every research library.

ḤAYĀT NĀṢIR AL-ḤAJJĪ. *Al-Sulṭah wa-al-Mujtama‘ fī Salṭanat al-Mamālīk: Fatrat Ḥukm al-Salāṭīn al-Mamālīk al-Baḥrīyah min Sanat 661 H./1262 M. ilá Sanat 784 H./1382 M.* (Kuwait: Jāmi‘at al-Kuwayt, Lajnat al-Ta'līf wa-al-Ta‘rīb wa-al-Nashr, 1997). Pp. 220.

REVIEWED BY ANNE FALBY BROADBRIDGE, University of Chicago.

From the title of Ḥayyāt Nāṣir al-Ḥajjī's latest work, the reader might expect a towering essay addressing sweeping themes and grand ideas. A first glance at the text, however, reveals a book explaining why Mamluk society fell into disarray during the *later* Bahri period. Upon further inspection it becomes clear that al-Ḥajjī is actually condemning the moral corruption of the military elite while investigating Mamluk financial troubles throughout the fourteenth century, especially the various ways the ruling elite tried to cope with problems of cash flow and revenue. Al-Ḥajjī does go on to discuss social, economic, and moral changes in Mamluk society, but her overwhelming focus is on high-level fiscal disorder and ethical decay as the catalysts for all other societal problems.

To begin, al-Ḥajjī suggests that by the Mamluk period Islamic society had lost its adherence to religious notions of proper government. By these al-Ḥajjī specifies the concepts of taking counsel *(shūrá)* and [dispensing] justice *(‘adl)*. Al-Ḥajjī also addresses the ruler's obligation to guarantee the populace its rights to protection *(amān)* and freedom *(ḥurrīyah)*. Although a grandly conceived investigation of the moral basis for societal decline, al-Ḥajjī's theory falls a bit short in places—she neglects to define her understanding of the idea of freedom, for example, the use of which smacks of anachronism. Her essay also hints at an attempt to discuss history as it should have been (in moral terms) rather than as it perhaps was, for al-Ḥajjī posits a kind of Ideal Age of Islamic rule—corresponding approximately to that of the earliest caliphs—which did not last.

Al-Ḥajjī goes on to suggest that Mamluk society entered its period of deterioration after 740/1341 precisely because al-Nāṣir Muḥammad's heirs neglected these basic Islamic principles of government. Specifically, power struggles among the amirs and within the house of Qalāwūn itself led to faulty, un-Islamic and short-sighted policies, which in turn led to oppression, financial ruin and moral disarray throughout society. Unfortunately al-Ḥajjī does not seem to be familiar with the work of Amalia Levanoni, who located the roots of decline in al-Nāṣir Muḥammad's own day.[1] One wonders what al-Ḥajjī might have made of Levanoni's argument and conclusions had she encountered them.

After establishing her theory of disintegrating ethics, al-Ḥajjī devotes the rest of the book to an analysis of the specific financial ways in which things fell apart. (It should be noted, however, that her treatment of fiscal and societal issues covers the entire Bahri period, even though by her own argument decline did not really set in until the 740s/1340s.) In this section al-Ḥajjī focuses overwhelmingly on the policy of the *muṣādarah*, or governmental seizure of an individual's property and assets. Al-Ḥajjī illustrates her detailed discussion of kinds of *muṣādarāt* with a wealth of examples; this is the strongest section of the book. She focuses on the types of people likely to be targeted (amirs, administrative officials, prosperous individuals) and the reasons prompting the seizure of assets (genuine wrongdoing, political machinations, sultanic or amiral grudges, a need for ready cash). Finally she investigates the way this process changed over time throughout the century, which is really quite absorbing. After this lengthy discussion of the *muṣādarah* itself, al-Ḥajjī devotes the rest of the work to a follow-up examination of the economic, administrative, social, and moral repercussions of this type of fiscal reordering. Although parts of these later sections are interesting, they are not up to the level of her work on the *muṣādarah*. Consequently these chapters suffer from a certain repetition of both material and points, as well as an uneven application of supporting evidence from the sources.

Nevertheless, although al-Ḥajjī's detailed discussion of the *muṣādarah* and its ramifications is interesting, one cannot help but wonder whether other factors might not also have contributed to economic stagnation and social and moral disarray during the second half of the fourteenth century. Al-Ḥajjī does not seem to be interested in natural disasters, for example, and thus fails to mention either the bubonic plague pandemic of 748-49/1347-48 with its accompanying devastation of society, or the thirteen secondary plague epidemics that followed it over the

[1]Amalia Levanoni, *A Turning Point in Mamluk History: The Third Reign of al-Nāṣir Muḥammad ibn Qalāwūn (1310-1341)* (Leiden, 1995).

course of the next 50-odd years. One doubts that al-Ḥajjī has read Michael Dols´ seminal work[2] on the subject, since he is not mentioned in the bibliography.

Nor, despite her focus on the political elite, does al-Ḥajjī always give equal attention to all of their actions. Thus, for example, she spends little time on the brief and ultimately unsuccessful reign of al-Nāṣir Aḥmad (742/1341-42), despite the fact that he reportedly absconded to Karak with the entire extensive contents of the royal treasury, none of which was ever recovered.[3] One wonders whether the disappearance of so much wealth from ruling hands might not have been a factor in the shortage of cash al-Ḥajjī claims Mamluk sultans faced in the 740s/1340s and which she attributes solely to their excessive and immoral spending on luxury goods and services. In a discussion of decay stemming from financial mismanagement, such an omission is baffling.

On a minor and more technical note: al-Ḥajjī´s work seems to have lacked a good editor, as the book suffers from numerous typographical errors and an over-reliance on multiple exclamation points. The single paragraph that stretches from pages 107-10 should have been broken into several smaller units. Al-Ḥajjī´s bibliography is quite lengthy, but it suffers from the above-mentioned omissions as well as some other peculiarities. At times it hints at a curiously purist tendency, since she read some of the Arabic sources in manuscript form—al-Shujāʻī, Ibn al-Suqāʻī, al-ʻUmarī´s *Masālik al-Abṣār*—even though edited versions of those works do exist. Al-ʻAynī is incorrectly identified as Muḥammad, not Maḥmūd. Also, al-Ḥajjī refers to the MS of Baybars al-Dawādārī al-Manṣūrī´s *Zubdat al-Fikrah fī Tārīkh al-Hijrah*, but oddly does not seem to have read the same author´s *Al-Tuḥfah al-Mulūkīyah fī al-Dawlah al-Turkīyah.*

In sum, al-Ḥajjī´s work purports to be a comprehensive investigation of decline in the fourteenth century, but is really more a statement about Mamluk morality, venality, and resulting societal disarray, all supported unevenly with evidence from the sources. The work is most valuable for al-Ḥajjī´s detailed investigation of the *muṣādarah* and its myriad permutations and results. Given the exclusivity of her focus on financial policy and the moral decisions of a corrupt ruling elite, however, some of her conclusions must be taken with a grain of salt. Nevertheless al-Ḥajjī does the field the service of raising numerous questions about the ways in which Mamluk society functioned, particularly fiscally. Some of these she does indeed answer; the remainder she leaves open for the reader to ponder.

Reviewed by Leonor Fernandes, American University in Cairo

This book proposes to survey the urban evolution of Cairo from its foundation to modern times. Despite its ambitious topic, the author succeeds in providing the non-specialist with a good overview of the expansions of the city. The book is roughly divided into three main sections covering the urban developments which took place from the conquest of Egypt to the post-World-War-II period; touching briefly upon the most recent transformations of the city.

The first section, which occupies roughly one third of the book, covers the period from the foundation of al-Fusṭāṭ to the creation and expansion of al-Qāhirah under the Fatimids. Rather than bore the reader with detailed plans of the city and its quarters, the author chose to focus on the history of the Fatimids and their architectural legacy: mosques, palaces, mausolea, walls, and gates. Sayyid, who mentions al-Maqrīzī, Ibn 'Abd al-Ẓāhir, Abū Ṣāliḥ al-Armanī, and Ibn Jubayr, often provides quotes. However, one may question the relevance of such inclusions in a survey work written for non-specialists. Since the proper bibliographical references fail to accompany the quotes or authors′ names their presence is equally of little use to the specialized scholars. The omission of the proper bibliographical information accompanying the names/quotes could perhaps be justified by the decision of the author to add at the end of each section, sometimes even at the end of each paragraph, a short bibliography on the subject discussed.

The second section of the book covers the expansion of Cairo under the Ayyubids and the Mamluks. The brief discussion of the Ayyubids′ achievements centers primarily on their military architecture, mainly the Citadel that became the seat of their government. According to Sayyid, as the Ayyubids moved their residence to the Citadel, al-Qāhirah proper lost its exclusive character and became the locus of religious foundations and a center for commercial activities and artisanship (pp. 30, 33). As mentioned by the author, the shift from Shi'sm to Sunnism during the Ayyubid period motivated them to build schools—thirty-two of them—to counter the Fatimid *da'wah* (p. 30). The presence of madrasahs and commercial foundations in what was once the heart of Fatimid Cairo brought about a change in the urban structure of the capital which was now opened to the common people (p. 33).

The change in the nature of the urban network was felt more strongly in the Mamluk period, during which the capital saw its greatest expansion. The expansion of Cairo under the Mamluks receives the most attention, and in this sub-section the author makes the best use of the primary and secondary sources at his disposal.

As a result, he succeeds in providing the reader with a good historical overview of the period. The reader is also able to appreciate the Mamluks′ architectural additions to the city; the latter′s urban topography, the successful program of urbanization adopted by rulers like al-Nāṣir Muḥammad, and the contributions of his successors are highlighted and solidly documented. Perhaps as a tribute to the wealth of studies done on the Mamluk period, the reader is provided with a state of the art survey of the city′s religious buildings, commercial constructions, and palaces. The expansion of the city outside the southern gate, its northeastern extension, and the big project of Amir Azbak are all given proper attention, and the addition of a number of plates benefits the reader.

The last section of the book covers the period from the Ottomans to modern times. Sayyid points out that during that period, urban expansion was in the direction of the south and west of the Khalīj. He links this expansion to demographic changes, which pointed to an increase in the population. Such an increase, he says, prompted the elites of the sixteenth and seventeenth centuries to move away from the heart of al-Qāhirah and the area around the Citadel to areas located further to the south and in particular around Birkat al-Fīl. Such a shift in urban expansion was made possible by the relocation of the tanneries, which took place at that time. In the eighteenth century, the elite settled in areas to the west of the Khalīj, more specifically around the Birkat al-Azbakīyah (p. 62).

The last ten pages of the book are dedicated to the study of the changes which took place in the nineteenth and twentieth centuries. The rule of Muḥammad ʻAlī and his successors and their efforts to modernize Cairo are surveyed briefly. The author points out that in the first half of the nineteenth century the bulk of the urban changes took place in the following quarters: the Citadel, Birkat al-Azbakīyah, Būlāq, and Shubrā, where the pasha erected for himself a palace. Sayyid shows how Ismāʻīl′s dream of transforming the capital into a modern city and his use of European experts such as Haussmann, Berillet, and Grand greatly altered the topography of this Islamic capital. By the end of the nineteenth century and thanks to the tireless efforts of ʻAlī Bāshā Mubārak, minister of public works, Cairo had acquired a new set of street networks, the great garden of Azbakīyah to replace the old pond, new bridges, and new palaces. Finally, the twentieth century saw the formation of new quarters such as Zamalek (1905), Garden City (1906), Heliopolis (1906), and Maadi (1907).

This survey of the urban expansion of the city of Cairo is easy to read and the presence of a number of illustrations allows the reader to get a good picture of the changes which occurred throughout the centuries. The book could equally be useful to students since it provides them with a lengthy bibliography, which includes primary as well as secondary sources. One welcomes such concise works, which give a quick survey of a city′s development without encumbering the

reader with too many specific details or big theories. A number of unfortunate typographical errors could have been avoided. A careful spelling of foreign names would have helped. On the whole the book represents an interesting contribution to the field.

REVIEWED BY JOHN L. MELOY, American University of Beirut

Ilyās al-Qaṭṭār has provided the field of Mamluk studies a great service by authoring this comprehensive study of the province or vice-regency *(niyābah)* of Tripoli during the Mamluk period, starting from its roots as a county in the Crusader period until the Ottoman conquest. The author argues that during the Mamluk period Tripoli experienced an awakening *(nahḍah)* in a variety of fields—society, economy, urban development, military, demography—due in large measure to the attention the city received from the Mamluk state. The historical significance of the province not only lies in the multi-faceted growth it underwent until the mid-fourteenth century but, he argues, also is due to the fact that Tripoli was inextricably tied to the countryside. Al-Qaṭṭār makes the point that the *niyābah,* centered in Tripoli, was established to control the religious minorities in the region so that the city provided a locus of communication between these groups. Consequently, the study brings ″the countryside from the margins of Arab-Islamic history and places it in the sphere of interest of power″ (pp. 701-2). Historiographically, a study of the province of Tripoli serves as a means to combine the traditional urban orientation of Mamluk history with a view of the geographical and social margins of the state.

In spite of its rapid growth early in the Mamluk period, Tripoli never became one of the main metropolitan centers of the Mamluk state. Nonetheless, al-Qaṭṭār′s study demonstrates that it should be the object of modern scholarly attention since it affords the opportunity to examine inter-community relations and urban-rural connections, thus broadening and deepening our understanding of Mamluk history. Confessional and local sources from this region, of course, provide the opportunity to investigate inter-community relations. For example, the author uses the marginalia found in the Rabbula Gospel text, which comprise a record of the endowment deeds of the See of the Maronite Patriarchate from 1154 to 1522, as well as the

more widely known Maronite and Druze chroniclers. The author recognizes the limited scope of such sources and for a broader view of Tripoli's history he relies on the standard sources used by Mamluk historians.

The division of the book, to use the author's expression, is "classical" (p. 32). He starts with a lengthy introduction discussing the geographical setting of the city and the region, which includes a considerable amount of geological detail, the relevance of which is not altogether apparent. Subsequent chapters cover the following topics: (1) politics and the military, including extensive discussions of the Mamluk campaigns against the Crusaders and Ismailis and the campaigns into the Kisrawān region of Mount Lebanon; (2) society, including discussions of the Maronite, Ismaili, and Nusayri communities; (3) administration, including highly detailed descriptions of official positions in the provincial bureaucracy; (4) urban development, including descriptions of architectural and urban units; and (5) economy, ranging from the economic setting (sections on the plague, locusts, wind storms, etc.) to industry, maritime trade, revenue assignments, and other topics. Many of these chapters contain long series of sub-sections rather monotonously describing particular items or phenomena; e.g., commodities, building types, administrative districts, etc. Of course, the drawback of this encyclopedic scheme of organization is that the tremendous amount of detailed information can overshadow the valuable arguments expressed in his concluding remarks. However, this style, which is by no means unusual, should not be allowed to detract from the author's contribution. Throughout the text, al-Qaṭṭār briefly explores a number of substantive issues, including discussions on the nature of cities in the province, the role of villages, modes of research in Islamic urbanism, and an especially interesting set of remarks on the nature of the relationship between the provincial administration and the local population. These and other discussions may be of concern to Islamic historians in general, and will certainly be of interest to scholars of the Mamluk period in particular.

Al-Qaṭṭār's bibliography is quite extensive, although two entries are incomplete. Complete bibliographic information on the Rabbula text mentioned above, as well as the epigraphic data preserved on Tripoli's buildings, would have been helpful, rather than the brief descriptions provided under the rubric of "Archives" (p. 703, and see the description of his sources on pp. 26-27). This oversight is indeed curious since the study as a whole is thoroughly documented; citations for these "archival" sources are contained, one might even say buried, in the notes of the respective chapters.

To a great extent Ilyās al-Qaṭṭār has anticipated Stephan Conermann's call, issued in the last volume of *Mamlūk Studies Review* (pp. 257-60), for studies taking on a microhistorical approach. Historians of the Mamluk Sultanate will appreciate al-Qaṭṭār's monograph on the province of Tripoli, particularly for its

wealth of information on this important but often overlooked medieval city and its hinterland.

AḤMAD IBN ʻALĪ IBN ḤAJAR AL-ʻASQALĀNĪ, *Tarjamat Shaykh al-Islām Ibn Taymīyah,* edited by Abū ʻAbd al-Raḥmān Saʻīd Maʻshashah (Beirut: Dār Ibn Ḥazm, 1419/1998). Pp. 76.

REVIEWED BY JON HOOVER, University of Birmingham

The Shafiʻi scholar Ibn Ḥajar al-ʻAsqalānī (d. 852/1449) is best known for his commentary on al-Bukhārī's hadith collection, *Fatḥ al-Bārī*. Among his numerous other writings is *Al-Durar al-Kāminah,* a biographical dictionary devoted solely to important persons of the eighth Islamic century. This dictionary allots a considerable sixteen pages to the Hanbali jurist Ibn Taymīyah (d. 728/1328). The booklet under review prints only Ibn Taymīyah's biography as found in a manuscript isolated from the rest of *Al-Durar* and located in the Kuwaiti Markaz al-Makhṭūṭāt. The editor gives the source of the manuscript as the Dār al-Kutub in Egypt, but he does not tell us more about its origin or its transmission apart from the remainder of *Al-Durar*.

This copy of Ibn Taymīyah's biography does not appear to differ substantially from that found in the edition of *Al-Durar* printed in Hyderabad in 1348/1929-30 (vol. 1, 144-60). In his footnotes, the editor lists numerous minor discrepancies between his manuscript and a copy of *Al-Durar* printed in Egypt. I did not have access to the Egyptian edition, but it appears there are also slight differences between this and the Hyderabad edition.

The editor's purpose in publishing this booklet is expressly apologetic. In his introduction, he notes that some unnamed elements in our time have taken it upon themselves to brand as unbelievers *(takfīr)* scholars like Ibn Qayyim al-Jawzīyah, Muḥammad ʻAbd al-Wahhāb, and Ibn Taymīyah. Ibn Ḥajar's biography of Ibn Taymīyah then serves as a refutation of this charge because the great Shafiʻi hadith scholar refused to call Ibn Taymīyah an unbeliever. Moreover, the biography reveals that even many of those who differed with the Hanbali jurist admired him and acknowledged his deep piety, extensive knowledge, and defense of Islam against heresy. In short, the editor sets forth a highly respected figure in Islamic religious sciences to testify on Ibn Taymīyah's behalf against his modern detractors.

After the introduction, the editor supplies us with a short biography of Ibn Ḥajar. Brief notes on the manuscript and editorial method follow, as do pictures

of the first and last manuscript pages. Then comes the text of the biography. This is liberally supplemented with footnotes devoted to textual variants, identification of personalities appearing in the text, and correction of factual errors in Ibn Ḥajar′s account.

As biographies of Ibn Taymīyah go, Ibn Ḥajar′s account is highly unusual. It contains claims that come as a surprise to anyone familiar with Ibn Taymīyah′s life and writings. Without explanation, Ibn Ḥajar tells us Ibn Taymīyah recanted from his doctrine of God′s attributes during his trials of 705/1306 and a report was written to the effect that he had said he was an Ash'arī. At another point, we find Ibn Ḥajar has Ibn Taymīyah confessing to be a Shafi'i.

As the editor indicates, it would seem the traditionalist Ibn Ḥajar was trying to ameliorate the bad reputation Ibn Taymīyah had in some Shafi'i quarters by bringing him into conformity with the orthodoxy of the time. Yet I am not sure this interpretation is adequate because the cost entailed in Ibn Ḥajar′s reworking of Ibn Taymīyah′s story is so high that one begins to wonder whether it might be a form of satire. Contrary to what one might expect from someone writing an apology, Ibn Ḥajar turns Ibn Taymīyah into a groveling wimp, and the editor himself devotes considerable effort to correcting this image in his footnotes. In any case, the reasons for Ibn Ḥajar′s odd portrayal of the Hanbali jurist remain unclear, and this suggests an intriguing avenue for further inquiry.

The editorial work and the printing of this biography are superb. Yet it remains only a printed edition of a single manuscript about whose provenance we know little. The primary significance of this little booklet is the reminder that some curious puzzles remain to be solved in the legacy of one of Islamic history′s most controversial figures.

ḤUSNĪ MUḤAMMAD NUWAYṢIR, *Al-'Imārah al-Islāmīyah fī Miṣr: 'Aṣr al-Ayyūbīyīn wa-al-Mamālīk* (Cairo: Maktabat Zahrā' al-Sharq, 1996). Pp. 724.

REVIEWED BY NASSER RABBAT, MIT

In its architectural heritage, Cairo is unquestionably one of the world′s richest cities. Its monuments run the gamut of styles from the seventh to the twentieth century that we now call ″Islamic.″ The most spectacular, however, date from the Mamluk period (1250-1517), which created a wealth of structures that synthesized the achievements of earlier times and symbolized the image of the city for centuries to come. The Mamluk period also produced the largest and most complete study

of a city in Islamic history, Taqī al-Dīn al-Maqrīzī's *Al-Mawāʿiẓ wa-al-Iʿtibār bi-Dhikr al-Khiṭaṭ wa-al-Āthār*. Composed between 1415 and 1439-40, it records with loving care each and every street and every important structure in Cairo and, to a lesser degree, other Egyptian cities up to Maqrīzī's own time. This encyclopedic book has remained extremely influential for more than five centuries, not only because of its expansive range, but also, and perhaps more powerfully, because of its intense emotional charge as an expression of Maqrīzī's filial affinity with his city and his country.

It is not surprising, then, that most modern Egyptian architectural historians have focused on the Mamluk period and that so many among them have come under Maqrīzī's intellectual and rhetorical sway. Some even come across as his modern, visually-oriented heirs. Like him, they weave together architectural descriptions with historical sketches and anecdotes about the patrons, users, and builders (when they are known). And like him their narrative is more diachronic than synchronic.[1] Others adopt either a typological or a chronological approach, though they still depend on Maqrīzī's data, structure, and prose.[2] For all of them, however, Maqrīzī provides an essential pretext to a scholarly tradition that presents Cairo's architectural history as an endogenous development which unfolds over time with minimal interaction with the outside world, and which is suffused with self-conscious patriotism.

The most recent entry in this category is Ḥusnī Muḥammad Nuwayṣir's *Al-ʿImārah al-Islāmīyah fī Miṣr: ʿAṣr al-Ayyūbīyīn wa-al-Mamālīk*. Though the title mentions Egypt, the book only deals with the Islamic architecture of Cairo in the Ayyubid and Mamluk periods. In three unequal sections—on the Ayyubids (114 pp.), the Bahri, or Turkish, Mamluks (110 pp.), and the Burji, or Circassian, Mamluks (494 pp.)—a selection of monuments is listed, their architecture described in varying degrees of detail, and, when available, their *waqf*s quoted to elucidate their forms and functions. This last aspect is probably the most significant and beneficial addition that this book brings to the usual survey of Cairene architecture. It also gives the book a stronger Maqrizian flavor than its predecessors since both authors, Nuwayṣir and Maqrīzī, insert *waqf* texts into their descriptions to lend them a more authoritative tone.

The book, however, lacks a clear criterion for its selection of representative buildings; those chosen vary in relevance from one historical period to the next. The list of Ayyubid monuments is fairly complete, although there are some historical

---

[1]Cf. Ḥasan ʿAbd al-Waḥḥāb, *Tārīkh al-Masājid al-Āthārīyah Allatī Ṣallá fīhā Farīdat al-Jumʿah Ḥaḍrat Ṣāḥib al-Jalālah al-Malik al-Ṣāliḥ Fārūq al-Awwal* (Cairo, 1946; reprint 1994).

[2]Cf. Aḥmad Fikrī, *Masājid al-Qāhirah wa-Madārisuhā,* 3 vols. (Cairo, 1962-69); Aḥmad ʿAbd al-Razzāq Aḥmad, *Tārīkh wa-Āthār Miṣr al-Islāmīyah* (Cairo, 1977; reprint 1993).

problems in including the mausoleum of the Abbasid caliphs and that of the Sultana Shajar al-Durr in that category—the former because the building is most probably early Mamluk, although the first tomb under its dome dates back to the late Ayyubid period (1242); the latter because Shajar al-Durr is considered by most historians to be the first Mamluk ruler, although she was the consort of al-Ṣāliḥ Najm al-Dīn Ayyūb. The list of the Bahri Mamluk buildings, on the other hand, gives only 7 examples out of almost 100 structures still standing today in part or in toto, and is therefore too limited and arbitrary to allow the reader any general observations on the period's architectural characteristics or its main achievements. A somewhat better ratio obtains with the treatment of Burji (or Circassian) monuments: 28 out of a total of almost 150 still standing. Here, Nuwayṣir is at his best: his descriptions are careful and detailed and supported by *waqf* information in 20 of the 28 monuments covered (especially in the last part which covers Qāytbāy's buildings, the subject of Nuwayṣir's Ph.D. dissertation).

Given the disparity between the three sections, one is inevitably led to see the book more as an excursion into the Ayyubid and Mamluk architecture of Cairo, in a way reminiscent of the much earlier *Rambles in Cairo* (Cairo, 1931) by Mrs. Devonshire, than as a comprehensive study. This impression is further confirmed when one considers the book's structure: it has no preface and no conclusion summarizing its method and goals. Only the Ayyubid section has a brief introduction. It begins with a comment on the neglect that the architecture of the Ayyubids suffered at the hands of the "Orientalists," purportedly "because of their religious biases against Ṣalāḥ al-Dīn." This is patently untrue, and the point is embarrassingly belied by the fact that the author heavily depends for his text, and especially for his figures, on K. A. C. Creswell's *Muslim Architecture of Egypt* (Oxford, 1959), a dependence that is never acknowledged. Moreover, the copying appears to have been done in haste, for the author does not seem to have checked some of the Arabic names in the English transliteration, so that the name of the Abbasid envoy to the last Ayyubids, Abū Naḍlah, is rendered with a *dāl,* following the anglicized form, when the original was with a *ḍāḍ* (pp. 100 and 104, figs. 5 and 6).

The book nonetheless provides fairly complete architectural descriptions of a number of key Cairene monuments, especially those of the late Burji period, which are not covered in Creswell's still magisterial survey (it had stopped in 1311, and we are still waiting for Christel Kessler's promised continuation). The book also fills a niche in the Arabic language market, in which inexpensive architectural surveys are otherwise unavailable. It is therefore regrettable that the numerous figures, borrowed from a medley of sources, are so badly reproduced and in such a maddening variety of scales as to be totally useless.

But what is really unfortunate, to this reviewer at least, is the persistence of the endogenous Maqrizian model, which might have been admirable in a pre-

nationalist fifteenth-century treatise, but not in this late twentieth-century survey—all the more because the last major study of Mamluk architecture, Michael Meinecke's *Die Mamlukische Architektur in Ägypten und Syrien* (Glückstadt, 1992), had already broken with the cosmocentric archetype to posit instead a framework of regional exchange. Having long suffered from an exclusivist and now largely discarded conception of Western architecture as having developed with little or no interaction with other traditions—including its own—the study of Islamic architecture, or any subcategory thereof, should embrace architectural and cultural interconnectedness as its interpretive credo.

Slave Elites in the Middle East and Africa: A Comparative Study, edited by Miura Toru and John Edward Philips (London and New York: Kegan Paul International, 2000). Pp. 248

REVIEWED BY WARREN C. SCHULTZ, DePaul University

This volume contains eleven papers presented at "The Slave Elites Workshop" organized by the Islamic Area Studies project of the University of Tokyo. The workshop was organized to move beyond symposia focused only on the Mamluk Sultanate and to "elucidate the transregionality and commonality of the slave-elite system in West Africa and the Middle East by paying attention to their similarities and differences" (p. xi). The book thus aims for a wider audience than Mamlukists. Indeed, several of the contributors call for more comparative studies with slave systems outside the Islamic world. It is to be hoped that it receives this wider audience, for a recurrent theme in several of the papers is that many of the theories and theses for analyzing slavery developed by scholars concerned with the Atlantic or East Asian slavery systems are of limited (if that) applicability to the many types of slavery found in the Islamic world.

The book is organized into three parts sandwiched between an introduction and conclusion: Part One: Origins (papers 1-3); Part Two: Power and Networks (4-7); and Part Three: Transitions (8-11). The contents include: the introduction "Slave Elites in Islamic History" by Sato Tsugitaka; "The Turkish Military Elite of Samarra and the Third Century Land Tenure System" by Matthew Gordon; "Slave Elites and the *Saqāliba* in al-Andalus in the Umayyad Period" by Sato Kentaro; "The Location of the 'Manufacture' of Eunuchs" by Jan S. Hogendorn; "My Slave, My Son, My Lord: Slavery, Family and State in the Islamic Middle East" by Dror Ze'evi; "The Changing Concept of *Mamlūk* in the Mamluk Sultanate in Egypt and

Syria″ by Nasser Rabbat; ″Waqf as an Instrument of Investment in the Mamluk Sultanate: Security vs. Profit?″ by Carl F. Petry; ″The Power of Knowledge and the Knowledge of Power: Kinship, Community and Royal Slavery in Pre-Colonial Kano, 1807-1903″ by Sean Stilwell; ″The Concept of Slavery in Ottoman and Other Muslim Societies: Dichotomy or Continuum″ by Ehud R. Toledano; ″Mawlay Isma‘il′s *Jaysh al-‘Abīd*: Reassessment of a Military Experience″ by Fatima Harrak; ″Comrades in Arms or Captives in Bondage: Sudanese Slaves in the Turco-Egyptian Army, 1821-1865″ by Ahmad Alawad Sikainga; ″The Persistance of Slave Officials in the Sokoto Caliphate″ by John Edward Philips; and the concluding remarks ″Slave Elites in Japanese History″ by Miura Toru.

Despite the comparative emphasis stressed in the preface, introduction, and conclusion, the bulk of these contributions are focused studies on specific cases in particular regions. While not specifically about the Mamluks, Hogendorn, Ze′evi, Toledano, and Philips do place their essays in wider contexts, and all refer at least in passing to the Mamluk Sultanate. Only the chapters by Rabbat and Petry are specifically devoted to matters Mamluk, with Petry raising comparative issues in the final section of his article. Given the nature of this journal and its primary audience, I will restrict my comments to these six essays, as individual readers will find the remaining chapters of value or not depending on their own interests in and needs for comparative examples.

Hogendorn′s contribution is bleakly fascinating as the author sketches out the nuts and bolts of the trade and manufacture of eunuchs in the Muslim Mediterranean world. It argues that economic factors—based mainly on the high post-operative death rates—are crucial to understanding why castration centers were located so far from final markets. Wide-ranging in terms of chronology, this chapter is based primarily on sources later than the Mamluks, with a heavy emphasis on the nineteenth century. The discussion of eunuchs in the Mamluk sultanate is primarily of a historical contextual nature, and is based on the work of Ayalon.

Ze′evi′s contribution is a short interpretive essay based on existing scholarship, in which he promises to look at familiar matters in a new way. He argues that in the Islamic world, it was necessary for future elite slaves to pass through a period of ″social slumber″ as full members of the master′s household before moving on to bigger things. Its greatest value, I believe, may be to the non-Islamicist reader, for he delivers a brief yet cogent analysis of the inapplicability for Islamic contexts of several aspects of Orlando Patterson′s thesis of slavery as social death. The inadequacy of Patterson′s central metaphor for the many types of Ottoman slavery is eventually endorsed by Toledano as well, although the latter specifically approves the value of approaches like Patterson′s which stress the ″mutually conditioning effect of the owner-slave relationship″ (p. 166). He ultimately favors a ″continuum based model″ for understanding owner-slave relationships over the simple

dichotomy of free/slave. Toledano also provides a useful overview of the wider field of slavery studies, identifying several possible reasons why to date many ″comparative″ studies of slavery have not included slavery in Muslim societies.

Philips′ essay is much broader than the title suggests. It is not just a case study of the Sokoto Caliphate′s eventual re-adoption of slave officials and soldiers after coming to power with an ideology condemning their use as un-Islamic, although that in itself is valuable enough. Weaving between issues of theory and evidence-based analysis, he deftly links his case study to the wider issue of the ubiquity of slave officials in the pre-modern Muslim world, reaching the conclusion that this institution was ineluctable (pp. 232-33). This frank, even iconoclastic, essay will certainly provoke thought.

The above-mentioned essays all reinforce the basic yet important point that many of our undergraduates have never realized, that not all slave systems are the same. Rabbat′s contribution illustrates for non-Mamlukist readers that not all mamluk systems are the same. Even though Rabbat reminds us that the sources available are not particularly forthcoming as to how the transition took place, the mamluk system established by Baybars and Qalāwūn and lasting into the fourteenth century was very different from the mamluk system of, say, the Abbasids or the Seljuqs. Mamluk mamluks were no longer life-long slaves, subjugated to their masters, but a ″caste″ of free individuals, with shared experiences and overlapping loyalties, to name but a few differences.

Petry′s essay is of a more foundational nature, exploring the convoluted details of that essential financial phenomenon, the *waqf*. After discussing the probable reasons for the popularity of *waqf*s among the Mamluk elite, Petry presents a detailed overview of the assets listed in the major *waqf* deeds of the penultimate Mamluk sultan, Qanṣūh al-Ghawrī. From the detailed lists of real estate, he teases out the conclusion that al-Ghawrī′s investments favored stability and reliability over profit and risk. He goes on to explore some potential ramifications of this observation. Petry has thus identified another important thesis against which other endowment deeds should be checked. Given that several hundred of these complex deeds survive from the Mamluk period, this would be a tedious task, but nevertheless a valuable one.

Finally, it is worth mentioning that this workshop was held in October 1998; the editors are to be commended for bringing the proceedings to publication so rapidly.

MUḤAMMAD IBN IBRĀHĪM AL-JAZARĪ, *Tārīkh Ḥawādith al-Zamān wa-Anbā'ihi wa-Wafayāt al-Akābir wa-al-A'yān min Abnā'ihi: al-Ma'rūf bi-Tārīkh Ibn al-Jazarī*. Edited with introduction by 'Umar 'Abd al-Salām Tadmurī (Sidon/Beirut: al-Maktabah al-'Aṣrīyah, 1998). Three volumes.

REVIEWED BY LI GUO, University of Notre Dame

For students of the early Mamluk era, Shams al-Dīn Muḥammad al-Jazarī (d. 739/1338) is our own al-Ṭabarī. Enough has been said about the originality and significance of this Damascene historian who is hailed as the father of early fourteenth-century Syrian as well as Egyptian (!) historical writing. His principal work *Ḥawādith al-Zamān wa-Anbā'uhu wa-Wafayāt al-Akābir wa-al-A'yān min Abnā'ihi (Events and News of the Time with Obituaries of Worthies and Notables)*[1] is regarded by medieval and modern scholars as one of the main sources on the reigns of Qalāwūn, al-Ashraf Khalīl, Kitbughā, Lājīn, and al-Malik al-Nāṣir. Unfortunately, the work has survived only in fragments, few of which have been published so far.[2] The current complete lavish edition of the extant fragments is, therefore, most welcome.[3]

Volume one is based on the famous Paris MS Bibliothèque Nationale arabe 6739 (wrongly given as 6379 in the Introduction), which was the basis of Sauvaget's masterly French summary (covering the years 689/1290 to 699/1299)[4] as well as of my partial edition, supplemented with the parallel text of al-Yūnīnī's *Dhayl Mir'āt al-Zamān* (covering the years 697/1297 to 699/1299).[5] In his brief introduction, the editor, after comparing it to al-Jazarī's *al-Mukhtār,* an epitome of the work edited by al-Dhahabī, noted that the Paris MS is neither the *Mukhtār,* nor the original of the *Ḥawādith* per se, but rather "another epitome of the work." And this assessment prompted him to postpone his comprehensive introduction to the work until Volume 2, which is believed to be part of "the original" (pp. 5-6).

[1]I use Little's translation of the title; see Donald Little, "Historiography of the Ayyūbid and Mamlūk Epochs," in *Cambridge History of Egypt*, ed. Carl Petry (Cambridge, 1998), 428.

[2]For modern scholarship on al-Jazarī, see Jean Sauvaget, *La Chronique de Damas d'al-Jazarī (Années 689*-698 H (Paris, 1949); Ulrich Haarmann, *Quellenstudien zur frühen Mamlukenzeit* (Freiburg, 1970); Donald Little, *An Introduction to Mamluk Historiography* (Montreal, 1970); idem, "Historiography," 427-30; Numan Jubran, "Studien zur Geschichte und Sozialgeographie von Damaskus im Ausgehenden 13. Jahrhundert: mit einer Teiledition der Chronik Šams ad-Dīn Muḥamad [sic] al-Ğazarīs," Ph.D. diss., Freiburg, 1987; Li Guo, *Early Mamluk Syrian Historiography: al-Yūnīnī's Dhayl Mir'āt al-Zamān* (Leiden, 1998), especially 1:41-59.

[3]Another edition is being prepared by Numan Jubran, Yarmouk University, Jordan.

[4]Sauvaget, *La Chronique*.

[5]Guo, *Al-Yūnīnī,* vol. 1, translation, vol. 2, Arabic text.

This is interesting but by no means a surprise insofar as the Paris MS bears another title, *Jawāhir al-Sulūk fī al-Khulafā' wa-al-Mulūk,* and has been identified by modern scholars as representing a recension of the acclaimed *Ḥawādith al-Zamān,* or *Tārīkh al-Jazarī* (not "Ibn al-Jazarī," as Haarmann repeatedly pointed out).

To review the edition, I did a spot check of the years 697 to 699 A.H., comparing it to the Paris MS, the microfilm of which is at my disposal, as well as my own edition of this portion where al-Yūnīnī's and al-Jazarī's versions run parallel, nearly identical, to each other.[6] It reveals that as far as the history section is concerned, Tadmurī's and my editions, based on the same manuscript, are nearly the same; but there are some different readings of poetry, the most thorny task in the editing process. One example must suffice here: on pp. 387-88 (the events of the year 697 A.H.), a panegyric poem celebrating Sultan Lājīn's recovery from an accidental injury was mistaken in Tadmurī's edition as prose.[7] Since these two editions are likely to be the only ones available for some time to come, I therefore offer the appended list of these different readings. Comments will be made only when errors, either Tadmurī's or mine, are obvious. Otherwise I leave the judgment to the reader. In the following list, T stands for Tadmurī's edition, and G for Guo's.

Volumes 2 and 3 present the text of the Istanbul MS, Köprülü 1037, which covers the years 725/1325 to 738/1338. This is the first complete edition, to my knowledge, of this portion of al-Jazarī´s work.[8] For the reasons mentioned above, a lengthy introduction is provided here, in Volume 2. It includes (1) a general description of the manuscript (pp. 5-7), (2) re-pagination of the misplaced folios (pp. 8-18), (3) an overview of the contents of the manuscript (pp. 18-20), (4) al-Jazarī´s method (pp. 20-23), (5) source criticism (pp. 24-29), (6) discussion of al-Jazarī´s reliance on ʻAlam al-Dīn al-Birzālī (pp. 29-34), and (7) al-Jazarī´s biography (pp. 34-41). The somewhat repetitive introduction does offer a great deal of information. However, for those familiar with earlier works by Cahen, Sauvaget, Haarmann, and Little on the subject, very little can be found that is new.

The edition of the three volumes is overall competent. The editor has supplied headings (marked with brackets) to each cluster of the text. Some additional contents, drawn from other contemporary or later sources, are provided as well (marked with brackets). The editor also thought fit to add to Volume 1 appendixes that contain quotations of al-Jazarī´s ″original″ from parallel sources, some still in manuscript (al-Fayyūmī´s [d. 1369] ″Nathr al-Jumān fī Tarājim al-Aʻyān,″ Dār al-Kutub MS 1746), that are missing from the Paris MS (pp. 469-79). The footnotes include grammatical corrections as well as variant readings from parallel sources. The indexes include Quran and hadith quotations and poems, as well as the table of contents and bibliographical references. But there is no index of proper names of persons and places, which is inconvenient.

[8]For the Istanbul MS, see Haarmann, *Quellenstudien*, 48-50.

SAMIRA KORTANTAMER, *Bahrî Memlûklar´da Üst Yönetim Mensupları ve Aralarındaki İlişkiler* (İzmir: Ege Üniversitesi, 1993). Pp. 208.

REVIEWED BY STEFAN WINTER, The University of Chicago

To many scholars in Turkey today, medieval Islamic history is of interest simply as a backdrop to the emergence of the early Turkmen beylicates in Anatolia. A noteworthy exception is Samira Kortantamer, lecturer in the Literature Faculty at Aegean University in Izmir, who treats the phenomenon of Qipchak Mamluk rule in Egypt and Syria first and foremost as a remarkable and unique episode in Middle Eastern and comparative political history. Her past contributions have included articles both on Mamluk historiography and on the Mamluk bureaucratic apparatus, as well as Turkish translations of key essays by David Ayalon and P. M. Holt (see the on-line Mamluk Bibliography).[1] In this monograph, Kortantamer sets out to explore the informal relations, sympathies, and personal rivalries between high government officials in order to explain the human and social dynamics that underpinned this sui generis form of rule.

Following Ibn Abī al-Faḍā'il´s *Al-Nahj al-Sadīd* (a portion of which the author edited and translated for her University of Freiburg dissertation in 1973), the members of the administration are defined here as the sultan, the caliph, the high amirs, the four head qadis, and the vizier. Kortantamer does not so much analyze the Mamluk system of government as provide an anthology of textual passages illustrating individual office holders´ mutual interactions. Her sources are limited in essence to Ibn Abī al-Faḍā'il and Maqrīzī´s *Sulūk*. While the citations are generally evocative and colorful, and are supplemented by extensive footnotes on technical terms and biographical references, one almost wishes the author had also developed a deeper, more essayistic interpretation of her subject.

After a brief overview of the genesis of Mamluk rule, the first section treats the sultans´ relations with their wives, sons, and daughters. Much of this is used to relate the story of Shajar al-Durr which, sensational as it may be, hardly typifies family relations in Mamluk-era aristocratic households. The author is then left to demonstrate that the women are really only mentioned in the sources in the context of royal weddings, the births of heirs, and occasionally pilgrimages. The situation is naturally different with respect to sons, and Kortantamer provides a few lively examples of some sultans´ attempts to get their offspring recognized as their political successors, and of al-Nāṣir Muḥammad´s increasingly frustrated efforts to have his son and prospective heir Anūk give up his girlfriend.

---

[1]http://www.lib.uchicago.edu/e/su/mideast/MamBib.html.

The discussion turns to the sultans′ relations with other state functionaries, beginning with the caliph. After reproducing Maqrīzī′s account of the caliphate′s transfer to Cairo, the author describes how the Mamluks′ respect for the institution gradually deteriorated to the point that individual caliphs could be deposed and exiled by the sultans, even against the wishes of the religious judges. Next comes the sultans′ relationships to the leading Mamluk amirs, which the author classes according to whether the incumbent sultan was strong or weak. The prototype of the former—al-Nāṣir Muḥammad—showered favors on his mamluk Tankiz until he wearied of his arrogance and set about to destroy him. For another example of a strong sultan′s wrath against his Mamluks, the author devotes ten pages to al-Nāṣir Muḥammad′s attempts to have agents assassinate Qarāsunqur and Ākkūsh al-Afram in Ilkhanid Iran. In contrast, weak or youthful sultans, such as al-Nāṣir Muḥammad′s son Barakah, were constrained to do the powerful amirs′ bidding. The qadis, on the other hand, had no political role at all, other than attending a new sultan′s enthronement and legitimizing his rule. Utilized to manifest the Mamluks′ respect for the religious law, the qadis could in fact be ignored or overruled in important matters such as the succession to the caliphate. Another position which lost much of its importance under the Mamluks was that of vizier. While political affairs became the sole prerogative of Mamluk military officers such as the *nā'ib,* the civilian vizierate saw its area of responsibility reduced to finance. Incumbents were frequently Coptic converts and invariably wealthy, which, as Kortantamer illustrates with the case of Ibn Zunbūr, made them especially susceptible to spectacular instances of divestment, torture, and expropriation.

Chapter II is devoted to relations from the caliph′s point of view and inevitably reiterates much of what was stated under sultan-caliph relations in Chapter I. Kortantamer quotes at length the passages describing the inductions of the first and second caliphs, contrasting this with al-Manṣūr ʻAlī′s abrupt dismissal of al-Mutawakkil in 1377. No matter how much religious prestige the caliphs were made to embody, the author concludes again, a strong sultan could always impose his choice for the office even against the opposition of the qadis.

The most stimulating excerpts are perhaps those presented in the final chapter, which deals with the high amirs′ relations to the sultan and to each other. The author begins by describing how slaves were imported and integrated into the military aristocracy of Egypt, while remaining rooted in their Turkish cultural background. Loyalty to one′s original master (and his household) was the highest moral value within Mamluk circles and thus a sine qua non for a successful political career. The only tie stronger than this was the Mamluk′s to his *khushdash,* or brother-in-arms. Kortantamer again categorizes Mamluk peer relations according to whether the sultan was weak or strong, as illustrated by the story of the amirs Qawṣūn and Bashtāk. Even on his deathbed, al-Nāṣir Muḥammad could still

pledge his two leading Mamluks to mutual loyalty. Afterwards, however, Qawṣūn succeeded in manipulating the ineffectual new sultan in order to eliminate his rival. Only when he thus overplayed his hand did the other amirs rally around the newly influential Aydughmish and topple Qawṣūn, with the term "Qawṣūnī" going down in popular parlance as an insult.

If Kortantamer's sources are already well-known to specialists, her selection of passages certainly captures much of the intrigue of "the Mamluk phenomenon." As a pioneering work in the arena of Turkish-language Mamluk studies, Kortantamer's contribution should do much to spark further interest and research.

SHAI HAR-EL, *Struggle for Domination in the Middle East: The Ottoman-Mamluk War, 1485-1491* (Leiden, New York, and Cologne: E. J. Brill, 1995) Pp. 238.

REVIEWED BY W. W. CLIFFORD, The University of Chicago

More than twenty years ago Andrew Hess challenged us to think of the early sixteenth/tenth century Mediterranean world not as geographically unitary but, rather, culturally differentiated. Hess believed his post-Braudelian "new segregation" of Mediterranean life could best be discerned at the fringe of its most antagonistic cultural zone—Ottoman-Habsburg North Africa. Fueling cultural segregation along this "archetypal" frontier was a mid-fifteenth/ninth century convergence of technological and political change into a military revolution benefiting Iberian expansion into the Western Islamic lands. Beset by structural bottlenecks, Andalusian and Maghribian states proved unable to replicate Iberian advantages in administrative centralization and military specialization. Even the Sa'dian dynasty, after a credible start, failed ultimately to harness the "unique combination of firepower, mobility and political unity" which made the Ottomans so competitive in the struggle for leadership within the Maghrib—just as it had made them in the Levant. For like the North African Sa'dians, the Levantine Mamluks had seemingly also failed to master the "new style of warfare." Despite its segregated, post-tribal, urban-based, institutional structure, the early sixteenth/tenth century Mamluk state was unmistakably "in the throes of its own decline," according to Hess, owing to its failure to "restructure [its] armies to fit the new (gunpowder) technology."[1]

[1]Andrew C. Hess, *The Forgotten Frontier: A History of the Sixteenth-Century Ibero-African Frontier.* (Chicago and London, 1978); idem, "Firearms and the Decline of Ibn Khaldun's Military Elite," *Archivum Ottomanicum* (1973): 173-200.

Despite its rather obvious importance, Islamicists have been generally reticent about Hess's revisionism. Typically perhaps, while the author of the book under review, Shai Har-El, affects some knowledge of Hess's work, he addresses it only tangentially in the end. This is all the more regrettable as his own thesis about the "defensive strategic principles" driving late Mamluk foreign policy largely parallels Hess's belief about the decline of Mamluk political and military power over the course of the fifteenth/ninth century. What analysis Har-El does provide of this decline constitutes little more than a potted summary of David Ayalon's traditional views on the systemic collapse of Mamluk civilization. Concerning the role of Hess's "new technology" in Mamluk decline, Har-El acknowledges only that there existed within the late Mamluk military an "insufficient use of firearms and new methods of warfare" (pp. 28, 54-55). Indeed, from Har-El's narrative of the decisive frontier battle at Ağa-Çayırı (1488/893) one infers that Mamluk victory was based less on their non-use of the "new technology" than their ability simply to frustrate Ottoman tactical deployment of their own. Despite its apparent validation of *furūsīyah,* Ağa-Çayırı was nevertheless a "hard lesson" to some in Cairo about the shortfall in Mamluk military preparedness, including Sultan Qāytbāy, who in its aftermath began inducting the arquebus formally into the Mamluk military arsenal (pp. 201-2).

While much of Har-El's book is filled expectably by traditional military-diplomatic narration, it is not entirely the kind of *l'histoire événementielle* about which Braudel liked so much to fret. At the outset Har-El attempts to center the usual story of Mamluk-Ottoman relations in a novel heuristic framework of interlocking regional "subordinate system[s]." Already embedded in a "Mediterranean subordinate system," the Mamluk and Ottoman states found themselves, according to Har-El, unavoidably entangled in the struggle for control of an Anatolian "subordinate frontier system" adrift since the collapse of Mongol authority in west Asia. Despite the successful evolution of a "balance of power system," which employed "shifting alliances" to limit "the amount of violence," traditional statecraft could not ultimately overcome regional centrifugal tendencies. The final collapse of the Anatolian frontier system into a post-Aqquyunlu "power vacuum" coincided with a sudden waning of Mamluk and waxing of Ottoman military capabilities. The concomitant differentiation between Cairo's "status quo" policy and Istanbul's increasingly "imperialist" one engendered an uncontrollable conflict that would achieve denouement not on the plains of Cilicia but in the Nile river valley itself. Thus was sown at Ağa-Çayırı (1488/893), Har-El seems to be intimating, the crop bitterly reaped at Raydānīyah (1517/923).

Indeed, the effectiveness of Har-El's study of the 1488/893 campaign cannot be divorced from his fine, antecedent geo-political analysis of Cairo's "status quo" policy. Briefly, in an effort to consolidate their post-Mongol strategic-commercial

position in the Near East, the Mamluks absorbed in 1375/776 the Little Armenian kingdom of Cilicia, inaugurating a ″new epoch″ which was to bring Cairo ″into a confrontation with the growing power of the Ottomans.″ To forestall this inevitable conflict, the Mamluks assembled an elaborate ″defense-in-depth system″ anchored by natural defensive barriers, i.e. the Anti-Taurus and Amanus mountains, as well as man-made ones, i.e. historic ″frontline″ (*thughūr*) and ″rearline″ (*ʻawāṣim*) military infrastructures. Layered into these relatively stable geo-strategic echelons were more frangible political sub-systems, i.e. ″outer″ buffer-client principalities (Karaman and Kadi Burhan al-Din) as well as ″inner″ ones (Ramadan and Dulkadir). While the Mamluks themselves guaranteed ″basic security″ against theater invasion, the Turkman buffer-clients were tasked to deal with border provocations. It was a break-down in this ″current security″ mission on the ″inner″ frontier after 1464/868 that would effectively doom the classical Mamluk state.

In general Har-El′s taxonomy helps to impose a certain meaningful order on the jumble of military-diplomatic events characteristic of this period. Some concepts, though, appear to have greater integrative value than others. His ″buffer-client system,″ for instance, seems a less affected and more dynamic heuristic structure than his quasi-stable, inter-regional ″subordinate systems.″ Har-El has furthermore an effective grasp of regional geography. Particularly valuable is his terrain overview of the Cilician campaign, giving readers a good feel for the operational problems confronting both Mamluk and Ottoman war planners. Ağa-Çayırı, by the way, is ″a plain roughly mid-way between Adana and Tarsus.″ Har-El has moreover sensibly buttressed his written descriptions with a variety of maps, an important inclusion too often omitted by scholars.[2]

A significant if somewhat undeveloped subplot in Har-El′s story of terrestrial conflict in Cilicia is that of maritime warfare, particularly the risky Ottoman projection of naval power onto the Mamluk littoral. Har-El draws attention principally to an important contemporary Ottoman naval *defter,* not much studied over the last half century, which lists the naval armament employed in the Ottoman flotilla.[3]

The *defter* notes intriguingly what appear to be two large, heavily-gunned, carrack-rigged sailing vessels—*bârça*s *(barza).* But aside from associating these vessels with the Ottoman sea-*ghāzī*, Burak Reis, who a decade later at the battle of Zonchio would command another of these experimental sailing warships, Har-El

---

[2]While the book can rightly be praised for its map production, the same cannot be said for editorial control over errata, of which there is a great deal.

[3]Haydar Alpagut*, Denizde Türkiye* (Istanbul, 1937), 627; İsmail Hakkı Uzunçarşılı*, Osmanlı Devletinin Merkez ve Bahriye Teşkilâtı* (Ankara, 1948), 512-13.

adds little to the historical appreciation of his own document.[4] This is not wholly surprising as his own secondary sources, while venerable, are quite dated. Absent, for instance, is Svat Soucek′s seminal, modern study of late medieval Ottoman naval terminology.[5]

And while any organized discussion of contemporary Ottoman sea-going artillery is difficult to discern in the secondary literature, Har-El′s own characterizations seem unaccountably problematic. The *prangi,* for instance, which figures prominently as the most numerous type of gun counted in the *defter,* is described by Har-El merely as ″certain firearms.″ In fact the *prangi* was a small-caliber swivel gun and a standard piece of Ottoman secondary naval armament. Har-El also defines the somewhat larger caliber swivel guns, *zarbazan*s, as ″mortars,″ a confusing appellation. Is he perhaps conflating the term with the smaller Spanish bow swivel gun (*morterete*) or with a siege mortar-bombard, or does he mean to suggest that the Ottomans had successfully mounted sea-going mortars on their warships two centuries before the accepted advent of a dedicated bomb vessel? Har-El′s own illustration of the Ottoman flotilla (p. 182) is a curious pastiche of round-bottomed, oared, single-masted, and square-rigged ship types, none visibly mounting, by the way, any of the guns listed in the *defter*. Har-El might have done better simply to re-read John Guilmartin, who not only describes but correctly *illustrates* some of these Ottoman gun tubes (pp. 158-72; 301-2).

While perhaps technical, the issue of naval artillery is not entirely scholastic. As a purpose-built, sailing gun-platform, the *pârça* did not long survive the fifteenth/ninth century to provide the Ottomans a possible blue-print for their own version of the ″fast and maneuverable carriers of *artillery*″ they would soon face in the Atlantic-style galleons.[6] We possess, then, in this contemporary naval *defter* a rare snapshot of an evolutionary dead-end in Ottoman naval development, one which was to have momentous historical repercussions for the Ottoman retention of strategic control of the early modern Mediterranean. While Har-El′s evaluation of both the operational and tactical significance of the Ottoman flotilla in the overall Cilician campaign is satisfactory, he might have brought greater historic insight to this important puzzle.

Concerning the demise of the Ottoman fleet off Cilicia, its foundering and partial capture in August 1488/Ramāḍan 893 after a sudden storm—possibly a seasonal *khamsīn*—Har-El′s short account (pp. 181-83) fails to appreciate fully the special characteristics of the local maritime environment. It is curious that his close attention to the geographical does not seem to extend ″offshore,″ as it were, to the hydrological or meteorological. Ottoman naval planners would almost certainly have known that Cilician waters posed a serious natural obstacle. Counter-clockwise currents, high waves, and katabatic squalls descending the Taurus range made even the summer months unfavorable, even dangerous, for sea-borne operations.[7]

It is sometimes claimed conveniently by Ottomanists, including Har-El (p. 192), that the unsuccessful campaign of 1488/893 was a token military gesture. Yet, how likely is it that Ottoman war planners would have jeopardized such a large, well-equipped fleet, including expensive ″capital″ ships (*pârça*s) in such a high-risk maritime environment and at such extreme operational range without serious expectation of strategic dividends? Upon reflection, Bayezid II′s naval descent on Ayas (1488/893) seems no more whimsical than his father′s (Mehmed II) sea-borne gambit at Otranto (1481/885).

From the Mamluk maritime perspective, one transcendent question emerges: Where was the Mamluk navy in 1488/893? Cilicia was still within operational range of Mamluk flotillas well into the early sixteenth/tenth century. Even the Ottoman naval force commander (*kapudan*) (and Sultan Bayezid′s son-in-law), Hersek-oğlu Ahmed Paşa, feared a Mamluk amphibious landing in Cilicia (pp. 177-78). Moreover, the fifteenth/ninth century had already witnessed the highly competent exercise of Mamluk *Seemacht* in the eastern Mediterranean, one which would be extended just a few years later into the Indian Ocean. Unfortunately, the mystery of the Mamluks and their relationship with firearms is surpassed in Har-El′s scholarship only by the puzzle of their relationship with naval vessels. And, as with firearms, Har-El is content to invoke *ipse dixit* David Ayalon′s rambling commentary on Mamluk naval history as answer (pp. 58-9).

Finally, the generally positive results of Har-El′s campaign study are somewhat spoiled by his over-calculated historical summation. His claim, for instance, that the aftermath of Ağa-Çayırı, including the peace treaty of 1491/896, somehow ″saved [Sultan Bayezid′s] prestige″ and gave the Ottomans ″a symbolic victory″ (p. 212) is unconvincing. Certainly, it diverges in sum and substance from the

Pryor, *Geography, Technology and War: Studies in the Maritime History of the Mediterranean 649-1571* (Cambridge, 1988); idem, ″Winds, waves, and rocks: the routes and the perils along them,″ *Maritime Aspects of Migration* (1989): 71-85; Victor Goldsmith and Stan Sofer, ″Wave climatology of the Southeastern Mediterranean,″ *Israel Journal of Earth Sciences* 32 (1983): 1-51.

interpretation given recently by Carl Petry, whose biography of Sultan Qāytbāy Har-El seems to have entirely overlooked.[8]

Furthermore, Har-El's contention that the subsequent Mamluk "shift from neutrality in [the] Ottoman-Safavid conflict" led to an actual "military alliance" between Cairo and Tabriz after 1514/920 also does not jibe. Though preliminary strategic talks were held, Mamluk-Safavid summitry ultimately derailed on their mutual struggle for symbolic diplomatic precedence.[9]

This all suggests a certain *post hoc ergo propter hoc* fallacy underpinning Har-El's basic historical reasoning. Despite the generally sensible integration of geo-politics into his study, there lingers a faint reductionist whiff of Turnerian physiography-as-history in his stress on the inevitability of some final reckoning between the proximal Mamluk and Ottoman states. Clearly, Har-El has unsuccessfully eluded the historicist embrace of Turkish nationalist scholarship, which has long held a belief in the mythic expansion of the frontier march (*uc)* as a primary source of Ottoman values and institutions. Yet, the violence of Ottoman-Mamluk encounters after Ağa-Çayırı, notably at Raydānīyah, should be interpreted as neither redemptive by Ottomanists nor apocalyptic by Mamlukists.

MUḤAMMAD ʻABD AL-GHANĪ AL-ASHQAR, *Tujjār al-Tawābil fī Miṣr fī al-ʻAṣr al-Mamlūkī* (Cairo: al-Ḥay'ah al-Miṣrīyah al-ʻĀmmah lil-Kitāb, 1999), Pp. 571.

REVIEWED BY HAYRETTIN YUCESOY, The University of Chicago

This study was originally a doctoral dissertation submitted to Ayn Shams University in Egypt. It treats the emergence, development, and demise of the spice trade in Egypt known as Kārimī. It comprises seven chapters, an introduction, a conclusion, and appendices (a list of Kārimī merchants during the Mamluk period, maps showing the trade routes and major centers, and charts depicting the family trees of two prominent Kārimī merchants).

As one may expect, al-Ashqar begins his study with a consideration of two central issues: the origins and etymology of the name Kārimī, and the circumstances of the rise of Kārimī commercial activity. His discussion of the first problem, in

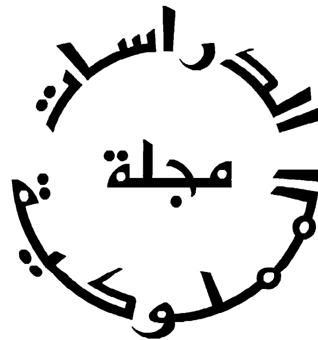
[8]Carl F. Petry, *Twilight of Majesty: The Reigns of the Mamluk Sultans al-Ashraf Qāytbāy and Qanṣūh al-Ghawrī in Egypt* (Seattle and London, 1993), especially 88-103.

[9]W. W. Clifford, "Some Observations on the Course of Mamluk-Safavi Relations (1502-1516/908-922): I & II," *Der Islam* 70 no. 2 (1994): 272-74.

which he compares and contrasts the main theories on the subject (such as that of Ṣubḥī Labīb [who has authored the article in the *Encyclopaedia of Islam*], of Goitein, and of al-Shātir Buṣaylī), concludes, unfortunately, without any new suggestions. Likewise, the author's conclusion that the Kārimī emerged as a group of merchants who had been known to operate locally up until the eleventh century, when they gradually expanded their horizons and began to engage in long-distance trade between the Indian Ocean and the coasts of the Red Sea and the Mediterranean, is a recapitulation of previous conclusions of scholarship.

Al-Ashqar pays due attention to the relationship between the high volume-big profit trade and the ruling institution, and highlights the benefits of the cooperation between the Kārimī merchants and the Mamluks in fostering trade on the one hand, and for stabilizing the Mamluk ruling apparatus, and launching large-scale military, architectural, and administrative projects on the other. His awareness of the role that European powers and merchants played in the Kārimī trade, and especially of the Mongol-European alliance and of the attempts to exclude the Mamluks from the east-west trade (a project that ended in the fourteenth century) show al-Ashqar's interest in considering the larger picture of the spice trade. However, one would expect to see a reference to Janet Abu-Lughod's study *Before European Hegemony,* a knowledge of which could have greatly improved his treatment. His disinterest in the theoretical dimensions of his subject is also evident in other chapters.

For instance, al-Ashqar deals with the social status and role of Kārimī merchants, categories of financial transactions, commercial and financial institutions, commodities, routes, centers, vessels, and seasons of Kārimī trade. He discusses how the Kārimī merchants realized very early their unique position and formed an intercontinental and long-lasting connection among themselves and how, by virtue of their wealth, organization, and control of Kārimī commodities, for which there was a high demand, they became a significant part of Mamluk economy, politics, and society. He also emphasizes the Kārimīs' skills and world-view which allowed them to master languages, chivalry, social manners, trade laws, taxation, astronomy, arithmetic, seafaring, etc. However, there is no attempt whatsoever to initiate an informed theoretical discussion about the role of Egypt in the crucial economic changes that took place globally in the period from the fourteenth to sixteenth centuries. In particular, a discussion of the rise of capitalism in Western Europe vis-à-vis the economic context of the Middle East, would have been desirable. It is perhaps asking too much to expect al-Ashqar to discuss the theoretical implications of the trade boom, capital accumulation, group solidarity, and international outlook of the Kārimīs and of the ways in which they might have affected the configuration and outlook of Mamluk society. After all, if he is silent on these matters, so is the mainstream of historical scholarship.



Al-Ashqar′s explanation of the decline of the Kārimī trade hurts his study, rather than helping it reach a convincing conclusion. His division of the causes of decline into ″external″ and ″internal″ is artificial and is based on a perspective other than that of the Kārimīs themselves. It shatters the whole notion of the intercontinental scope and sophistication of the spice trade, thus giving the wrong impression that internal and external causes can be separated. Al-Ashqar seems to have gathered material and presented it as a cause for decline without much analysis or attention to the time-frame in which events took place. It is neither appropriate nor convincing to string together ″causes″ spanning from the beginning of the fourteenth century to the sixteenth century (the papal boycott, for example, the discovery of the Cape of Good Hope and the following Portuguese monopoly of the spice trade in the period between 1499-1509, and Qāytbāy′s confiscation of the property of the Kārimīs in the beginning of the sixteenth century). He does not mention the specific conditions which caused some recurring phenomena throughout two centuries, (e.g., confiscation of property, the papal boycott, pirate activity, etc.) to be crucial factors in the collapse of the Kārimī trade in the late fifteenth century.

All in all, al-Ashqar makes extensive use of sources in his study, consults contemporary scholarly literature—not necessarily the most recent, however—and incorporates some of their arguments in his research primarily to verify his suggestions or to argue a point. One could wish he had provided the reader with a brief assessment of the scholarly literature on his topic and then highlighted his own contributions. Despite all the shortcomings of the study and the lack of new insights for specialists on the Kārimī merchants, just to see ideas substantiated by evidence taken from primary sources and enriched by examples, without unnecessary and misleading rhetoric of religiosity and nationalism, is refreshing. To be sure, there is repetition and needless digression in some parts; the print is not reader-friendly, nor are the maps and charts. There are many spelling mistakes where the Latin alphabet is used, and yet more embarrassingly there is a missing signature of sixteen pages between pages 193 and 208. One must point out also that his description of trade routes is less than adequate. Also, al-Ashqar would have done a much better job had he included legible maps and better studied the commercial centers in terms of their specific value for Kārimī trade. Chapter Six, which discusses how the Kārimīs deployed their intercontinental potential to connect distant territories by acting as envoys, missionaries, and patrons of art and learning, could have been integrated into the previous three chapters, since it deals with many of the subjects treated in Chapters Three, Four and Five. One would say in conclusion that the book makes an acceptable ″inflated version″ of the *Encyclopaedia of Islam* article ″Kārimī,″ albeit in a not very attractive form.

MAMLŪK STUDIES
REVIEW

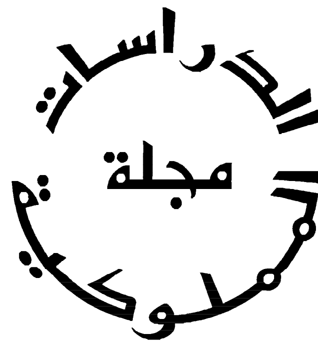
Published by the Middle East Documentation Center (MEDOC)
The University of Chicago

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. All submissions should be typed double-spaced. Submissions must be made on labeled computer disk or online, together with a printed copy. The print copy should have full and proper diacritics, but the disk or online copy should have no diacritics of any kind.



Note: Readers of *Mamlūk Studies Review* who have access to the World Wide Web are referred to the MEDOC home page: http://www.lib.uchicago.edu/e/su/mideast. This site provides links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of primary and secondary sources, created and maintained by MEDOC. Authors may download editorial and style guidelines from the Mamluk Studies Review page. The site also has information about subscribing to the Mamluk listserv. The Mamluk listserv is an open forum for discussions of all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the *Review.*

ISSN 1086-170X.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2006 Prize, dissertations must be defended by December 31, 2006, and submitted to the Prize Committee by January 31, 2007. Submissions should be sent to:

Chair, Prize Committee

Preface

In the course of my work as editor of this journal, and also as editor of the *Chicago Online Bibliography of Mamluk S*tudie*s,* I began to take note of a body of scholarship in the field of Mamluk studies by Japanese scholars. Of course, I don´t read Japanese, so my acquaintance with this scholarship was limited to books and articles written in European languages. Once my curiosity was piqued, however, I began to review a number of scholarly journals published in Japanese which also included English abstracts. I was surprised not only by the amount of work being done in the field by our Japanese colleagues, but was also impressed by the erudition and originality displayed by some of the authors. I recently counted the number of citations to works by Japanese scholars which appear in the *Chicago Online Bibliography of Mamluk Studies*. I found forty-nine citations to works written in languages other than Japanese. All are European languages except for one entry in Arabic and one in Persian (the latter is a translation of a book originally written in English). I also found fifty-four citations to works written in Japanese. This means, of course, that more than half of all Japanese scholarship in the field in essentially unknown outside of Japan, to the great detriment of the field at large.

In May of 2003, at a conference on Mamluk studies held at the University of Chicago, I had the opportunity to discuss all of this with Professor Sato Tsugitaka. In the course of our discussion I suggested that a special issue of *Mamlūk Studies Review* be devoted to articles written by Japanese specialists in the field and asked him to help me produce it. The volume in hand is the result of this collaboration. I wish to take this opportunity to thank Professor Sato, without whom the project could never have succeeded. Thanks are due also to my colleague Eizaburo Okuizumi, Japanese Studies Librarian at the University of Chicago, who took a keen interest in the project and answered, with unfailing good humor, questions about the romanization of Japanese titles and other issues. Thanks are also due Patrick Wing for his skillful editorial contributions and Olaf Nelson for solutions to myriad software and other technical problems.

Mamluk Studies in Japan: Retrospect and Prospect

Islamic and Middle Eastern studies in Japan has a long history dating back to the beginning of the Meiji Era (1868–1912), when research was first based on information received through China and translations of treatises by European scholars of Islam. From the 1930s on, Japanese scholars began to form various research associations and institutions, such as the Institute of Islamic Civilization Studies (Isuramu Bunka Kenkyujo, 1932), the Institute of the Islamic World (Kaikyoken Kenkyujo, 1937), and the Institute of Oriental Culture (Toyo Bunka Kenkyujo, 1941) in order to study Islam and Islamic civilization on their own. However, during World War II, they were directed by the Japanese government to investigate the contemporary situation of Muslim populations in such Asian countries under Japanese occupation as China, Indonesia, and Malaysia. The aim was clearly to utilize the sense of solidarity existing among these Asian Muslims in the war effort. After such research activities ceased with the end of the war in 1945, some scholars who chose to continue Islamic studies turned toward classical studies regarding medieval Islamic civilization, forsaking their research on contemporary Islam.

After World War II, a new era of Islamic and Middle Eastern studies was opened in Japan under the leadership of Maejima Shinji, Izutsu Toshihiko, and Shimada Johei. Maejima Shinji (1903–83) studied cultural exchange in the history of contact between East and West, making use of the available Chinese and Arabic sources. His major work was collected into the voluminous *Various Aspects of Cultural Exchange between East and West* (Maejima 1971). He is also known for his original translation of *Alf Laylah wa-Laylah* into Japanese under the title *Arabian Nights* (Maejima 1966–92).

Izutsu Toshihiko (1914–93) utilized the methodology of semantics in his study of the Quran, as revealed in such works as *The Structure of the Ethical Terms in the Koran*[1] and *God and Man in the Koran*.[2] He translated the Quran into Japanese,[3] which is widely read even today due to its accuracy and clarity. In his later years

[1]In English (Tokyo, 1959).

[2]In English (Tokyo, 1964).

[3]3 vols. (Tokyo: Iwanami Shoten, 1957).

Izutsu took great interest in studying the history of Sufism and Taoism in comparative perspective.

Shimada Johei (1924–90), who had pursued the fields of Arabic and Islamic history under ʻAbd al-ʻAzīz al-Dūrī, Bernard Lewis, and others at the University of London, made serious efforts to introduce European Islamic research methods into Japan. He wrote many articles in Japanese on the social and economic history of the early Islamic period, based on such Arabic sources as *Tārīkh al-Rusul wa-al-Mulūk* by al-Ṭabarī, *Kitāb al-Kharāj* by Abū Yūsuf, and *Futūḥ al-Buldān* by al-Balādhurī. His collected articles, entitled ″Studies on the Early Islamic State″[4] is regarded as a masterwork completed after his many years′ labor.

These pioneers, however, mostly focused on the study of Islamic history and civilization in the classical ages, not extending their interests to the Seljuqid, Ayyubid, or Mamluk periods. It was only from the end of the 1960s on that Japanese scholars started to investigate seriously the various subjects related to the Ayyubid and Mamluk dynasties.

The Beginning of Mamluk Studies in Japan

Before World War II, Kobayashi Hajime had studied the mamluks in Islamic history (Kobayashi 1939); however, his work was not concerned with the Mamluk dynasty, but with mamluk soldiers as a social and political phenomenon peculiar to Islamic civilization. I myself, after studying the methodology of Islamic history under Shimada, turned to the history of Mamluk Egypt and Syria which is favored with ample historical sources in Arabic. My intention was to see how the Mamluk period might be understood in the evolution of Arabic history since the early Islamic period, so I was stimulated by the article of Claude Cahen entitled ″L′évolution de l′iqṭāʻ du IXe au XIIIe siècle,″[5] which traced chronologically the evolution of the *iqṭāʻ* system in medieval Islamic history.

I too took up the subject of the *iqṭāʻ* system to disclose the relationship between state and society during the Ayyubid and Mamluk periods, but differed in approach from Cahen and Shimada, who had mostly studied the landholding and taxation systems. I first paid attention to cadastral surveys *(rawk)* conducted in Egypt and Syria during the years 1298–1325. I wrote two articles on this subject originally in Japanese (Sato 1967, 1969a), then revised and enlarged them into an English translation (Sato 1979). From these studies on the cadastral surveys, I found that very little research had been done on rural life and the peasantry in medieval Egypt and Syria. After collecting the sources related to this subject through a search of Arabic manuscripts in Cairo, Damascus, and Istanbul, I wrote

---

[4]In Japanese (Tokyo: Chuo Daigaku Shuppanbu, 1996).

[5]*Annales, économies, sociétés, civilisations* 8 (1953): 25–52.

a major article on rural society and the peasantry in Ayyubid and Mamluk Egypt (Sato 1973). A collection of my articles on the evolution of the *iqṭā‘* system was published in Japanese in 1986, then in 1997 I published an English book entitled *State and Rural Society in Medieval Islam: Sultans, Muqta‘s, and Fallahun* (Sato 1997), which included the above-mentioned Japanese research in revised and enlarged form. My empirical work on Egyptian rural society during the medieval period served as a stimulus to the appearance of a book *Al-Qaryah al-Miṣrīyah fī ‘Aṣr Salāṭīn al-Mamālīk*[6] by an Egyptian scholar, Majdī ‘Abd al-Rashīd Baḥr.

Kobayashi Seiichi, following his study of commercial policy under the Mamluk government (Kobayashi 1973a), took up the study of the formation of Sufi orders and their activities in medieval Egypt (Kobayashi 1973b, 1975). After that, however, his interest changed to the modern history of Egypt, particularly religious movements there during the eighteenth and nineteenth centuries.

Yajima Hikoichi, who had studied Arabic and Islamic history under Maejima Shinji, intended to examine commercial and cultural activities in the Islamic world during medieval times. Basing his work on the original Arabic sources, Yajima disclosed various aspects of Egyptian commercial policy during the Bahri Mamluk period (Yajima 1980). In his study of the commercial activities of the Kārimī merchants, he made clear the trade route connecting the Nile valley with the Red Sea coast, focusing on the Qūṣ-‘Aydhāb route (Yajima 1986). He then published a valuable work describing historical change in international commercial networks of medieval Islam, although not touching on the causes of such changes (Yajima 1991). After a long-term study of the Arabic manuscripts of the travel accounts by Ibn Baṭṭūṭah, Yajima translated *Tuḥfat al-Nuẓẓār* into Japanese with very learned annotations (Yajima 1996–2002). Now he is preparing a new critical Arabic text of *Tuḥfat al-Nuẓẓār,* based on the collected manuscripts.

Yukawa Takeshi, who was also a student of Maejima, has studied the social and cultural activities of the ulama in Egypt during the Ayyubid and Mamluk periods. He published several articles on such subjects as the ulama community in medieval Upper Egypt (Yukawa 1979a), the activities of the Maghribi and Andalusi ulama in Egypt (Yukawa 1980), and Ibn Jamā‘ah's ideas on education (Yukawa 1990a). In particular, Yukawa became interested in the political thought of Ibn Taymīyah (Yukawa 1983a, 1985, 1988, 1990b), translating *Al-Siyāsah al-Shar‘īyah* into Japanese in collaboration with Nakata Ko (Yukawa 1991: Nakata 1991b).

Morimoto Kosei began his research on the taxation system in Egypt during the early Islamic period, based mainly on Greek and Arabic papyrus documents. His results were published under the title of *The Fiscal Administration of Egypt in the*

---

[6]Cairo, 1999.

Early Islamic Period.[7] He then became interested in the historical views of Ibn Khaldūn and translated the *Muqaddimah* into Japanese (Morimoto 1978–87), and wrote an article on judicial corruption during the Mamluk period, utilizing the original sources describing what Ibn Khaldūn saw in Egypt (Morimoto 2002).

Ohara Yoichiro, who had worked at the Japanese Ministry of Foreign Affairs, published a book in Japanese entitled *The Mamluk Dynasty in Egypt* (Ohara 1976). However, it is not an original work, but a collection of academic research done by modern Arabic scholars. Mutaguchi Yoshiro is a journalist who has contributed considerably to attracting general readers to Islamic and Middle Eastern issues through books on the medieval and contemporary Arab world (Mutaguchi 1972, 1986a). His Japanese translation of *Les Croisades vues par les Arabes* by Amin Maalouf (Mutaguchi 1986b) is still widely read by university students.

The New Era of Mamluk Studies in Japan

Yajima, Yukawa, myself, and other scholars initiated the field of Mamluk studies in Japan and oriented the research toward a new era of prosperity since the 1980s. Kikuchi Tadayoshi, who had studied Oriental history at Waseda and Osaka Universities, took up the study of the social life of Mamluk Egypt, focusing on the personal histories of *muḥtasib*s in Cairo (Kikuchi 1983). He then wrote several articles on the Arabic manuscript *Al-Rawḍ al-Bāsim fī Ḥawādith al-ʻUmr wa-al-Tarājim* by ʻAbd al-Bāsiṭ al-Ḥanafī (d. 1514), who was a son of Khalīl ibn Shāhīn, author of *Zubdat Kashf al-Mamālik* (Kikuchi 1997, 2000, 2002). Kikuchi's intent was to describe a vivid history of Mamluk Egypt by comparing the accounts of ʻAbd al-Bāsiṭ, Ibn Taghrībirdī, al-Sakhāwī, Ibn Iyās, et al.

Miura Toru, who had the unique experience of working at a publishing company for about ten years, began his research activities on the urban history of Damascus during the Mamluk period under my guidance. His research on the suburb of Damascus, al-Ṣāliḥīyah (Miura 1987, 1989d, 1995b) intended to describe the urbanization process of al-Ṣāliḥīyah during the Ayyubid and Mamluk periods, based mainly on *Al-Qalā'id al-Jawharīyah fī Tārīkh al-Ṣāliḥīyah* by Ibn Ṭūlūn (d. 1546). He then extended his research interests into the social activities of outlaws called *zuʻr* in al-Ṣāliḥīyah during the Mamluk period (Miura 1989a, 1989c). On the other hand, Miura has made serious investigations into the court documents preserved at Markaz al-Wathā'iq al-Tārīkhīyah fī Dimashq. Based on his detailed study on these documents, he shed light on the actual situation of the Islamic legal system from the late Mamluk to the Ottoman period (Miura, 2000b). *Slave Elites in the Middle East and Africa,* edited by Miura and John E. Philips (Miura and Philips 2000) is also a useful contribution to the comparative study of mamluks in

[7]In English (Kyoto: Dohosha, 1981).

Islamic history, including the Mamluk period.

Hasebe Fumihiko, stimulated strongly by Boaz Shoshan's article "Grain Riots and the 'Moral Economy': Cairo, 1350–1517,"[8] studied the food riots that occurred in the later Mamluk period through the Arabic source materials (Hasebe 1988). He extended his interest to studying the characteristics of Egyptian society in the abnormal weather, famine, and epidemics that occurred during the fourteenth century (Hasebe 1989). His research on food riots attempts to explain the actions of the Mamluk government when faced with such severe disturbances as well as to disclose the actual conditions of grain price fluctuations and food shortages in Mamluk Cairo (Hasebe 1990, 1993, 1994, 1999a). Recently, Hasebe has taken up the relationship between the sultan's kingship and the Sufi saints during the end of the Mamluk period (Hasebe 1999b, 2002), and has edited an interesting book entitled *Poor Relief in the Medieval Mediterranean Cities* (Hasebe 2004b), which includes two articles on the relief efforts in medieval Cairo and Jerusalem (Hasebe 2004c; Miura 2004).

Matsuda Toshimichi, who was a student of Shimada, has made efforts to study the useful documents of St. Catherine's Monastery. Based on his elaborate decipherment of these documents, he has written many articles on such subjects as nomads in the Sinai Peninsula (Matsuda 1989, 1991a), the dissolution of *waqf*s (Matsuda 1991b), the *dhimmī*s in medieval Egypt (Matsuda 1990b), *maẓālim* institutions under the Mamluks (Matsuda 1990a), and the oath *(qasāmah)* found in the proclamations of Sultan Qāytbāy (Matsuda 1995b). Recently, he expanded his research interest to the Ḥaram documents in Jerusalem and introduced several sources related to the qadis in Jerusalem and the Christian pilgrims who traveled there during the Mamluk period (Matsuda 1997, 2004).

Ohtoshi Tetsuya, who studied Arabic and Islamic history under my guidance at the University of Tokyo, took special interest in communicating with Egyptian poor people, living among them in Old Cairo for two years. His first article (Ohtoshi 1993a, 1993b) describes concretely various aspects of popular visits to al-Qarāfah (the City of the Dead) in Cairo, utilizing the Arabic manuscripts of the *ziyārah* books, travel guides *(mashāyikh al-ziyārah)* written between the twelfth and fifteenth centuries. Then he discussed several phases of development and the social function of al-Qarāfah during the Ayyubid and Mamluk periods, by analyzing the accounts of chronicles, *waqf* documents, and biographies in addition to the *ziyārah* manuscripts (Ohtoshi 1994, 1996a). Ohtoshi then extended his research interest gradually into considering the conceptualization of "Egypt" as reflected in visits to the holy tombs in Muslim society (Ohtoshi 1998, 2001b), the relationship between the Copts and Muslims in twelfth- through fifteenth-century Cairo (Ohtoshi

[8] *Journal of Interdisciplinary History* 10, no. 3 (1980).

2001a, 2003), and the aspects of *taṣawwuf* as revealed in the *ziyārah* books and the visits to al-Qarāfah (2004a, 2004b).

Taṣawwuf is one of the main subjects studied by Japanese scholars. In addition to Ohtoshi´s and my work (Sato 2001), there is Kisaichi Masatoshi´s book entitled *Isuramu seija* (Muslim saints),[9] focusing on the Sufi saints in the Maghrib countries. Tonaga Yasushi, who has seriously examined the methodology of *taṣawwuf* studies, has clarified the position of *taṣawwuf* in Sunni thought during the Mamluk period (Tonaga 1990b) as well as the controversies over the orthodoxy of *waḥdat al-wujūd* during the late Mamluk period (1990a). In contrast to Tonaga´s work, Nakata Ko turned to the study of the religious and political thought of Ibn Taymīyah, including the significance of *ijmā‘* (Nakata 1987), the theory of Quranic exegesis (Nakata 1988), and a refutation of metaphor *(majāz)* theory (Nakata 1990a).

The field of Islamic archeology was pioneered by Kawatoko Mutsuo at the Middle Eastern Culture Center, who published a voluminous work entitled *The Egyptian Islamic City* (Kawatoko and Sakurai 1992), which includes the survey results of his elaborate excavation work done at al-Fusṭāṭ for seven years beginning in 1978. Kawatoko also clarified the international coffee trade in south Sinai between the late fifteenth and the early eighteenth century, utilizing the Arabic documents excavated at the port of al-Ṭūr (Kawatoko, 2001). Shindo Yoko, who participated in the excavations at al-Fusṭāṭ and al-Ṭūr along with Kawatoko, took special interest in glassware throughout the Islamic world. Classifying and analyzing the pieces unearthed from al-Ṭūr and Rāyah, she has written several articles on Islamic marvered glass (Shindo 1993), glass bracelets (Shindo 1996), and glass beakers (Shindo 2004b), and recently has published a book in Japanese entitled *Arts and Crafts in Islam* (Shindo 2004a), which is a general history of the subject.

Some Characteristic Features of Mamluk Studies in Japan

First of all, it should be mentioned that the third generation of Japanese scholars studying the Mamluk dynasty appeared in Japan during the first half of the 1990s. They study various subjects related to state and society in the Mamluk period, based on the Arabic, Turkish, and Italian documents. Kondo Manami, following the publication of an article on the practice of law in Mamluk Syria (Kondo 1994), took up Taqī al-Dīn al-Subkī and his family in relation to the activities of ulama during the Mamluk period (Kondo 1995, 1999). Horii Yutaka, who studied the Ottoman conquest of Egypt as a turning point in the history of the Eastern Mediterranean world, has examined the commercial relationship between Italian cities and Islamic states during the fifteenth and sixteenth centuries. Based on the Arabic and Italian source materials, he has described the situations of the Venetian

[9]Tokyo: Kodansha, 1996.

consul and residents in Egypt under the Ottoman conquest (Horii 1997a, 1997b) as well as under late Mamluk rule (Horii 1999, 2003). Igarashi Daisuke first studied the Syrian financial policy during the late Mamluk period (Igarashi 1999), and then, after a stay in Syria for two years, considered the legal opinions about the *bayt al-māl* by al-Balāṭunusī, a Shafiʻite scholar in Mamluk Damascus (Igarashi 2003). Recently, he is studying the establishment and development of the *dīwān al-mufrad* under the Circassian Mamluks to clarify the transformation of the Mamluk regime during the fifteenth century (Igarashi 2004).

Another newcomer, Nakamachi Nobutaka, who first studied Armenian in his graduate work, took an interest in examining the peace treaties that Baybars concluded with the Franks and the Armenians (Nakamachi 1996). Following the publication of an article on military refugees from the Ilkhanids to the Mamluk sultanate (Nakamachi 2000), Nakamachi realized the importance of studying the Arabic manuscripts of *ʻIqd al-Jumān* by al-ʻAynī to understand Mamluk history during the thirteenth–fourteenth centuries (Nakamachi,2003). Ito Takao has noticed that the social mobility of the Egyptian ulama was rather limited between the fourteenth and sixteenth centuries through investigating the activities of two influential families, Banū al-Bulqīnī and Banū al-Shiḥnah (Ito 1996). He also examined in detail the historical sources al-Sakhāwī referred to in his *Al-Iʻlān bi-al-Tawbīkh* (Ito 1997). Finally, let me add that three young scholars have joined us recently: Ota Keiko in an article on the Meccan Sharifate and its diplomatic relations during the Bahri Mamluk period (Ota 2002), Ishiguro Hirotake in a discussion about the administrators of *Wafā' al-Nīl* during the Burji Mamluk period (Ishiguro 2002), and Yoshimura Takenori in an analysis of the water supply administration in the suburbs of Cairo under the Bahri Mamluk government (Yoshimura 2003).

Secondly, we may indicate the efforts of Japanese scholars to study Arabic manuscripts and documents abroad other than the published primary sources. As mentioned above, I myself have searched for Arabic manuscripts related to the *iqṭāʻ* system in Cairo, Damascus, and Istanbul, Yajima on the travel account of Ibn Baṭṭūṭah, Matsuda on various subjects related to the St. Catherine′s documents, Ohtoshi on the guidebooks for visitors to al-Qarāfah, Kikuchi on the writings of ʻAbd al-Bāsiṭ, and Nakamachi on the chronicle by al-ʻAynī, to mention a few cases. It is noteworthy also that Miura and Horii have tried to compare the Mamluk and the Ottoman periods in their work utilizing Arabic and Italian documents.

As to the published materials related to Arabic and Islamic studies, not a small number of universities and institutes, including the Faculty of Letters at the University of Tokyo, The Institute of Oriental Culture (The University of Tokyo), Keio University, The National Diet Library, The Toyo Bunko, Hokkaido University, Kyoto University, and Kyushu University, for example, have collected them since

the 1960s. However, the collections are still small and insufficient for scholars and students who want to use the primary sources in earnest. Among the universities and institutes mentioned above, The Toyo Bunko (Oriental Library), which was established in 1924 by the Mitsubishi Company to promote Asian studies in Japan, has the best collection on the Middle East in Arabic (20,000 volumes), Persian (15,000), and Turkish (18,000), and source materials related to the Mamluk period account for a large part of the Arabic collection there.

Following World War II, Japanese scholars, who were freed from the historical view of imperial absolutism, were stimulated considerably by Marxism, which puts stress on the social and economic factors in the development of history. For example, Shimada Johei chose to study the taxation system in the early Islamic period with the intent of participating in similar discussions with historians working in other fields. As mentioned above, Morimoto Kosei followed him, but I differed slightly from them and took up the subject of the *iqṭāʿ* system to examine the relationship between state and society during the Ayyubid and Mamluk periods (Sato 1967, 1969b, 1979, 1997a). The commercial activities of the Kārimī merchants were also considered of a major importance to understanding social and economic mobility in international trade networks (Kobayashi 1973a; Yajima 1980, 1986, 1989, 1991). The study of the monetary system in medieval Islam by Kato Hiroshi (Kato 1976) is regarded also as an achievement in the same field of research.

I had already started my study of rural society and the peasantry in Egypt (Sato 1972, 1973, 1977) prior to the introduction of the social history method developed by the Annale school in the 1980s. From around that time on, the study of social history was conducted eagerly in relation to the Mamluks as seen in the work on food riots by Hasebe (Hasebe 1988, 1990, 1994, 1999a), the *zuʿr* of Mamluk Damascus by Miura (Miura 1989a, 1989c), and Ohtoshi´s work on popular visits to al-Qarāfah in Old Cairo (Ohtoshi 1993a and others). Active studies on the social roles of ulama by Yukawa (Yukawa 1979a, 1980, 1981), Kikuchi (Kikuchi, 2002), Miura (Miura 2000), Kondo (Kondo 1994, 1995, 1999), and Ito (Ito 1996, 2003) have greatly improved our understanding of urban life during the Mamluk period.

Consequently, the above discussion demonstrates that the field of Mamluk studies in Japan has developed steadily since the end of the 1960s. Most of the younger scholars hope to visit the Middle East both to search for source materials and communicate with local scholars. Due to the appearance of the second and the third generations of expert since the 1980s, research has been greatly diversified to include such subjects as the relationship between kingship and Sufis, political and judicial ideas of the ulama, various aspects of urban life, international trade networks, etc. However, we find only a few scholars working on the fields of architecture, history of science, or arts and crafts during the Mamluk period.

Furthermore, we have another important subject to consider, ″What is the Mamluk state?″ in comparison to other Islamic states in history. As to the languages used in the research literature, we now face a serious problem. As revealed in the Select Bibliography, the number of books and articles written in English (and including one article in German) amounts to only 30 (17%) of the total as of the end of 2004. We should recognize the fact that the works written in Japanese cannot be understood by most non-Japanese scholars. In order to contribute to international academic activities, it is necessary for us to publish more of our research achievements in Arabic, Persian, Turkish and the European languages.

SELECT BIBLIOGRAPHY (1939–2004)

Japanese names are given with the surname first.

The titles of Japanese works are translated into English after the transliteration into Roman characters.
